YWCA	Young Women's Christian Association
YYS	(Zhongguo yishu yanjiuyuan) Yinyue yanjiusuo and variants (Music Research Institute (of the Chinese Academy of Arts))
Z	Zimmermann catalogue [Purcell]
zar(s)	zarzuela(s)
zargc	*zarzuela género chico*

Bibliographical Abbreviations

All bibliographical abbreviations used in this dictionary are listed below, following the typography used in the text of the dictionary. Broadly, *italic* type is used for periodicals and for reference works; roman type is used for anthologies, series etc. (titles of individual volumes are italicized).

Full bibliographical information is not normally supplied in the list below if it is available elsewhere in the dictionary. Its availability is indicated as follows: D – in the list of 'Dictionaries and encyclopedias of music'; E – in the list of 'Editions, historical'; and P – in the list of 'Periodicals'; these lists are located in vol.28. For other items, in particular national (non-musical) biographical dictionaries, basic bibliographical information is given here; and in some cases extra information is supplied to clarify the abbreviation used.

Festschriften and congress reports are not generally covered in this list. Although Festschrift titles are sometimes shortened in the dictionary, sufficient information is always given for unambiguous identification (dedicatee; occasion, if the same person is dedicatee of more than one Festschrift; place and date of publication; and name(s) of editor(s) if known). For fuller information on musical Festschriften up to 1967 see W. Gerboth: *An Index to Musical Festschriften and Similar Publications* (New York, 1969). The published titles of congress reports are generally reduced to their essentials, but sufficient information is always given for purposes of identification (society or topic; place and date of occurrence; journal issue if published in a periodical; editor(s) and publication details in unfamiliar cases). A comprehensive list of musical and music-related 'Congress reports' appears in vol.28. Further information can be found in J. Tyrrell and R. Wise: *A Guide to International Congress Reports in Music, 1900–1975* (London, 1979).

Library Sigla

The system of library sigla in this dictionary follows that used by Répertoire International des Sources Musicales, Kassel, as listed in its publication *RISM-Bibliothekssigel* (Kassel, 1999). Below are listed the sigla to be found; a few of them are additional to those published in the RISM list, but have been established in consultation with the RISM organization. Some original RISM sigla that have now been changed are retained here.

More information on individual libraries is available in the libraries list in volume 28.

In the dictionary, sigla are always printed in *italic*. In any listing of sources a national sigillum applies without repetition until it is contradicted.

Within each national list, entries are alphabetized by sigillum, first by capital letters (showing the city or town) and then by lower-case ones (showing the institution or collection).

A: AUSTRIA

A Admont, Benediktinerstift, Archiv und Bibliothek
DO Dorfbeuren, Pfarramt

A Note on the Use of the Dictionary

This note is intended as a short guide to the basic procedures and organization of the dictionary. A fuller account will be found in the Introduction, vol. l, pp.xix–xxix.

Abbreviations in general use in the dictionary are listed on pp.vii–xi; bibliographical ones (periodicals, reference works, editions etc.) are listed on pp.xiii–xviii and discographical abbrevations on pp.xix–xx.

Alphabetization of headings is based on the principle that words are read continuously, ignoring spaces, hyphens, accents, bracketed matter etc., up to the first comma; the same principle applies thereafter. 'Mc' and 'M'' are listed as 'Mac', 'St' as 'Saint'.

Bibliographies are arranged chronologically (within section, where divided), in order of year of first publication, and alphabetically by author within years.

Cross-references are shown in small capitals, with a large capital at the beginning of the first word of the entry referred to. Thus 'The instrument is related to the BASS TUBA' would mean that the entry referred to is not 'Bass tuba' but 'Tuba, bass'.

Signatures where the article was compiled by the editors or in the few cases where an author has wished to remain anonymous are indicated by a square box (□).

Work-lists are normally arranged chronologically (within section, where divided). Italic symbols used in them (like *D-Dl* or *GB-Lbl*) refer to the libraries holding sources, and are explained on pp.xxi–xxxvii; each national sigillum stands until contradicted.

Pohlman – Recital 1

P

[continued]

Pohlman [Pohlmann], **Johannes** (*fl* 1767–93). English harpsichord and piano maker of German origin. He was one of the instrument makers known as the '12 Apostles' who emigrated from Germany after the Seven Years War. He married Dorothea Ludiwigeh at St Anne's Soho, London, in 1769. Pohlman worked first in Compton Street, Soho, and later at 113 Great Russell Street, Bloomsbury, from 1777 until about 1794 (in which year Mrs Pohlman's name first appears instead of his in the poor rates). He was probably the best-known piano maker in London after JOHANNES ZUMPE, building similar instruments to Zumpe's and filling the orders Zumpe could not handle. No harpsichords by him survive, and his earliest known piano is a square one dated 1767. Pohlman appears to have made only square pianos in which the English single action with overdampers was used. His pianos include two hand stops to raise the dampers in the treble and the bass; occasionally there is a third, to operate the 'lute'. A half-blow mechanism, where the hammer's resting-point is raised nearer to the strings, is found in some of his pianos; the sound it produces is disappointing and it was never generally adopted. His early instruments have a range of *G′–f‴* (e.g. in the Brussels Conservatory collection) although one example lacks *G*♯*′*; later ones have a full five octaves, *F′–f‴*.

A firm founded in Halifax in 1823 by one Henry Pohlmann (as Pohlmann & Pohlmann, later Pohlmann & Son) dealt in pianos, organs and various other instruments; it was not related to the 18th-century firm of Johannes Pohlman.

MARGARET CRANMER

Poïkilorgue (Fr.). A portable free-reed keyboard instrument, a precursor of the French harmonium. It was invented in Toulouse about 1830 by Aristide Cavaillé-Coll. *See* REED ORGAN, §1.

Point (i) [pointe, poynte, poyncte] (Ger. *Punkt*). An English term in use from the 16th century to the beginning of the 18th signifying a motif, or more generally a theme, suitable for treatment in an imitative style, and by extension a piece or passage in such a style. Butler (*The Principles of Musik*, 1636/*R*) defined the point as 'a certain number and order of observable Notes in any one Part, iterated in the same or in divers Parts: within the time commonly of two Sem[i]briefs in quick Sonnets, and of four or five in graver Musik'. The word was apparently derived from the Italian *punto*, which was used in the same sense by Nicola Vicentino in his *L'antica musica ridotta alla moderna prattica* (1555/*R*), and perhaps ultimately from the Latin PUNCTUM, used by some medieval theorists (Anonymous IV, Johannes de Grocheo) to designate individual phrases or sections of a piece.

In discussing 'fuge' (i.e. imitation) Morley (1597) observed that the 'way of two or three severall points going together, is the most artificiall kinde of composing which hetherto hath beene invented either for Motets or *Madrigals*' (p.167); the maintenance of a point in imitative writing could justify certain technical irregularities, but it was 'better to leave the point and folow none at all, then for the pointes sake, ... make ... harsh unplesant musicke: for musicke was devised to content and not offend the eare' (p.83). Writers such as John Coprario (*Rules how to Compose*, *c*1610), Christopher Simpson (*A Compendium of Practical Music*, 1667), and Roger North (early 18th century) used the term in a similar way when discussing imitation, but in his *Division Viol* (1659) Simpson also stressed the importance of sometimes developing a point in making divisions on a bass: here he was clearly thinking of a point as a motif rather than as a theme for imitative treatment.

The Mulliner Book (ed. in MB, i, 1951) contains six pieces with the title 'Point', variously spelt, one each by Sheppard and Tallis and four anonymous pieces. With the exception of Tallis's piece, which is somewhat more extended, they are simply extremely short fugues with one entry in each part. It was rare at this period in instrumental music for a single theme to dominate an extended imitative piece, and even in the next century a piece 45 bars long by Tomkins bears the title 'A substantiall verse; maintayning the poynte' (MB, v, 1955, no.31). One lyra viol tablature (*GB-Mp*) contains an anonymous 'point or prelud[ium] to be playde before the Lancashire pipes'. This is not an imitative piece but merely develops the motif stated at the outset.

The term 'point' (and its German equivalent *Punkt*) is still used with reference to 16th-century music. A section of music generated by the imitative treatment of a motif, or indeed the motif itself, is commonly called a 'point of imitation', and the motets of Gombert, Crecquillon and their contemporaries are said to be made up of several

such 'points', usually eliding one with the next (see HAM, no.114).

MICHAEL TILMOUTH

Point (ii). English composer. *See* POYNT.

Point d'orgue (i) (Fr.). A harmonic pedal or PEDAL POINT or ORGAN POINT.

Point d'orgue (ii) (Fr.). A pause or FERMATA.

Point d'orgue (iii) (Fr.). A cadenza such as is commonly implied by a fermata in appropriate situations, for example in concertos.

Pointer (Fr.). In French music of the 17th and 18th centuries, a term directing the performer to follow the rhythmic convention of NOTES INÉGALES. In this sense *pointer* requires that notes (most usually quavers) written as equal be played 'dotted', so that the first of the series is lengthened, the second decreased by as much (e.g. a dotted quaver followed by a semiquaver). As late as 1768 Rousseau gave substantially this definition (*Dictionnaire*, article 'Pointer'). However, he distinguished between French and Italian usage: while (he wrote) the French 'point', as a matter of course, those notes written as equal, the Italians play the notes as written (i.e. as equal) unless the specific term *pointé* is given in the music. In some contexts, applied to either a species of *notes inégales* or to a detached type of bowing (*see* BOW, §II, 2(vii)), *pointer* is synonymous with PIQUER.

DAVID D. BOYDEN

Poirier, Lucien (*b* Saint-Alphonse-de-Rodriguez, Quebec, 29 Nov 1943; *d* Loretteville, Quebec, 7 June 1997). Canadian musicologist and organist. After winning first prize for the organ in 1969 at the Conservatoire de Musique du Québec à Montréal, where he was taught by Bernard Lagacé, he continued to study the organ and harpsichord with Eduard Müller at the Schola Cantorum Basiliensis and with Gaston Litaize in Paris (1969–72). He pursued further studies in music at Strasbourg University (MMus 1972, PhD 1980). In 1972 he was appointed professor at the Université Laval, Quebec, later becoming director of its school of music (1991–4).

As both a musicologist and performer, Poirier specialized in the works of Migot, making a recording of his organ music in 1978. He edited a selection of Migot's organ music, *Second livre d'orgue* (Paris, 1979), and the choral work with organ accompaniment, *De christo*, which he performed with the Radio Canada Chorus in 1981. During the 1980s he concentrated his research on the history of Canadian music, working on a project devoted to the history of music in Quebec between 1764 and 1918. The results of this work have been published in *Répertoire des données musicales de la presse québécoise* (Quebec, 1991). He contributed many articles to a variety of dictionaries and journals and also edited a number of volumes in the series Patrimoine musical canadien. As an organist, he performed frequently in Canada and many European countries.

CLAIRE GRÉGOIRE-REID

Poise, (Jean Alexandre) Ferdinand (*b* Nîmes, 3 June 1828; *d* Paris, 13 May 1892). French composer. He studied with Adolphe Adam and P.-J.-G. Zimmermann at the Paris Conservatoire and gained second main prize for composition in the Prix de Rome of 1852. Devoting himself immediately to *opéra comique*, he found popularity with his first work, *Bonsoir, voisin*, which held the stage at the Théâtre Lyrique for five years (80 performances), then appeared in the repertory of the Opéra-Comique (101 performances from 1872 to 1877). *Les charmeurs* was hardly less successful; it was also given by the Opéra-Comique, in 1862. *L'amour médecin*, in spite of being the production preceding *Les contes d'Hoffmann*, proved durable; by 1893 it had been seen 187 times, being withdrawn only 1898. Poise made a speciality of setting librettos derived from 18th-century sources, and in 1867 he arranged and reorchestrated Philidor's *Le sorcier*. His own style remained unadventurous: even *La surprise de l'amour*, much praised by some, uses orthodox operetta formulas. *Carmosine* was completed at Poise's death, to be heard eventually after 36 years.

WORKS

OPERAS

unless otherwise stated, all are opéras comiques, first performed and published in Paris

Bonsoir, voisin (1, A. de Beauplan and Brunswick [L. Lhérie]), Lyrique, 20 Sept 1853 (*c*1855)

Les charmeurs (1, A. de Leuven, after C.-S. Favart: *Les ensorcelés, ou Jeannot et Jeannette*), Lyrique, 7 March 1855, vs (*c*1865)

Le thé de Polichinelle (1, E. Plouvier), Bouffes-Parisens, 4 March 1856

Le roi Don Pèdre (2, E. Cormon [P.E. Piestre] and E. Grangé [E.P. Basté]), OC (Favart), 30 Sept 1857, vs (1857)

Le jardinier galant (2, de Leuven and P. Siraudin), OC (Favart), 4 March 1861 (1861)
Les absents (1, A. Daudet), OC (Favart), 26 Oct 1864, vs (1865)
Jean Noël (1, E. Dubreuil), unperf., vs in *Le magasin des demoiselles* (1865)
Le sorcier (1, J. Adenis, after A.A.H. Poinsinet), Fantaisies-Parisiennes, 9 Feb 1867 [rev. of F.A.D. Philidor: Le sorcier, 1764]
Le corricolo (3, E. Labiche and Delacour [A.C. Lartigue]), OC (Favart), 28 Nov 1868
Les deux billets (1, J.P. Claris de Florian), Athénée, 19 Feb 1870 (1870)
Les trois souhaits (1, Adenis), OC (Favart), 29 Oct 1873, vs (1874)
La surprise de l'amour (2, C.P. Monselet, after P. Marivaux), OC (Favart), 31 Oct 1877, vs (1878)
La cigale et la fourmi (1, A. Beaumont [A. Beaume], after J. de La Fontaine), unperf., vs in *Le magasin des demoiselles* (1877)
La dame de compagnie (1, Beaumont), unperf., vs in *Le magasin des demoiselles* (1877)
L'amour médecin (3, Monselet, after Molière), OC (Favart), 20 Dec 1880, vs (1881)
La reine d'une heure (1, Beaumont), unperf., vs in *Le magasin des demoiselles* (1881)
Joli Gilles (2, Monselet, after S. d'Allainval), OC (Favart), 9 Oct 1884, vs (1884)
Le médecin malgré lui, 1887 (after Molière), unperf.
Carmosine, Monte Carlo, 1928

1 piece in La poularde de Caux (1861)

OTHER WORKS

Cécile (orat), Dijon, 1888
Several choruses, 4 male vv, cited in *FétisB*; songs

DAVID CHARLTON

Poissl, Johann Nepomuk, Freiherr **von** (*b* Haukenzell, Lower Bavaria, 15 Feb 1783; *d* Munich, 17 Aug 1865). German composer. He came from a south German aristocratic family and in 1805 settled in Munich where he studied composition with Danzi and Abbé Vogler. With Danzi's encouragement and support (and perhaps assisted by his own aristocratic background), Poissl had his first stage work, the Singspiel *Die Opernprobe*, staged at the Munich Hofoper in 1806, though the work made little impression. Probably influenced by Danzi's through-composed German grand opera *Iphigenie in Aulis* (1807), Poissl turned his attention to grand opera with continuous music, the genre to which all but two of his subsequent operas belong. His next two operas, *Antigonus* (in German) and *Ottaviano in Sicilia* (in Italian), both to librettos adapted by the composer from Metastasio, enjoyed considerable local success; according to Weber, *Ottaviano* was greeted 'with almost unparalleled enthusiasm'. However, his Singspiel *Aucassin und Nicolette*, produced the following year, was coolly received and Poissl returned to grand opera, determined to retrieve his reputation. With his tragic opera *Athalia* he gained the acclaim he sought. The *Münchner Theaterjournal* hailed its appearance as marking 'the longed-for era of a national art, the creation of a national artistic model which we have so far lacked'. The *Allgemeine musikalische Zeitung* concurred, believing that in this work Poissl had discovered the style of a truly national opera. During the next few years *Athalia* was performed in most of the major German theatres. Poissl quickly produced another opera along similar lines, *Der Wettkampf zu Olympia*, which was highly praised and widely staged. This was the high point of Poissl's operatic career. Of his later operas, *Nittetis, La rappresaglia* and *Die Prinzessin von Provence* were moderately successful, and the first performance of *Der Untersberg*, in 1829, was well received, but a clique was formed against it at the third performance and it was soon withdrawn. This disappointment may have played a part in deterring Poissl from further operatic efforts for more than a decade; but the direction of his artistic output may also have been affected by personal misfortunes at that time. During those years his first wife and four grown children of the marriage died, and shortly afterwards he lost three infant children of a second marriage. These events may have prompted his growing preoccupation with the composition of sacred music. His church music, much of which was for unaccompanied voices, included a setting of Psalm xcv, a *Stabat mater* and a *Miserere*; but his major work was the cantata/oratorio *Der Erntetag* (1835), for which he wrote both words and music. One writer of the time considered it to surpass all his works except *Athalia* and to confirm his 'worthy place among the best German composers of the present day'. In 1843 he returned to operatic composition for the last time with *Zaide*, but this roused little interest.

Poissl spent most of his life in financial difficulties; these were temporarily relieved when, in 1823, he was made superintendant of court music (*Hofmusik Intendant*) in Munich, and director of the court theatre (*Hoftheater Intendant*) in 1824. In 1833 he lost his position at the theatre, though he had two further short spells in that position in 1846 and 1848; in 1847 he was obliged to relinquish his post as *Hofmusik Intendant*, and he was appointed to the titular honour of first chamberlain (*Oberkammerer*). His last years were again darkened by financial worries. When he died at the age of 82 his music had sunk into almost total oblivion.

Poissl was an important figure in the move to create a German operatic tradition that could challenge the supremacy of foreign operas on the German stage. He was an important link in the chain connecting the Mannheim-Munich German grand opera tradition, which stemmed from Holzbauer, with the Romantic operas of Weber and Spohr. Weber's personal connection with Poissl, which began in 1811, was undoubtedly significant for both composers. Similar aspirations to create a German grand opera tradition were shared by a number of composers at this time, notably Ignaz von Mosel. But in many respects both Mosel and Poissl approached the problem from a rather different angle from Weber, generally relying on classical or mythological texts in the manner of Gluck. Despite the considerable success of several of Poissl's operas, this approach proved a cul-de-sac. It was Weber's and Spohr's more 'Romantic' conception of German opera that paved the way for Wagner's achievements. Poissl's efforts to handle Romantic themes in his last three operas, composed after the appearance of Weber's *Der Freischütz* and *Euryanthe* and Spohr's *Jessonda*, were not successful.

Despite his aristocratic roots, which caused some resentment among less privileged musicians, Poissl's music reveals him to have been a thoroughly trained and technically accomplished composer. His church music testifies to his command of conventional contrapuntal

skills and his operas, while lacking real dramatic power, are often imaginative as well as polished.

WORKS

STAGE

first performed at Munich, Hofoper, unless otherwise stated

Die Opernprobe (komische Oper, 2, after It. lib), 23 Feb 1806
Antigonus (3, J.N. Poissl, after P. Metastasio), 12 Feb 1808
Ottaviano in Sicilia (dramma eroico, 3, Poissl), 30 June 1812, ov. pubd
Aucassin und Nicolette (Singspiel, 3, F.K. Hiemer, after M.-J. Sedaine), 28 March 1813
Athalia (grosse Oper, 3, J.G. Wohlbrück, after J. Racine), 3 June 1814, ov. pubd
Der Wettkampf zu Olympia, oder Die Freunde (grosse Oper, 3, Poissl, after Metastasio: *L'olimpiade*), 21 April 1815, ov. pubd
Dir wie mir, oder Alle betrügen, 1816 (komische Oper, 2, von Zahlhans), unperf.
Nittetis (grosse Oper, 3, Poissl, after Metastasio), Darmstadt, 29 June 1817
Issipile, 1818 (grosse Oper, Poissl, after Metastasio), unperf.
La rappresaglia (opera semiseria, 2, Poissl, after C. Sterbini), 7 April 1820
Die Prinzessin von Provence (Zauberoper, 3, Poissl, after F. Romani), 23 Jan 1825
Der Untersberg (romantische Oper, E. von Schenk), 30 Oct 1829
Zaide (romantisch-tragische Oper, 4, Poissl), 9 Nov 1843
Additions to: Nasolini: Merope, 1812; and operas by Dittersdorf and Rossini

INCIDENTAL MUSIC

Renata (F. Heyden), 12 Oct 1823
Belisar (von Schenk), 23 Feb 1826
Kaiser Ludwigs Traum (Festspiel, E. von Schenk), 27 March 1826
Hermannsschlacht (H. von Kleist), 1 double chorus, 1826, ?unperf.

SACRED CHORAL

Méhuls Gedächtnisfeyer (J. Sendtner), Munich, 22 Dec 1817
Judith (orat), excerpts perf. Munich, 11 April 1824
Der Erntetag (orat, Poissl), Munich, 4 April 1835
3 masses: C, 1812, A♭, *c*1816, E♭, 1817; Stabat mater, 8vv (Munich, 1821); Miserere, 8vv, 1824, arr. 6vv, 1833; Ps xcv, solo vv, chorus, orch; Omnes gentes, off, S, chorus, orch; Salve regina, 8vv

OTHER VOCAL

Der Sommertag (pastoral cant., ?Poissl), Munich, March 1814
Die Macht des Herrn (cant., F. Bruckbräu), Munich, 21 April 1826
Vergangenheit und Zukunft (dramatic poem, Poissl), Munich, 30 Nov 1832
Ein baierisches Volkslied (J. Sendtner), chorus, 1824; arias and duets, 1–2vv, orch; 10 canzonettas, 1–3vv, pf, 4 pubd (Munich, n.d.); songs, 1–2vv, pf

INSTRUMENTAL

Concs., incl. Cl Conc., 1812; Vc Conc., 1817 (Leipzig, 1818)
Harmoniemusik für die königliche Tafelmusik, *c*1845 [after Donizetti, Auber and I. Lachner]
6 variations, vn, bn, hpd

CLIVE BROWN

Poisson, Jakub Jan. *See* RYBA, JAKUB JAN.

Poitevin, Guillaume (*b* Boulbon, nr Arles, 2 Oct 1646; *d* Aix-en-Provence, 26 Jan 1706). French composer and teacher. He was trained as a choirboy at St Trophime, Arles. On 17 November 1663 he was engaged to serve the cathedral of St Sauveur, Aix-en-Provence, on the strength of his serpent playing. He received the tonsure on 8 March 1665 and on 23 April 1667 was named *maître de musique* of the cathedral. He was ordained on 2 April 1672 and became a prebendary of St Sauveur on 14 May 1677. At his request he retired from his post on 4 May 1693 and was succeeded by his pupil Jean Gilles, who was in turn followed by Jacques Cabassol. On 5 May 1698 at the chapter's request he returned to his post and held it until his death. The successes of his students indicate that he must have been an able teacher. Two of his pupils, Campra and Blanchard, served in the royal chapel, and two others, Gilles and Belissen, had distinguished careers in the cities of Toulouse and Marseilles respectively.

Poitevin's few extant works reveal a mastery of harmony and counterpoint. The requiem attributed to him is rich in prepared dissonances and chromatic movement, more so than the mass fragments. His word-setting is generally syllabic, with occasional melismas on appropriate words such as 'laudamus', 'gloria' and 'ascendit'. Though none of the extant works requires instruments beyond the basso continuo, a list at Arles mentions three lost *Dixit en symphonie*, evidence that he, like his students, composed works with orchestra.

WORKS

Frags. of 4 masses, 4vv, *F-AIXmc*: Messe 'Ave Maria'; Messe 'Speciosa facta es'; Messe 'Benedicta tu'; Messe 'Dominus tecum'
Messe des morts, 4vv, bc; edn (Paris, 1962)
De profundis and Libera me, 4vv, bc, *AIXmc*
Lost, mentioned in an inventory at Arles: Messe à deux choeurs du 2ème ton; 3 Dixit en symphonie; Beatus vir; Laetatus sum; Lauda Jerusalem (2 settings)

JOHN HAJDU HEYER

Poitiers. City in France, capital of the Poitou-Charentes region. Poitiers is richly endowed with sacred buildings whose organs are well equipped to meet the varied requirements of all organ music, with the possible exception of the early Baroque period. The famous cathedral organ, built by François-Henri Clicquot (author of the treatise *Théorie pratique de la facture de l'orgue*, 1789) and restored in 1994, is specially suited to the performance of French Classical organ music.

The existence of numerous church organs has prompted frequent concerts of sacred music in Poitiers. Orchestral concerts are given in the Théâtre Municipal (which has 900 seats) by the Orchestre du Poitou-Charentes, while choral singing is cultivated by numerous amateur choirs.

The Conservatoire National de Région is particularly noted for its courses in early music, choral conducting

and contemporary music. The church of St Germain has been converted by the conservatoire into a concert hall which hosts an annual season of chamber music recitals and two important festivals: the Rencontres de Musique et Danse Contemporaines de Poitiers and the Tournoi Européen d'Improvisation Musicale. The Institut de Musicologie at the university specializes in the study of medieval music.

As a regional capital Poitiers is the centre of musical education and concert promotion for the four départements that make up the region. Several well-known composers were born or have lived there, including Hilaire Penet (*fl* early 16th century), Louis Vierne (1870–1937) and Pierre Petit (*b* 1932).

LUCIEN JEAN-BAPTISTE/ERIC SPROGIS

Pokorny [Pokorný]. The name of a large number of Bohemian musicians and composers of the 18th and 19th centuries; Dlabač mentioned 12 of them. Because the name (meaning 'humble') is so common, it is impossible to establish whether all the musicians who bore it were related. The most important of them, Franz Xaver (Thomas) Pokorny (1729–94), is considered separately below (with his sons Bonifaz, 1757–89, and Joseph Franz, *b c*1760).

Jan Pokorny (*b* Milevsko, 16 May 1689; *d* Bechyně, 27 Dec 1783) was a singer at the Premonstratensian church of St Benedict at Prague from 1697 to 1700, and then choral director and organist at Bechyně for 40 years; he may have been a composer. Václav Pichl was one of his pupils. About 1789 his son Josef was organist and director of music at Pont-à-Mousson, near Metz in France. František Pokorny (*b* ?Vlašim; *d* Ronov, 13 Aug 1797) studied at Prague in about 1750 and later took a post as organist at Ronov where he was also active as a teacher. He composed a number of sacred works. Gotthard Pokorny (*b* Český Brod, 16 Nov 1733; *d* Brno, 4 Aug 1802) was first employed as a school assistant in his home town; from 1760 he was conductor at the cathedral of St Peter at Brno. He composed church music, violin concertos and other works.

Stephan Johann Pokorny (*b* Chrudim, *c*1740; *d* Vienna, 1792) studied at Německý Brod (now Havlíčkův Brod) from 1755 to 1760; he then entered the Augustinian order at Prague and became a pupil of Kajetan Mara. From 1780 he was organist of an Augustinian monastery in Vienna. Johann Ferdinand Pokorny (*b* Koloveč, nr Domažlice, 1797; *d* Jihlava, 3 March 1870) was the son of a teacher and studied at Prague; he later became a singer at the Premonstratensian monastery at Strahov near Prague. In 1819 he became director of a new music society in Jihlava where, for more than 20 years, he conducted the theatre orchestra in performances of operas by Mozart, Weber and others; from 1836 he was also director of the choir. His manuscript *Geschichtliche Skizze des Musikvereins in der k.k. Stadt Iglau* (in the collection of the Männergesangverein, Jihlava) contains the programmes of all his concerts.

Franz [František Xaver Jan] Pokorny (*b* Lstiboř [now Ctiboř, Benešov district], 22 Dec 1797; *d* Meidling, nr Vienna, 7 Aug 1850) was the son of a teacher. In 1819 he joined the orchestra of the Theater in der Josefstadt in Vienna as a clarinettist, and from 1822 he played in theatre orchestras in Pressburg (now Bratislava) and Baden. In 1827 he became conductor of the theatre orchestra in Pressburg and in 1835 director of the theatre. In 1836 he also took over direction of the theatre in Baden, and in 1837 that of the Theater in der Josefstadt. His opera company performed at Pressburg during the winter, at Vienna in the spring and at Baden in the summer. In 1845 he acquired the Theater an der Wien and he soon resigned all his directing posts except those in Vienna. His main interest was the narrative Singspiel, the most successful of which, performed under his direction, was *Der Zauberschleier* (1842) by his conductor A.E. Titl. Other conductors engaged by Pokorny included Suppé and Lortzing. Johann Baptist Pokorny (*d* Munich, after 1840) was a pupil of Fracassini, and entered the service of the Bamberg court some time before 1796. In that year he became a court musician; he was appointed assistant director of music at the court in 1800, and director of music in 1802. After the dissolution of the Kapelle he became conductor of the music society.

A number of masses, litanies, Rorate, *Te Deum* and *Regina coeli* settings, offertories and Czech pastorellas (in *CZ-Pnm* and many church libraries) are attributed simply to Pokorny.

TOMISLAV VOLEK

Pokorny [Pokorný, Pockorny], **Franz** [František] **Xaver (Thomas)** (*b* Mies [now Stříbro, Czech Republic], 20 Dec 1729; *d* Regensburg, 2 July 1794). Bohemian composer. It is possible, but cannot be proved, that he was related to other Czech musicians called Pokorny. After studying with Riepel in Regensburg, Pokorny entered the court orchestra of Oettingen-Wallerstein in 1753. In 1754 he studied in Mannheim with Johann Stamitz, Holzbauer and Richter. On returning to Wallerstein he was promised the position of choral director there, but his appointment was never confirmed. A symphony by Pokorny was performed on 13 July 1766 at Dischingen, the summer residence of the Prince of Thurn and Taxis. The composer left the service of the Count Philipp Karl of Oettingen-Wallerstein on 22 March 1770 and at last became a member of the court orchestra of Thurn and Taxis at Regensburg, where, according to payment records, he had already been playing the violin since 1766. Pokorny's gravestone in Regensburg gives his title as 'musician of the princely chamber of Taxis' (Hochfürstlich Taxisscher Kammer-Musicus).

Pokorny left a great number of works. The largest group comprises some 140 symphonies, most of them preserved in autograph score. Of these symphonies, 104 have also been attributed to other composers. These

misattributions were deliberately made by Theodor von Schacht, director of the court orchestra of Thurn and Taxis, in Regensburg in 1796. Schacht deleted the composer's name and the place and date of composition on the covers of these works and substituted names of other composers or provided new covers. It has not yet been possible to prove authorship of any of the 104 symphonies by a composer other than Pokorny, which suggests that he did in fact write them all.

Most of Pokorny's symphonies are in four movements. The works from his Oettingen-Wallerstein period are scored for strings, flutes and horns. The horn parts are throughout of a very virtuoso nature. The style of the symphonies is strongly marked by melodies reminiscent of folk music. The symphonies written in Regensburg are scored for a greater variety of instruments and their formal concept is more carefully devised.

Pokorny's son Bonifaz (Franz Xaver Karl) (*b* Wallerstein, 24 Jan 1757; *d* Scheyern Abbey, 5 Aug 1789) took vows at Scheyern Abbey in 1780 and was ordained priest in 1783. He was one of the monastery's leading musicians as *regens chori*, organist and teacher. None of his compositions has survived. Another son, Joseph Franz, born in Regensburg about 1760, is mentioned in Eitner and Mettenleiter as a musician at the court of Thurn and Taxis at Regensburg. However, no mention of him can be found in the records of the Thurn and Taxis court orchestra. The horn virtuoso Beate Pokorny, who was successful at a Concert Spirituel in Paris in 1780, was not Franz Xaver Pokorny's daughter but his sister.

HUGO ANGERER

Pokorný, Petr (*b* Prague, 16 Nov 1932). Czech composer. After studying the piano at the Prague Conservatory with Václav Holzknecht and Ilona Štěpánová-Kurzová (1951–4), he read natural sciences at Prague University (1954–9) and concurrently took composition lessons with Bořkovec, Emil Hradecký and others. In the 1960s he collaborated with the avant-garde ensemble Musica Viva Pragensis, in whose evenings of music and poetry he introduced the work of young poets. His compositional language, strictly dodecaphonic during this period, later became a free flow of ideas marked by lyricism and sensuous sounds. During the era of communist rule in former Czechoslovakia, he was discriminated against for his bourgeois family background and anticommunist ideas; the Fourth String Quartet, written during the fall of communism in 1989, carries a preface describing the sense of freedom following 'oppressive timelessness'.

Pokorný was a co-founder of the Prague Musica Iudaica festival and the Czech Schubert Society. He is also an active member of the Atelier '90 society and the Ochranny Svaz Autorsky (OSA) performing rights organization.

MOJMÍR SOBOTKA

Pokrass, Daniil (*b* Kiev, 17/30 Nov 1905; *d* Moscow, 16 April 1954). Russian composer and conductor. He attended the Kiev Conservatory (1917–21) where he studied the piano with of S. Tarnovsky and Felix Blumenfeld, later moving to Moscow where he took lessons with Nikolay Roslavets. From 1936 to 1951 he was one of the musical directors of the Central House of Culture for Railway Workers. Among his non-collaborative works are the *Uvertyura na turskiye temï* ('Overture on Turkish Themes') and a wind quintet; from 1932 he worked exclusively with his brother DMITRY POKRASS.

Pokrass, Dmitry (*b* Kiev, 26 Nov/7 Dec 1899; *d* Moscow, 20 Dec 1978). Russian composer. He studied at the Petrograd Conservatory in the piano class of M. Gelever (1913–17) and then worked as an accompanist in variety concerts. His career as a composer began during the Civil War; in 1919 he volunteered and served in the First Cavalry Army where, from 1919–22, he worked in the political section. In 1923 he moved to Moscow where he was engaged in the field of light music as a composer and pianist, also conducting in a number of theatres of drama and in variety groups. From 1936 to 1972 he directed the

light orchestra of the Central House of Culture of railwaymen. He was a laureate of the USSR Prize (1941), received the A. Aleksandrov gold medal (1973) and was made a People's Artist of the USSR (1975).

From 1932 Dmitry Pokrass worked with his brother DANIIL POKRASS. on popular songs, a genre which came to dominate the output of both composers. The initiative in creating the melodies and basic harmonic contours came, as a rule, from Dmitry, whilst Daniil wrote the piano accompaniments; quite frequently, however, such divisions were not so clear cut. The Pokrass brothers were witnesses to and partly responsible for the birth of that special genre – the Soviet mass song. These accessible songs, easily picked up by the widest listening public, reflected the most important events in the history of the country and were frequently devoted to the theme of World War II. They were sung at meetings, on the streets and squares, during mass festive gatherings and demonstrations. The semi-official texts did not prevent the songs enjoying genuine popularity since their vivid and picturesque melodies, conceived in the style of a march or an anthem, were particularly memorable. As a rule, they had a 'bill board' character and a clear structure. The Pokrass brothers drew on various sources ranging from revolutionary marches with their predominance of dotted rhythms, turns of phrase taken from 19th-century popular Russian music, elements of Ukrainian urban folklore and speech patterns. The songs often possessed a characteristic narrative construction and were notable for the not infrequent use of onomatopoeic devices.

MARINA NEST'YEVA

Pokrovsky, Dmitry (Viktorovich) (*b* Moscow, 1944; *d* Moscow, 1996). Russian ethnomusicologist, collector, folklorist, ensemble director and actor. In the mid-1960s he studied the balalaika at the Gnesin Academy of Music. After undertaking fieldwork with his mother, who was an ethnographer, he became fascinated by folklore and founded an experimental ensemble which rehearsed for the first time on 16 September 1973 under his direction. The young participants did not learn the songs from memory but improvised them as though they had adopted them from traditional singers. Their songs were in the style of the drawn-out songs of the Don Cossacks, which have distinctive qualities of timbre, texture and structure. This was the beginning of a powerful revival of traditional songs in various regions of Russia. Pokrovsky's work encouraged others to establish ensembles for the purpose of performing regional traditional musics, and by the early 1980s thousands of such groups were playing traditional material based on his principles. Pokrovsky's ensemble and the revival movement won enormous popularity, which troubled the KGB. After 1982 he founded the Academy of Folklore and extended his repertory by working with the Christmas Puppet Theatre. He established contacts with composers such as Alfred Schnittke, Vladimir Martïnov and A. Bagatov, jazz musicians including P. Winter and A. Kozlov, and theatres; he appeared in a production of Pushkin's *Boris Godunov*. His works were recorded on several LPs and CDs. His research interests in the field of folklore included problems of music perception, the theory of music and performing practice, and he also lectured on Russian modernism. He travelled extensively, living in the USA for some time and visiting Australia and western Europe. In 1988 he was awarded the State Prize for his ensemble's efforts to preserve the traditional culture of Russia.

IZALY ZEMTSOVSKY

Pol. *See* POLICKI.

Pol, David. *See* POHLE, DAVID.

Polacca (It.: 'Polish'). A term applied to compositions in a Polish style ('alla polacca'). It is usually taken as the Italian equivalent of POLONAISE. The term was used in the 18th century by composers including Bach (Brandenburg Concerto no.1, finale) and Telemann (Concerto in F, TWV 51: f 4); in the 19th century it came to be applied to instrumental or vocal pieces related tenuously or not at all to the polonaise, for example Schubert's setting of Scott's 'Lay of the Imprisoned Huntsman' from *The Lady of the Lake* (D843). Instrumental polaccas are often showy and ornate, gaining in brilliance what they lose in national character. Thus Chopin in a letter to Tytus Woyciechowski (14 November 1829) wrote of his 'alla polacca'

with cello accompaniment op.3 as 'nothing more than a brilliant drawing-room piece – suitable for the ladies'; evidently he did not put it in the same class as his polonaises, even those of that early period.

Polaccas frequently appeared in 19th-century operas, usually as vocal bravura pieces, or as cheerful concerted numbers, for example those in Bellini's *I puritani* and Rossini's *Il barbiere di Siviglia* (the finale). Instrumental movements with the designation 'alla polacca' also occur, such as the finale of Sibelius's Violin Concerto.

WILLIAM BARCLAY SQUIRE/MAURICE J.E. BROWN

Polacco, Giorgio (*b* Venice, 12 April 1873; *d* New York, 30 April 1960). Italian conductor. After studies in Venice, Milan and St Petersburg, he was engaged as an assistant at Covent Garden in 1890 and made his début the next year at the Shaftesbury Theatre, conducting Gluck's *Orfeo ed Euridice*. He quickly became a successful opera conductor in many European cities, in Russia and in South America, and conducted for Tetrazzini's American débuts in Mexico in 1905 and at San Francisco in 1906. In 1911 he directed the first English production in the USA of Puccini's *La fanciulla del West* by the Savage company and took the production on tour. He made his Metropolitan début the next year with *Manon Lescaut*, and remained there until 1917, succeeding Toscanini as director of the Italian repertory in 1915. He conducted in Chicago (1918–19) and returned there in 1921 from Europe at the invitation of Mary Garden; the Chicago Civic Opera was formed in 1922, and Polacco was principal conductor until ill-health forced him to retire in 1930. His performances were noted for precision and vigour and, in addition to Wagner and Italian operas, he became a leading conductor of French opera under Garden's influence at Chicago. He appeared at Covent Garden in 1912–13, and made his last appearances there, in 1930, conducting *Pelléas et Mélisande* with Maggie Teyte, who, in her autobiography (1958), described him as that opera's 'ideal interpreter'.

RICHARD D. FLETCHER

Polak, Jakub. *See* REYS, JAKUB.

Polak, Jan. *See* POLONUS, JOHANNES.

Poland [Polish Republic] (Pol. Rzeczpospolita Polska). Country in eastern Europe. Christianity was introduced in the late 10th century, and in 1025 Bolesław I became the country's first king. With the death of Bolesław III (1138) the kingdom was divided into principalities and was threatened by outside powers, but it was reunited in the 14th century by Wladisław I and his son Kasimir the Great. By the Union of Lublin (1569) Poland absorbed Lithuania, thus reaching its maximum extent, and subsequently prospered both economically and culturally. In the 18th century the country was attacked by both Sweden and Russia, losing considerable territory; by the First Partition of Poland (1772) much of the country became West Prussia, while Lithuania was lost to Russia and Galicia to Austria. By the Second Partition (1793) further territory was lost and the country was reduced to a third of its former size; with the Third Partition (1795) the remaining territory was divided between Russia, Prussia and Austria. A result of the constant interchanges of domination of parts of present-day Poland, notably Silesia, Pomerania and West Prussia, is that at times they have partaken of German cultural traditions, especially such cities as Wrocław (Breslau), Gdańsk (Danzig), Szczecin (Stettin) and Legnica (Liegnitz); while L′vov (Pol. Lwów; Ger. Lemberg), now in Ukraine, has partly Polish traditions.

There were suppressed insurrections and changes of territory during the 19th century, but it was not until 1918 that Poland achieved independence. By that time more than a third of the population consisted of minorities, Germans, Ukrainians, Belarusians, Lithuanians and Jews, all of whom influenced musical life. The German invasion of Poland precipitated World War II, after which the country became a socialist state until 1989.

I. Art music. II. Traditional music.

I. Art music

1. To 1600. 2. 1600–1750. 3. 1750–1900. 4. Since 1900.

1. TO 1600. The earliest signs of music on the terrain of modern Poland are remains of instruments dating from the Palaeolithic, Neolithic and later periods, found in the Małopolska, Kujawy and Wielkopolska regions: bone and clay whistles, rattles and pipes used in battle, hunting, worship and recreation. Indirect records of music are included in the Life of Methodius and other writings of the 10th and 11th centuries by Theophylactus, Theophanes and Ibrahim-Ibn-Jakub. By about the 9th century an extensive range of musical instruments was in use in the lands inhabited by the Vistulans (now the Kraków region) and Polanians (now the Gniezno region), and there was playing, singing and dancing at the duke's court and at cult sites.

After 966, when Mieszko I, ruler of the Polanians, introduced Western Christianity, the Church destroyed and obliterated traces of pagan culture. Centres for the propagation of the Church's own culture (including music to serve the new rituals) were established at the duke's court, in bishoprics and in monasteries. The first liturgical books containing Roman chant were imported from the Czechs and the Germans, and include the *Codex aureus* (latter half of the 11th century), the *Tyniec Sacramentary* (*c*1060), and the *Missale plenarium*, Wrocław Pontificale and Pontificale of the Kraków bishop (11th and 12th centuries). The oldest traces of a local chant tradition date from the start of the 13th century and are associated with cults of Polish saints. There are sequences, hymns and rhymed Offices in honour of St Wojciech (Adalbert), St Stanisław (e.g. the Office *Dies adest celebris* attributed to Wincenty z Kielc, *c*1200–1260) and St Jadwiga. This early chant writing reached its peak during the 15th century. The beginning of the 14th century saw the appearance of the first manuscripts containing local versions of the liturgical rite plus chant specifically intended for Polish dioceses (e.g. the Wiślica Gradual written for Kraków). Despite prohibitions by the Church authorities, this practice survived the reforms of the Council of Trent in the form of the Piotrkowski Chant which was sung throughout Poland at the end of the 16th century and start of the 17th. Other kinds of chant (e.g. Benedictine and Cistercian) were sung in monastic houses. From the 14th century to the end of the 16th century an increasing number of Polish liturgical manuscripts with

music were recorded in numerous monastery and cathedral scriptoria, while in the 16th century liturgical books of music were also printed.

Information about musical culture, musical life and secular music during the Piast dynasty – from the reign of Duke Mieszko I to that of King Kasimir the Great (*d* 1370) – appears in Polish chronicles, for example those of Gallus Anonymous (early 12th century), Wincenty Kadłubek (1150–1223) and Jan Długosz (1415–80), and also in liturgical volumes and other documents. Diverse song types were cultivated during the period, including knightly, military and epic songs as well as the lyric (which drew on Minnesang and was heard at kings' and magnates' courts). The sole surviving example of a religious hymn with a melody and a Polish text is *Bogurodzica*, dating from the end of the 13th century. This piece was extraordinarily popular at the time but was not notated until 1407. Itinerant home-bred musicians, courtly and civic musicians, instrumentalists and singers performed at courts and in towns throughout Poland. An ever-increasing range of West European instruments was employed; there are mentions of bells (*c*1038) and of organs at the court of Kasimir the Just (*c*1177–94). *Ludi teatrales* involving singing and dancing were staged. Musical notation was known; there were many educated scribes; schooling (which included the study of music) was developing; and in the mid-13th century the first original theoretical-musical inscriptions were recorded in volumes of the liturgy. Yet despite these developments, no music representing them has survived. So the first examples of possibly native polyphonic music added in the 14th century to 12th- and 13th-century liturgical volumes from the convents of the Poor Clares in Stary Sącz and Kraków are regarded as epoch-making. These inscriptions consist of organum accompaniments to the chants *Benedicamus Domino*, *Iube Domine* and *Surrexit Christus hodie*. Another manuscript from Stary Sącz contains organa, a four-voice conductus *Omnia beneficia* and fragments of motets in the style of the Notre Dame school. Meanwhile Silesian sources of the time include motets in Ars Nova style, by Philippe de Vitry and others.

During the 15th and 16th centuries, when the Polish state was at the height of its political power under the Jagellonian dynasty (from Władysław Jagiełło's coronation in 1386 to the death of Zygmunt II August in 1572) the medieval traditions of musical culture gradually yielded to new trends. Music, however, still retained its status as an ancillary, utilitarian craft. There is a striking contrast between the scant quantity of Polish music that has survived and the widespread practice and teaching of music in Poland. The royal court maintained vocal and instrumental groups and solo musicians of every kind: a modest ensemble at the end of the 14th century, a European-scale cappella under the last Jagellons, a modern ballet and opera company at Zygmunt III's court. The same range of musicians was employed at the magnates' courts, by the nobility and Church dignitaries, in cathedrals, churches and religious houses, and in towns (particularly the larger cities like Kraków, Gdańsk, Poznań and Warsaw). Music-making was supplied on demand: foreign musicians (Russians, Germans, Czechs, Netherlanders and later Italians) were hired and even specially imported, while native musicians were taught in German-style church schools and, in the 16th century, in cathedrals, courts, Dissenters' schools and other centres. The Kraków Academy and colleges that offered a high standard of instruction taught *arithmeticum cum musica* based on Johannes de Muris's treatise, as well as *musica choralis* and *musica mensuralis*. This teaching made reference to Guido of Arezzo, Ornitoparchus, Listenius, Spangenberg and also Polish theoretical works, for the most part manuals of plainchant and *musica mensuralis*, for example the 15th-century *Musica magistri Szydlovite* and, from the first half of the 16th century, the works of Sebastian z Felsztyna, Jerzy Liban and Marek z Płocka. At the very end of the 16th century education became dominated by the Jesuits. Assorted instruments were imported from abroad or built locally, e.g. in the 16th-century lute and violin workshops of Marcin Groblicz and B. Dankwart or, during the 15th and 16th centuries, in master organ-builders' workshops up and down the country. In the latter half of the 16th century the lute became extremely popular; unfortunately none of these instruments has survived, not even fragmentarily. A widely performed repertory of European and native music was disseminated first in manuscripts (prepared by countless scribes and writers of tablature) then at the beginning of the 16th century by means of imported presses. Local printing houses were soon established, first mainly in Kraków (Florian Ungler, Hieronim Wietor, Jan Haller, the Siebeneichers, Łazarz Andrysowicz) and then in Gdańsk, Toruń and Vilnius. Reformation circles also set up numerous presses in smaller centres.

The margins of liturgical volumes and other manuscripts contained many examples of monodies set to secular texts, Polish-language songs and primitive organum-type polyphonic works set to religious texts: carols, Marian hymns, songs etc. At the start of the 1440s, manuscripts of considerable artistic merit began to appear which included movements of the mass and motets combining features of the Italian school of Ciconia and Zacharias with the Burgundian style, or combining ballade style with elements of conductus, fauxbourdon and imitative technique. Native composition is represented here by Mikołaj z Radomia and various anonymous compositions, for example a student song *Breve regnum*, a piece in honour of Kraków, *Cracovia civitas*, and countless hymns with religious texts. This repertory is included in two important manuscripts: no.378 (lost) and no.8054 from the Biblioteka Narodowa in Warsaw. The latter half of the 15th century saw the cultivation of the eclectic song-motet typical of Central European (German, Silesian, Czech and Polish) circles, which combined elements of Ars Antiqua and Ars Nova styles, plus the styles of the Ciconia and Burgundian schools. Examples are Piotr z Grudziądza's music (which is scattered throughout various sources) and the repertory of the *Glogauer Liederbuch*. The seeds of polyphony in the imitative Franco-Flemish style appear in religious songs with Polish texts – *Chwała tobie gospodzinie* ('Glory to Thee, O Lord') and *O najdroższy kwiatku* ('O dearest flower') – and also, most importantly, in the music of Heinrich Finck, a German composer active in Poland.

Vocal polyphonic composition in the 16th century developed rather late by comparison with West Europe, and remained within the stylistic orbit of the Josquin school, then, to a somewhat lesser degree, the Roman school, and finally, at the end of the century, the Venetian school. From the early 16th century complete masses and

individual movements of the mass, motets and songs have survived mainly in tablature notation, most of them based on cantus firmus technique (by Mikołaj z Krakowa, Mikołaj z Chrzanowa and various anonymous composers). After 1550 these pieces were published separately and in collections such as the Wawel Part-Books (16th and 17th centuries), and the Łowicz Organ Tablature (1580). In their mass cycles and motets, Marcin Leopolita, Tomasz Szadek, Krzysztof Borek and above all, Wacław z Szamotuł (two of whose compositions were published in Nuremberg in 1554 and 1564) exploited the riches of the quodlibet and parody techniques, and in addition to cantus firmus employed imitation and through-imitation, drawing on Flemish polyphony. The end of the century saw distinct elements of thoroughbass (Jan Brant) and polychoral technique (Andrzej Staniczewski, Andrzej Hackenberger and other composers of the Royal Chapel whose works W. Lilius collected in his *Melodiae sacrae* of 1604). However, the Polish legacy of masses and motets is slight. Considerably more songs have survived, but there is a complete absence of native chansons and madrigals. The songs are simple four-part settings of religious texts in Polish, chiefly psalms (by Mikołaj Gomółka, Cyprian Bazylik and Wacław z Szamotuł among others). In the latter half of the 16th century these pieces were published in collections and cantionals, for example the Puławski Cantional (1545–67), the Zamoyski Cantional (1558–61), and the publications of J. Seklucjan (1547) and P. Artomiusz (1587). Songs with occasional and historical themes merit special attention, including Krzysztof Klabon's cycle *Pieśni Kalliopy Slowienskiey* ('Songs of the Slavonic Calliope'), which contains elements of antique metre.

Information about the practice of instrumental music survives from the earliest times; the oldest records include the Organ Tablature of Jan z Lublina (*c*1537–40), the Organ Tablature from the monastery of the Holy Ghost in Kraków (*c*1548), the Łowicz Organ Tablature (*c*1580) and several lesser collections and fragments. All of these tablatures are in German notation and typical in repertory and style of mid-16th century German organ music, though they include Polish pieces (by Mikołaj z Krakowa, Mikołaj z Chrzanowa, Seweryn Koń, Jakób Sowa, Marcin Wartecki and Krzysztof Klabon) as well as anonymous dances and songs with Polish incipits. Lute music is of a higher standard – particularly the original pieces in the Kraków Tablature (*c*1550) composed by Polish lutenists and foreign lutenists resident in Poland (Valentin Bakfark; the Italian, Diomedes Cato; Jakub Polak, who lived in France; and Wojciech Długoraj). Lute pieces by these composers were published in the most important collections of lute music in Western Europe dating from the turn of the 17th century (e.g. those of J.-B. Besard and Joachim van den Hove).

2. 1600–1750. King Zygmunt III's hiring of 23 Italian musicians for his Chapel Royal around 1600 had a decisive influence on Polish music in initiating a strong Italian presence. More than 100 Italians are recorded as working at the Chapel Royal in the first half of the century, among them composers (Vincenzo Bertolusi, Giovanni Valentini (i), Tarquinio Merula) and virtuoso singers (Baldassare Ferri, Margharita Cattaneo), under Italian *maestri* up to 1649 (Luca Marenzio, Asprilio Pacelli, Giovanni Francesco Anerio, Marco Scacchi). Then, until 1699, the *maestri* were Poles (Bartłomiej Pękiel and Jacek Różycki), after which the coronation of the Saxon elector August II as king of Poland led to a connection with the Dresden chapel. The Chapel Royal had its most magnificent period during the first half of the 17th century, when its modern repertory and high standards of performance left their mark on the works of native composers, especially Adam Jarzębski, Marcin Mielczewski and Pękiel. The royal establishment also influenced the newly founded or refounded chapels of such magnates as Stanisław Lubomirski, Mikołaj Wolski, W.D. Zasławski and the Radziwiłłs, who also engaged Italians, especially singers.

The royal court's move to Warsaw at the start of the 17th century stimulated the development of a new musical centre there, but Kraków continued to play an important role. State celebrations still took place there, bringing the Chapel Royal from Warsaw; the Rorantists' music remained active; and a new musical establishment was instituted at the cathedral in 1619, with 30 singers and instrumentalists, again under Italian *maestri* (Annibale Orgas and Franciszek Lilius in the first half of the century), though at the end of the century the maestro was Grzegorz Gerwazy Gorczycki, the outstanding Polish composer of the late Baroque. Smaller musical establishments existed in many of the churches in Kraków at that time, some of them – including those of the Jesuits and Carmelites, according to surviving inventories – with rich repertories. The Jesuits, in particular, had musical boarding schools and religious houses around the country. Speculative music theory was taught at the Kraków Academy throughout the Baroque period, and printing houses in the city issued liturgical books, four-part Protestant songs in cantionals, and music primers. *Melodiae sacrae* (Kraków, 1604), a collection of 20 pieces by royal musicians, is the single most ambitious musical publication produced in Poland during this century, in the second half of which music printing declined.

The presence of Italians inevitably had a great effect in introducing the new styles of monody and recitative. Merula's *Satiro e Corisca*, performed in Warsaw in 1625, is a particularly interesting and influential example, its strict but emotional recitative deriving from the style of Monteverdi. Ten operas were performed by the Chapel Royal between 1635 and 1648, all with librettos by the king's secretary, Virgilio Puccitelli, who showed originality in his clear ideological programmes. His librettos were published in Warsaw and Vilnius, but the music is lost; we know only that the composers were members of the Chapel Royal (Scacchi, for example, was responsible for *Il ratto di Helena*). After the death of Władysław IV, in 1648, operatic productions were rare.

Polychoral music was known in Poland early in the 17th century, the outstanding representative being Mikołaj Zieleński's *Offertoria/Communiones totius anni* (Venice, 1611), a collection of more than 150 settings for seven, eight or twelve voices, close to early Giovanni Gabrieli in style. Later composers, such as Mielczewski and Pękiel, adhered more to the later Venetian school or, when writing in *prima pratica*, to the Roman polychoral school. In sacred *concertato* works, again known from the first decades of the century, the Venetian tradition prevails, but Roman character is found too. Of secular songs, very few have been preserved with their music, since only texts were printed.

Organists active during the 17th century included Adam of Wągrowiec, Andrzej Niżankowski (a pupil of Frescobaldi), Pękiel and Andrzej Rohaczewski; almost none of their keyboard music has survived. Chamber music flourished, mainly of Venetian fantasia and canzona types, as exemplified by the works of Zieleński, Mielczewski and Jarzębski, the trios of whose canzonas show a distinctly Polish style before 1627, privileging the violins and thereby suggesting a connection with the 16th-century tradition of violin-making in the Groblicz and Dankwart families. A local tradition existed too in church music, defined by quotations from sacred or secular songs regarded as Polish (to be found in Mielczewski, Pękiel, Stanisław Sylwester Szarzyński, Gorczycki and others). There are also mazurka rhythms in Mielczewski's canzonas; in the late 17th century, folkdance came to have a great effect on sacred music for Christmas celebrations. Mazurka, oberek and polonaise quotations, and stylizations of a folk band (drones, natural trumpet sounds, open fifths), appear in works by, for example, Szarzyński, Józef Kobierkowicz, Jacek Szczurowski and Mateusz Zwierzchowski.

In the first half of the 18th century there were composers active throughout the republican era, such as Andrzej Sieprawski, Siewiński and Policki, but no outstanding personalities appeared. Religious music dominated, especially the ensemble cantata, solo cantatas being much rarer. In cantatas by Wołoszko, Zwierzchowski, Marcin Józef Żebrowski, Antoni Milwid and Szczurowski and others, the transition from late Baroque to early Classical style can be charted.

3. 1750–1900. Polish musical life of the second half of the 18th century revolved around the royal court, the private manor houses and the churches. There was also sporadic growth of public concerts in towns, the repertory of which often included works by composers of the Mannheim and Viennese schools. Stanisław II (1764–95), the last polish king, actively encouraged the cultural life of his country, and among the institutions he founded was the National Theatre in Warsaw (1765) which staged Italian, French and German works as well as operas by Polish composers; the first Polish opera was staged there in 1778. In the 1780s municipal theatres were established in Lwów (1780), Kraków (1781), Lublin (1782), Poznań (1783) and Wilnio (1785), and numerous operas were also performed at private manor houses. Performances of symphonies were equally popular during this period; in 1781 Haydn's symphonies were performed in Poland for the first time. Contemporary Polish composers who wrote symphonies include Dankowski, Gołąbek, Milwid and Jan Wański. Poland also played host to some of the most celebrated European musicians of the time, including Pugnani, Giovanni Battista Viotti and Jan Ladislaw Dussek. In 1795 Poland lost its independence, and for the whole of the 19th century was divided between Russia, Prussia and Austria. The main centre of Polish music in the 19th century was Warsaw, followed closely by Lwów. In Warsaw, the new National Theatre building opened in 1779 and in 1833 the company moved to the newly built Teatr Wielki (Grand, or Wielki, Theatre). This was the only musical institution in Poland which continued to function throughout the entire 19th century, and which had a secure financial basis through support from the (Russian) authorities. After Warsaw, the most important opera theatre in Poland during the 19th century was the Municipal Theatre in Lemberg (Lwów). Especially in the second half of the 19th century, the theatre gave many premières of works by Polish composers, because these were not welcomed by the Russian government in Warsaw. The opera ensembles in Warsaw and Lemberg gave guest performances in other Polish cities, including Kraków, Lublin and Kalisz. Opera performances were also given at theatres in other cities, especially Kraków and Poznań.

Public concert life was dominated by benefit concerts and by programmes comprising many short items played by different performers. The latter type of concert, which was typical in Western Europe during the first half of the 19th century, remained popular in Poland through the later part of the century. These concerts usually featured solo performances and small chamber ensembles. Besides leading Polish performers (including Szymanowska, Lipiński, Chopin, Wieniawski and Paderewski), the most famous European musicians performed in Poland, among them Hummel, Paganini, Dreyschock, Vieuxtemps, Pasta, Liszt and Saint-Saëns. Orchestral music, including that by native composers, was rarely performed, due to the lack of permanent orchestras other than opera orchestras. There were cycles of subscription concerts devoted mainly to chamber music in Warsaw (from 1817) and subsequently in Kraków, Lemberg and smaller towns such as Lublin. In addition, concerts of religious music took place in churches. The number and variety of concerts gradually increased during the course of the century, primarily through the activities of the music societies which were created in many Polish cities. These societies had their own choirs and often their own amateur orchestras, and sometimes even supported music schools (for example, the Galician Music Society in Lemberg, the Warsaw Music Society and the Kraków Music Society). In the second half of the century many choral societies were created, initially in the region of Wielkopolska (Greater Poland) which was under Prussian occupation. The first such societies were formed in the 1860s, and were followed by choral societies in other regions such as the Lutnia Society in Lemberg (1880) and the Lutnia Society in Warsaw (1886).

The first conservatory to provide a full range of music education in Poland was founded in Warsaw in 1821 as the Institute for Singing and Declamation. Its principal was Józef Elsner, later the teacher of Chopin. After the failure of the November Uprising the conservatory was closed down in 1831; its functions were later taken over by the Music Institute (1861), which became the Warsaw Conservatory after World War I.

The 19th century saw a considerable growth in writings on music and music criticism, and the appearance of the first Polish music journals. The most important of these were published in Warsaw: *Tygodnik muzyczny* ('Musical Weekly', 1820, edited by Karol Kurpiński); *Ruch muzyczny* ('Musical Movement', 1857, edited by Józef Sikorski), and *Echo muzyczne* ('Musical Echo', 1877, edited by Jan Kleczyński). The leading figures in Polish music criticism included Maurycy Mochnacki, Sikorski, Józef Kenig, Maurycy Karasowski and Kleczyński. The beginnings of Polish musical lexicography date from the middle of the century; its most important manifestation was the dictionary of Polish musicians by Wojciech Sowiński, *Les musiciens polonais et slaves anciens et modernes* (Paris, 1857). Research into early Polish music began in the first

years of the century and gave rise to many publications on this subject, together with concerts of early music and the publication of numerous works, including J. Cichocki's *Chants d'église a pleusiers voix des anciens compositeurs polonais* (Warsaw, 1838) and the important four-volume source by Józef Surzyński, *Monumenta musices sacrae in Polonia* (Poznań, 1885–96). From the beginning of the century folksongs were also collected. The most important research in this field was by Oskar Kolberg, whose monumental work was without precedent in Europe. He collected more than 15,000 melodies, of which he published almost 9000 in 33 volumes between 1865 and 1890.

There was also a growth in music publishing. The first part of the century saw the creation of a series of small, mostly short-lived, firms, including Klukowski, Friedlein, Józef Zawadzki and J.K. Żupański. Especially after 1850, several larger music publishers were founded, some of which continued into the 20th century. These included Gebethner & Wolff and Sennewald, both based in Warsaw, and Juliusz Wildt, based in Krakó. The output of these firms was dominated by solo and chamber works; the relatively few orchestral, choral and operatic works that were published tended to appear in piano reductions. For example, Gebethner & Wolff published a short score of *Halka* by Moniuszko in 1857, and one of the opera *Monbar* by I.F. Dobrzyński in 1863. The 19th century also witnessed a growth in the manufacture of musical instruments, notably of pianos. The best-known Polish piano manufacturers were Antoni Leszczyński, Krall & Seidler, and Fryderyk Buchholz, who had his factory in Warsaw from 1815 to 1837. Chopin had a piano by Buchholz in his Warsaw apartment.

In the 19th century Poland produced many performers of European renown. These included the violinists Karol Lipiński, Apolinary Kątski, Henryk Wieniawski and Stanisław Barcewicz, the cellist Aleksander Wierzbiłłowicz, the pianists Maria Szymanowska, Antoni Kątski, Aleksander Michałowski, Paderewski, Natalia Janotha and Józef Wieniawski, and the singers Władysław Mierzwiński, the Reszke family, Aleksander Bandrowski-Sas and Marcella Sembrich.

From the early years of the 19th century Polish musical culture was dominated by the concept of nationalism. With the loss of Polish independence art was invested with a special significance, reinforcing the sense of national identity. One of the musical consequences of this was that throughout the century composers worked with the metrical rhythms of Polish folkdances (polonaises, mazurkas and krakowiaks). In addition to the numerous self-contained dance pieces, these metrical rhythms also pervaded large-scale works such as sonatas, symphonies, concertos, operas and even sacred works. The generation of Polish composers before Chopin included M.K. Ogiński (primarily a composer of polonaises), Franciszek Lessel, Józef Elsner, Karol Kurpiński, Józef Deszczyński, Franciszek Mirecki, Maria Szymanowska and Karol Lipiński. The works of these composers were predominantly in the Classical style, and particularly influenced by Haydn. Some pre-Romantic elements are also apparent, especially in the works of Maria Szymanowska, whose piano miniatures (including mazurkas, études, polonaises, waltzes and nocturnes) prefigure Chopin. The most important opera composers of that time were Elsner, Kurpiński and Mirecki.

With Chopin Polish music became internationally influential; his piano works evolved a highly individual style through their original harmony and their transformation of folk music, and subsequently became a symbol of Polish nationalism. The other composers of Chopin's generation were mostly fellow pupils of Elsner: I.F. Dobrzyński, Józef Nowakowski, T.N. Nidecki, Antoni Orłowski and Julian Fontana. The strongest influence on Polish composers of the second half of the 19th century was Moniuszko, the most significant Polish composer after Chopin and widely acknowledged as the creator of Polish national opera. His operas show stylistic affinities with the works of Auber, but make much use of Polish themes and the metrical rhythms of Polish folkdances. The principal composers of the following generation were Władysław Żeleński and Zygmunt Noskowski, who were also important as teachers and conductors. Each worked in a wide range of musical genres. Żeleński is notable above all for his songs and operas, which continued the tradition of Moniuszko, while Noskowski concentrated more on chamber and orchestral works, and wrote the first Polish symphonic poem, *Step* ('The steppe', 1896). Other composers of the period include Paderewski (1860–1941), Gustaw Roguski (1839–1921), Antoni Stolpe (1851–72), Henryk Jarecki (1846–1918), whose operas show some Wagnerian influence, and Roman Statkowski (1859–1925). Stylistically, the works of Polish composers in the later 19th century are conservative, rarely going beyond Schumann or Mendelssohn. The only exceptions are the songs of Eugeniusz Pankiewicz (1857–98), which reveal a more adventurous approach to harmony and, above all, the works of Juliusz Zarębski (1854–85), whose music sometimes foreshadows Impressionism. Neither Pankiewicz nor Zarębski, however, had a decisive influence on the development of Polish music. The situation only changed with the next generation of composers, such as Karłowicz and Szymanowski, whose work extended well into the 20th century.

4. SINCE 1900. 20th-century Polish music was intimately bound up with the two world wars and a sequence of what, at the time, seemed to be insuperable socio-political problems. At the turn of the century, Poland as an independent country still did not exist, partitioned as it was between Russia, Prussia and Germany. Its musical life was stagnating too, with composers caught in a conservative time warp (Paderewski's compositions were, however, of some importance). Warsaw's Philharmonic Hall opened in 1901, enabling the city to have a full symphony orchestra for the first time. However, it took a handful of musicians – called YOUNG POLAND after the *fin-de-siècle* literary and artistic circle in Kraków – to make active contact with the European mainstream. The group's first concert (performed in Warsaw, 6 February 1906) marked the official moment of recognition for its members: Grzegorz Fitelberg, Ludomis Różycki, Szeluto and Szymanowski.

It was Szymanowski and his colleague Karłowicz who initially set the pace of reform by embracing recent Germanic influences; Karłowicz died prematurely and Szymanowski shouldered the burden until his own death in 1937. He brought other European, Mediterranean and Eastern influences to bear on his own music and, after World War I and Poland's resultant independence in 1918, turned to Polish folk music as both a new exoticism and his way of helping to establish a Polish national

identity. At the same time he encouraged his younger compatriots to study abroad, especially in Paris, as a means of ensuring musical renewal and as a guard against provincialism.

French neo-classicism provided the mainstay of Polish music until the mid-1950s because of two further periods of cultural isolation. During World War II Poland's occupation by the Nazi forces crippled its musical life, which barely survived in underground educational activities and in café concerts. After the war, however, Polish musicians quickly regrouped, setting up a network of music schools and conservatories, radio and concert orchestras, music organizations and journals which have survived into the 21st century.

Composers re-formed their union, which also established a musicology section. This latter move was to prove crucial as postwar political manoeuvring led to a one-party communist state at the end of 1948. Soviet cultural dogma weighed heavily on Polish music in the years 1947 to 1954, when the Stalinist policy of *socrealizm* (socialist realism) was promulgated by the Polish Ministry of Art and a few key figures such as the Soviet-trained musicologist, Zofia Lissa (the policy's critics, especially Kisielewski, were only partly silenced). Genres such as the mass song, cantata and opera, none of which had much of a Polish pedigree, were encouraged, especially after a government-led composers' conference at Łagów (5–8 August 1949). Peer-review sessions were set up so that music of all types could be vetted. Against the odds, significant contributions were made in this postwar decade by Bacewicz, Lutosławski and Panufnik; the less experienced younger generation, such as Baird and Serocki, struggled to establish themselves against the backdrop of 'music for the masses'. Although many works were criticized and some banned, the system was far less severe and watertight than in the USSR, and after Stalin's death in 1953 the restrictions slowly faded. Nevertheless, this did not prevent Panufnik's defection to the West in 1954.

Tumultuous political events in Poland at the end of October 1956, which were to lead to artistic freedoms unparalleled elsewhere in the Soviet bloc, coincided with the first Warsaw Autumn international festival of contemporary music. The brainchild of the Union of Polish Composers, and of Baird and Serocki in particular, this festival, now the longest-running of its kind anywhere in the world, played the crucial role in bringing contemporary music and composers from inside and outside Poland together. The late 1950s saw an astonishing explosion of talent and avant-garde experimentation that soon earned composers the soubriquet abroad of the 'Polish School'. It was the generation of Górecki and Penderecki that provided the real shocks, alongside the slightly older Kotoński and Bogusław Schaeffer. After sampling serial systems and aleatory trends from the West, Polish composers, almost as one, shifted towards a direct, expressive engagement with sound and textures, which for a while seemed to justify the term 'sonorism' attached to their music in Poland itself. And yet composers revealed individual characteristics which went beyond the initial catalysts and musicological labels. By the mid-1960s Lutosławski had clearly defined his own rich idiom, Bacewicz and Szabelski had made their personal accommodations with new methods of pitch organization, while Baird and Serocki had gone their separate expressive ways.

The tide against Western European and American experimental aesthetics became apparent in the 1960s not only in the 'Polish' appropriation of old music and religious genres by Górecki and Penderecki – trends which were to lead in the mid-1970s to the modalism and slow repetitive rhythms of Górecki's Third Symphony and, more controversially, to Penderecki's regression to 19th-century symphonism – but also in the ultra-reductive, reiterative abstractions of even younger composers such as Krauze and Tomasz Sikorski. In the early 1970s, Krauze was joined by Kilar in brashly embracing Polish folk music, an ironic recall of the very materials to which Szymanowski had turned in 1921 and which had been more or less obligatory under *socrealizm* after World War II.

The reaction of the generation of composers born in the 1950s and 60s was to take detached, often ironic attitudes to contemporary culture. This coincided with new political turmoil: the election of a Polish pope (1978), the rise of the Solidarity trade union (1980) and the declaration of martial law (1981). Postmodernism emerged in lean Baroque fragmentation (Szymański), minimalism in hard-driven edginess (Kulenty) and nostalgia in post-Romantic opulence (Knapik). If a cross-section of Polish musical culture were to be made as the country regained democracy in 1989, after decades of vicissitudes, it would reveal that many of its composers had achieved Szymanowski's goal of international stature, that its musicology had emerged with dogma-free successes, especially in the field of medieval and Renaissance Polish music, that there was a vigorous growth in new high-quality performing ensembles, both authentic and modern, but that most of its musical institutions were hard pressed by new competitive initiatives (especially in publishing and the media) and by the drastic cuts in state subsidy which post-communism brought in the 1990s.

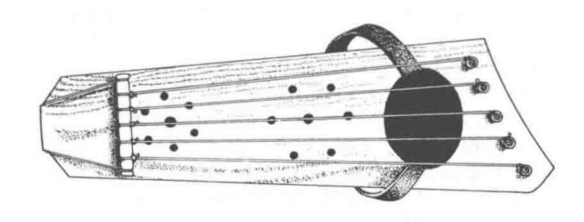
II. Traditional music



1. Introduction. 2. Sources and research. 3. Function and context. 4. General characteristics. 5. Instruments. 6. Music regions. 7. Popular song and 'folklorism'. 8. Recent trends.

1. INTRODUCTION. The 'Polishness' of Polish folk music does not reside in its stylistic uniformity, but in its use of the Polish language, one of the western family of Slavonic languages, and in the performer's consciousness of his or her Polish identity. The concept of 'folk' usually denotes a local collection of integrated, rural communities with a traditional culture, but in the 20th century research has been broadened to include the working urban environment and the oral tradition of religious songs. Poland has a population of nearly 40 million, two-thirds of which is urban and approximately 1·5% of which represents national minorities (Lithuanians, Belarusians, Russian Old Believers, Ukrainians, Ruthenians, Slovaks, Czechs, Jews, Germans and the Romani people). About a million Poles live abroad as minorities, in Russia, Lithuania, Belarus, Ukraine, the Czech Republic, Slovakia, Germany, France, the British Isles, the USA, Canada, Latin America and elsewhere; the study of their musical traditions is just beginning. Polish has a number of dialects which differ in varying degrees from the literary language and there are numerous cultural regions (fig.1). Since 1945 the west of the country has been the scene of intensive resettlement, which precludes discussion of the characteristic features of this culture in terms of geographical categories.

2. SOURCES AND RESEARCH. There are a number of important sources for the pre-folkloristic period (before the 18th century). Excavations from the Palaeolithic era to the Middle Ages have revealed ceramic rattles (including zoomorphic and ornithomorphic types), ceramic hourglass drums, bone and clay whistles, panpipes (for example from the 8th century to the 6th BCE, in Małopolska) made from nine bone pipes and probably

1. Map of Poland showing the major cultural regions

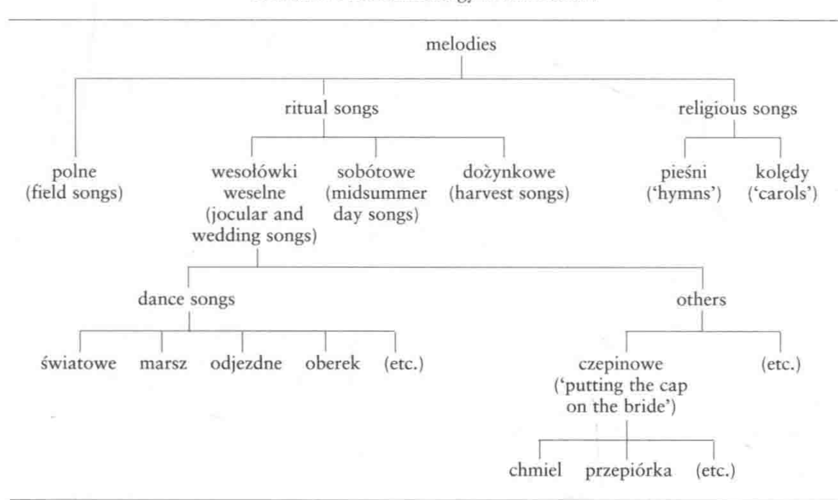
2. *Drawing of a gęśle (five-string zither) from Gdańsk, 12th–13th centuries*

constructed in an anhemitonic pentatonic scale, pipes and chordophones, including five-string zithers of the KANTELE type (fig.2). Written sources include the reports of travellers and merchants (e.g. the Arab geographer Ibn Rustah, *fl* 903), of writers (e.g. Theophylactus Simokatta, 7th century) and of foreign and Polish chroniclers (e.g. Wincenty Kadłubek), sermons, statutes and synodal resolutions, economic accounts and tax registers dealing with such varied items as Slavonic chordophones, Polish trumpets, pipes and the distribution of pipers, superstitions and songs (e.g. historical songs, midsummer night customs and the songs that were sung at them). In literature there are references to customs and songs (e.g. by Jan Kochanowski) and instruments (e.g. by Kasper Miaskowski). Musical sources yield quotations of melodies and metrorhythmic features in compositions from the Renaissance onwards, including contrafacta and dances. Further information comes from iconography, especially wall paintings (e.g. the earliest Polish representation of bagpipes, in the church at Mieronice, early 14th century) and woodcuts in printed works (fig.3); and from organological literature (e.g. M. Agricola, *Musica instrumentalis deudsch*, Wittenberg, 1529, on Polish violins).

In the 19th century the first attempts were made to note down folk music, inspired partly by the ideas of Romanticism (the search for 'Slavonic antiquities'), and later by 'positivism' (a desire for scientific documentation). Folk art was also looked to for confirmation of the national identity by a nation deprived of its existence as an independent political unit. The year 1802, when Hugo Kołłątaj first formulated the needs of Polish historiography, is regarded as the date when the study of Polish folklore began. The first collections of songs, most often without melodies, were made by Joachim Lelewel, Adam Czarnocki (under the pseudonym Zorian Dołęga-Chodakowski), Kazimierz Wójcicki, Wacław Zaleski (pseudonym Wacław z Oleska), Karol Lipiński, Żegota Pauli, Józef Konopka, Ludwik Zejszner and Jan J. Lipiński. The first articles on folklore were written by Paweł Woronicz on folksong and Karol Kurpiński on folk music (1820).

An important change of direction was effected by the work of Oskar Kolberg (1814–90), who collected and published ethnographic materials, including some on folklore, arranged in volumes according to region and encompassing Polish, Lithuanian, Belarusian and Ukrainian ethnic areas. 33 volumes were published during his lifetime. The reprinting of these, and publication of the unpublished manuscripts (begun in 1961), will amount to about 80 volumes, containing about 25,000 songs and dances and about 15,000 melodies. Other important collectors of Kolberg's period and later were Gustaw Gizewiusz, Florian Cenowa, Józef Lompa, Andrzej Cinciała, Jan Kleczyński and Zygmunt Gloger.

From about 1904 folk music began to be recorded on the phonograph: musicologists engaged in this work included Adolf Chybiński, Helena Windakiewiczowa, Łucjan Kamieński, Marian Sobieski and his wife Jadwiga, and the ethnographer Kazimierz Moszyński. Between 1930 and 1939 archives of recordings were built up in Poznań (under Kamieński) and Warsaw (director Julian Pulikowski), together containing a total of 25,000 recordings. Individual collectors of folk music included Marian Stoiński, Władysław Skierkowski as well as Stanisław Mierczyński.



During World War II these collections of recordings were completely destroyed. From 1945, initially under the direction of the Sobieskis, an important new collection has been built up totalling about 120,000 recordings and housed in the Institute of Fine Arts, Warsaw (M. Sobieski Archive). Other important collections are to be found in university institutes of musicology (Warsaw, Poznań, Kraków and Katowice) and in the archives of the Polish Broadcasting Corporation's Centrum Kultury Ludowej (Centre of Folk Culture). In 1970 the Catholic University of Lublin began documentation and research into the oral tradition of religious songs, examining the immense local variability of these songs and the changes taking place in the Catholic liturgy. Research is currently being carried out by B. Bartkowski, Ludwig Bielawski, Jadwiga Bobrowska, Anna Czechanowska, J.K. Dadak-Kozicka, Ewa Dahlig, Piotr Dahlig, Adolf Dygacz, Alojzy Kopoczek, Bogusław Linette, Bożena Muszkalska, Aleksander Pawlak, Zbigniew Przerembski, Jan Stęszewski and Sławomira Żerańska-Kominek.

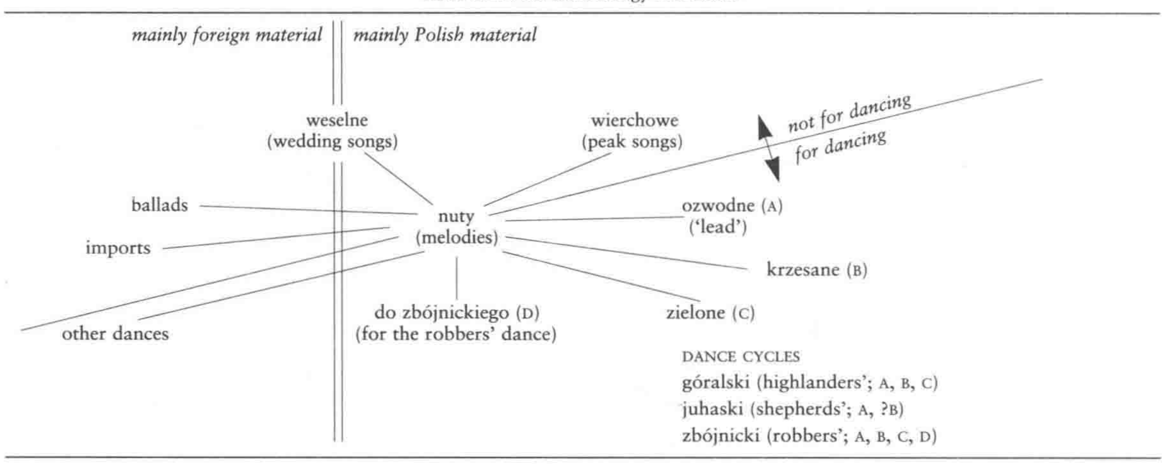
3. FUNCTION AND CONTEXT. Folklore survives to varying degrees in different villages and regions. Until the mid-20th century everyone in the villages sang, and professional musicians, untrained in the Western sense, played for dances. The repertory of songs is divided in the communities into that of children and adults. The adults sing either in groups, as in some ritual songs, or solo, as

3. *Entertainment in a hostelry with serby (fiddle), dudy (bagpipe), flute and bębenek (drum): woodcut from J. Haur's 'Skład albo skarbiec znakomitych sekretów ekonomii ziemiańskiej' (1693)*

TABLE 1: Folk terminology in Sandomierz

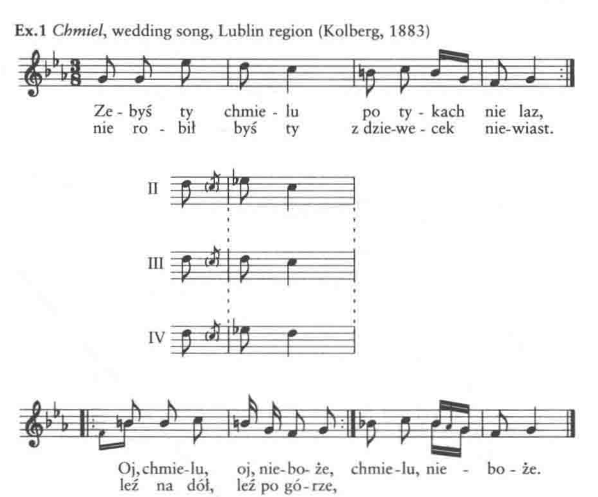
in women's lullabies and men's and women's *przyśpiewki* (the *przyśpiewka* is associated with rituals or with the dance and consists of a short 'pre-dance' stanza sung by a dancer as a musical cue to the instrumentalists, followed by the playing of this melody for the dance by the ensemble). Some songs are led by individuals, such as the *czepiarka*, the woman who puts the married woman's headdress on the bride at the wedding. The musicians play local *przyśpiewki* for the dance, a small number of dances being purely instrumental, and a few melodies for ceremonial occasions. The relationship between the singers and players in performance of dance music is usually one of two types: singing is followed by dancing with the instrumental group, followed by singing again; or, singing with the instrumental group is followed by dancing with the instrumental group, followed by singing with the instrumental group again. The first type of relationship is encountered in Wielkopolska and the Kielce and Lublin regions, and the second type in Podhale, Beskid Śląski, the Kraków area and Kielce region. A similar relationship between instrumental group and singers is found in ritual group songs (e.g. of weddings), although there are occasions when the ritual songs are sung by a group without instrumental accompaniment.

The most important ritual is the wedding, with a rich repertory of melodies. Some wedding songs have a wide distribution (e.g. the *chmiel*), others are more local. A lively tradition is the singing of special religious songs before a funeral. The most important annual ceremonies are those clustered around Christmas, such as the singing of carols (*kolędowanie*) and processions with masked figures; spring customs of driving away winter and welcoming spring (*gaik*, *topienie marzanny*, *dyngus*) and *sobótki* (customs for midsummer night), traditions known to have existed from the Middle Ages; and ceremonies for summer, the harvest and the end of the harvest.



A considerable number of the melodies are for dances, and many others possess dance characteristics – the connection with the dance leaves its mark on the music. Dances are usually accompanied by instruments, but a few dances are accompanied by songs only: these are children's dances and a traditional women's dance at weddings in the Kurpie region, called *przytrampywanie*. Dances can be divided into group dances and couple-dances. Among those for groups are dances based on a circle (e.g. the *zbójnicki*, a men's dance, and the *przytrampywanie*) and figure-dances (e.g. *szewc*, *miotlarz*, *kadryl*). Most common are round-dances for many couples, for example the *kujawiak*, *oberek*, *okrągły*, *światówka*, *powolniak* and POLKA.

Song texts may be loosely associated with particular melodies, in which case they form a repertory primarily of single stanzas which are joined into cycles as needed, as in certain situations at a dance, for example. A closer link between melody and text is apparent in ritual and multi-stanza songs, such as ballads. Jan Bystroń distinguished three basic groups of songs: songs related to rituals; general songs, which can be sung at any time, anywhere, by anyone, and include ballads, comic songs and *przyśpiewki*; and occupational songs. The most numerous are the ritual and general songs, the most vital are the sub-group of *przyśpiewki*. The epic is not a characteristic genre.



Participants in a local musical culture have a system of concepts which classify songs according to their ritual function, their place of performance and their dance type; these correspond to fairly distinct musical groups. In the terminology of Sandomierz (Table 1) *polne* ('field') songs are those sung in the open air; *światowe* ('worldly' songs) are *przyśpiewki* melodies and are sung to texts with varying content. In Podhale (Table 2) the word *nuta* means melody; *wierchowe* ('peak' songs) are those versions of dance-tunes, called *ozwodne*, which are not danced to, and are sung as general songs in the open air. Children's songs, funeral laments, shepherds' calls etc. are not generally considered as music.

4. GENERAL CHARACTERISTICS. Vocal and instrumental music is based on a more or less equal-tempered tonal system. Two groups of forms, one recited rhythmically (children's play songs), the other without a fixed rhythm (laments), display the merest traces of melodic organization. In some types of scale (e.g. narrow-range or pentatonic) the third and the seventh occur with a neutral pitch or are unstable (ex.1). Particular scales or types of scale predominate in the songs of a specific region, or are connected with certain genres. The melodic range of the

TABLE 2: Folk terminology in Podhale

Ex.1 *Chmiel*, wedding song, Lublin region (Kolberg, 1883)

songs varies from one region to another. Melodies with a range of a 3rd or a 4th are considered survivals and are found in wedding songs and annual rituals (ex.2), Many street vendors' calls are based on two pitches a 3rd apart,

Ex.2 Midsummer Day song, Lublin region (Czekanowska, 1961)

or three notes ranging over a 4th. The pentatonic scale is found in conservative regions (e.g. Kurpie region), but it is unknown in the Carpathian area (Orawa, Podhale, Pieniny). Major and minor modes are known all over Poland.

Most frequently, a single note is sung to each syllable of a text (syllabic song). A certain amount of melisma, generally of two notes (as in grace-, passing and changing notes), occurs in about 10–20% of songs in the south and about 60–70% in the central regions, although these usually occur as isolated instances. More melismas are found in slower and ceremonial songs, fewer melismas in the lively ones or in dance-songs. Glissando is frequent. Monophony predominates; earlier polyphony is characteristic of the Carpathian area. Harmonic songs (i.e. in harmony of the Western type) in folk usage date from the 19th and 20th centuries and are rarely found. Folksong melodies usually move in 2nds and 3rds; larger intervals may occur at the beginning of a phrase, in *przyśpiewki*, and in songs from the western and north-western regions. The general melodic contour is undulating. The melody is divided into sections coinciding with the divisions of the text lines and limits of the beat. Melodic motifs, except in archaic ceremonial melodies, are sharply outlined and distinct.

Syllabic verse forms predominate, although deviation from the strict syllabic system does occur; there is, for instance, an asyllabic system, in which the number of syllables and accents in a line is variable, and a tonic system (e.g. in children's songs and those of annual rituals), in which there is a set number of accents in a line, but the number of syllables varies. In the syllabic system the most common divisions of syllables within the line are: 12 (6 + 6) and 6, 8 (4 + 4), 14 (4 + 4 + 6) as in ex.10, 10 (5 + 5) as in ex.1, 7 (4 + 3), 13 (4 + 4 + 5), 11 (4 + 4 + 3) and 10 (4 + 6). The frequency of their occurrence varies in different areas. Syllabic songs are generally composed of two- or four-line rhymed isorhythmic stanzas. Heterosyllabic stanzas are found, for example *AABBA* (where the third line is of a different length), *AABBA'* (the fifth line being a section of the first) and *AABB*. 12- and 8-syllable lines are generally connected with *przyśpiewki*; the 10 (5 + 5)-syllable line is a verse form used in northern Poland for *przyśpiewki*, or for wedding or harvest songs; 11-syllable lines are connected with pastoral and wedding songs. The basic words of the text are expanded with interjections (*oj, ej, dana*), a nonsense refrain or a meaningful one, and repetitions of the text (as in ex.2). Interjections are characteristic of dance-songs (ex.3), while a meaningful refrain is found in wedding songs, among others (e.g. ex.1, second part).

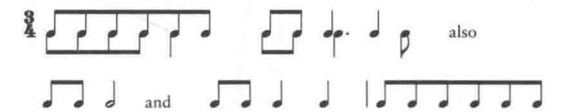
There is a close correlation between syllabic versification and the repetitive and generative qualities of the rhythmic patterns. Some rhythms are particularly frequent, as are those of the mazurka, krakowiak and polonaise, which were the first 'national dances'. At the beginning of the 17th century 'Polish dances' based on the rhythm of the mazurka were fashionable outside Poland. The mazurka rhythm is associated mainly with 8-, 14-, 12- (ex.3) and 13-syllable lines: it is in triple

Ex.3 *Światówka*, dance-song, rationalized rhythmic pattern, Sandomierz region (Stęszewski, 1974)

metre, often in fast time, the bar having a maximum of four syllables, condensed in the first part of the bar (ex.4*a*). The phrases vary in rhythm, depending on the proportions of the line (ex.4*b*). These rhythms are found in non-dance-songs all over Poland and in *przyśpiewki* in the central region. The dances with mazurka rhythms have various names, tempos and characteristics: *kujawiak* (ex.8), *obertas*, *powiślak*, *światówka* (ex.3), *mazur* and others.

Ex.4 Common mazurka rhythms

(a)



12-syllable lines are the basis for a group of fast, duple-metre krakowiak dances, which are found mainly in Małopolska. Locally they assume various names (*szopieniak*, *mijany*, *suwany* and others). Most frequent are two forms of syncopated krakowiak rhythms (ex.5). The

Ex.5 The most common krakowiak rhythms

rhythmic formula of the *polonez* ('polonaise') is associated with some dance-songs, also with general ones and a few wedding songs. It is characterized by triple time with a fairly slow tempo; a maximum of six syllables to a bar; like the mazurka, a rhythm of four syllables; and special cadential turns and dotted rhythms (ex.6). The polonaise rhythm uses the rarer lines of 10 (4 + 6), 17 (4 + 6 + 4 +

Ex.6 Common rhythmic patterns in the polonaise

3) and 19 (6 + 6 + 4 + 3) syllables, and polonaise dances have a number of names: *polski*, *chodzony*, *pieszy*, *wolny*, *wielki* and others.

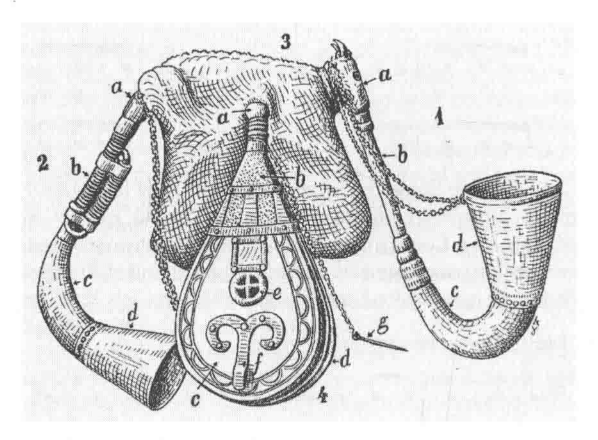
Features common to the whole of Poland are absence of anacrusis and a preponderance of 'descendental' rhythm (i.e. progressively decreasing rhythmic density within each bar or phrase) and dotted descendental rhythm. Singing is in a natural chest voice, of medium intensity. Wedding songs are sung lower, dance-songs higher. Ritual songs and those sung out of doors have the slowest tempos.

The stanzaic form predominates in Polish folksongs. Those without stanzas are street vendors' and shepherds' calls (*wyskanie* in Podhale), children's play songs, songs for annual ceremonies and some *wierchowe* melodies from Podhale. The most frequent forms of musical stanza (where *R* is the refrain) are: *AA'*, *AA'A'* (ex.10), *AAR* (ex.1), *AA'RA'*, *AB* (ex.7), *AA'B* (ex.2), *ABB'* (ex.3),

Ex.7 Wedding song, Kurpie region (S. Jarociński, ed: *Polish Music*, Warsaw, 1965)

AAAA', *AABA*, *ABAB'*, *ABCA* etc. Songs with a bar structure usually have 8 or 16 bars, but are expanded by repetitions and refrains. The arrangement of phrases is usually symmetrical, although other structures occur (ex.7). The most stable elements of the songs are form, versification and rhythm, and to a lesser degree scale and, least of all, melody. The variability of the melody is, however, subject to certain limitations (ex.1 shows the variation in one bar of the melody).

5. Instruments. Some instruments are used exclusively by children, and these are mostly toys producing one or a few notes, or percussion instruments. They include wooden *fujarki* (pipes) with six to eight or fewer finger-holes; *fujarki z kory*, pipes made from willow bark; *piszczałki* (reedpipes) made from the stems of plants, with single or double reeds; ivy leaves and pieces of birch bark; *gwizdki* (whistles) made from various materials; *klekotki* (rattles) or *kołatki* (clappers), and the *terkotki* (rattles) used on Good Friday; *grzechotki* (rattles); and the *diabełek* ('little devil'), which is a small friction drum. Larger and stronger friction drums known as *burczybas* or *huk* are used by adults in the Pomorze and Warmia regions as ritual instruments.



Adults use many instruments, some of which are confined to particular regions. They can be divided according to usage into those for accompanying dances, and those which are used in other circumstances. Thus the violin and bagpipes are used to accompany dances,

4. Trombita (long wooden trumpet), Beskid Śląski region

while the violin and various kinds of wooden flutes are also used to play solo music – *granie do słuchu* ('for listening') – in some areas.

There are three types of wooden trumpet, used by shepherds: the *bazuna* in Pomorze is about 2 metres long (it is also played by fishermen); the *ligawka* or *ligawa* from Mazowsze, about 1·5 metres long, can be straight or slightly curved, and is also played in the evenings during Advent; and the *trombita* (*trąbita*, *trębita*; fig.4) from Beskid Śląski, up to five metres long. The *bazuna* and *ligawka* are slightly conical and produce only between four and eight harmonics; the *trombita* is cylindrical and is used for playing slow melodies. The *fujarki* (duct flutes) are also shepherds' instruments and are of two types: the first has between six and eight finger-holes; the second has no finger-holes, but by overblowing, and either opening or closing the distal end, two series of harmonics are produced, which are the basis of rich melismatic playing. In Mazowsze such pipes are made of willow bark, while in Beskid Żywiecki they are made from a hollowed-out branch about 60 cm long; they are usually played while herding a flock, or during Lent, hence the name *postna* ('Lenten') *fulyrka*.

There are five basic types of bagpipe in Poland, all with single reeds. The *kozioł* of western Wielkopolska has the deepest tone and the widest range: *b*♭–*c*′–*d*′–*e*♭′–*f*′–*g*′–*a*♭′–*b*♭′–*c*″–*d*″–*e*♭″(drone *E*♭), the two highest notes being produced by overblowing. The hairy side of the skin is on the outside of the bag. The *dudy* (figs.5 and 6), common in other parts of Wielkopolska, has a slightly smaller range and a higher pitch: *f*′–*a*′–*b*♭′–*c*″–*d*″–*e*♭″–*f*″–*g*″(drone *B*♭), although it can be tuned higher or lower. In the Beskid Śląski region *gajdy* are used, tuned to *b*♭–*e*♭′–*f*′–*g*′–*a*♭′–*b*♭′–*c*″ (drone *E*♭), while in the Beskid Żywiecki there are *dudy*, similar to the *gajdy*, tuned to *c*′–*e*♭′–*f*′–*g*′–*a*′–*b*′–*c*″–*d*″(drone *F*). The *koza* of Podhale, with no bell, differs considerably from the other types in that it has three drones: one in the separate drone-pipe, and two in the chanter, which has three channels. Its scale is: *b*♭′–*c*″–*d*″–*e*♭″–*f*″–*g*″ (drones *B*♭, *f*′ and *b*♭′). All the

5. Dudy (bagpipe) from Wielkopolska: (1) chanter: (a) wind cap, (b) chanter, (c) wooden horn, (d) metal bell; (2) drone: (a) wind cap, (b) drone-pipe, (c) horn, (d) metal bell; (3) bag; (4) bellows: (a) 'knee', (b) neck, (c) upper board, (d) leather casing, (e) vent with valve inside, (f) hook, (g) cleaning rod for removing excess wax from finger-holes

6. *Dudy (bagpipe), Beskid Żywiecki region*

bagpipes except those in Beskid Żywiecki and Podhale have bellows for filling the bag with air. Most types have a straight drone-pipe, while that in the *kozioł* and the *dudy* from Wielkopolska is bent twice, at an angle of 180° (see fig.5), and has a bell. Historical sources show clearly that the distribution of bagpipes in Poland was once much greater than it is now. Young people learning to play the *dudy* in Wielkopolska use a bladder pipe known as *siesieńki* or *pęcherzyna* (fig.7) with a scale similar to that of the *dudy*. The *siesieńki* has no drone or bellows, and the leather bag is replaced by one or two bladders.

Of the string instruments, the fiddle predominates throughout Poland. Common characteristics of fiddle playing are a general adherence to the 1st position; frequent use of the E and A strings for playing the melody and the occasional use of the D and G strings for drone accompaniment; arco playing, in a non-legato style apart from ornamentation; and 'playing for listening'.

Until the early 20th century, smaller string instruments of the kit type were played in Wielkopolska and Podhale: the *mazanki* (tuned *a′–e″–b″*) and *złóbcoki* or *gęśliki* (with three to four strings tuned like the violin) respectively (figs.8*a* and *b*). They were carved out of one piece of wood, except for the soundboard. In the 19th century there existed in the Lublin area a string instrument called the *suka*, similar in shape to the violin but with a shorter neck and three strings: the strings were stopped with the fingernails, and it was held like the viola da gamba (cf fig.3). Both the *suka* and *mazanki* had bridges constructed so that one foot rested on the soundboard and the other, longer, foot extended through the opening to rest against the back of the instrument: the *basy* in the Kalisz area had a similar bridge (for further illustration, *see* BRIDGE (i), fig.1*g*). *Mazanki* began to be replaced at the beginning of the 20th century by a fiddle with an artificial fret, designed to facilitate playing in the 1st position but in a higher register, required for playing with the *dudy*.

Various bass string instruments with two to four strings and of different shapes are used in Poland, including the *basetla* or *basy*, a type of local cello or double bass. Many of these are carved out of one piece of wood, apart from the soundboard, and are played as drone instruments with unstopped strings (e.g. in the Kielce and Kalisz areas) or with stopped strings in the Podhale and Rzeszów areas, although this is a newer practice. A popular instrument in the Rzeszów area is the locally made *cymbały* (dulcimer).

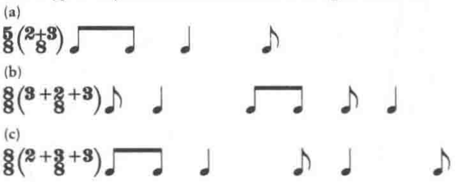
7. *Siesieńki jednopęcherzowe (single bladder pipe)*

Ex.8 The *kujawiak* dance, Kujawy region, played on the violin by Władysław Kwiatkowski (*b* 1903) (Bielawski ed., 1973)

Of percussion instruments, the tambourine, usually with jingles around the rim, is known generally, as is a medium-sized double-headed drum, which has been supplemented since the 1940s and 50s by the triangle or cymbals. The tambourine is struck either with a stick or with the hand, while the double-headed drums are struck only with sticks.

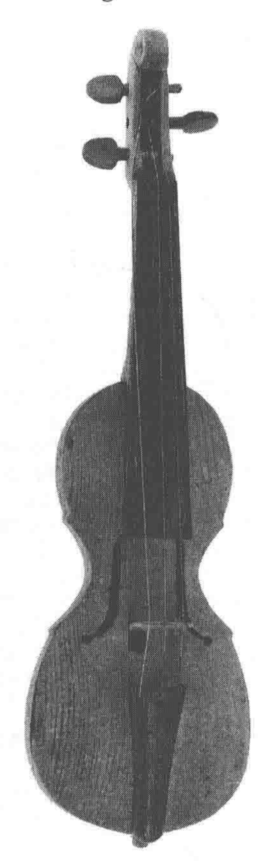
Wind instruments in folk ensembles are a relatively new addition and include clarinets (chiefly in C and E♭), cornets and trumpets. From the end of the 19th century concertinas and accordions began to appear in folk bands.

The most common type of folk band in the 19th century contained a melody instrument (e.g. the fiddle) and a rhythmic one (e.g. drum or *basy*), and such an ensemble survives in some regions such as Biłgoraj, Lublin, Sandomierz, Kielce and Mazowsze. In bagpipe-playing areas, an ensemble can be composed of bagpipes and a string instrument – *mazanki*, fiddle or fiddle with artificial fret. Around 1900 a second fiddle, adding a chordal accompaniment, joined the fiddle and drum or fiddle and bass in Podhale, Rzeszów and other regions. Gradually, more instruments have been added to the basic ensemble, so that a band may now consist of, for instance, first fiddle, clarinet, trumpet, second fiddle and double bass (e.g. in the Kraków region).



In instrumental playing there are particular phrases which begin and end the melody, and also appear between stanzas (ex.8). An instrumental performance is based on frequent repetitions of the same melody, embellished each time with new ornaments, variants, rhythmic changes and transpositions. The basic repertory of a folk band consists of *przyśpiewki*, dance-tunes, wedding tunes and marches.

6. Music regions. It is possible to distinguish five large music regions: central, north-western, north-eastern, eastern and southern Poland.



The whole of central Poland is marked by the predominance of mazurka triple time in the dance, associated with a fairly quick tempo and tempo rubato (ex.3 shows in brackets the basic, rationalized rhythmic pattern). The melodies are usually lively and often have a range of an octave or a 9th and a scale that cadences on the lowest note and has its axis of melodic movement on the fourth degree from the lowest (cf the scales of various types of bagpipe): *d′–[e′]–f♯′–g′–a′–b♭′/b′–c″–d″–[e″]*. This type of scale is also found in other regions.

The sub-region of Wielkopolska is distinguished by a larger number of songs with different rhythms, polonaises and waltzes (*okrągłe, do koła* and others), duple time and figure-dances; a tendency for numerous repetitions of text and melody (as in Kujawy); and the instruments *mazanki, siesieńki, dudy, kozioł*, and the Kalisz two-string *basy*.

Ex.9 Typical rhythmic formulae in five- and eight-beat bars

8. Small string instruments of the kit type: (a) złóbcoki played by Adam Kuchta, Bukowina Tatrzańska, Nowy Sacz province; (b) mazanki from Grodzisk Wielkopolski, Poznań province (Państwowe Muzeum Etnograficzne, Warsaw)

West Wielkopolska possesses vocal melodies with the widest average range in Poland, which can be explained by the influence of the *kozioł* scale on singing. Characteristic of the Kujawy sub-region are: *kujawiaki*, which are dances somewhat slower than those in, for example, Mazowsze and the Kielce region; dance cycles of various tempos; and a rich technique of violin playing (ex.8). Śląsk has many dances of the polonaise and figure type, and dance-games; ensembles with a relatively large number of wind instruments; and more homophonic songs than other regions. Many survivals of calendar ritual and wedding music are found in the Opole area of Śląsk. In Mazowsze, Kielce and Sandomierz, mazurka rhythms are characteristic; the tradition of fiddle playing is extremely rich in Sandomierz and Kielce. Some characteristics of central Poland are common to the neighbouring regions.

Ex.10 *Leśna* (outdoor) song, Kurpie region (Stęszewski, 1974)

43", ♪ = 66, guisto

e Za - ku ka-ła ku - ka - wän - ka ji ku-je ji ku - je;

po - ziedz-ze mje, ku - ká - wäń - ko, gdzie mój Jaś no - cu - je,

po - ziedz-ze mje, ku - ká - wäń - ko, gdzie mój Jaś no - cu - j(e).

The north-western region has lost its individuality: duple and triple metres are now equally common; the tempo is leisurely and the vocal register fairly low. There is wide use of major and minor scales, and in the Kaszuby region relatively wide melodic intervals are found.

Besides frequent duple and triple metres the north-eastern region is characterized by five- and eight-beat bars, and apocope. *Przyśpiewki* in triple time usually contain three syllables to a bar. In five-beat metre a four-syllable group (ex.9*a*) plays a basic role, and can be seen in verse lines with eight, 11 (ex.7) and 13 syllables. Five-beat bars are mostly associated with wedding songs, fairly slow and not accompanied by dancing: they are found in Kurpie, Mazury and northern Podlasie. In the same area it is possible to find eight-beat bars associated with archaic scales of medium range (e.g. a pentachord, also the pentatonic), with 12-syllable lines, wedding texts and fairly slow tempo. There are two forms of eight-beat bars (exx.9*b* and *c*), which are reminiscent of the krakowiak, but are certainly earlier. The archaic manner of articulation of the apocope rests on the absence or, more rarely, the strong diminuendo of the final syllable of the stanza's text (ex.10). The distribution of apocope is similar to that of the five- and eight-beat bars. The songs from this region have relatively slow tempos; its open-air songs (*leśne*) are rich in melisma.

The eastern region is distinguished by its greater number of archaic, slow ritual songs (e.g. wedding, harvest and midsummer eve songs) without metre, which use narrow

diatonic (e.g. tetrachordal) scales. In these melodies the highest ratio of melisma has been recorded, with the frequent appearance of somewhat syllabic and non-syllabic verse forms, texts in stichic form and non-stanzaic musical structure. Wedding songs make use of dance melodies to a lesser extent. The dance repertory is largely in triple time (e.g. the *oberek*), and shows a strong influence from central Poland. In these last two regions, certain differences in musical traditions characterize villages inhabited by freeholders. Their repertory lacks the archaic wedding melodies, and there is no singing at wedding ceremonies. Songs are usually more recent, often composed and of literary provenance. Lyrical or patriotic texts predominate. Both peasant farmers and freeholders, however, share a common local repertory of religious songs including Christmas carols and funeral songs.

The southern region is characterized by a marked preponderance of duple-metre melodies, which also serve as dance *przyśpiewki*. In the lowland parts of the territory krakowiak rhythms are strongly represented, and have spread from there to the highland regions. Parts of the Carpathian district (e.g. Beskid Żywiecki, Podhale and Pieniny) possess their own repertory of dance melodies and dotted rhythms *alla zoppa*. In the Beskid Śląski region chromaticism plays a considerable part; Podhale, Orawa and Pieniny have produced a style of polyphonic singing that owes nothing to Western harmony. Podhale is distinguished by a descending melodic outline; the dance cycles *góralski* (for a pair of soloists) and *zbójnicki* (men's dances); the predominant range of a 6th (in about 30% of the repertory); the frequent occurrence of the F mode; a high vocal register and great tension of the voice in men's singing, and low women's voices; the *koza* and *złóbcoki* (see §5); a decided preponderance of 12-syllable lines; and the dance *ozwodny* with a five-bar phrase (ex.11), which occurs in dance cycles. The music of the mountainous regions is characterized by the narrowest average melodic range; dance- and wedding-songs are performed in *tempo giusto*, contrasting with the rigours of the slow metrical *wierchowe* and *wałęsane* melodies, sung in the open air.

The geo-ethnic situation of Poland is reflected in the character of its folk music. This is connected with western Europe in the decided predominance of strophic song forms and in some of its song subjects (e.g. in the ballad). Polish folk music has the syllabic system of versification common to other western Slavs (except for the Czechs); with the Lusatians it shares the types of instrument which appear in Wielkopolska. With the Finns, Sames (Lapps), Estonians and Latvians, Polish folk music shares the five-beat bar structure; with them and with the eastern and southern Slavs, the apocope. The link with the eastern Slavs is also seen in the traces of non-syllabic versification, some common melodic motifs and narrow-range types of scale. With the Slovaks, Hutsuls (from the east Carpathians), Hungarians and Balkan peoples, southern Poles share many instruments, *alla zoppa* rhythms, polyphonic forms and some dances; these phenomena may be traces of the migrations of the Vlachs (Wallachians) who brought their pastoral culture from the south.

7. Popular song and 'folklorism'. From 16th century sources onwards one can trace the widely increasing circulation of originally composed folk songs and dances and consequently the beginnings of a popular repertory. Examples are the *tańce polskie* or 'Polish dances' ('polnischer Tanz', 'danza polacca', polonaise) which from the 16th century were widely distributed throughout Europe in organ and lute tablatures, and were mentioned in numerous accounts, including Valentin Hausmann's writings on Polish *proportio*. The appearance of dances with mazurka rhythms (and subsequently polonaise rhythms) in the music of European composers also dates from that period.

Ex.11 *Ozwodny* dance, Podhale, two violins and bass (Mierczyński, 1930)

In the 19th century an increasing number of Polish sentimental songs were composed and – above all – patriotic, national and soldiers' songs were written as a reaction to the partitions of Poland by Russia, Prussia and Austria. Songs and dances from foreign countries became popular, for example those from Ukraine (*kolomyjka* etc.), Austria (*walczyk*, *sztajerek*), Germany and France. In the 20th century all the fashionable dances were in general circulation, including Latin American dances (tango etc.). The mass media contributed to a gradual internationalization of the repertory, and this has been accompanied by a dwindling of traditional folk music and folksongs of Polish provenance.

If one understands the simplest form of 'folklorism' to mean the re-creation of folklore outside its rural environment with an altered (aesthetic) function, then traces of this practice were quite common at the royal court and at those of Polish magnates as early as the Renaissance. For example, in the 18th century the last king of Poland, Stanisław August, was greeted by a folk band when he visited the provinces, while in the late 19th century in Galicia groups of villagers played, sang and danced for the Austrian archduke at an agricultural show. Between the two World Wars folklorism was a part of official ceremonies (e.g. the *dożynki* – 'harvest homes' – attended by the Polish president). The political apparatus of the Polish socialist state, particularly after 1948, entrusted folklorism with an important role. Numerous amateur and professional ensembles (*Mazowsze*, *Śląsk*) were formed and assigned a propaganda role at home and abroad.

8. Recent trends. From the 1950s to 80s, sanitized 'folklore' structured by central cultural policies was performed in ensembles, 'culture houses' and festivals. This gave way in the 1990s to new musical forms:

predominantly young people, immersed in a completely modern life style, performing folk music for a variety of reasons including commercial benefit. This new music, often consisting of stylized versions of traditional songs, occurs mostly in urban centres. For instance, the Jorgi Quartet are from Poznań and Orkiestra Swiętego Mikołaja (Saint Nicholas's Orchestra) from Lublin. After the collapse of Soviet communism, the new political climate of liberal democracy and the market economy also brought a revival of the music of national minorities, such as Jewish *klezmer* music.

In the mid-1990s, traditional music also began to be re-invented within its rural environment. A primary centre of this new 'folklore' is Podhale, the district around Zakopane in the Tatra Mountains. There are three main types of music-making: traditionalist, including the pan-Carpathian trend (e.g. Jan Karpiel); fusions, such as that performed by the Trebunia Family Band, who compose new melodies with local characteristics thereby breaking the attachment to 'fossilized tradition'; and market-orientated, such as disco polo or folk-musak.

The traditional music of Podhale has influenced other musical genres such as classical music, pop, rock and jazz, both nationally and internationally. Works that have been inspired by this music include Karol Szymanowski's ballet *Harnasie* (1931), Wojciech Kilar's *Krzesany* (1974) and *Siwa mgła* (1979), as well as fusions with Polish pop-rock music (e.g. the groups No To Co, Skaldowie and Krywan), jazz (e.g. the saxophonist Zbigniew Namysłowski and his Jazz Quartet play with traditional fiddlers) and reggae (e.g. a series of recordings was initiated in 1991 through cooperation between the Trebunia Family Band and Norman 'Twinkle' Grant from Jamaica).

By the 1990s, the music of the Polish Tatra Mountains was being played at Highland weddings and gatherings, in Zakopane restaurants and hotels, as well as in cosmopolitan centres such as London and Chicago. There are countless commercial recordings, ranging from the local Folk label to the English company Nimbus. Podhale regionalism, boosted in this way, has gradually become the prototype for other 'regionalisms'. The Tatra Highlanders' expressive life style, revolving around their dance and music, has become a model for the rest of Poland.

Grajcie dudy, grajcie basy [Play, bagpipes, play, basses], rec. 1950–74, Polskie Nagrania SX 1125 and 1126 (1976) [incl. notes by J. Sobieska in Eng., Pol.]
Pologne dances, Arion ARN64188 (1992)
Music of the Tatra Mountains, Poland: Gienek Wilczek's Bukowina Band, Nimbus Records NI5464 (1996) [incl. notes]

KATARZYNA MORAWSKA (I, 1), ZYGMUNT M. SZWEYKOWSKI (I, 2), ZOFIA CHECHLIŃSKA (I, 3), ADRIAN THOMAS (I, 4), JAN STĘSZEWSKI (II, 1–7), KRZYSTOF ĆWIŻEWICZ (II, 8)

Polani, Girolamo (*fl* Venice, 1689–1720). Italian composer. From 2 October 1689 he was employed as a soprano at S Marco, Venice, at the low wage of 25 ducats (most other singers received 100). He wrote operas for three Venetian theatres: the Teatro SS Apostoli, marking the last time that theatre was used for opera, the Teatro S Angelo, the

least prestigious of the large Venetian theatres, and the Teatro S Fantino, a tiny theatre that specialized in small-scale works. None of his settings is known to survive. The light-hearted operas at S Fantino contrasted strikingly with the serious opera cultivated at the major Venetian opera houses. Several are set in everyday contexts and involve as few as five characters, some of whom use Venetian dialect. *Chi la fà l'aspetta* is the first libretto for S Fantino labelled comic, but there is no evidence that the explicitly comic repertory of the years 1717 to 1720 bears any connection with contemporary Neapolitan developments in comic opera. Despite its urban setting, it conforms in its pastoral tone to most of the operas staged at the S Fantino from its opening in 1700 until the last opera presented there in 1720.

A letter from Rolli indicates that Polani had arrived in London via Holland by 18 October 1720. He was put forward as a director of one of the Academy operas, but in the event he did not participate.

WORKS

all in 3 acts; performed in Venice unless otherwise stated

La vendetta disarmata dall'amore (dramma per musica, F. Passarini), S Fantino, carn. 1704 [with attrib. uncertain as La costanza nell'onore, Rovigo, Campagnella, aut. 1703]
Creso tolto alle fiamme (dramma per musica, A. Aureli), S Angelo, aut. 1705
Prassitele in Gnido (dramma pastorale, Aureli), SS Apostoli, carn. 1707
Vindice la pazzia della vendetta (favola pastorale, B. Pedoni), S Fantino, carn. 1707
Rosilda (dramma favoloso, Pedoni), S Fantino, aut. 1707
La virtù trionfante d'amore vendicativo (favola pastorale, Pedoni), S Fantino, carn. 1708
Il cieco geloso (dramma pastorale, Aureli), S Fantino, Oct 1708
Il tradimento premiato (favola pastorale, G.P. Candi), S Angelo, 3 Nov 1709
Berengario re d'Italia (dramma per musica, M. Noris), S Angelo, week before 22 Feb 1710
Chi la fà l'aspetta (dramma comico, Passarini), S Fantino, carn. 1717

HARRIS S. SAUNDERS

Polansky, Larry (*b* New York, 16 Oct 1954). American composer, performer and theorist. He studied at the University of California, Santa Cruz (BA mathematics and music 1976), York University, Toronto (1977) and the University of Illinois, Urbana-Champaign (MA composition 1978). His principal teachers included Ben Johnston, James Tenney and Ron Riddle. He has taught at Mills (1981–90) and Dartmouth (1990–) colleges and is co-author (with David Rosenboom and Phil Burk) of the computer music language HMSL (Hierarchical Music Specification Language), with which many of his works are composed. In 1983 he founded Frog Peak Music, a composers' collective that distributes and publishes the scores, writings and recordings of many experimental composers. A skilled performer on the guitar, mandolin and *gendér*, his works employ conventional Western instruments, Javanese instruments, interactive computer, instruments and computer, and tape. His compositions often explore his theoretical interests, which include just and experimental intonations, morphological metrics (the measurement of musical shapes), mutation functions (the transformation of one shape into another), societies of mind (complex systems made of simple parts) and world musics, topics on which he has written extensively.

CARTER SCHOLZ

Polaski, Deborah (*b* Richmond Center, WI, 26 Sept 1949). American soprano. She studied at Marion College, Indiana, and with Irmgard Hartmann in Berlin, making her début in 1976 at Gelsenkirchen. After appearing at Munich, Hamburg, Karlsruhe and Ulm, she sang Death/Judas in Einem's *Jesu Hochzeit* at Hanover (1980); Marie (*Wozzeck*), Isolde and Kundry at Freiburg (1983–5); Katerina Izmaylova at Mannheim (1985–6); Amelia (*Un ballo in maschera*) at Essen and Chrysothemis at Geneva (1986); Senta at La Scala and in Prague (1988); Strauss's Electra (a role she has recorded) at Zürich (1991) and Salzburg (1994); and Kundry for her Metropolitan début (1992) and at Bayreuth (1993). With a powerful, vibrant voice of true dramatic proportions, she is well equipped to tackle the heavier Strauss and Wagner repertory. After singing Brünnhilde at Bayreuth in 1988, with limited success, Polaski scored a triumph when she sang the same role there in 1991 and in several subsequent seasons; she has also sung the part at Cologne (1990), the Berlin Staatsoper (1993–4) and Covent Garden (1994–5). Her other roles include the Marschallin and the Dyer's Wife, which she sang in Amsterdam and Geneva in 1992.

ELIZABETH FORBES

Polbero. *See* POWER, LEONEL.

Poldini, Ede [Eduard] (*b* Budapest, 13 June 1869; *d* Bergeroc, Vevey, 28 June 1957). Hungarian composer and pianist. He studied with Stephan Tomka at the National Conservatory in Budapest and with Mandyczewski (theory) and Epstein (piano) in Vienna. He then spent a year in Geneva and in 1908 settled in Bergeroc. He received the Hungarian Cross of Merit, second class (1935), and the Hungarian Medal for Artists (1948).

In Hungary Poldini was renowned chiefly for his stage works, but his success was not limited to his native country. *Vagabund und Prinzessin* and *Hochzeit im Fasching*, his two best operas, were both produced in London, the former at Covent Garden in 1906 and the latter, as *Love Adrift*, at the Gaiety Theatre in 1926; *Vagabund* was also seen in around 20 other European cities. His many piano compositions, too, achieved widespread popularity. Poldini's compositional style differs from most of his compatriots at the time in that he draws from musical developments outside Hungary. In *Vagabund* and *Hochzeit* he combined elements of the 19th-century Hungarian operatic tradition with those from French and German comic opera. His musical language is marked by a melodic inventiveness and a fine sense of instrumental colour.

MELINDA BERLÁSZ

Poldowski [Lady Irène Dean Paul; née Wieniawska] (*b* Brussels, 16 May 1879; *d* London, 28 Jan 1932). Polish composer, active in England. Poldowski was the pseudonym chosen by the youngest daughter of Henryk Wieniawski. At the age of 12 she entered the Brussels Conservatory, where she studied the piano with Pierre-Jean Storck and composition with Gevaert; subsequently she studied in London under Michael Hambourg and Percy Pitt. In 1900 Chappell published *Two Songs* under her own name of Wieniawska. She married Sir Aubrey Dean Paul in 1901 and later became a naturalized British citizen. In 1904, after the birth of her first son, she went to Paris for further study with André Gédalge. Returning to London when the child died, she resumed her studies in Paris in 1907, attending for a short period D'Indy's class at the Schola Cantorum.

Poldowski is chiefly remembered as a composer of song though she also composed for orchestra, wind octet and at least two stage works. Sir Henry Wood thought she had 'exceptional talent' and conducted the première of her *Nocturne* for orchestra at the 1912 Proms; in the 1919 season she performed the solo piano part in *Pat Malone's Wake*. Between 1913 and the late 1920s her works were performed regularly in Belgium, the Netherlands, London and Paris, frequently by artists such as Gervase Elwes and Maggie Teyte. In New York she initiated a series of concerts of her work which were critically acclaimed.

Stylistically, she was, in her own words, 'always restless and dissatisfied under any scholastic influence'. French influences predominate: she selected mostly French texts, her great predilection being the poetry of Verlaine whose delicacy of expression and evocation of nuance inspired her to produce her finest work, while traits of Fauré, Debussy and Ravel are perceptible in her music. Her individuality is disclosed in the choice of harmony, the programmatic imagery and in the subtle manipulation of form.

DAVID MOONEY

Pole, David. *See* POHLE, DAVID.

Pole, Hans. *See* POLONUS, JOHANNES.

Pole, William (*b* Birmingham, 22 April 1814; *d* London, 30 Dec 1900). English civil engineer and music scholar. He was professor of civil engineering at University College, London, from 1859 to 1876. He graduated at Oxford as BMus in 1860 (at the age of 46) and as DMus in 1867, and was also organist in London at St Mark's, North Audley Street, from 1836 to 1866. For his scientific work he was elected a Fellow of the Royal Society of London in 1861 and of the Royal Society of Edinburgh in 1877. In 1874 he was, with Sir John Stainer, instrumental in

founding the Musical Association (now Royal Musical Association).

Pole is best remembered for his treatise *The Philosophy of Music*. This was not a work on aesthetics, but a reproduction of a series of lectures he had been invited to give in 1877 at the Royal Institution of Great Britain 'on the Theory of Music, as illustrated by the late researches of Helmholtz', i.e. on acoustics as a physiological basis for music theory. The book is still valuable to music students as an introduction to Helmholtz's *Lehre von den Tonempfindungen*.

Pole was active with A.F. Ellis and A.J. Hipkins in the movement that eventually succeeded in lowering the high 19th-century English concert pitch by some two-thirds of a tempered semitone. He contributed several articles to the *Musical Times* and to the first edition of Grove's *Dictionary*, including 'Pitch'. He composed a *Psalm c*, performed at Tenbury in 1861 and from which he arranged an eight-voice motet (London, 1879).

GEORGE GROVE/L.S. LLOYD/HUGH COBBE

Poledňák, Ivan (*b* Velké Meziříčí, 31 Dec 1931). Czech musicologist. He studied musicology and aesthetics at Brno University (1951–6) under Gracian Černušák, Jan Racek, Bohumír Štědroň and the aesthetician Oleg Sus, taking the diploma with a dissertation on Helfert's aesthetics which was accepted for his doctorate in Prague University in 1967. He took the CSc degree in 1968 at Prague with a work on jazz and was awarded the DrSc in 1989. After completing his studies he worked at the Institute of Educational Research, Prague (1959–68), and wrote a series of methodological papers, textbooks and other material for music education at state schools; at the same time he was vice-president of the Czech Society for Music Education (1969–71). He played an important part in Czechoslovak research into jazz and dance music, a field which had long suffered from dilettantism. As an expert on jazz he was appointed artistic director of the Reduta Intimate Theatre in Prague (1963–72), a small-scale stage specializing in musicals and some experimental work. In 1968 he became a member of the musicology institute at the Czech Academy of Sciences, where he has concentrated on the psychology of music, aesthetics, theory, and the history of popular music. He was director of the Academy from 1990 to 1997. He has lectured in musicology at Prague University and (since 1990) at Brno and Olomouc Universities. He was appointed professor by Olomouc University in 1994. Since 1994 he has also been involved in extensive organizational activities (for example, as president of the Czech Association of Musicians and Musicologists, president of the Czech Music Council and member of the governmental accreditation committee for universities).

JOSEF BEK

Polevaya, Viktoriya Valeriyevna (*b* Kiev, 11 Sept 1962). Ukrainian composer. She graduated from Karabyts's class at the Kiev Conservatory in 1989, started teaching orchestration, score reading and choral arrangement there in 1990, and completed her postgraduate studies with Kolodub in 1996. Her refined, even elitist works are marked by a spiritual and subtly intellectual outlook; she

is drawn to philosophical subjects which frequently find expression in programmatic works. She confidently handles complex techniques – often in unusual combinations, such as a meeting of gagaku and the avant garde – and has successfully created an 'event' with her *Progulka v pustote* ('Walks in the Void'). She has made occasional forays into the world of folk music.

WORKS
(selective list)

Ballet: Gagaku (ballet-pantomime), 1994
Inst: Sym. no.1, 1989; Trio '5x3', 1989; Sym. no.2 'Hommage to Bruckner', 1990; Anthem I, pf, str, bells, 1991; Messa [Mass] (Latin canonical texts), solo vv, children's chorus, orch, 1993; Progulki v pustote [Walks in the Void], chbr ens, 1993; Trivium, pf, 1993; Langsam, str orch, 1994; Transforma, sextet, orch, 1994; Zelyoniye travyaniye zaichiki [Green Grassy Little Hares] (N. Vorob'yev), pf cycle, 1995 [for children]; Chisla [Numbers], pf sonata, 1996
Vocal: Klage (R.M. Rilke), S, chbr orch, 1994; 3 kolïbel'nïye [3 Lullabies] (Russ. folk texts), children's chorus, 1994; Oda Goratsiya [Ode of Horace] (Horace: *O Venus*. . .), Ct, chorus, chbr orch, 1994; Stsena iz 'Gamleta [Scene from 'Hamlet'] (W. Shakespeare), S, chbr ens, 1994; Sugrevushka [My Dearest Heart] (Russ. folk text), female chorus, 1994; Ėpifaniya (Polevaya), S, chbr orch, 1995; Svete tikhiy [O Quiet Light], solo vv, chorus, chbr orch, 1995 [arr. of 16th century chant]
MSS in *UA-Km*; Ukraine Ministry of Culture

NINA SERGEYEVNA SHUROVA

Polewheel [?Wheeler, Paul] (*fl* 1650–60). English composer. He achieved fame as a violinist during the Commonwealth, but no details of his life are known. His name appears as Paul Wheeler in Evelyn's Diary for 4 March 1656 and a further reference is in John Batchiler's *The Virgin's Pattern* (London, 1661). The manuscript *US-NYp* Drexel 3551 contains two of his pieces for bass viol and three more, including his extremely popular 'Ground', are in the manuscript *GB-Ob* Mus.Sch.C.39 (*DoddI*). The name 'Paulwheel' is attached to two pieces in John Playford's *The Division Violin* (London, 1685) which were subsequently reprinted in later editions. The manuscript *GB-Och* 1183 contains a bass instrumental part by him.

ANDREW ASHBEE

Polgár, László (*b* Budapest, 1 Jan 1947). Hungarian bass. He studied with Eva Kutrucz at the Liszt Academy of Music, Budapest, 1967–72, and later privately with Hans Hotter and Yevgeny Nesterenko. He made his début at the Hungarian State Opera in 1971 as Count Ceprano (*Rigoletto*). His career proper started in the early 1980s: he sang Rodolfo in *La sonnambula* at Covent Garden in 1981, Leporello in Yuri Lyubimov's famous Budapest production of *Don Giovanni* in 1982 and Gurnemanz in Ferencsik's *Parsifal* revival the next year. He returned to Covent Garden in 1989, with the Hungarian State Opera, as Bluebeard in Bartók's opera.

Polgŕ has made regular appearances at the Vienna Staatsoper since 1983, and in Munich and Paris from 1985, and has appeared in Zürich and Salzburg as Sarastro and Publius (*La clemenza di Tito*). But he is perhaps best known for his magnetic interpretation of Bluebeard, which he recorded with Boulez and sang again with distinction at the Aix Festival in 1998. He was a member of the Zürich Opera from 1991. He owes his international fame to his beautifully silky, well-balanced voice and his remarkable declamation and musicality, also noted features of his concert appearances.

PÉTER P. VÁRNAI/ALAN BLYTH

Polgar, Tibor (*b* Budapest, 11 March 1907; *d* Toronto, 26 Aug 1993). Hungarian composer, active in Canada. His teachers at the Budapest Academy of Music included Kodály. After working as a pianist with Hungarian Radio from 1925, he co-founded the Hungarian Radio SO, becoming its first permanent conductor until 1950. He was also conductor of the Philharmonia Hungarica in West Germany (1962–4) and the University of Toronto Symphony Orchestra (1965–6). He taught in the opera department of the University of Toronto (1966–75) and coached the Canadian Opera Company, which subsequently performed his opera *The Glove* over 90 times. In 1969 he became a naturalized Canadian. He often employed Hungarian idioms in his compositions, which include many scores for the stage and over 200 film scores. After retiring in the 1970s, he remained active in composition, conducting and teaching.

WORKS
(selective list)

Dramatic: A European Lover (musical satire, G. Jonas), 1965; The Glove (comic op, Schiller-Jonas), 1973; In Praise of Older Women (film score), 1978
Vocal: The Last Words of Louis Riel (cant., J.R. Colombo), C, Bar, SATB, orch, 1966–7; The Troublemaker (E. Mohácsi), solo vv, SATB, orch, 1968; many arrs. of Ger. and Hung. folksongs
Inst: Suite II, orch, 1954; A Puszta 'A Day from Life in the Hungarian Lowland', orch, 1960; Variations on a Hungarian Folk Song, hp/(hp, str, timp), 1969; 3 Poems in Music, pf/orch, 1977; 2 Sym. Dances 'In Latin Rhythm', tpt, band, 1979; Conc. Romantico, hp, orch, 1985

CLIFFORD FORD

Policci, Giovanni Battista (*fl* 1665–84). Italian composer and organist. He competed unsuccessfully for the post of *vicemaestro di cappella* of the church of the Madonna della Steccata, Parma, in 1665 but obtained it on 22 July 1667 on the death of Francesco Manelli. On 23 May 1670 he was named organist of the same church, and on 3 October 1681 *maestro di cappella*. From 23 September of that year to August 1684 he also served as *vicemaestro* of the Parma court, for which in 1681 he composed *Amore riconciliato con Venere*, an introduction to a ballet, and the opera *Amalasunta in Italia*, performed in the theatre of the Collegio dei Nobili, both to texts by Alessandro Guidi. None of his music is known to survive.

Police, the. English rock group. It was formed in 1976 by Sting (Gordon Sumner; *b* Wallsend, Co. Durham, 2 Oct 1951; vocals and bass guitar), Andy Summers (Andrew Somers; *b* Poulton-Le-Fylde, Lancs., 31 Dec 1942; electric guitar) and Stewart Copeland (*b* Alexandria, Egypt, 16 July 1952; drums). They were originally regarded as part of the burgeoning new wave scene. However they always displayed a greater level of musicianship than their punk

counterparts, and developed a brand of melodic, reggae-influenced, energetic rock. As the band's principal songwriter, Sting produced a number of well-crafted pop songs, which conveyed the group's unique sound. Early hits such as *Roxanne* and *Can't Stand Losing You* (both 1979) featured Sting's West-Indian style voice, sparse clean rhythm guitar lines and reggae-derived bass and drum parts, while other tracks from the album *Outlandos d'Amour* (A&M, 1978), including *Peanuts* and *Next to You*, were more straightforward rock songs propelled by Copeland's energetic drumming. By the time of their second album, *Regatta De Blanc* (A&M, 1979), the Police were arguably the most successful band in the UK, seen, with Sting's melodic songs, as successors to the Beatles. *Message in a Bottle* and *Walking on the Moon* were both UK number one hits in 1979. In the early 1980s the Police achieved global success with *Ghost in the Machine* (A&M, 1981), which included the single *Invisible Sun*, a comment on the conflict in Northern Ireland. Their final album, *Syncronicity* (A&M, 1983), contained the most stylistically diverse set of songs, but still with the group's unmistakable sound, notably the pop standard *Every Breath You Take*, and *Tea in the Sahara* which featured Summers' impressionistic chordal washes. Vital to their success were the photogenic good looks of Sting and their mastery of the emergent medium of pop video. The band split up in 1986, as each member pursued solo projects.

Sting worked with a number of jazz musicians, including Gil Evans, Branford Marsalis, the pianist Kenny Kirkland and the drummer Omar Hakim, as he incorporated elements of jazz (on *Dream of the Blue Turtles*, 1985) and non-western musics (on *Nothing like the Sun*, 1987). Perhaps his most affecting solo work was his song about the writer Quentin Crisp, *Englishman in New York*, a hauntingly beautiful melody and a reminder of his pop sensibility. In the 1980s Sting also busied himself with acting and with environmental issues. His album *Ten Summoner's Tales* (1993) returned to a more melodic, mainstream pop sound. For further information see D. Hill: *Designer Boys and Material Girls* (Poole, 1986).

DAVID BUCKLEY

Policki [Pol; first name unknown] (*fl c*1750). Polish composer. As many of his works are in the Cistercian monastery libraries at Mogiła (near Kraków) and Obra (near Poznań), it is probable that he belonged to a Cistercian order, further implied by the monogram RP (? Reverendus Pater) which precedes his name in surviving manuscripts. Three masses with instruments and a shortened vespers cycle also with instruments (all *PL-MO*) provide interesting examples of the development of the Classical style in Poland, and also illustrate the infiltration of the polonaise into contemporary sacred music. These works adhere to the early *galant* style – though retaining the da capo form and two- to three-part vocal texture of the Italian Baroque tradition – and are distinguished by interesting melodic invention. A Benedictus has been edited (in MAP, iii/1, 1969, pp.97–8). Two further masses (formerly in *PL-OB*) were lost in World War II.

MIROSŁAW PERZ

Policreto [Policreti, Policretto], **Giuseppe** [Giosef] (*b* Treviso; *fl* 1571–80). Italian composer, writer and poet. He was a monk in the order of the Servi di Maria and appears not to have held any professional musical post. In the dedication of his *Il primo libro delle napolitane* (Venice, 1571[9]), for three voices, he referred to the contents as being his first works. He was probably active in Padua about 1580, for he signed the dedication of his *Boscarecccie: terzo libro delle canzoni* (Venice, 1580) for three and six voices from there. His other known works are *Il secondo libro delle giustiniane* (Venice, 1575[14]), for three voices, and a five-voice madrigal in *Delli pietosi affetti* (Venice, 1598[6]).

PIER PAOLO SCATTOLIN

Polidori, Ortensio (*b* Camerino; *fl* 1621–54). Italian composer. He was *maestro di cappella* of Fermo Cathedral from 1621 to 1630, at Pesaro Cathedral in 1634 and at Chieti from 1639 to 1646. According to Schmidl he afterwards held a similar post at Palermo. Eight collections by him published before 1621 are lost. His surviving output consists entirely of sacred music, including a high proportion of mass and psalm settings. A number of these are for large forces – either the conventional double choir of opp.10 and 16 or more modern mixed concertato ensembles including violins and (in op.14) trombones or viols. His motet collections are for smaller combinations; op.13 includes competent solo motets with declamatory lines to which ornamental semiquaver runs are added sparingly for expressive effect. The time signature 6/4 is found in a duet in this volume – an early instance of its use in church music.

WORKS

JEROME ROCHE

Poliker, Yehuda (*b* Kiriat Haim, 25 Dec 1950). Israeli singer, composer, guitarist and *bouzouki* player. During the 1970s he played in various rock bands which performed mainly at weddings. One of these bands became known as Benzeen in the early 1980s, when Poliker established what was to become a fruitful and long-lasting creative partnership with the lyricist and critic Yaakov Gilad. Benzeen became highly successful with its hard rock sound, but disbanded in 1984 after the release of its second album. In 1985 Poliker made two albums of rock-oriented interpretations of Greek songs, with Hebrew lyrics by Gilad; these recordings widened Poliker's popularity beyond the young audiences of rock and marked his shift towards a sound based on Mediterranean and Middle Eastern elements. In 1988 he recorded *Ashes and Dust*, in which he and Gilad explored their experiences of growing up in Israel in the 1960s as sons of survivors of the Holocaust, and this album is widely considered Poliker's masterpiece. His later albums, two of which are purely instrumental, include virtuoso performances on guitar and *bouzouki* and display his growing mastery of recording techniques and electronics. Poliker's creative treatment of traditional Mediterranean and Middle Eastern musics has appealed to a wide audience, and he has become one of the most highly esteemed popular musicians in Israel.

MOTTI REGEV

Polin, Claire (*b* Philadelphia, 1 Jan 1926; *d* Merion, PA, 6 Dec 1995). American composer, flautist and musicologist. She studied at the Philadelphia Conservatory (BMus 1948, MMus 1950, DMus 1955), where her teachers included Persichetti, and later with Mennin at the Juilliard School of Music, and with Sessions and Foss at Tanglewood. A flute student of William Kincaid (with whom she wrote two books on flute playing), she was active both as a solo performer and as a member of the Panorphic Duo. She held teaching appointments at the Philadelphia Conservatory (1949–64) and Rutgers University (1958–91). Among her honours were a MacDowell Colony Fellowship (1968), the Delta Omicron International Composers Award (1953, 1958) and numerous ASCAP awards.

Polin's scholarly interests included early Welsh music, the instruments and music of ancient and biblical times, Russian folk and contemporary music, contemporary American music, interdisciplinary studies and flute education. Her compositions, generally scored for solo instruments or chamber groups, often reflected her research, incorporating folk material and birdsong into an otherwise freely atonal idiom. Sparse and delicate textures and an emphasis on contemporary instrumental techniques are also characteristic of her works.

MARGARET E. THOMAS

Poliński, Aleksander (*b* Włostów, 4 June 1845; *d* Warsaw, 13 Aug 1916). Polish writer on music, critic and journalist. He studied medicine and sang in the choir of an Augustinian church in Warsaw. Cutting short his medical studies, he began a course at the Warsaw Conservatory with Żeleński, Noskowski and Minchejmer. From about 1880 until his death he was a music critic and journalist for the Warsaw newspapers and magazines *Kurier warszawski* (permanent reviewer from 1899 to 1914), *Tygodnik ilustrowany*, *Kłosy*, *Echo muzyczne, teatralne i artystyczne*, *Scena i sztuka* and many others. From 1903 to 1916 he taught at the Warsaw Conservatory, lecturing in Polish music history. He also composed (two masses and a number of religious songs), and edited a number of early works for performance and publication.

Poliński's main interest was the history of Polish music: he collected a large number of sources and materials (his rich collection, kept in the royal palace in Warsaw, was lost during World War II), published treatises, books and articles and organized concerts of early works. He was the author of the first broad history of Polish music (1907); in it he used source materials to outline the development of culture and musical life in Poland in a historical and social context. He also tried to bring about an appreciation of Polish music of specific periods; his writings include a monograph on the medieval religious song *Bogurodzica* (1903).

KATARZYNA MORAWSKA

Poliphant [polyphant, polyphon(e)]. An English plucked chordophone of the early 17th century. John Playford attributed its invention to Daniel Farrant and described it as 'An Excellent Instrument … not much unlike a Lute, but strung with wire', which might be thought to apply to the ORPHARION more than to the poliphant. Talbot (*c*1690) mentioned its wire strings and scalloped shape. It seems to have been an attempt at a diatonically tuned hybrid of all the wire-strung instruments (including the harp), with short treble strings played across a lute- or bandora-shaped body, fingered strings over a fingerboard, and long bass diapasons like those of a theorbo. A 17th-century sketch by Randle Holme (*Academy of Armory*, *GB-Lbl* Harl.2034; see illustration) is accompanied by the following description:

A poliphant of some called poliphon, It is an hollow yet flat kind of instrument, containing three dozen & 5 wier strings to be played upon. On the right side the neck are 3 pins, on the left side above 9 pins, & at the bending or corner in the middle of the neck 9 pins, & below the neck on the top of the body are 8 pins fixed, as the figure it selfe will give y^u the best description of it. There is on the body a crooked Bridge & 3 small round holes.

It will be noticed that the number of 'pins' or pegs does not match Holme's 'three dozen & 5' strings, unless 'above 9' means 'more than nine' rather than showing their position. Talbot's measurements indicate 37 strings, some of which were 'touched with Thumb of left hand' (see Gill, 1962). Sir Francis Prujeane wrote in 1655 of one with 'above forty single strings'. John Evelyn's description of the poliphant in his diary for 14 August 1661 shows that by then it was considered very rare: 'the Polyphone, an instrument having something of the Harp, Lute, Theorbo &c; it was a sweete Instrument, by none known in England, or described by any Author'.

Drawing of an instrument described as a poliphant from Randle Holme's 'Academy of Armory', late 17th century (GB-Lbl Harl.2034, f.207v)

IAN HARWOOD

Poli-Randaccio, Tina [Ernestina] (*b* nr Ferrara, 13 April 1879; *d* Milan, 1 Feb 1956). Italian soprano. She studied in Pesaro and made her début in 1902 at Bergamo in *Un ballo in maschera*. She travelled widely in Italy, Spain, Hungary and South America, mostly in lyric-dramatic and *verismo* roles. Admiring her Santuzza in *Cavalleria rusticana*, Mascagni engaged her in 1908 to sing the heroine of his *Amica* in an Italian tour. In 1910, as Brünnhilde in *Siegfried*, she made her début at La Scala, where she also appeared in the theatre's first presentation of *La fanciulla del West*. Other notable roles were Aida, La Gioconda and the heroine of Mascagni's *Parisina*. In her only season at Covent Garden (1920) she sang Tosca, a performance praised for emotional force but criticized for unevenness. Her career lasted until 1934 with an appearance as Turandot at Bologna. Recordings show a powerful voice, capable of delicacy but inclined to shrillness at the top and having the fast vibrato characteristic of Italian sopranos of the period. She was clearly an imaginative artist, sensitive to nuance and warm in feeling.

Poliziano [Ambrogini Poliziano], **Angelo** (*b* Montepulciano, 1454; *d* Florence, 1494). Italian humanist and poet. He spent most of his life in the service of the Medici family. He was close to Lorenzo de' Medici, whose children he taught, and on his death wrote a lament, *Quis dabit capiti meo aquam*, which Isaac set to music. Poliziano was equally at home in Latin or Tuscan verse. His poetry was set by contemporary Florentine composers such as Isaac, Bartolomeo degli Organi and Pintelli as well as by a younger generation, including Bernardo Pisano, Tromboncino, Cara and other frottolists also set occasional verse by him. Poliziano' s celebrated *Fabula di Orfeo*, an entertainment written in various verse forms for a half-spoken, half-sung performance, was probably written for the Carnival season in Mantua in 1480 during one of his short periods away from Florence. No music has survived (an ascription of the music to 'Germi' is a misreading in Carducci's edition); the style was probably similar to that of an anonymous setting of Poliziano's *Canzone di maggio* in Razzi's *Libro primo delle laude spirituali* (RISM 1563[6]). *Orfeo*, long described as an epoch-making secularization of religious drama, is probably better considered as looking forward to the rise of both the *intermedio* and musico-dramatic performances. The poem was twice recast as a drama.

Polizzino [Polizzini], **Giovanni Pietro.** Italian harpsichord maker who constructed polyharmonic instruments for GIOVANNI BATTISTA DONI.

Polka (from Cz., pl. *polky*). A lively couple-dance in 2/4 time. It originated in Bohemia as a round-dance, and became one of the most popular ballroom dances of the 19th century.

There is much dispute about the origins of the polka. Etymologically, the name suggests three Czech words: *půl* ('half'), *pole* ('field') and *polka* ('Polish woman'), all of which have given rise to various speculations. Accordingly it is a dance with a predominant 'half-step', a 'field dance' or a dance coming from or inspired by Poland. The earliest reference to the dance (J. Langer: 'České krakowačky', *Časopis Českého musea*, 1835, pp.90–91), in an article discussing the dancing of the *krakowiak* in Bohemia, mentions the admixture of local Czech dances such as the *strašák* and *břitva* and states that it was danced differently in Hradec Králové (eastern Bohemia), where they called it the 'polka'. The earliest dictionary entry (J. Jungmann: *Slownjk česko-německý*, iii, 1837) defines the dance laconically as a 'Polish dance'. Nejedlý, dismissing the tale (printed in *Bohemia*, 1844) of the dance's invention by a high-spirited maidservant, suggested that the adoption and adaptation of a Polish dance was connected with the wave of sympathy that the Poles attracted after their aborted insurrection of 1830. What is clear is that it was not a folkdance, but a town-based social dance going no further back than the 1830s, though its similarities to genuine Czech folkdances such as the *skočná* facilitated its ready acceptance in Bohemia. Some German writers have questioned the Czech origins of the polka, suggesting that it was no more than the SCHOTTISCHE with a new name. Horak has demonstrated the confusion of names in Austria, Switzerland and southern Germany, where a round dance with alternating steps (his definition of the polka) is variously designated 'Polka', 'Schottisch', 'Bairsch-Polka', 'Boarisch Schottisch' or 'Rheinländer'.

The polka was introduced to Prague in 1837 and appeared in print the same year in Berra's collection *Prager Lieblings-Galopen für Pianoforte*. In the following years innumerable polkas were written by such composers as Hilmar, Joseph Labitzky and Josef Neruda, and were published in collections of dances or in special series with picturesque or topical titles. In 1839 the band of a Bohemian regiment took the polka to Vienna, and that year it also reached St Petersburg. The Prague dancing-master Jan Raab introduced it to Paris in 1840, though it was not until 1843–4 that it became the favourite dance of Parisian society. On 11 April 1844 the dance was first performed in London by Carlotta Grisi and Jules Perrot on the stage of Her Majesty's Theatre. The next month it appeared in the USA, where it gave rise to numerous jokes about the presidential candidate J.K. Polk. In 1845 the polka was danced at Calcutta at a ball given by the governor-general in honour of Queen Victoria. It attained extraordinary popularity, and clothes, hats, streets and even puddings were named after it. Magazines and newspapers of the time were full of news items, descriptions, illustrations and advertisements referring to the dance (see illustration). From Paris the correspondent of *The Times* reported that 'politics is for the moment suspended in public regard by the new and all-absorbing pursuit, the Polka'. *Punch*, in the year of the polka's arrival in London, despaired of the constant allusions to the dance heard in society: 'Can you dance the Polka? Do you like the Polka? Polka – Polka – Polka – Polka – it is enough to drive me mad'. In the early days of its triumphant round-the-world tour the polka was accompanied by related Bohemian dances, such as the *třasák* ('trembling dance'), which became known in German-speaking countries as the *Polka tremblante*, the SKOČNÁ ('leaping [dance]') which became known in Vienna as the *Zäpperlpolka*, and the 3/4 time *rejdovák*, which became known in France and the USA as the REDOWA. However, local dancing-masters introduced their own variants; during the 1840s the polka-mazurka was popular, combining polka steps with the 3/4 time of the mazurka; in Germany the *Kreuzpolka* was the most popular form, and in Viennese ballrooms during the 1850s two distinct forms evolved, the graceful *Polka française* and the livelier *Schnell-Polka* which was similar to the galop.

According to Cellarius's *La danse des salons* (Paris, 1847) the tempo of the polka was that of a military march played rather slowly, at 52 bars (104 crotchets) per minute. The music was usually in ternary form with eight-bar sections, sometimes with a brief introduction and coda. Early characteristic rhythmic patterns are made of quavers and semiquavers, generally without an upbeat (ex.1). Polka rhythms after 1850, particularly outside the

Czech lands, sometimes include upbeats (ex.2). Like many other Czech dances, early polkas are sometimes texted (ex.3).

"THE ORIGINAL POLKA"
IS INTRODUCED.

The polka was cultivated by all the leading ballroom dance composers of the latter part of the 19th century, including the Strausses, Josef Gungl, Hans Christian Lumbye and Emile Waldteufel. It even affected popular song, as attested by George Grossmith's *See me dance the polka* (1886). Along with the waltz it was a staple of military bands and mid-19th-century popular sheet music.

Ex.3

['Uncle Nimra bought a grey horse for 4500 thalers; he came home, grabbed his wife and danced a *madĕra* with her']

Of all Czech dances the polka is the one that most commonly denotes notions of Czechness, and as such has been incorporated by Czech composers into their works, sometimes as named dances and suites (comparable to the way Chopin transformed Polish folkdances into art music), as designated movements (such as the scherzo equivalents in Smetana's string quartets), or simply as polka-like sections in larger works (such as in the folk festivities depicted in the 'Vltava' movment of Smetana's *Má vlast*). One explanation for this is that the rhythms of this duple-time dance with strong downbeats provides an exact parallel to the Czech language, whose defining characteristic (almost unique among European languages) is that all words have a first-syllable stress. Although iambic verse was what most Czech poets and librettists attempted to produce in the 19th century, Czech is essentially a trochaic/dactyllic language. The easiest verse to write in Czech is trochaic; set artlessly to music it

generates a type of polka music. Unlike many of the 'high-style' iambic Czech librettos of the time, Sabina's libretto for Smetana's *The Bartered Bride* (1866) is mostly in trochees; the result is that polka rhythms lie behind much of the opera's faster duple-time music and made it sound unconsciously 'Czech' to an emerging nationalist population, anxious for artistic endorsement of its national identity. Smetana's next opera *Dalibor* (1868), written to a much more high-minded libretto with few trochees, was at first rejected for sounding too 'German'. Smetana's later operas were either written with trochaic librettos to facilitate polka-type music (*The Two Widows*, 1874) or at least took care to incorporate polka sections (*The Kiss*, 1876; *The Devil's Wall*, 1882). Few Czech composers after Smetana (though mainly from Bohemia rather Moravia) could avoid the embrace of the polka. Later examples include named polkas for piano such as Suk's *Ella Polka* (1909), Novák's 'Čertovská polka' ('Devil's Polka', from *Youth*, 1920), Martinů's *Etudy a polky* (1945) and Dobiáš's *Tři poetické polky* (1950) and many more polka-type movements or sections in orchestral music, for example in Dvořák's *Slavonic Dances* (first ser., 1878), *Česká suita* (1879) and in Fibich's *Vesna* (1881), in Suk's *Fairy Tale* (1899–1900), or in Ostrčil's melodrama for voice and piano *Ballad of the Dead Cobbler and the Young Dancer* (1904). Non-Czech examples of polkas can be found in Walton's *Façade* (1922–9), Shostakovich's ballet *The Age of Gold* (1931) and Stravinsky's *Circus Polka* (1942).

The polka continued as a dance or popular-music genre. Jaromír Vejvoda's *Modřanská polka* ('Modřany Polka', 1934) became popular during World War II as *Škoda lásky* ('A Waste of Love'), in Germany as the *Rosamunde-Polka* and among the allied armies as the *Beer-Barrel Polka* ('Roll out the Barrel'). Later Czech examples, reflecting prevailing political circumstances, include Dobiáš's *Polka míru* ('Peace Polka') and Kubín's *Údernická polka* ('Shock-Workers' Polka'). In the USA polkas are still performed in areas with a large central-European population, particularly by the Polish community (*see* UNITED STATES OF AMERICA, §II, 1(iii)(h)). The Polish urban polka, known as 'Eastern style', was popular until the mid-1960s. The Polish rural polka persisted in relative isolation in Chicago until the late 1940s, when it was revitalized by Walter 'Li'l Wally' Wallace Jagiello, who combined it with elements of Polish folksong and *krakowiak*. Klemann distinguishes this type of polka, known as 'honky', from the more dynamic rock-influenced 'dyno' polka.

Pollak, Rose. *See* PAULY, ROSE.

Pollarolo, (Giovanni) Antonio (*b* Brescia, bap. 12 Nov 1676; *d* Venice, 30 May 1746). Italian composer, son of CARLO FRANCESCO POLLAROLO. He was a pupil of his father and perhaps of Lotti. When he was 13 years old the family moved from Brescia to Venice. His first employment at S Marco began in 1702 as substitute for his father, who was *vicemaestro di cappella*. In 1723 Antonio assumed this office in his own right. When the *primo maestro*, Antonio Biffi, died in 1733, Pollarolo participated in an inconclusive competition for the vacated position. He served as acting *maestro* for three years until a second competition was won by Lotti, and in 1740 succeeded Lotti as *primo maestro*. Throughout his life Pollarolo lived in the parish of S Simeon Grande in Venice. His first wife died in 1709, leaving three young children; his second wife, whom he married in 1712, bore him four more children.

His first opera was *L'Aristeo*, performed at Venice in 1700, followed by *Griselda* (1701) and *Demetrio e Tolomeo* (1702). A church music performance of his work is recorded as early as 1704 (Selfridge-Field, 258). His next compositions date from 1714 onwards, starting with *Recognitio fratrum*, an oratorio written for the Ospedale degli Incurabili, where his father was *maestro*. In 1716 Antonio was himself elected *maestro di coro* at one of the Venetian conservatories, the so-called Ospedaletto, for which he wrote the Latin oratorios *Sacrum amoris* (1716) and *Sterilis fecunda* (1717). In 1718 he composed the *Oratorio per il SS Natale* for Rome. He contributed music to the opera *Nerone fatto Cesare* (Venice, 1715) and probably for a setting of *Venceslao* (1721). For a decade his operas were produced at Venetian theatres. *Cosröe* was performed in Rome in 1723 and the serenata *I tre voti* in Vienna in 1724. In 1734 he was re-elected as *maestro di coro* at the Ospedaletto after a one year lapse. He resigned the position in 1743 and was granted a lifelong annual pension.

In the early librettos Antonio Pollarolo is called the 'emulator' of his celebrated father, Carlo Francesco. That he was no longer so described in his second main series of operas, beginning in 1719, possibly signifies that he was then recognized as a composer in his own right. His operatic style can be only partly judged because his datable extant music comes from so short a period (1721–4) and consists chiefly of arias; only the serenata *I tre voti* survives complete. A eulogy of the Empress Elisabeth, the text offered little opportunity for dramatic development, but the music is rich in style, from the festive five-part sinfonia to the terzettos (marked 'coro') and the accompanied and ensemble recitatives. But the most worthwhile music is in the extended da capo arias, which exceed his father's in scope and virtuosity. The *A* section is tripartite, with an orchestral introduction. The return of *A* is often abbreviated, even to the point of recapitulating only the introduction. Basso continuo arias have almost entirely given way to orchestrally accompanied ones. The vocal themes are more interesting than his father's because of their lively, syncopated rhythms, and their wide-ranging

coloratura is a true vehicle for the virtuoso singers of the period. His aria style approaches the sentimental bel canto of the new generation of composers.

OLGA TERMINI

Pollarolo, Carlo Francesco (*b* c1653; *d* Venice, 7 Feb 1723). Italian composer and organist. His works, especially the operas, illustrate the stylistic transition from the late Venetian to the Neapolitan school of opera composers of the late 17th century and early 18th.

1. LIFE. He was probably a pupil of his father, Orazio Pollarolo, organist in Brescia at the parish church of SS Nazaro e Celso (*c*1665–1669) and at the cathedral (1669–*c*1675). Before 1676, in which year his son Antonio Pollarolo was born, Carlo Francesco was organist at the Congregazione dei Padri della Pace, and he substituted for his father at the cathedral for more than a year before being named his successor on 18 December 1676 (it is not known why Orazio had left the city or where he went). On becoming organist at the cathedral Carlo Francesco relinquished his other post. The records of SS Nazaro e Celso establish his marriage in 1674 and the baptisms of his first two children. The family moved at least twice to different parishes of the city, for the baptisms of the next two children, in 1678 and 1679, are recorded at S Afra, whereas those of four more children between 1682 and 1689 are recorded at S Zeno.

During these years Pollarolo advanced rapidly in his profession. On 12 February 1680 the *maestro di cappella*, Pietro Pelli, resigned his position at Brescia Cathedral, and Pollarolo was elected *capo musico* in his place. On 7 June 1681 he assumed a comparable position in the Accademia degli Erranti, a society devoted to 'letters, arms, and music'; he probably continued in this capacity until 1689. His first opera, *Venere travestita*, had been performed at the Accademia in 1678. A libretto records the performance in 1680 of his earliest oratorio, *La fenice*, the music of which is lost. From 1685 on his activity as opera and oratorio composer intensified: *I delirii per amore* was given at Brescia, *La Rosinda* in Vienna (both in 1685), *Il demone amante, overo Giugurta* opened the 1686 season in Venice, followed the same year by *Il Licurgo, overo Il cieco d'acuta vista*. His *Roderico* (1687), *La costanza gelosa negl'amori di Cefalo e Procri* (1688) and *Alarico re de Gotti* (1689) were given at Verona, and a version of *Antonino e Pompeiano* with most of the music by Pollarolo at the Teatro in Brescia in 1689. Thus he was an established composer before his arrival in Venice. He and his family must have left Brescia by the end of 1689, when a new organist (G.B. Quaglia) was elected at the cathedral, but his younger brother Paolo (*b* 1672) and the latter's son Orazio (*d* 1765), who composed a few operas, pursued musical careers in Brescia. His daughter Giulia married the organ builder Giacinto Pescetti, a fellow Brescian, in 1697 and the opera composer GIOVANNI BATTISTA PESCETTI was their son.

On 13 August 1690 Carlo Francesco was elected second organist at S Marco, Venice. Two years later he attained the position of *vicemaestro di cappella*, an unusually quick advancement. From 1691 his operas were performed in the Venetian theatres at the rate of one or more each year. He dominated the most reputable opera house in the city, S Giovanni Grisostomo, from about 1691 to about 1707 and also had works staged at S Angelo, S Cassiano, S Fantino and other theatres in and outside Venice.

The Pollarolo family settled in the parish of S Simeon Grande in Venice, where a further son was born in 1692. Ten years later Carlo Francesco competed for the position of *primo maestro* at the cathedral but lost the election by one vote to Antonio Biffi. His letter of application refers to his seven children. Three months later Pollarolo was 'giubilato', i.e. relieved of his regular duties without loss of status, and his son Antonio took over his duties as *vicemaestro*. But Pollarolo's activity as an opera composer had reached a peak and continued strongly until about 1720. His best works date from the period from 1690 to 1705. His tenure as musical director of the Ospedale degli Incurabili, one of the four famous Venetian conservatories, can be ascertained from librettos and from Coronelli's *Guida de' forestieri*: it dated at least from 1696 to 1718, perhaps even to 1722. The librettos of the Latin oratorios *Tertius crucis triumphus* (1703), *Samson vindicatus* (1706), *Joseph in Aegypto* (1707), *Rex regum* (1716) and *Davidis de Goliath triumphus* (1718) establish his authorship of the music as well as his position at the Incurabili. He wrote music for other institutions and occasions too: in 1697 an oratorio, *Il combattimento*

degli angioli, for S Maria della Consolazione (La Fava), and in 1699 an intermezzo, *Il giudizio di Paride*, for the Accademia degli Animosi, whose guiding spirit was Apostolo Zeno. Then in 1716 Pollarolo composed a cantata, *Fede, Valore, Gloria e Fama* (in which Faustina Bordoni sang the part of Faith), for the Austrian ambassador to Venice, and the wedding of the ambassador's son in 1721 was celebrated with Pollarolo's music to *Il pescatore disingannato*. His last stage work was the opera *L'Arminio*, produced in November 1722, when he was already suffering from his final illness, which lasted six months. He was buried in S Maria di Nazareth, known as the church of the Scalzi, located on the bank of the Grand Canal in Venice. Pollarolo was also famous as a performer: in 1710 Don G. Desiderio counted him, with Francesco Gasparini and Vinaccesi, as one of the 'tre de' primi virtuosi de questa dominante' (Talbot, 74) and Galliard mentioned him among 'the foremost masters for the harpsichord' (Raguenet).

2. Works. Pollarolo wrote some 90 operas and 18 oratorios over a period of 44 years (1678–1722). He belongs to the generation of Marc'Antonio Ziani and Perti. His operas were performed throughout Italy and in Vienna, Brunswick and Ansbach, but his popularity did not outlive him. His chief librettists were Corradi, Frigimelica Roberti, Noris, Silvani and Zeno. Of these Noris is known for his deference to the taste of the Venetian public, whereas Frigimelica Roberti and Zeno worked towards the reform of librettos.

Pollarolo's early operatic style, derived from Legrenzi and Pallavicino, reflects his attention to dramatic and textual expression. The recitatives range from an epic style with longer note values to a quasi-secco style with many repeated notes. A more florid melodic line often appears in cadences just before an aria. Even fully-fledged coloratura passages, whether intended as word-painting or not, occur in the recitatives. Pollarolo frequently alternated recitatives with ariosos of varying metre (4/4, 3/4, 3/2). These features contribute to the refreshing flexibility in compositional technique which is in strong contrast to the stereotyped scene structure of the later works of Pollarolo and his contemporaries. The melodic style had not yet congealed into formulae for questions, exclamations or cadences. Short exclamations by a group of people may be set as recitatives. Sometimes a repeated phrase, in recitative or arioso, functions as a refrain either to unify the section or to define a persistent mood; the result is a kind of miniature rondo form.

By *Il Faramondo* in 1698 ariosos had disappeared from Pollarolo's operas. Recitatives are more in the secco style; expression is now concentrated in harmonic shifts, modulations, affective intervals, chromatic bass lines and dissonances between vocal and bass lines. Accompanied recitatives become focal points of expression, and while the early arias are brief, they are already in *ABA* form with variations such as an abbreviated or an expanded reprise. Arias accompanied only by the basso continuo outnumber those with orchestra. The bass may simply give harmonic support or move in patterns totally independent of the vocal theme (e.g. 'Non lagrimate, no' from *Il Roderico*, Act 1 scene xiii).

The expansion and orchestral elaboration of the accompanied aria is one of Pollarolo's chief contributions to Venetian opera. Thematically the arias of the middle period are undistinguished, but formally they expand to da capo arias with a bipartite *A* section. The basic principle of da capo form is constantly varied by some unusual melodic, harmonic or formal trait. In the last works Pollarolo even approaches a tripartite *A* section (e.g. 'O sommo Apollo' from *Astinome*, 1719). Recitative interrupting an aria forms an effective dramatic device (e.g. 'Ha soave e dolce vita' from the undatable oratorio *Jesabelle*). In the 1690s the orchestral arias began to increase in number; in *Ariodante* (1716) they outnumber continuo arias by a ratio of four to one. In his early works the accompaniments usually consist of three-part strings (unmarked in the scores) in which the two treble parts tend to be widely separated from the bass. During the 1690s a wide variety of instrumental combinations appears, ranging from one to eight parts but most often five. Interesting examples include a solo violin in duet with the voice without bass in 'Usignuoli che cantate' from *Onorio in Roma* (1692), Act 3 scene vi; three-part strings without bass in 'Il viver mio si chiude' from *La forza della virtù* (1693), Act 3 scene ii; cornett and bass in 'Aure vaghe' from *Ottone* (1694), Act 2 scene i; oboe and bass in 'Fede e onor' from *Le pazzie degli amanti* (1701), Act 2 scene iv; two tenor violas, violone and theorbo in 'In quel piè legato' from *Onorio in Roma*, Act 2 scene iv; five-part strings plus two oboes in 'O non ti rivedrò' from *Ottone*, Act 3 scene ix; and the same with timpani in 'All'armi' in *La forza della virtù*, Act 3 scene viii. Pollarolo was one of the first Venetian composers to introduce the oboe into the opera orchestra. In *Onorio in Roma* (Act 3 scene ii) he transfers the concerto grosso principle to the operatic stage: the five-part orchestra on stage alternates with the three-part concertino off stage. Elsewhere the alternation between tutti and concertino serves to reduce the accompanying sound during the singer's phrases. Devices such as offstage singing, offstage obbligatos, and echo effects are frequent in the oratorios as well as in the operas. In Pollarolo's late operas the variety of instrumental combinations and effects gives way to a basic four-part texture; and his instrumental style develops from simple chordal writing to idiomatic string writing of some virtuosity. The sinfonia of *Onorio in Roma* features five idiomatic string parts in addition to the simpler figured bass part. Others are scored for four-part strings and wind (oboes, trumpets or trombones), as in *La forza della virtù* and *Ariodante*. The form of the sinfonia loosely resembles the Scarlattian type, varied by elements from the French overture.

Ensemble singing is limited to relatively short duets; only in the finales do we find brief vocal trios, quartets or quintets. Choruses appear only in the oratorios *Jesabelle* and *Jefte* (1702); those in the latter score are exceptional in being written in a quasi-polyphonic style over a figured bass.

It is the increasing standardization in Pollarolo's later operas (scenes divided into long passages of secco recitative followed by large-scale da capo arias) coupled with a virtuoso vocal style that links him with the next generation of Venetian and Neapolitan opera composers.

WORKS

OPERAS

drammi per musica in three acts, unless otherwise stated

VGG – *Venice, Teatro S Giovanni Grisostomo*

Venere travestita (G. Bottalino), Brescia, Accademia degli Erranti, 1678

Il demone amante, overo Giugurta (M. Noris), Venice, S Angelo, Dec 1685

I delirii per amore (F. Miliati), Brescia, 20 Jan 1686
Il Licurgo, overo Il cieco d'acuta vista (Noris), Venice, S Angelo, Feb 1686
Enea in Italia (G.F. Bussani), Milan, Regio Nuovo, 1686
Il Roderico (Bottalino), Verona, 1687, lib *I-MOe* [?identical with Il Roderico, Brescia, 1684, and with L'Anagilde, ovvero Il Rodrigo, Reggio nell'Emilia, April 1685, *MOe*]
La costanza gelosa negl'amori di Cefalo e Procri, Verona, 1688, *D-Mbs*
Antonino e Pompeiano (Bussani), Brescia, Grande, 1689
Alboino in Italia (G.C. Corradi), Venice, SS Giovanni e Paolo, 1691, collab. G.F. Tosi
Il moto delle stelle osservato da Cupido (serenata, 10 scenes), Padua, 1691
La pace fra Tolomeo e Seleuco (A. Morselli, after P. Corneille: *Rodogune*), VGG, Jan 1691
Onorio in Roma (G.M. Giannini, after Corneille: *Stilichon*), VGG, 2 Feb 1692, *D-AN*
Marc' Antonio (Noris), Genoa, Falcone, 19 Sept 1692
Iole, regina di Napoli (Corradi), Venice, SS Giovanni e Paolo, 18 Nov 1692
L'Ibraim sultano (Morselli, after J. Racine: *Bajazet*), VGG, 1692
La forza della virtù (D. David, after Rogatis: *Storia di Spagna*), VGG, week before 3 Jan 1693, *B-Br*, *CZ-K*; as Creonte tiranno di Tebe, Naples, S Bartolomeo, 1699 [comic scenes by S. De Luca]
Gl'avvenimenti d'Erminia e di Clorinda (Corradi, after T. Tasso: *Gerusalemme liberata*), Venice, SS Giovanni e Paolo, Jan 1693
Amage, regina de' Sarmati (Corradi), Venice, S Angelo, Nov 1693
Ottone (tragedia per musica, 5, G. Frigimelica Roberti), VGG, 14 Jan 1694, *CZ-K*, *D-Bsb*, *US-SFsc*
La schiavitù fortunata (F.M. Gualazzi), Venice, S Angelo, 15 Nov 1694
Irene (tragedia per musica, 5, Frigimelica Roberti), VGG, 26 Dec 1694, *CZ-K*; rev. Pollarolo and D. Scarlatti, Naples, 1704, arias *I-Nc*
Alfonso primo (Noris, after Rogatis), Venice, S Salvador, 1694, frag. *D-Hs*, *US-SFsc*
La Santa Genuinda, overo L'innocenza difesa dall'inganno [Act 3] (dramma sacro per musica, 3, ? P. Ottoboni, after Molano: *Santi di Fiandra*), Rome, Palazzo Doria Pamphili, 1694, *D-Mbs*, *F-Pc*, *GB-Lbl* [Act 1 by G.L. Lulier, Act 2 by A. Scarlatti]
Il pastore d'Anfriso (tragedia pastorale, 5, Frigimelica Roberti, after Virgil: *Georgics*), VGG, 22 Jan 1695, *CZ-K*
La Falsirena (R. Cialli), Ferrara, 30 Jan 1695, ? Brescia, 1696
La Rosimonda (tragedia per musica, 5, Frigimelica Roberti), VGG, aut. 1695, *CZ-K*
Ercole in cielo (tragedia per musica, 4, Frigimelica Roberti), VGG, carn. 1696
Almansore in Alimena (Giannini), Reggio nell'Emilia, 3 May 1696, 6 arias *I-Bc*
Gli inganni felici (A. Zeno, after Herodotus), Venice, S Angelo, 25 Nov 1696, *GB-Lbl* (facs. IOB, xvi, 1977), arias *I-Rvat*
Amor e dovere (David), VGG, 26 Dec 1696
Tito Manlio (Noris), Florence, Pratolino (Villa Medici), 1696, ? VGG, Jan 1697, *D-SWl*, 58 arias *I-Nc*
I reggi equivoci (Noris), Venice, S Angelo, Jan 1697
La forza d'amore (L. Burlini), Venice, SS Giovanni e Paolo, Jan 1697
L'Oreste in Sparta (P. Luchesi), Reggio nell'Emilia, 29 April 1697
Circe abbandonata da Ulisse (A. Aureli), Venice, SS Giovanni e Paolo, 12 Nov 1697
La clemenza d'Augusto [Act 2] (C.S. Capece), Rome, 26 Dec 1697, *E-Mn*, aria *GB-Lbl* [Act 1 by S. De Luca, Act 3 by G. Bononcini]
Marzio Coriolano (Noris), VGG, 18 Jan 1698
L'enigma disciolto (favola pastorale, 3, G. Neri), Reggio nell'Emilia, Communità, 27 April 1698; as Gli amici rivali, ? Venice, 1705, Verona, 26 Oct 1710
L'Ulisse sconosciuto (?C. Frigieri), Reggio nell'Emilia, 2 May 1698
Il Faramondo (Zeno, after Calprenede), VGG, 27 Dec 1698, *A-Wn*
Il repudio d'Ottavia (Noris), VGG, week before 14 Feb 1699, 10 arias *I-Bsp*
L'oracolo in sogno [Act 3] (F. Silvani), Mantua, 6 June 1699; rev., Venice, S Angelo, 11 Jan 1700 [Act 1 by A. Caldara, Act 2 by A. Quintavalle]
Lucio Vero (Zeno, after Capitolino, Ruffo, Vittore and others), VGG, 26 Dec 1699
Il giudizio di Paride (int), Venice, Palazzo Grimani, Accademia degli Animosi, 1699
Il colore fa' la regina (Noris), VGG, 30 Jan 1700, *CZ-K*
Il delirio comune per l'incostanza dei genii (Noris), VGG, 12 Dec 1700
L'inganno di Chirone (melodramma, 3, P. d'Averara), Milan, Regio Ducal, 1700
Le pazzie degli amanti (dramma in musica, 3, F. Passarini), ? Vienna, Hof, Feb 1701, *A-Wn*; Rovigo, Manfredini, aut. 1711
Catone Uticenze (Noris), VGG, 1701
L'odio e l'amore (Noris), VGG, 27 Dec 1702
Ascanio (d'Averara), Milan, Regio Nuovo, 1702
Venceslao (5, Zeno, after Rotrou and Corneille), VGG, Feb 1703
La fortuna per dote (tragicommedia, 5, Frigimelica Roberti), VGG, 30 Nov 1704
L'eroico amore (tragicommedia, 3, M.A. Gasparini), Bergamo, 1704; as L'Alcibiade, ovvero La violenza d'amore, Milan, 1709 and Dolo, 1711, ? collab. F. Gasparini and F. Ballaroti; as L'amante impazzito, Venice, 1714
Il giorno di notte (Noris), VGG, 1704
Il Dafni (tragedia satirica in musica, 5, Frigimelica Roberti), VGG, 30 Jan 1705
La fede ne' tradimenti (G. Gigli), Venice, S Fantino, 30 Oct 1705
Filippo, re della Grecia (5, P.G. Barziza, after Livius), VGG, week before 16 Jan 1706
Flavio Bertarido, re dei Langobardi (S. Ghisi), VGG, 1706
La fede riconosciuta (Pasquaglio), Vicenza, 1707
La vendetta d'amore (pastorale per musica, 3), Rovigo, Manfredini, 1707, *GB-Lam*
L'Ergisto (dramma pastorale, 3, Passarini), Rovigo, Campanella, Oct 1708
Igene, regina di Sparta (A. Aureli), 1708
Il falso Tiberino (P. Pariati ?and Zeno, after P. Quinault), Venice, S Cassiano, between 12 and 19 Jan 1709
La ninfa riconosciuta (melodramma pastorale, 3, Silvani), Vicenza, Garzeria Fiera, 1709
Il Costantino pio (dramma posto in musica, 3, Ottoboni), Rome, Palazzo della Cancelleria, 20 Jan 1710
Amor per gelosia (favola pastorale, 3), Rome, 1710
Engelberta, o La forza dell'innocenza, Brescia, Accademia, carn. 1711
La Costanza in trionfo, Brescia, Accademia, carn. 1711
Publio Cornelio Scipione (dramma per musica, 5, A. Piovene, after Livy and Plutarch), VGG, week before 16 Jan 1712
Peribea in Salamina (after Plutarch), Vicenza, Grazie, May 1712, *I-Mc*
L'infedeltà punita (Silvani), VGG, 15 Nov 1712, collab. A. Lotti
Spurio postumio (Piovene), VGG, 26 Dec 1712
Eraclio [Act 3] (P.A. Bernardoni), Rome, Palazzo della Cancelleria, 1712 [Act 2 by F. Gasparini]
Giulio Cesare nell'Egitto (A. Ottoboni, after Bussani), Rome, 1713, *US-Wc*
Semiramide (Silvani), VGG, 6 Jan 1714, 9 arias *D-Dl*
Marsia deluso (favola pastorale, 5, Piovene), Venice, SS Giovanni e Paolo, carn. 1714, 5 arias *Dl*
Il trionfo della costanza, Vicenza, Grazie, May 1714
Tetide in Sciro (Capece), Vicenza, Grazie, May 1715
Il germanico (Barziza), VGG, 24 Jan 1716
Ariodante (A. Salvi), VGG, 14 Nov 1716, *Bsb* (facs. DMV, xiii, 1985), *US-Wc* (copy of lost *D-Dl* score) [? rev. of G.A. Perti: Ginevra, principessa di Scozia, Florence, Pratolino (Villa Medici), 1708]
L'innocenza riconosciuta (T. Malipiero), Venice, S Angelo, aut. 1717
Farnace (D. Lalli), Venice, S Cassiano, aut. 1718
Amore in gara col fasto (dramma per musica, Silvani), Rovigo, Manfredini, 1718
Astinome (?G. Lerner), Rome, Capranica, carn. 1719, 10 arias *F-Pn*
Il pescatore disingannato (epitalamio musicale), Venice, Sept 1721
L'Arminio (Salvi), Venice, S Angelo, 14 Nov 1722; aria in Flavio Anicio Olibrio (pasticcio), *D-ROu*, ed. in Strohm, ii, 273

Other operatic: Cinna [Act 2], *E-Mn*; Pastorale à tre voci, *Mp*; Il litigio amoroso (serenata à tre voci con istromenti), *US-BEm*; unknown op, *D-Bsb*, ed. in Strohm, ii, 200
Doubtful: Venere travestita (A. Scappi), Rovigo and Murano, 1691; Alfonso, il sesto re di Castiglia, Naples, 1694 [cast as for Alfonso primo, 1694]; Il re infante (Noris), Bologna, 1694 [possibly by Pollarolo with addns by Perti]; Gl'amori di Paride ed Ennone in Ida, ?1697; De la virtude ha la bellezza onore (?Pariati), Venice, 1704 [possibly by Pollarolo]; La pace fra Pompeiano e Cesarini (Aureli), Venice, 1708; Berenice e Lucilla, o L'amar per virtù, *D-W* [? Pollarolo or D. Freschi; cast as for Lucio Vero, 1700, recits. in

Ger.]; La Proserpine, *GB-Lbl*, attrib. Pollarolo on f.136 [pencil note]

ORATORIOS

La Rosinda (?G. Faustini), Vienna, 1685, *A-Wn* Cod.18103
Jefte (Frigimelica Roberti), Venice, 1702, *Wn* Cod.16581
Jesabelle, *B-Bc* 1096
Sansone, 1706, *GB-Mp* F530 Ps41
Saule indemoniato, *Mp* F530 Ps44

Lost oratorios include:
La fenice, Brescia, 1680; Il combattimento degli angioli (Frigimelica Roberti), Venice, Fava, 1697; La clemenza di Salomone (Frigimelica Roberti), Venice, 1702; S Orsola, Venice, Incurabili, Venice, 1702; Le gare dell'India e di Roma, Brescia, 1703; Tertius crucis triumphus, Venice, Incurabili, 1703; Conversio glorioso in vita Divinae Ursulae, Venice, Incurabili, 1704; La vittoria dell'amor divino, Venice, Incurabili, 1704; Samson vindicatus, Venice, 1706; Joseph in Aegypto, Venice, Incurabili, 1707; Il convito di Baldassar (P.A. Ginori), Rome, Palazzo della Cancelleria, 1708; Rex regum in veneti regia a regibus adoratus (G. Cassetti), Venice, Incurabili, 1716; Davidis de Goliath triumphus, Venice, 1718

OTHER WORKS

OLGA TERMINI

Pollarolo [Polaroli], **Orazio** (*b* *c*1695; *d* Brescia, 1765). Italian composer and organist. He was named after his grandfather, who composed a collection of dances (*Suonate da camera a tre*, op.1). He succeeded his father, Paolo Pollarolo, as organist and *maestro di cappella* of S Francesco in Brescia, holding the post from 1724 to 1752. From 1742 to 1762 he served as *maestro di musica* at the Casa di Dio there. His *Cantate musicali*, written for the inauguration of the new *podestà* M.A. Cavalli, refers to him as *maestro di cappella* of the Accademia degli Erranti. The *Messe concertate* of 1740, preserved at Brescia Cathedral, are marked op.2. He also provided music for the Convertite della Carità, at least during the period 1750–52, and he served as organist of the Congregazione della Pace. Two operatic works by him are known: *Orlando furioso* (Mantua, 1725) and *Il Venceslao* (Mantua, 1728 and Brescia, 1729). If a Pollarolo was the teacher of the young Ferdinando Bertoni, it must have been this Orazio.

OLGA TERMINI

Pollarolo [Polaroli], **Paolo** (*b* Brescia, 25 Jan 1672; *d* Brescia, *c*1729). Italian composer and organist. He was probably a pupil of either his father Orazio or his older brother, Carlo Francesco. He served as organist of S Maria della Pace, Brescia, from 1701 to about 1728 and he was elected *capo musico* of the Accademia degli Erranti there in 1706. He was also *maestro di musica* at the Casa di Dio, and *maestro* and organist of S Francesco, at least from 1722 to 1728. Family records are extant from the later part of his life in the parish of SS Nazaro e Celso, Brescia, where his wife died in 1748. The date of his death is not known precisely, but in 1729 his son Orazio succeeded him at S Francesco.

Pollarolo had a modest career as a composer, beginning with a contribution to the oratorio *Sara in Egitto* (Florence, 1708). His *Maria Stuarda* (1716) and *Argomento e scenario del brittanico* (1717) were performed at the Collegio dei Nobili di S Antonio Viennese, Brescia, where he was also *maestro di cappella*. According to Barezzani (1981), he also wrote the oratorio *I trionfi della carità* (1710), the pastorale *La fede e l'amore in armi* and perhaps also *La fede e l'amore in pace* (1719).

OLGA TERMINI

Pollastri, Augusto (*b* Bologna, 9 May 1877; *d* Bologna, 9 Nov 1927). Italian violin maker. He was a pupil of Raffaele Fiorini in Bologna and set up independently there around the turn of the century. His violins are based on the Stradivari pattern but were sufficiently individual to earn the dubbing 'modello Pollastri'. The curves, archings, edges and scrolls are all gracefully rounded. The varnish is generally a red-brown, sometimes not very transparent, but always attractive, even when the colour is more red-purple. At the end of the 20th century Pollastri's instruments had begun to mature in tone; this, combined with their great beauty and delicacy, and their rarity – he apparently made only 64 instruments – has made them much in demand and capable of commanding high prices. There are many copies of Pollastri's instruments and even some fakes.

Augusto's brother Gaetano Pollastri (*b* Bologna, 24 Nov 1886; *d* San Lázzaro di Savena, nr Bologna, 5 Oct 1960) studied with him and became his assistant. After 1927 Gaetano worked independently in a style similar to his brother's. In the 1930s and 40s the individual features of his style became more prominent and he used a red varnish, without the purple tinge of his brother's. Both makers branded their instruments with their logo, face to face cockerels, near the end button and above the label in the interior. Gaetano was a more prolific maker, and his instruments, although always a bit less attractive than his brother's, are appreciated for their fine tone.

JAAK LIIVOJA-LORIUS, ROBERTO REGAZZI

Polledro, Giovanni Battista (*b* Piovà, Casale Monferrato, nr Turin, 10 June 1781; *d* Piovà, 15 Aug 1853). Italian violinist and composer. He studied in Asti, then, about 1796, was heard in Turin by Pugnani, who became his teacher for six months. This led to his appointment as a violinist of the royal orchestra at Turin, of which Pugnani was the leader. When the orchestra was dissolved, soon after the French forced the king to abdicate in 1798, Polledro gave concerts in northern Italy and in 1804 became leader of the theatre orchestra and a church musician in Bergamo. Soon after, he went to Moscow and spent about five years in the employ of Prince Tatishchev, who maintained his own serf orchestra. In 1811 he resumed his travels and was acclaimed in Germany as the best violinist since Viotti. In 1812 he performed with Beethoven in Karlsbad. In 1814 he became leader of the Dresden court orchestra, with a salary equal to that of Weber, the conductor. From 1824 to 1844 he was active in Turin as court *maestro di cappella*.

Polledro's playing was praised for its technical facility, especially in double stops and jumps across the finger-board. His compositions were considered of only moderate interest even by his contemporaries; but they are elegant and exemplify the technical advances leading from Pugnani to Paganini. He wrote mainly for the violin, and also some church music, both vocal and instrumental.

BORIS SCHWARZ/EMANUELE SENICI

Pollet. French family of musicians and at least one music publisher. They were active in the 18th and 19th centuries.

(1) Charles-François-Alexandre-Victor Pollet [l'aîne] (*b* Béthune, 19 Oct 1742; *d* Evreux, 16 July 1824). Cittern player, violinist, harpist and composer. He was the son of Alexandre-Auguste Pollet, an artist in Béthune, and was living in Lille around 1771. He then came to Paris, where he made his name as a musician. According to Choron and Fayolle he left the city for Evreux towards 1793, and seems to have lived there until his death. His published works, for cittern, include several *Recueils d'ariettes* (1771–5), 6 *sonates*, op.4 (1775) a *Méthode*, op.5 (1775) and a *Journal d'airs*, opp.9–12 (1778).

(2) (Jean-)Benoît(-Joseph) Pollet [le jeune] (*b* Béthune, *c*1755; *d* Paris, 16 April 1823). Composer, music publisher, player and teacher of the cittern and the harp, brother of (1) Charles-François-Alexandre-Victor Pollet, with whom he studied music. He arrived in Paris towards 1775, and contributed to the development of the cittern (he is credited with determining the tuning of the second course of five strings used on citterns in A: *d♯-d-c-b-a*). According to Choron and Fayolle, he gave up the cittern for the harp on the advice of Jean-Baptiste Krumpholtz. From 1799, now a famous teacher, he organized monthly concerts of harp, piano music and singing for his pupils. He set up as a dealer in sheet music, harps and pianos in 1800. On his death his widow Elisabeth-Joséphine Varlet (*b c*1777) took over the shop before selling the business to Hanry, who features as her successor from June 1825 onwards. His published pieces include 25 romances,

numerous chamber works and a 'scène comique', *Trio de mirlitons* (1803).

(3) **Joseph Pollet** (*b* Paris, 30 April 1806; *d* Paris, Nov 1883). Choirmaster and organist and, according to Fétis, the grandson of (2) Benoît Pollet. His parents were apparently the guitarist L.M. Pollet (*b* c1782) and the harpist Marie-Nicole Simonin (1787–1864). However, the registration of the birth of a certain Alexandre-Charles-Marie Pollet (1 June 1805, Archives de la Seine) indicates that M.-N. Simonin was the wife of Agathon-Joseph-Victor Pollet. Admitted to Notre Dame as a choirboy on 4 October 1814, Joseph entered the Conservatoire in 1824, and studied harmony with Dourlen, organ with Benoist, and counterpoint and fugue (winning first prize in 1830) with Fétis. He was choirmaster and taught piano to the children of the Notre Dame choir from 1830 to 1873, and was also organist at the church of St Jacques-du-haut-Pas before being appointed organist at Notre Dame where he remained from 1834 to 1841. Several of his masses were performed at Notre Dame, particularly in 1823–4, and according to Fétis he also published sacred music.

(4) **Charles Pollet** (*b* ?Paris, before 1830; *d* ?Paris, after 1886). Organist, active in Paris and, according to Fétis, the son of (3) Joseph Pollet. He was a harpist at the Théâtre Italien towards the end of the 1820s, and seems to have lived or worked at Vaugirard, on the edge of the city. His published compositions include a large number of pieces for piano and several sacred works. Two further members of the family were active in Paris at the beginning of the 20th century: Charles M. Pollet published a romance ('Obscurité', 1908) and Marcel Pollet published numerous piano pieces and songs and romances with piano or orchestral accompaniment (including '3 Chansons de Bilitis', 1909).

HERVÉ AUDÉON

Pollet, Françoise (*b* Boulogne-Billancourt, nr Paris, 10 Sept 1949). French soprano. She studied the violin and later singing at the Versailles Conservatoire and in Munich. A three-year engagement at Lübeck (1983–6, début role the Marschallin) gained her experience in Mozart, Verdi, Wagner and Strauss. Since then she has sung widely in France and abroad, and became the first French soprano since Crespin to gain an international reputation. Her forays into the French repertory include Valentine (*Les Huguenots*), both Cassandra and Dido in *Les Troyens*, Catherine of Aragon (Saint-Saëns's *Henry VIII*) and Dukas' Ariane (in the 1991 Ruth Berghaus production at the Théâtre du Châtelet, Paris).

Pollet's soft-grained, lustrous instrument is not always heard to advantage in the dramatic soprano repertory that she sometimes essays, but rather in gentler styles and moods, in which her voice attains a rare beauty of tone and style. She is a distinguished singer of lieder and *mélodies* and a lambent interpreter of the orchestral version of Messiaen's *Poèmes pour Mi*. Her recordings include *Les Troyens* (Dido) and *La damnation de Faust* (both under Dutoit), *Les Huguenots*, Brahms songs and a highly praised disc of French arias.

MAX LOPPERT

Pollier, Mathias. *See* POTTIER, MATTHIAS.

Pollini, Francesco [Franc, Franz] [Barone Pulini] (*b* Ljubljana, 26 March 1762; *d* Milan, 17 Sept 1846). Italian composer, pianist and teacher. Although he was born in Ljubljana, his family was of Venetian origin and was raised to the Austrian nobility in 1778. Legal documents describe him as a chemist by profession as he made and distributed a well-known antisyphilitic infusion, the recipe for which he inherited from his father, with which he cured Paganini in Milan in 1824. From the spring of 1783 he lived in Vienna. He became acquainted with Mozart, who dedicated two pieces to him (as Baron Pulini), the Scena and rondò K490 and the A major duet K489, which was composed for the private performance of *Idomeneo* given in Vienna on 13 March 1786, when Pollini sang the role of Idamante. He was also in contact with Antonio Salieri, who in 1784, when Pollini travelled to Paris, introduced him (probably with a letter) to Baron Du Roullet (*A-Wn*, Handschriftensammlung 8-34-1). About 1790 he settled in Milan, where he studied with Zingarelli, and in 1798 he married the 23-year-old Marianna Gasparini, an amateur harpist. That same year his opera *La casetta nel bosco* was performed at the Teatro della Cannobiana. In 1801 his cantata *Il trionfo della pace* was given at La Scala in honour of the Peace of Amiens. For the ceremony of Napoleon's coronation in Milan Cathedral (26 May 1805) two of his compositions for large orchestra and chorus were performed, *Vivat, vivat* and *Te ergo quaesumus*.

Pollini gave private piano lessons and is not known to have taught at the Milan Conservatory. However, when the conservatory was founded he was made an Honorary Member, a title of some prestige. He was asked to write a piano method, which was published by Ricordi in 1812 under the title *Metodo pel clavicembalo*. This was the first Italian piano method and it remained in use for many years, achieving wide circulation. It stands out from other treatises of the period (by Clementi, Adam, Dussek and Pleyel) for the particular attention Pollini pays to the relationship between technique and sound-quality. That he was highly thought of as a composer and teacher is indicated by the entries he received in contemporary encyclopedias, and the many positive reviews of his work. As an active organizer of private instrumental academies he constituted a point of reference for many musicians of his day. Through Zingarelli he became a close friend of Bellini, when the composer moved to Milan, and Bellini dedicated *La sonnambula* to him. More than 60 of his works were published by various European publishing houses, including Ricordi. His work-list, however, has previously been muddled with that of a composer of the same name born in Mendrisio in Switzerland in 1832, who studied at the Milan Conservatory and later conducted at La Scala.

In his compositions Pollini explores the dramatic and romantic possibilities of the piano, while maintaining a solidly constructed musical discourse. His piano writing calls for a complete mastery of touch, since the melody is normally combined with two accompanying parts, a texture made more apparent from 1820 by the use of three staves, isolating the melodic line.

ELENA BIGGI PARODI

Pollini, Maurizio (*b* Milan, 5 Jan 1942). Italian pianist. His virtuoso agility and his taste for adventurous repertory developed early, during his studies with Carlo Lonati and Carlo Vidusso. As a student he won second prize in the 1957 Geneva International Competition, and his graduation from the Milan Conservatory in 1959 was followed by victory in the Ettore Pozzoli Competition that year and in the 1960 Warsaw Chopin Competition. At this time his recording of Chopin's First Concerto for EMI demonstrated a fusion of poetry and precision which remains unrivalled. By now he was already gaining the reputation of a problematic perfectionist, and after mixed receptions for his concert performances he withdrew from the international scene to consolidate his technique and repertory. On his return to performing in 1968 he made a sensational impact. He signed a contract with Deutsche Grammophon and over the next decade made a succession of classic recordings, among them Beethoven's last five sonatas and Fourth Concerto, Chopin's Etudes, Schoenberg's complete solo works, Schumann's Fantasy, Bartók's Second Concerto, Prokofiev's Seventh Sonata, Boulez's Second Sonata, and Stravinsky's Three Movements from *Petrushka*.

All these interpretations are marked by a combination of clarity, power and intellectual lucidity, which suggests the model of Michelangeli, with whom Pollini studied for a few months. In fact he has drawn equal inspiration from pianists of the previous generation, including Backhaus, Edwin Fischer, Haskil, Cortot and Gieseking, and from conductors as diverse as Karajan, Toscanini and, especially, Mitropoulos.

His friendship with Claudio Abbado began in their student days when they started to explore the music of the Second Viennese School and the serialists of the 1950s and when their shared left-wing political idealism led them to search for new ways of bringing contemporary music to audiences of workers. Pollini's commitment to the cause of Boulez and Stockhausen has not wavered and is unparalleled among pianists of his stature. For a short period in the early 1980s he turned to conducting, directing Rossini's *La donna del lago* at the Pesaro Festival

Maurizio Pollini

and Mozart concertos from the keyboard. In 1995 he devised and presented a cycle of concerts at the Salzburg Festival.

His legendary reticence in interviews eased somewhat in the late 1980s, but at the same time the nervous intensity of his playing began to show negative effects in an increasing rigidity of phrasing and tendency to clip rhythms. At its best his playing retains a hypnotic intensity, technical finesse and a rare ability to convey the cumulative power of long musical paragraphs.

DAVID FANNING

Pollitzer, Adolf [Adolphe] (*b* Budapest, 23 July 1832; *d* London, 14 Nov 1900). Hungarian violinist and teacher. The youngest of a family of 19, Pollitzer studied the violin under Böhm and composition under Preyer in Vienna, and later the violin under Alard in Paris. He played before the emperor as a child and at 13 won the friendship of Mendelssohn, in whose presence he played the E minor Violin Concerto. Settled in London by 1851, Pollitzer led at the Royal Italian Opera under Costa for many years, and also led the New Philharmonic and Royal Choral societies. In 1861 he was appointed professor of violin at the London Academy of Music, of which he became principal in 1890. His numerous pupils included Elgar, whose talent he recognized and to whom he gave much encouragement. In 1920, Elgar referred to Pollitzer as 'one of the very best teachers and players we ever had'. He produced Ten Violin Caprices and many editions of violin works by Alard, De Bériot, Vieuxtemps etc.

KEITH HORNER

Pollius, Daniel. *See* BOLLIUS, DANIEL.

Polmier, John. *See* PLUMMER, JOHN.

Polo. Type of *cante flamenco*. *See* FLAMENCO, §2 and Table 1.

Pololáník, Zdeněk (*b* Brno, 25 Oct 1935). Czech composer. He studied the organ with Josef Černocký at the Brno Conservatory (1952–7) and composition with Petrželka and Schaefer at the Janáček Academy of Musical Arts (1957–61). He associated himself with avant-garde ideas in the ealy 1960s, though his spontaneous inventiveness has not been subordinated to any particular new technique. Even his 12-note serial compositions, those from the Second Symphony (1962) to the ballet *Mechanismus* (1964), are by no means strict. Indeed, he inclines towards modality of the type which lies behind Moravian folksong. His music also shows an expressive feeling for rhythm and tone-colour, the latter being particularly evident in his collage and electronic pieces. Nor has he eschewed elements of pop music, which appear in the *Rytmická mše* ('Rhythmic Mass') and the musical *Mladá garda* ('The Young Guard'), for the principle of combination is the decisive factor in his work. Sacred music forms an important part of his output, much of it written for liturgical use. His music for film, stage, radio and television is extensive.

WORKS

OLDŘICH PUKL/KAREL STEINMETZ

Polonaise (Fr.). A Polish dance. Often of stately, processional character, it was much developed outside Poland in the 18th century. It came to be characterized by the rhythm shown in ex.1 but its origins lie in sung Polish folk dances of simple rhythmic-melodic structure. These dances, in triple metre and built from short phrases without upbeats, were performed at weddings and other festivals with regional variations of character, tempo and function. The folk *polonez* was adopted by the 17th-century Polish nobility, who transformed it into a more sophisticated dance, suitable for their refined, cultured courts. There are polonaises of transitional character, popular with the minor aristocracy, which retain elements of rural simplicity, but the court polonaise, when sung, employed more sophisticated texts. It became yet more elaborate as it developed into an instrumental piece for dancing at grand society occasions. Through its processional nature the dance assumed martial overtones and its status in Poland promoted its dissemination across Europe. At the end of the 17th century the *polonez* was becoming popular in the courts of many countries and by the middle of the 18th century it had firmly acquired the French title 'polonaise' even in Polish sources.

Ex.1

Jan z Lublina's tablature (1537–48) contains many dances with Polish titles. 'Polnischer Tanz', 'chorea polonica' and 'polacca' are terms that are used in several 16th-century sources, the earliest known being a Polish dance in a Nuremberg lute tablature of 1544 (later examples can be found in Ammerbach's organ tablature book of 1583, the Loeffelholtz manuscript of 1585 and Nörmiger's *Tablulaturbuch* of 1598). None of the pieces with these titles, however, resemble the later polonaise. The carol 'Wźłobie leży' ('Lying in a Manger'), dating from the mid-17th century, is the earliest known piece that exhibits rhythmic and melodic features characteristic of the polonaise (ex.2). Courtly polonaises are included

Ex.2 'Wźłobie leży' (melody line)

in lutebooks of this time – for example, in that of Virginia Renata of Gehemans (1640; *D-Bsb* 20052) – and theoretical classification of polonaise types can be found in Retzelius's *De tactu musico* from the end of the century (Uppsala, 1698).

In the 18th century Princess Anna Maria of Saxony (1728–97), daughter of King Augustus III of Poland, collected over 350 polonaises. The examples she brought together reveal that the the level of sophistication had notably increased. Instrumental accompaniments employ fashionable, rococo stylization and figurations. The harmonic language includes local colouration of detail to create a folk tone (for example, Lydian fourths). The structure has also been considerably extended with trio sections in binary or da capo form. The polonaise had now become an attractive part of the repertory of dance forms for European composers. Telemann, who visited Poland in 1704–7, composed many examples. Those of J.S. Bach (for example in the French Suite no.6 and Orchestral Suite no.2) exhibit many of the classic characteristics of the stylized 18th-century polonaise. In France, Couperin contributed examples, and in the second half of the century polonaises were written by W.F. Bach,

Schobart and Mozart (the 'Polonaise en rondeau' in the Piano Sonata in D K284/205*b*). The combination of rondo and polonaise was also employed by Beethoven in the 'a la polacca' finale to his Triple Concerto for piano, violin and cello op.56. Beethoven also wrote a Polonaise in C op.89 for solo piano. Schubert composed 10 polonaises for piano four hands, four in D599 and six in D824.

In his *Der vollkommene Capellmeister* (1739) Johann Mattheson praised the passionate character that the dance offered. This rhetorical aspect of the polonaise became especially notable in examples by W.F. Bach (ex.3), but it

was in the politically unstable Poland of the late 18th century that the dance began to assume a heightened emotional quality with contrasts between noble majesty and heartfelt melancholy. Inevitably, with the partition of the country between occupying powers, the dance became symbolic of the Polish 'nation'. Prince Maciej Radziwiłł (*c*1751–1800) composed polonaises for large instrumental forces. His polonaise 'La chasse' is scored for two violins, viola, cello, bassoon, timpani, two clarinets, two horns and includes a part for an additional 'Polnisch Horn'. The work also includes a programmatic text. For the theatre, Jan Stefani composed a folk opera *Cud mniemany* ('The Supposed Miracle') which included the polonaise among many Polish dance forms. In the work of Prince Michał Kleofas Ogiński (1765–1833) the instrumental polonaise became an independent keyboard work for the salon rather than for court dancing. He wrote 20 for piano (some for four hands) which are frequently melancholy in tone and have programmatic titles. That Ogiński had participated in the Kościuszko uprising of 1794, an event of profound symbolism for the Polish people, only increased the national resonance of his compositions, but these pieces assured the popularity of the polonaise not only in Polish salons but also across much of Europe. His 'Pozegnanie Ojczyzny' ('Farewell to the Fatherland') of 1794 became one of the most widely known programmatic polonaises of the day. It was pieces such as this that the poet Adam Mickiewicz must have been remembering when he wrote an impassioned description of a polonaise at the end of his epic poem *Pan Tadeusz* (1834).

Józef Kozłowski, Ogiński's teacher, was particularly prolific, writing nearly 70 polonaises for orchestra as well as examples for piano. He served in the Russian army and his choral polonaise *Grom pobiedy rozdawajsia* ('Thunder of victory, resound!'), written for the 1791 celebrations of Catherine II's victory over the Turks, was until 1833 the Russian national hymn. Its success, ironically particularly strong after Russia's annexation of Polish lands in 1795, made it a model for future polonaises by 19th-century Russian composers. Back in Kozłowski's native Poland, however, as the 19th century progressed so the polonaise became increasingly 'domesticated'. Karol Kurpiński commented in 1820 that the noble character of the polonaise had been lost since the turbulent years at the end of the 18th century. Chopin's teachers Wojciech Zywny and Józef Elsner continued to develop certain features of the dance but Elsner's view, expressed in 1811 to Breitkopf & Härtel, that 'everything that is pleasing today may be converted into a polonaise' conforms with Kurpiński's frustation. The latter's 'Coronation' Polonaise for chorus and orchestra (1826) may be an attempt to revive the dance's former glories, but his introduction of *Rule, Britannia* and *God Save the Queen* into a polonaise dedicated to the Duke of Cumberland suggests the exhibitionist's wish to please his audience. Kozłowski, too, was fond of incorporating pre-existing melodies (for example, by Pleyel and Mozart) into his polonaises.

Franciszek Lessel and Maria Szymanowska wrote polonaises in the virtuoso manner of Hummel. Pieces such as Weber's *Grande polonaise* op.21 (1808) and *Polacca brillante* op.72 (1819), which was later arranged by Liszt for piano and orchestra, exhibit a similarly 'brilliant' idiom. This style was an important musical stimulus for the young Chopin and polonaises figure strongly in his earliest works. His Variations on 'Là ci darem la mano' op.2 for piano and orchestra close with an 'alla polacca' finale. The virtuoso tradition of improvising on popular operatic themes of the day works its way into his Polonaise in B♭ minor (1826), the trio of which contains embellishments of 'Vieni fra queste braccia' from Act 1 of Rossini's *La gazza ladra*. Two polonaises for piano date from 1817 and are therefore among Chopin's earliest surviving pieces. The influence of Ogiński is discernible, even to the extent that certain melodic contours and figurative designs are closely similar, but already in these very youthful pieces Chopin is reflecting a more profound engagement with folk and national dimensions when compared with many salon dance pieces of this time.

Chopin's later polonaises develop the dance to a level of technical complexity far beyond the examples of his predecessors. The Polonaise in F♯ minor op.44 (1841), for example, combines daring rhetoric, formal expansion, poetic intensity and pianistic bravura. The heroic-military tone is amplified by imitative, percussive effects. The trio section is, by contrast, a lyrical 'tempo di mazurka'. The piece is, then, an example of a tendency in Chopin's mature works for dance types and genres to be mixed (although mazurka features are also found in certain polonaises by Chopin's predecessors). In his later polonaises the ternary form, with a contrasting trio section, becomes modified. This is already apparent in op.44, but formal complexity and mixing of genres becomes most powerful in the *Polonaise-Fantasy* op.61.

Schumann wrote eight polonaises for piano four hands (1828) and one as the eleventh piece of *Papillons* op.2. There are two examples by Liszt (1851, and the *Fest-Polonaise* of 1876) and one by Wagner (published as his op.2), but it was in 19th-century Russia that the polonaise became especially popular. As the success of Kozłowski's examples demonstrated, the pomp and nobility of the polonaise was greatly approved by the Russian courts. Verstovsky, in the entr'acte to Act 3 of his opera *Askold's Grave* (1835), uses a polonaise to set the scene of the Russian palace. Glinka composed a polonaise setting, for chorus and orchestra, of the words 'Great is our God' (1837) and a Polonaise in E for orchestra (1839). At the beginning of Act 2 of his opera *A Life for the Tsar* (1836)

he uses a polonaise to characterize the Polish nobility. Musorgsky employs the dance for similar dramatic purposes in Act 3 of *Boris Godunov*. Tchaikovsky turned to Kozłowski's example for the climax of Act 2 of his opera *The Queen of Spades*, quoting his choral refrain 'Be glorified by this, O Catherine' when Catherine II appears. In other Russian operas the polonaise style is employed for its ceremonial qualities, inevitably assuming Russian national resonance (for example, in Tchaikovsky's *Vakula the Smith* and *Yevgeny Onegin*, Rimsky-Korsakov's *Mlada* and Borodin's *Prince Igor*). Orchestral polonaises by Lyadov (1899) and Anton Rubinstein (1902) were both commissioned for the ceremonial unveiling of monuments. Skryabin's virtuoso Polonaise for solo piano is in the Chopin mould, but Szymanowski's example (the first of his *Polish Dances* of 1926) is in a more modernistic idiom.

STEPHEN DOWNES

Polonio (García-Camba), Eduardo (*b* Madrid, 5 Jan 1941). Spanish composer. He was enrolled at the Madrid Conservatory (1958–68), at the same time studying instrumentation with Günther Becker in Darmstadt. He has been an active member of the Madrid avant garde since 1967, the year in which he began working at the Laboratorio Alea, and from 1970 to 1972 he was, with Luis de Pablo and Vaggione, part of the group Alea Música Electrónica Libre. From 1976 he resumed his activity in the recently created Laboratorio Phonos in Barcelona. He has collaborated with video artists, actors and jazz musicians, organized the 'Six Days of Contemporary Art' festival and founded the Gabinete de Música electroacústica in Cuenca and the Asociación de Música Electroacústica de España, of which he was the first president (1988–94). He received the Bourges 'Magisterium' prize (1994) for his electro-acoustic compositions.

Since 1970 Polonio has composed electro-acoustic music exclusively, abandoning traditional instruments. His style, full of tenderness and irony, frequently opens itself up to dialogue with other artistic fields. In his work we always find accomplished orchestration of sound objects of various origins, with timbre and rhythm functioning as the dominant polarities.

JOSÉ IGES

Polonus, Johannes [Polak, Jan; Pole, Hans] (*b* Breslau [now Wrocław]; *fl* 1590–1616). German composer and instrumentalist. He was appointed a court musician at Wolfsburg in 1590. In 1603 (according to *EitnerQ*) he was a violinist in the Berlin court orchestra, with a salary of 112 thalers and free board, which was raised to 144 thalers in 1612. The title-page of his *Canticum Sanctorum Ambrosii et Augustini* (Magdeburg, 1606), for five voices, names him as a musician of the Elector of Brandenburg, and in

1616 he became the elector's Kapellmeister. 13 of his motets, for four to six voices, appeared in the collection *Cantiones aliquot piae* (Helmstedt, 1590), and a manuscript wedding song, *Selig ist der gepreiset*, written for the Duke of Saxony in 1607 and signed 'Johannes Polonus Marchiacus' is extant (in *D-Dl*).

RICHARD MARLOW

Polovinkin, Leonid Alekseyevich (*b* Kurgan, 1/13 Aug 1894; *d* Moscow, 8 Feb 1949). Russian composer and teacher. He entered the Moscow Conservatory in 1914 to study the piano with Lev Konyus and Kipp and also the violin. In 1918 he enrolled in the composition and orchestration class of Vasilenko, and at the same time he studied harmony with Zolotaryov, fugue with Glière, form with Catoire and conducting with Malko. After graduating in 1924 he moved to Leningrad (now St Petersburg), and there took part in the establishment of the Mamontov studio of Monumental Opera, known as the 'Mamont', which was affiliated to the former Mariinsky Theatre. He was also music director at the Aleksandrinsky Theatre, but soon returned to Moscow for postgraduate composition study at the conservatory (1926). There he did work on formal analysis and taught orchestration (1926–32). In 1926 he began a long career as music director of the Moscow Children's Music Theatre, and he organized and conducted the orchestra of this theatre. In his music he had to overcome a dependence on Skryabin before seeking a new language which was connected to the ideals and interests of the Association for Contemporary Music (ASM). From 1924 he was secretary of the ASM. The titles of many works dating from the 1920s, such as *Teleskop*, *Ėlektrifikat* and *Proisshestviya* ('Incidents') conceal a sense of irony. However, Polovinkin's contemporaries heard in his music almost traditional features: 'the simplicity and naivety give to this work traits of a living modernity which departs from Romantic ideals in favour of abstract classical forms' (wrote Pindar concerning one of Polovinkin's *Proisshestviya*). The tendency towards psychology often borders on eccentricity. A second phase in Polovinkin's work began with his appointment to the children's theatre, and was also spurred by the sharply negative press reaction to his music. In this later period he turned to a simpler folksong-like style.

INNA BARSOVA

Pols [polsdans, polsk]. *See* SPRINGAR.

Polska (Swed.: 'Polish' [dance]; Dan. *polsk dans*; Nor. *pols*). A Scandinavian folkdance. It dates from the Renaissance, with its roots in Polish folk choruses and dance pairs. Versions of it occur at all levels of societies and fall into two groups – those in its modern metre (C, ¢, 2/4) and those in its archaic metre (3/4, 3/8). Some archaic *polskas* are of interest as prototypes of the POLONAISE.

The *polska* entered the mainstream of European dance history in the first half of the 16th century. Under the influence of the allemande, it developed into both duple- and triple-time versions, which then each had separate historical developments. It did not however become a movement in the Renaissance and Baroque suite but remained in the vanguard of creative dance composition in Poland, Hungary and Germany, as seen in the work of Mikołaj z Krakowa and Wojciech Długoraj, the lute intabulations of Matthäus Waissel and the organ intabulations of Jan z Lublina, August Nörmiger and Christoph Loeffelholz von Colberg. *Polskas* for dancing are also found in the works of Hans Neusidler and Philipp Hainhofer.

The *polska* spread to the North Sea region in the 17th and 18th centuries as a result of close contacts between Poland and Sweden when both countries were ruled by the Vasa dynasty (from 1587). Despite its foreign origins the *polska*, with a rhythm similar to that of the mazurka (ex.1), came to be considered one of the most characteristically national folkdances of Sweden (*see* SWEDEN, §II). Among the earliest to be written down are the 85 *polskas*, mostly for fiddle and collected in Östergötland and Småland, brought together by Johan Wallmann (1792–1853). The *polska* was popular in all the Scandinavian countries. *Polskas* were noted down in Norway by the civil servant Hans Kamstrup (1788–1844). In Finland the word 'polska' refers more broadly to couple- and group-dances in 3/4.

Polskie Wydawnictwo Muzyczne [PWM; Polish Music Publications]. In 1928 a group of Polish musicologists and musicians led by Adolf Chybiński, Teodor Zalewski, Tadeusz Ochlewski and Kazimierz Sikorski organized the Towarzystwo Wydawnicze Muzyki Polskiej (TWMP; Polish Music Publishing Society), Warsaw, to publish authentic editions of Polish music. The catalogue includes music in all genres from the 15th century to the 20th. In 1934 TWMP began publishing the periodical *Muzyka polska*; the principal scholarly series is Wydawnictwo Dawnej Muzyki Polskiej, which includes early music by Szarzyński, Mielczewski, Pękiel, Gorczycki and Zieleński as well as 19th- and 20th-century music up to World War II. In April 1945 TWMP transferred its assets to PWM, organized by Tadeusz Ochlewski and based in Kraków; Mieczysław Tomaszewski succeeded Ochlewski on the latter's retirement in 1965. Until the end of the 1980s PWM-Edition was the only music publishing house in Poland and produced a wide range of music and music literature. It is particularly important for its publications of early and avant-garde Polish music and critical editions of Chopin, Moniuszko, Wieniawski and Szymanowski, as well as its publications for children.

TERESA CHYLIŃSKA

Polumier, John. *See* PLUMMER, JOHN.

Polyakova, Lyudmila Viktorovna (*b* Rostov-na-Donu, 4 Oct 1921; *d* Moscow, 15 Sept 1990). Soviet musicologist. She studied at Moscow Conservatory in the department of theory and composition, graduating in 1948 and completing her postgraduate studies with Gruber in 1953. From 1950 to 1952 she taught at the conservatory in the faculty of foreign music and in 1955 was awarded the *Kandidat* degree. She led a section of the journal *Sovetskaya muzïka* (1953–60) and was then appointed a researcher (1961), later senior research fellow, at the Institute of Art History (now the State Institute of Art Research). In 1950 she became a member of the Union of Soviet Composers.

Polyakova specialized in the musical culture of the countries of Eastern Europe. Her individual articles on the music of Czechoslovakia culminated in the two-volume work *Cheshkaya i slovatskaya opera XX veka* (1978–83). In this work she examined the historical development of opera and its links with Czech and Slovak spiritual life. She also wrote extensively on the music of Russia, and in particular on the work of Sviridov and the Georgian composer Taktakishvili. Her principal areas of interest were vocal music and opera, especially the problems of drama within the operatic score. It is this issue that she addressed in her writings on Prokofiev's *Voyna i mir* ('War and Peace') and the operas of Kabalevsky. As well as compiling and editing collections of essays on a variety of subjects, including Wagner and the music in Germany, Polyakova also wrote for a wider audience, creating a series of guides to Russian classics and Soviet composers.

NELLI GRIGOR'YEVNA SHAKHNAZAROVA

Polychronion (Gk.). A set of acclamations to the Byzantine Emperor and his family sung on ceremonial occasions in Constantinople. The singers addressed the person they greeted with wishes for many years. Nowadays polychronia are sung during the liturgy whenever a bishop is present. (*See also* ACCLAMATION.)

Polygram. International group of record companies. *See* DECCA, DEUTSCHE GRAMMOPHON and PHILIPS.

Polyhymnia [Polymnia]. The Muse of hymns, dance and mime, represented with the barbitos. *See* MUSES.

Polymnestus of Colophon (*fl* 7th century BCE). Greek composer. He wrote *nomoi* (*see* NOMOS) sung to the aulos, and epic and elegiac poetry, but nothing of his work has survived. From Asia Minor he went to Sparta, where with Thaletas, Sacadas and others he brought about a revival of poetry and especially of music; he is doubtfully associated with the Orthios Nomos by Pseudo-Plutarch, who mentions him several times in his discussion of the *nomos* (*On Music*, 1132c–1135c) and also attributes to him (1141b) the invention of the Hypolydian *tonos* and the use of such special intervals as *eklusis* (a descending interval of three *dieses*) and *ekbole* (an ascending interval of five *dieses*). Pindar (Bowra, frag.178) spoke of him as a famous poet, and the comic dramatist Cratinus, Pindar's contemporary, mentioned his compositions (Kock, frag.305). Later, however, Aristophanes (*Knights*, 1287) associated them with sexual depravity. This divergence from the remainder of the tradition is puzzling, since the works of a poet-composer prominent in 7th-century Sparta are not likely to have been licentious.

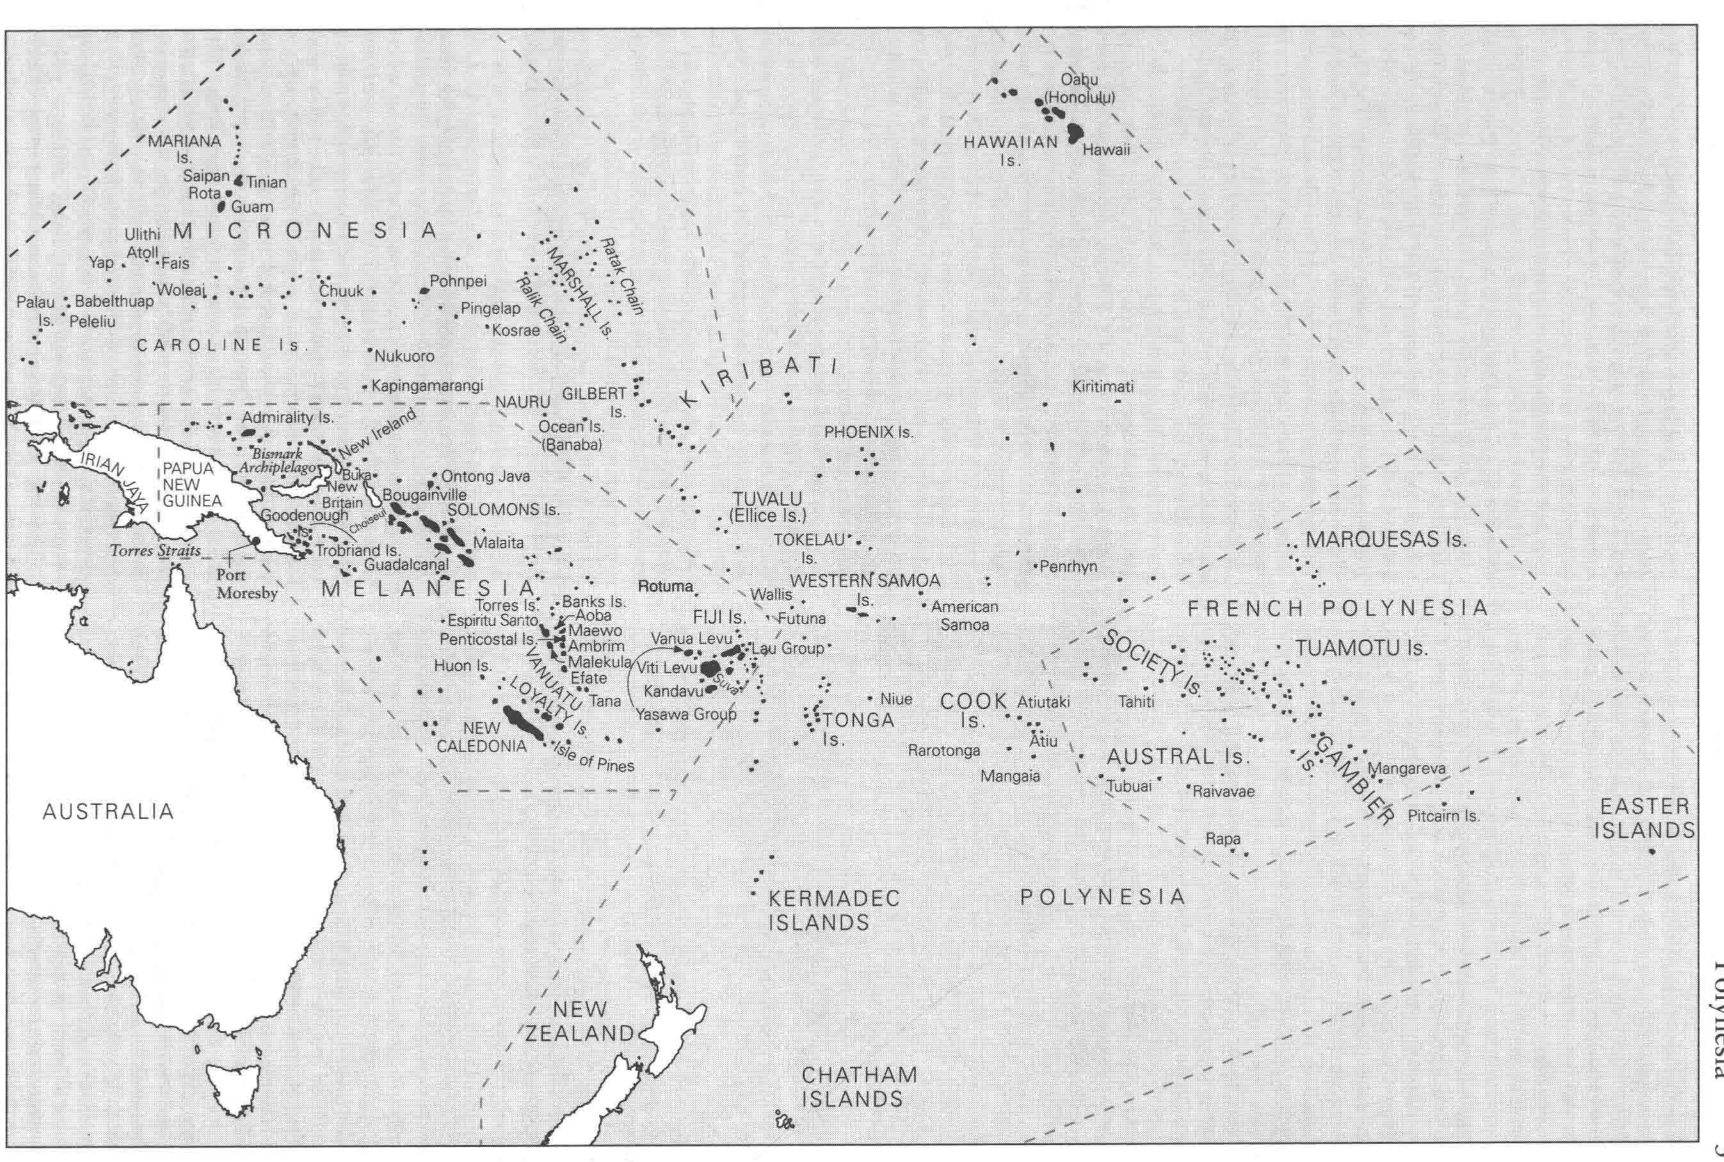
WARREN ANDERSON/THOMAS J. MATHIESEN



Polynesia. Conventional geographic and cultural division of the eastern Pacific Ocean. With Melanesia and Micronesia, these islands make up the Pacific Islands.

I. Introduction. II. Eastern Polynesia. III. Western Polynesia.

I. Introduction

1. General. 2. Music and musical instruments: (i) Music (ii) Instruments. 3. Dance.

1. GENERAL. Polynesia (Gk. *poly*: 'many'; *nēsos*: 'island') comprises 18 island groups lying in a rough triangle in the Pacific Ocean with New Zealand in the south, Hawaii in the north and Easter Island in the east (fig.1). Within this ocean area of approximately 30 million km², the land area of New Zealand occupies about 260,000 km² (for the traditional music of New Zealand *see* NEW ZEALAND, §II), the Hawaiian Islands about 15,000 km² and the total of all the other islands less than 9000 km². A useful division for studies of Polynesian music, dance and other aspects of culture is western Polynesia, eastern Polynesia, Polynesian outliers and urban enclaves. In western Polynesia, the dominant islands are Tonga and Samoa, which is divided politically into Samoa (called Western Samoa until 1 July 1997) and American Samoa. Both lie close to Fiji (*see* MELANESIA, §VII), which is often classified with Melanesia, but whose music, dance and many aspects of culture are closely related to those of western Polynesia. The smaller islands of western Polynesia include Niue, Tokelau, Tuvalu (formerly Ellice Islands) and Wallis and Futuna. In eastern Polynesia, the dominant island of the central area is Tahiti (one of the Society Islands). The other central islands include the Austral, Gambier (Mangareva), Marquesas and Tuamotu Islands, all within French Polynesia, and the Cook Islands. The small island of Pitcairn in the east and the islands at the corners of the Polynesian triangle are also eastern Polynesian in culture; the Line and Phoenix Islands, though usually considered geographically eastern Poynesian, are now part of Kiribati (*see* MICRONESIA, §III). Most of the Polynesian outliers lie in Melanesia: several in the Solomon Islands (*see* MELANESIA, §IV, 3) and a few in Fiji, New Caledonia, Vanuatu and Papua New Guinea; two lie in the Federated States of Micronesia. Prehistoric settlements of outliers were mostly from larger or volcanic islands with established populations to uninhabited smaller or coral islands for reasons no longer known. During the 20th century many Polynesians moved from smaller or more distant islands to more urbanized ones within the same country or group of islands (e.g. Tuamotus to Tahiti) for greater economic opportunity or a more varied lifestyle. Migration has also taken place for similar reasons to other countries with strong historical relationships (e.g. from Cook Islands, Niue, Samoa, Tokelau and Tonga to New Zealand; from American Samoa to Hawaii and West Coast cities of the continental USA). These expatriate communities maintain some features of the home-island culture, usually including the

1. Map of the Pacific Islands showing Micronesia, Melanesia and Polynesia

performing arts. Since the 1960s, Auckland has had the largest concentration of Polynesians of any city in the world.

Ecological differences between volcanic islands, coral atolls and larger land masses such as New Zealand, and long periods of isolation, experienced by the people particularly on Easter Island, Hawaii and New Zealand, have contributed to cultural diversity. Nevertheless, Polynesians recognize their kinship, as validated through their oral histories of migrations and, for many, revalidated through centuries of trade, intermarriage and occasional wars. In the late 20th century, closer bonds were being established through a cultural renaissance focussed on long-distance canoe voyaging and the performing arts, especially dance. Polynesians speak related indigenous languages; most also speak English, French or Spanish.

The original settlement of Polynesia has been a subject of great interest and not a little controversy. Archaeological research confirms that people who moved through northern Melanesia in a series of eastward migrations settled in the area of Fiji, Samoa and Tonga, where a distinctive configuration of cultural patterns developed. Now discredited theories included a route through Micronesia and South American origin of the people. Later, some of these people migrated to central eastern Polynesia, where a distinctively eastern Polynesian culture developed and from which the great migratory voyages to Hawaii, Easter Island and New Zealand took place. The smaller islands of western Polynesia and the Polynesian outliers were settled primarily by people from the Samoa–Tonga area.

In western Polynesia, traditional social organization focussed on lineage and village; religious music is not known to have been associated with these cultures prior to European contact. In eastern Polynesia, social organization was based on lineage and religious practices, which were centred in ceremonies on the *marae* (outdoor platform temple), and on concepts of *mana* (spiritual power or cosmic energy) and *taboo*, which governed people's lives. In their stratified society, chanters were specialists responsible for memorizing and reciting important texts, including long genealogical chants that validated a chief's *mana*.

2. MUSIC AND MUSICAL INSTRUMENTS.

(i) Music. Polynesians' musical abilities have been widely recognized, even though their indigenous languages had no collective terms for music or musical instruments. Early European navigators noted that the Polynesians enjoyed performance; Christian missionaries found that singing was the most effective route to their conversion; and the tourist industry promotes an image of handsome, uninhibited people singing and dancing on palm-lined beaches.

Music, though less conspicuous than dance (and therefore less adequately described in many early reports), was intrinsic to a larger number of societal functions. Some vocal styles, in regional variants, were widespread. One solo style of intoned recitation is syllabic, with rhythm and form dependent on the text. Another solo style that is more songlike in quality (though usually also designated as 'chant') is more sustained and often melismatic. Its range and the pitch relationships of melodic progressions are more organized, either in level or arching phrase contours that often end with a descending glide, with metric rhythm and strophic form. A multi-part choral style, prevalent in western Polynesia and central eastern Polynesia, usually has either a two- or three-part texture, with each part narrow in range and all parts progressing in parallel motion, or a drone (in the bass or another part) with one or two moving parts. A drone may be relatively short in duration or, when very long, maintained through staggered breathing.

In the 19th century most Polynesians became acquainted with Western musics. Hymns and chants were introduced by Protestant and Catholic missionaries (*see* HĪMENI) and secular songs by whalers and traders. Some islanders adopted or adapted these directly from the Europeans or Americans who introduced them; others learnt from other Polynesians (the people of Tuvalu were introduced to Christian hymns by recently converted Samoans, for example). A popular secular style that originated in Hawaii, initially referred to as Hawaiian style, became known in the 1950s as pan-Polynesian pop after spreading (with further adaptation) elsewhere in Polynesia and becoming PAN-PACIFIC POP by the 1960s, after being adopted and adapted in parts of Micronesia and Melanesia.

In the late 1990s, major musical activity was focussed on the continued development of popular music in modern idioms and a renaissance in indigenous music and dance. Popular music is continually stimulated by radio, to some extent by television and especially by the cassette recorder and relatively inexpensive pre-recorded tapes. In Hawaii, New Zealand and Tahiti, where formerly many LPs were produced, CDs are a thriving business. Though radio and cassettes allow popular musics to be heard almost anywhere in Polynesia, there are more live performances in urban centres, where there are venues suitable for electronic amplification and an audience large enough for such performances to be economically viable. The traditional heritage of both chants and dances retained from the past and new works in these idioms are stimulated by local festivals and civic functions, and by international festivals such as the Festival of Pacific Arts (*see* PACIFIC ARTS, FESTIVAL OF) and foreign tours.

Principal collections of music of the Pacific Islands, including Polynesia, are the Bernice P. Bishop Museum, Honolulu, and the Archive of Maori Music, University of Auckland (includes a territorial survey of Oceanic music).

(ii) Instruments. In early Polynesian societies, musical instruments, except possibly the shell trumpets used for signals and the temple drums used for rituals, were less valued than the voice. Most instruments played in public contexts were intrinsically associated with dance; others were played in more intimate or informal contexts. Clapping, slapping and other body percussion is widely used, especially for dance.

Indigenous idiophones include the slit-drum, which in western and central eastern Polynesia is used for some types of signals and certain dance genres. For some dances in Samoa and Futuna, a rolled mat was beaten with a pair of sticks, and in Rennell and Bellona, a sounding board is beaten (*see* MELANESIA, §IV, 3(ii)). For a major Hawaiian dance genre, a gourd is slapped with the fingers and thumped on the ground. Jew's harps, made from two pieces of plant material, were reported for several islands; other idiophones had very limited distribution.

The only indigenous membranophones were drums. The tall, single-headed drums with shark-skin membrane

were the highest status instruments in central eastern Polynesia and Hawaii. Most of the finest extant specimens are now in museums outside the country of origin. In Hawaii, smaller vertical drums are played for the most prestigious genre of hula.

The aerophone with the widest distribution in Polynesia, as elsewhere in the Pacific islands, was the conch-shell trumpet, both end-blown and side-blown. In some islands, the conch is now blown in stage presentations and at the beginning of important civic events. A bamboo nose flute, in several variants in different areas but characteristically with the blowing hole in the side-wall near a closed node, was quite widespread. Panpipes were formerly used, primarily in the Samoa–Tonga area. In New Zealand, where there was no bamboo, the Maori made aerophones, some of exceptionally fine craftsmanship, of several other materials (*see* NEW ZEALAND, §II, 2(ii)). The only indigenous Polynesian chordophone was the mouth bow.

The Western instruments most widely adopted by the Polynesians are plucked, fretted chordophones, primarily a four-string instrument introduced first to Hawaii, where it was named UKULELE, and the larger, six-string guitar. Some Polynesians, especially those in central eastern Polynesia, make local variants of the smaller instrument (e.g. an instrument with a half-coconut for the resonator in the Cook Islands; and one with a small membrane in the centre of the face, somewhat like that of the 'banjo-ukulele', in the Marquesas). In some areas the guitar functions much like a percussion instrument. These plucked-string instruments are widely used in pan-Pacific pop. Two-headed drums modelled on Western drums, the 'tin' (a metal container for crackers or kerosene beaten with two sticks) and the 'box' (modelled on a wooden packing crate beaten with bare hands) are essential to certain evolved traditional dance genres in western and central eastern Polynesia. Brass bands, where present, are mostly connected with the government, police, military and schools.

After settlement of the many islands, fundamental aspects of culture were retained while distinctive variants evolved, as is apparent not only in music and dance but also in pronunciation of words of both indigenous origin (e.g. *pahu*, *pa'u*, *'ukulele*, *ukulele*, *ukelele*, *'ukarere*) and those adopted from foreign sources (e.g. *hīmeni*, *himene*, *'īmene*).

3. DANCE. Dance, a conspicuous feature in the social life of many Polynesian communities, has drawn comments from explorers, missionaries, travellers and anthropologists, ranging from outright condemnation to enthusiastic appreciation. Several studies of Polynesian dance have placed this important cultural form in its social context and have analysed its structure. Among these are studies of dance in the Cook Islands, the Marquesas Islands, Hawaii, New Zealand, Tahiti, Tokelau and Tonga (see bibliography). Other studies have focussed specifically on the clowning and theatrical elements that use dance in Rotuma and Samoa.

Polynesian dance is a visual extension of sung poetry conveyed through indirectness (to say one thing but mean another), often in honour of chiefs or other important people. Specialists compose poetry, add music and movements and rehearse the performers for months before a public ceremony. In some dances movement motifs and phrases are stereotypic and repetitious; in others, movements pantomime activities of ritual or everyday life. Lower-body movement motifs primarily keep the time while the hand/arm motifs help to convey the poetry through allusion, metaphor and layers of meaning. The movements often refer to selected words of poetry, which themselves have concealed meanings. Texts appeal to genealogy to honour the living, and the observer must know the background of the composition in order to appreciate its significance.

Polynesian standing dances are comparatively stationary, and sitting dances occur throughout the area. Although men often perform movements that open the legs to the sides, women's thighs usually remain parallel. In eastern Polynesia, side-to-side and circular movements of the hips are integral to the lower-body movement motifs. Distinctive stylistic movements of the various Polynesian islands are primarily those of arms and hands: in Tonga, rotation of the lower arm and flexion and extension of the wrist while curling and uncurling the fingers; in Samoa, flexions and extensions of both the elbow and wrist; in Tahiti, an outward flick of the hands with a rotation of the lower arm; and in the Cook Islands, wrist extensions with arms slightly bent at the elbow. In New Zealand Maori dance, wrists are more rigid, with palms extended to create a hand quiver by a series of rapid slight movements at the wrist. The flexibility of wrists and fingers characteristic of Hawaiian movements produces a soft, undulating quality.

In the sung poetry as well as in the accompanying movements, the aim is to tell a story; thus the performers are primarily storytellers rather than actors. Dances are performed for audiences that traditionally had an intellectual and kinaesthetic understanding of the society's traditions; today some dances have entered the realm of spectacle, especially for outsiders who do not understand indigenous languages.

In Tonga, dance remains a functioning part of the socio-political system and is abstractly literary in its interpretation. Dances are created and performed for national occasions, and no notable gathering is complete without them. The most important dance type is *lakalaka*, performed by up to 200 men and women. It can be described as a sung speech with two sets of choreographed movements for men and women. A series of hand and arm movements that allude to selected words of the text are interspersed with dividing motifs. Leg movements are mainly a series of sideways steps executed nearly in place. Tilting the head to the side, an aesthetic element, expresses a state of inner exhilaration called *māfana*. *Lakalaka* is apparently a developed form of the pre-European dance *me'elaufola*, set in polyphonic choral singing. Traditional dances from pre-European times, still occasionally performed, are *me'etu'upaki*, a men's standing dance in which a dance paddle is twirled and several changes in formation take place, and a women's dance, *fa'ahiula*, which begins with the dancers seated in a curved row (*'otu haka*), from which one or more female dancers stand and perform (*ula*).

A contemporary group dance is *ma'ulu'ulu*, which often draws its participants from a school or church. The poetry is conveyed visually by one set of arm movements, although the performers may be all female, all male or both: seated in curved lines (the second and consecutive lines may be raised by kneeling, standing, or being elevated on benches), the number of participants range from 10 to 500 individuals. A female standing dance,

2. Haka or 'posture dance' of the New Zealand Maori

tau'olunga, is based on hand/arm movements similar to those above but with a wider variety of lower-body movement motifs; it is sung to *hiva kakala*, sweet songs, and accompanied by string bands. The melodic line and harmony are more Western but unmistakably Tongan. The movements may be pre-set or spontaneous, performed as a solo or by a small group. These principal dancers may be accompanied by one or more secondary dancers (male or female) who spontaneously join in with virile movements to emphasize the graceful movements of the women.

Samoan dance is in many ways similar to Tongan, but no comprehensive study has yet been published. Most dances are performed by groups, and some, such as *ma'ulu'ulu*, interpret poetry. *Sasa*, a formal group dance accompanied only by percussion instruments (now often including an empty five-gallon paraffin can), is a sitting dance with intricate, precise arm movements. Other Samoan dances include the men's slap dance, *fa'ataupati*, and the *siva*, both performed standing. The last *siva* of a programme is *taualuga*, a dance with no set choreography performed by the *taupou* (chief's daughter). She is usually joined by one or more talking chiefs, whose antics emphasize the grace of her movements.

Society Islands dance is known for its extremely fast hip movements. As in other Polynesian dances, however, the hand movements are the most important and interpret poetry. In *'aparima*, group dances performed standing or sitting by men and women, the hands are used to illustrate texts, which nowadays are chiefly concerned with love or descriptions of local topography. Fast hip movements are characteristic of both *'ōte'a* (choreographed group dances) and *tāmūrē* (spontaneous male-female duets). *'Ōte'a* and *tāmūrē* do not interpret poetry and probably evolved in post-European times from the rapid dance endings that astonished early European explorers. In pre-missionary times groups of professional travelling entertainers called Arioi expressed social comment through danced dramas; chiefs and priests were satirized with impunity during the performances in an effort to improve social conditions. Because of their compulsory infanticide and uninhibited sexual practices, the Arioi were entirely suppressed by missionaries; since then dance has become a medium for entertainment and competition. The Heiva, held in July, is now the most important dance occasion each year throughout French Polynesia. Dance troupes from the Cook, Austral, Tuamotu, Marquesas and Society Islands travel to Tahiti to present well-rehearsed dances in order to compete and to learn from each other.

Dance of the New Zealand Maori includes several types, *haka*, *wāita-a-ringa* and *poi*. *Haka* (fig.2) is usually described as 'posture dance' and includes dances used to welcome visitors, dances for amusement and war dances, properly called *peruperu* and performed with weapons.

3. Hawaiian hula dance of the Kalākuaua period (1874–91) performed by Hula Halau 'o Maiki

Haka are performed by men or women or both; members of either sex can lead the dance. *Haka* are usually energetic, with foot-stamping and decisive arm movements which lack the graceful wrist flexion of most Polynesian dances. Often a *haka* ends with a violent movement and out-thrust tongue. In *poi* dances one, two or occasionally three or four soft balls, attached to strings of different lengths, are swung in intricate patterns by the dancers, who are usually women. *Wāiata-a-ringa* 'action songs' are now the most common dance form: these incorporate ideas and movements of the older dance forms but have more graceful hand movements, less violent leg movements and Westernized music.

Hawaiian dance, 'hula', differs from other Polynesian dances in several ways. In many hula the performer is dancer, singer and musician simultaneously, accompanying himself or herself with percussive instruments such as gourd rattles, slit bamboos, stone clappers and rhythm sticks. Hawaiian movements are more narrative and interpretative: for instance, the hands are shaped to look like flowers, or the arms are moved in the manner of a bird in flight. Hip movements are more graceful and undulating, and steps are more varied. In pre-missionary times professional hula troupes were part of the courtly retinues of chiefs and were trained in specially built structures called *halau* by a hula master who was also a priest of the gods of the hula. The traditional dances were suppressed by Christian missionaries but revived in the court of King Kalākaua (1874–91) and are now often performed in their 19th-century versions (fig.3). Modern Hawaiian dances differ from the older forms in music, movement and function. Traditionally hula honoured gods and chiefs, telling their genealogies and comparing them with the beauties of nature. Modern hula are often about love and local attractions, and many use English texts and Westernized music. Throughout Polynesia, especially since the 1960s, new dances and additional categories have been introduced and are used for local, regional and international festivals and competitions. Traditional dances are usually performed in conjunction with traditional musical instruments and less melodic vocal contours, while contemporary dances, on the other hand, are performed with introduced musical instruments and Western harmony.

II. Eastern Polynesia

1. Cook Islands: (i) Northern (ii) Southern. 2. Easter Island. 3. French Polynesia: (i) Society Islands (ii) Austral Islands (iii) Tuamotu archipelago (iv) Gambier Islands (v) Marquesas Islands. 4. Hawaii: (i) Traditional vocal music (ii) Instruments (iii) Westernized music.

1. Cook Islands. The Cook Islands comprise 15 widely scattered islands lying between 8° and 23° S and 156° and

167° W, with a total land area of 241 km² and a total population of 20,000; the islands fall naturally into two groups, the northern and the southern. They are a self-governing protectorate of New Zealand; the administrative centre and seat of government is the island of Rarotonga. The people speak both Cook Islands Maori and English.

(i) Northern.

(a) Pukapuka. Pukapuka (also known as Danger Island) is an atoll in the northern group, located approximately 1150 km north-west of Rarotonga and distinctive within the Cook Islands. Its prehistoric cultural and linguistic links were predominantly with islands to the west, but eastern influences were also sustained. Indigenous musical forms, terms and instruments are therefore transitional, bearing similarities to those of both east and west. In contrast, acculturated and borrowed forms and styles of music and dance derive from the southern Cooks and further east. Hence most cultural forms current in the southern group (e.g. *ūtē*, *kaparima*) are known and composed by Pukapukans, but are generally only performed in interaction with other Cook Islanders.

From 1857, native missionaries principally from Rarotonga taught literacy with the Rarotongan Bible and hymnal, bypassing the vernacular. All hymns published in the hymnals are known as *īmene tapu* ('sacred hymns') and most can be sung in different styles. The *reo metua* style ('tune of the fathers') covers the earliest hymns with their organum-like parallel movement in 4ths and 5ths, as well as the later responsorial, more contrapuntal style that bears a degree of similarity to the *īmene tuki* ('grunted hymns') genre. The category entitled *īmene āpi'i Sāpati* ('Sunday School hymns') refers to the European tunes from the Sankey hymnal as they were learnt in the mid-20th century. The other hymn genre *īmene tuki* is highly popular and not dissimilar to elsewhere: texts are drawn from scripture or are freely composed, varying according to the occasion, whether religious or secular. The inclusion of phrases in Pukapukan or English is favoured, to the extent that many recent *īmene* have been composed entirely in the vernacular. The Pukapukan form has only two basic parts: women's, *tumu*, and men's, *malū*, with optional, improvised decoration in the tenor or soprano range called *pelepele*. Pitching is often rather high and cannot be sustained. This trait is said to have been brought from Penrhyn in the 1960s, resuilting in pitch instability and a much more piercing, strident tone than in earlier times.

The polyphonic *pātautau*, a heterogeneous, acculturated style used in sports celebrations and originally derived from the Society Islands *pāta'uta'u*, has developed a unique identity on Pukapuka for over a century. Several short, repeated sections occur in a variety of styles: simplified chant, rhythmic speech, harmonic procedure in 3rds or 6ths, or antiphonal interplay between men and women similar to *īmene tuki*. All *pātautau* invariably end with a modern song suitable for dancing and a rhythmic coda repeated successively faster, climaxing with an abrupt halt.

Traditional chants are collectively termed *mako* (glossed as a 'type of dance' throughout western Polynesia), and sub-genres are descriptive of their function. *Tila* (wrestling chants, named after the mast, the *tila*, of a canoe) are short, recited chants with a wide intonational range; a triple metre is underscored by hand-clapping, and word rhythms and accentuation are often syncopated, working counter to the metre. The tempo increases markedly on successive repeats as performers dance appropriate actions.

The term *mako* is now resticted to several sub-genres of long, flowing poems performed in an intoned, essentially monotonic style (the occurrence of an auxiliary tone a minor 3rd below the tonic is entirely predictable according to vowel quality and distribution). Interplay between linguisic features such as vowel assimilation, word stress and vowel length with the elements of music structure is exceedingly complex. Basic metrical organization is according to uniform line lengths of multiples of six morae (12 or 18 vowel counts per line). Other patterns are possible, such as when the *tānga*, the normative chanting style, changes to 'dragging style' (patterning in groups of eight morae with the penultimate vowel prolonged), or when triple metre signals the approaching end of the chant. Fishing chants *(lalau)* were the principal chants performed corporately by the paternal lineages (and later, the villages), typically to celebrate victory in a fishing contest. Other group chants were composed for individuals: *kupu* (love chant), *pinga* (love chant taught in a dream by a deceased partner), *tangitangi* (boasting chant) and *tangi* (lament). By 1990 the three villages could perform less than half the 150 *mako* and *tila* still known, and the art of composition is virtually lost. However, since 1980 new chants have been composed for special occasions on Pukapuka and in Auckland.

In ancient times dancing was usually an accompaniment to chant, with performers usually arranged in several ranks. Drumming rhythms typically underscored the rhythm of the chant, and this textual basis remains the common compositional device in modern drumming. *Ula pau*, the modern drum dance formed in sets of double columns, is probably modelled on military parade formation (the main dance is termed *vāeau*, 'army'), although commentators believe it derives from Tahiti. The four movements typically contain novel rearrangements of dance routines from the traditional repertory. Innovations are highly valued, and most styles of modern dance have at some time been incorporated within the Pukapukan form.

Indigenous names of instruments and their means of manufacture have gradually been superseded by those from the southern Cooks: so *pātē* and *tōkere* replace *nawa* and *kolilo* (originally from Manihiki) for wooden slit-drums, while the goatskin drum (*tangipalau*) and the modern bass drum (*pau*) have displaced the sharkskin drum (*payu*). An essential addition to the modern drumming ensemble is the *tini*, an empty kerosene can. The conch-shell trumpet (*pū*) was used formerly for signalling and perhaps as an additional sound in festive dancing. Popular songs, *īmene lōpā* (songs of the youth) are accompanied by a string band comprising ukelele and guitar, often supplemented by a slit-drum or bass drum.

(b) Manihiki and Rakahanga. Lying only 42 km apart and formerly occupied alternately for reasons of food conservation, Manihiki and Rakahanga have virtually identical musical cultures. Both are noted within the Cook Islands for the distinctive sound of their drumming to accompany *ura pau* dances: the slit-drums are tuned higher and may be more numerous than elsewhere. At the annual Constitution Day celebrations in Rarotonga, the principal national performing arts festival, the islands are

notable for their artistic innovation. Recent examples of this creativity have included departure from the one man–one drum rule and the creation of a rack of three drums beaten by a single man. Indeed, some Manihiki residents claim that the present-day drum dance itself is a Manihiki creation dating to the 1940s.

Both sacred and secular *hīmene* (hymns, *see* HĪMENI) feature a polyphonic combination of solo and group voice parts, the former exercising limited melodic, rhythmic and textual independence, the latter following set lines. The staccato performance of *he* vocables by soloists among *hīmene* singers, known as *fatifati* ('breaking up'), is integral to aesthetic satisfaction. In contrast to the practice on Rakahanga and Penrhyn, Manihiki *perepere* (solo singers) take pride in reaching high notes using chest register without devices to shut out the resultant physical discomfort. During performance, many singers shut their eyes and slowly rock back and forth or from side to side in a non-coordinated manner. During secular performances (e.g. of *ute* topical songs or *hīmene tuki*) singers may feel emotionally moved to wave their hands slowly over their heads or get to their feet and briefly dance on the spot.

Competitive music performances on Manihiki, either among the internal divisions of Tauhunu village or between Tauhunu and Tükao villages, use both sacred and secular material. *Uapou* meetings at the respective Cook Islands' church premises pitted division against division in singing *hīmene tapu* hymns, and formerly were followed by competitive singing of secular *hīmene tuki* outdoors. More formal competitions using *ute* topical, often satirical songs and *kaparima* dances were also common in recent years. *Patahutahu* solo dances featuring improvised movements in time to multiple repetitions of short texts sung in unison are less common than formerly.

Events of significance within the village or island – the opening of the airport near Tukao, completion of renovation of the mission house in Tauhunu – are recognized and enhanced by the creation of new drum dances called *hupahupa*. *Kaparima* action songs, in which dancers sit or stand to perform synchronized movements in time to Europeanized vocal music together with guitars and ukuleles, are standard items in concert programmes.

Conch trumpets are common for signalling specific village events such as working bees and the evening prayer time, and children occasionally make leaf oboes and jew's harps as sound-producing toys. A single slit-drum struck by a boy walking through the village announces a special school or church event.

(c) Penrhyn. The northernmost island in the Cook Islands, Penrhyn, or Tongareva, contains two villages, Omoka and Te Tautua, on opposite sides of its large atoll. The high cost of boat travel to neighbouring islands and especially to Rarotonga has resulted in relative stability of population.

In common with other Cook Islands, sacred and secular forms of *hīmene* are in frequent use. Secular *hīmene taranga* feature subject-matter from the historical or legendary past, and *hīmene tapu* or *hīmene tuki* treat biblical episodes in either paraphrased form or direct quotation. The regular *uapou* religious discussions held in the minister's house divide the congregation in two, each group in turn boosting its leader's speeches with a *hīmene*. *Tamau* (alto) and *marū* (bass) group parts are taught and fixed in content, in contrast to *perepere* soloists singing in soprano and tenor ranges, who are allowed melodic, rhythmic and textual freedom, and whose parts are not taught. Individual compositions contain one or two female and male solo parts whose vocal lines consist of extended melismas and rapid staccato utterances on the syllable *hē*, a phenomenon called *hatihati* ('breaking into pieces'). Individual singers tend to favour a limited number of such devices, as shown in ex.1.

Ex.1 Example of *hatihati*; transcr. R.M. Moyle

Performance of *hatihati* expresses an aesthetic preference, rendering the song 'sweet' (*reka*). Female solo singers maintain a chest register for even their highest notes, the physical discomfort eased somewhat by pressing a fist or hymnbook against the temple as they sing; the resultant strident sound is typical of the song genre.

Extended contact with Tahitian pearl divers working the atoll's lagoon in the 19th century and relatively close proximity to Tahiti itself resulted in the addition of new *ute* topical songs to the local repertory. Their eight-beat couplets and vigorous male grunting, sometimes in two interlocking parts, are identical to those elsewhere in the region. Mutual formal and informal visits with Tahiti have been maintained, and several Penrhyn residents have one Tahitian parent.

Now rare and bereft from its former (and apparently unknown) use context, the *kapa* chant is performed by a mixed group using rhythmic unison, strong accentuation and coordinated shifts of overall pitch. The language of the texts is not fully understood by modern performers, who may add spontaneous arm gestures while chanting. Several children's games incorporate rhythmic recitations called *pese*, a term also connoting recited poems of ancient origin, now rarely performed.

Within the term *tarekareka* (entertainment) falls *kosake* (dance), of which three genres are distinguished: the *taki* drum dance, *kaparima* action song and *patahutahu* solo dance, the last two tending to have Europeanized songs of local and recent composition.

Apart from wooden idiophones and membranophones of the ensemble accompanying the drum dance, and the Jew's harp and leaf oboes that are children's sound-producing toys, there are relatively few musical instruments. Conch trumpets for signalling are now rarely used.

(ii) Southern. The present discussion relates primarily to traditional music of Aitutaki and Mangaia (McLean, 1967), after Rarotonga the most populous of the southern Cook Islands. More recent studies include Laird (1982) on drumming and Little (1989, 1990) on the music of Atiu, Mauke and Mitiaro, known collectively as Nga Pu Toru.

(a) Traditional vocal music. There are at least 40 named song types in the southern Cook Islands. Some are purely vocal, others accompany dance; some are Tahitian importations, others are clearly indigenous; some are peculiar to particular islands and others are more widespread. Only the more common song types are discussed here.

Introduced song types include the *hīmene* and the *'ūtē*. The term *hīmene* is a transliteration of the English word 'hymn'. However, as a verb the word can mean simply 'to

sing', and hence there are both sacred and secular *hīmene*. Those of the secular variety include *hīmene aka'eva'eva* ('laments') and *hīmene tārekareka* ('songs for pleasure'). By far the most common, however, are church hymns, sung in parts. These are known collectively as *hīmene tapu* ('sacred hymns'). On the island of Aitutaki there are two styles of polyphonic *hīmene tapu*: those whose texts are in the hymnbook of the local Cook Islands Christian church, and those that are settings of biblical texts. The latter, which are distinguished by rhythmic grunting in unison from the men, are called *hīmene tuki*. The grunting (*tuki*) is performed as an integral part of the composition, 'to decorate the hymn'.

Hīmene singing was almost certainly introduced into Aitutaki in 1821, by two Tahitian pastors who were taken to the island by the missionary John Williams and left there to introduce Christianity. The style has developed continuously, and new *hīmene* are constantly being composed. On Aitutaki, composers from each of the seven main villages are required to compose two new *hīmene* – one *hīmene tuki* and one with a hymnbook text – twice a year, for Christmas and for the New Year. These new hymns are first performed at combined services in the church at Arutanga. The best-liked of the *hīmene tuki* may remain in the repertory for 30 years or more, though this is exceptional: more usually, only the latest ones are still sung, because the leading women for the earlier ones have died. There are up to six, or sometimes seven named parts in *hīmene tuki*. Two are main parts, sung by groups of women and men respectively. Superimposed upon the main women's part are two upper solo women's parts, and one or two upper solo men's parts are added to the main men's part and the bass grunting (*tuki*). Typically the women sing at the top of their range, as loudly as possible.

Similar styles of hymn singing occur on the other islands of the Cook group with different names, and the names for the voice-parts also differ from island to island. On Mangaia, the men's grunting is called *engu*; the *hīmene tuki* song type is thus called *hīmene engu*. The hymnbook hymns on Mangaia are called *hīmene Āreti*, after a missionary named Harris (Āreti), who is credited with introducing the style.

The *'ūtē* style was introduced to the Cook Islands from Tahiti. In the 1820s Ellis complained of Tahitian *'ūtē* that 'they were, with few exceptions, either idolatrous or impure, and were consequently abandoned when the people renounced their pagan worship'. Unknown to Ellis, however, the *'ūtē*, far from being abandoned, had merely been driven underground. The style subsequently spread not only to the Cook Islands, but also throughout French Polynesia. Many *'ūtē* still contain Tahitian words. Although Ellis described them as 'historical ballads', they are now mostly love songs and topical songs. They are sung in parts and with grunting like *hīmene tuki*, though in a different style. Unlike *hīmene*, *'ūtē* are sometimes accompanied by guitars, ukuleles, mouth organs or accordions.

Indigenous song types include the *pe'e*, *amu* and *karakia*. *Pe'e* songs are found on all the islands of the southern Cooks as well as on Penrhyn, in the northern group, where they are called *pese*. The latter cognate form of the word also occurs in Samoa, where it means simply 'song', as seems to have been the case in Tahiti, where the term was *pehe*. In Mangaia, similarly, the word seems to be a generic term for song, since love songs, welcome songs and hauling songs are all called *pe'e*. More usually, however, *pe'e* are historical songs commemorating particular events or the brave deeds of an ancestor; they were formerly used in oratory to demonstrate the knowledge and ability of the orator. They are now almost invariably associated with legends or other oral traditions and are performed as an integral part of story-telling. Although *pe'e* can be sung, most types, particularly in Aitutaki, are recited in 'speech-song' style.

In Rarotonga, *amu* are praise songs that tell the life story or deeds of celebrated chiefs or warriors. On Atiu, they likewise describe 'brave deeds' or 'a love of affection', or alternatively may be songs of 'a joyous nature, as in canoe hauling'. On Aitutaki, as in Atiu, there are two varieties of *amu*, both of which are said to be sung in unison (although the few recorded by the writer were in parts). The first are songs of praise or farewell for the dead, intended for performance in the presence of the dead body. They are accompanied by wailing and are sung not at the funeral service but immediately after death by women mourners and relatives of the deceased, gathered round the body. All songs of this type are said to have been composed by women, and they are sung mostly by women, although sometimes old men will join in. The other kind of *amu* was sung while hauling logs or pulling up boats, to encourage the men. In Mangaia, the term *amu* does not appear to be used, but songs for lifting heavy loads – the equivalent of the second variety of *amu* in Atiu and Aitutaki – are called *tauamu*.

Karakia are incantations or invocations. They are found throughout the southern Cook group. According to Buck, the Mangaian variety formed part of the stock-in-trade of priests, and the set words were valuable intangible property. They are performed solo, by men, in recited style.

There are some song types specific to Mangaia, of particular interest because of changes that have taken place in them since missionary activity began. The missionary William Gill wrote at length in 1875 of ceremonies called *tara kakai* ('death talks'). These took place at night in large, specially constructed houses lit with candlenut torches. Each male relative of the deceased had to lead a unison unaccompanied *tangi* ('crying song'); these songs alternated with *tiau*, songs accompanied by the *ka'ara* (slit-drum). Besides the 'death talks', funeral games called *'eva* ('dirge proper') were performed. Unlike the 'death talks', these took place by day. Four varieties were listed by Gill: *'eva tapara* ('funeral dirge'), *'eva puruki* ('war dirge'), *'eva toki* ('axe dirge'), and *'eva ta* ('crashing dirge'). All except the first were performed with weapons, presumably by men. In 1967 – less than 100 years later – no-one could be found on Mangaia who had ever heard of a *tara kakai*, *tangi*, or Gill's four varieties of 'dirge proper'. The term *'eva*, however, is still extant as a type of song performed exclusively by men, concerned with such topics as battles or the honouring of a warrior.

Complementary to the *'eva* is another song type, not mentioned by Gill at all, called *mire*, which was formerly sung only by women. Women still lead the song, but men may now take part. According to some informants, *'eva* and *mire* are sung on special occasions to entertain important people visiting the island, unlike *pe'e*, which can be performed at any time. Both *'eva* and *mire* are recited song types performed in unison by groups of

singers; they may be accompanied by actions; many of the *mire* recorded by the writer were accompanied by vigorous hand-clapping.

(b) Instruments. The only instruments still important are those used in ensemble to accompany the exciting and visually spectacular *'ura pa'u* (drum dance). Both the dance and the *pakau tārekareka*, its accompanying percussion ensemble, are similar to those of the somewhat better-known Tahitian *'ōte'a*. The instruments of the ensemble include several slit-drums (*pātē* on Rarotonga; *tōkere* (fig.4) on Aitutaki; *ōve* on Mangaia and Atui), which are also used singly for signalling; *pa'u* and *pa'u mango* (large double- and small single-sided drums respectively with shark- or goatskin heads); and the *tini* (paraffin tin), now often replaced by a small slit-drum of high pitch known as the *tini-tōkere*. Larger slit-drums, called *ka'ara*, played with two sticks instead of one to produce three notes instead of the two of the *tōkere*, are attested for Aitutaki, Mangaia and Rarotonga but had become obsolete as a traditional instrument by the late 1960s, surviving only as *tūpāpaku* ('ghost voices') of the olden days, which are said to be heard in the bush when a chief is going to die. The *ka'ara* was revived in the 1070s by the Cook Islands National Arts Theatre dance company, but without the older instrument's three-pitch capacity. Bamboo flutes, apparently mouth-blown, were used as toys by children in the early 20th century, as were coconut-leaf whizzers, leaf oboes and bamboo jew's harps. According to Buck, another toy used was the bullroarer. The *pū* (shell trumpet), usually end-blown though sometimes side-blown, was formerly used as a signal to assemble the people or as a warning for warriors to mobilize. On Mangaia, the sound of the *pū* was the voice of the god Rongo, calling the people to rituals associated with his service. It is now more prosaically used by the baker, to signal when bread is ready.

(c) Modern music. Action songs with guitar or ukulele accompaniment and European-style melodies, similar to those of the New Zealand Maori, are called *kaparima* (cognate with the Tahitian *'aparima*). They are performed by teams of dancers at events such as Constitution Celebrations, at hotels and other venues, where they generally alternate with drum dances together with traditional items such as *'ūtē* and dramatized legends in which *pe'e* or *hīmene tuki* may be incorporated.

2. EASTER ISLAND. Easter Island (Rapanui), lying at 27° 20'S and 109° 30'W, is the furthest east of the Polynesian Islands. Of the total population of 2770 (1992 census), approximately 1800 are pure Rapanui, the others being of mixed ancestry or from Chile. According to a tradition still celebrated in song, the ancestral settlers arrived from the west in two canoes. An impressive Polynesian culture flourished before the arrival of the first Europeans on Easter Sunday, 1722. Ceremonial dances performed at the *ahu* (sacred places at the site of the famous huge stone images) were a form of worship. Ancient stories, incised in script or glyphs on *kohau rongorongo* (wooden tablets), were chanted by traditional specialists at the rites of the bird-man cult and other ceremonies, and are still chanted by some elderly people. Some examples still known include the creation myth, stories about ancestors, the bird and yam legend, laments and work chants.

Catholic missionaries from Tahiti arrived in 1864, bringing a style of chant that was adopted by the islanders. But the death of the traditional priests and most of the

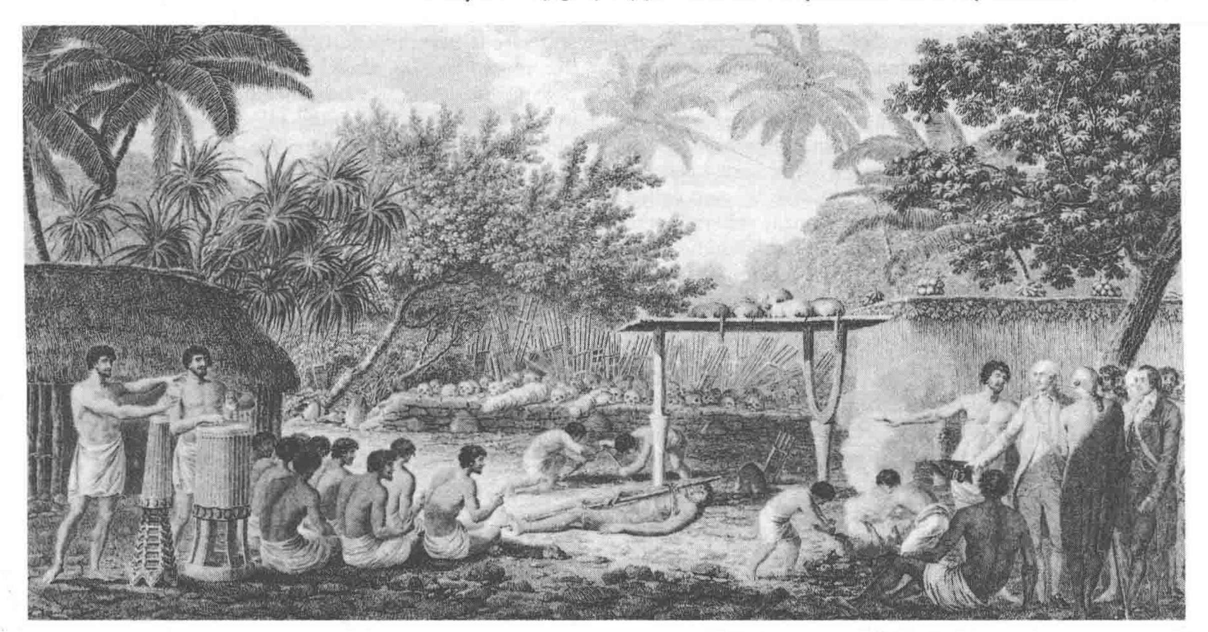
4. Dancers accompanied by tōkere (slit-drums), Aitutaki, Cook Islands, 1967

population through a smallpox epidemic and 'blackbirding' (the forced recruitment of Pacific Islanders for labour) resulted in the loss of much pre-contact culture by the 1870s. Secular genres from other Polynesian cultures (mostly Tahitian) were absorbed from 1914 onwards, and Latin American and international popular styles from 1954 (e.g. the Mexican *corrido*, the Argentine tango, the waltz, foxtrot etc.). In that year a regular ship service was established with Chile, which had annexed the island in 1888. The demands of tourism strongly influenced musical activity after an airport was opened in 1967. In the 1970s, when large numbers of Chileans and tourists began to visit the island, the *conjuntos* (popular island groups), which had been performing (usually outdoors) occasionally for islanders, developed smaller performing groups to provide regularly scheduled indoor evening entertainment. These groups perform music and dance, both traditional (some including demonstrations of string games) and contemporary, which incorporates other Polynesian and some Latin American elements (e.g. guitar styles). Chilean poular music is broadcast on government radio stations, and disco is popular among young islanders. Contemporary Tahitian music, readily available on cassette recordings, is the most popular 'foreign' music on Easter Island. Rapanui composers incorporate some stylistic features of popular Tahitian musics and, less extensively, of American country and western and rock, and Chilean popular songs. Some youth groups use the 'Spanish guitar'. There was a great resurgence of interest in learning and performing traditional songs and dance in the late 1990s.

Both traditional and modern music are predominantly vocal. To the pre-missionary period, Campbell ascribed *akuaku* (chants devoted to spirits), *riu* (laments recounting past events) and *riu-tangi* (funeral chants), *'atē* (praise chants addressed to humans and things, with musical patterns similar to those of *riu*), *'utē* (short songs with fixed forms), *kaikai* (recitations for string games, some being *pāta'uta'u* recitations (see below) of texts from the *rongorongo* tablets), and *ēi* (provocative or insulting songs, consisting of improvised satirical couplets, which could lead to fights or even tribal war if the satirized person took offence). To the period from 1864 to 1914 he ascribed evolved types of *riu*, *kaikai* and *ēi* in addition to *hakakio* (chants expressing gratitude at feasts), *hāipoipo* (wedding chants of Tahitian origin), and *hīmene* (hymns). *Riu*, the broadest category, embraces some types (e.g. surfing chants) that have been classified separately by other authors. Early *riu* were historical accounts of local kings or wars, remembrance of ancestors or expressions of mythical beliefs about *tangata manu* ('bird men'). Evolved *riu* concern more recent historical events.

Extant *'atē*, considered by Campbell to be at least 200 years old, are rhythmically free and have wide ranges of pitch. *Pāta'uta'u* are free rhythmic recitations without precise pitch. Musical styles within *riu* and other traditional song types vary because in many instances the music now sung is more recent in origin than the text. Tahitian *hīmene* style (see §3 below) and other two- and three-part singing styles are found (in bourdon, organum, free counterpoint and homophonic harmony).

Dancing or body movements, such as the gentle swaying of torso and arms in *hīmene*, accompanies most singing. Clapping, striking hands on the ground and non-musical vocal sounds are common types of accompaniment. The instrumental inventory is small. The *keho* (a stone plate over a gourd resonator in a pit in the ground) was stamped rhythmically to accompany singing and dancing. A shell (trumpet) was listed by one early writer. The *kauaha* from South America (a jawbone of a horse used as a rattle) and guitars and drums said to have come from Tahiti are now considered traditional accompaniment to light songs and dances. Other adopted instruments include a cane flute, button accordion and *ukelele* (ukulele).



3. French Polynesia. The area of south-eastern Polynesia that comprises the political entity of French Polynesia embraces five archipelagos: the Society Islands (eight inhabited high volcanic islands), of which Tahiti is the largest and best known; the Austral Islands (five volcanic islands) to the south-west; the Marquesas Islands (12 high volcanic islands) to the north-east; and the Tuamotu archipelago (76 coral atolls) and Gambier Islands (eight high volcanic islands within one fringing reef) to the east and south-east. The region was first populated by seafaring peoples who migrated from western Polynesia (Tonga or Samoa) around 100 to 300 CE, first settling in the Marquesas and Society Islands. Further dispersal from this centre resulted in the settling of the Austral, Tuamoto and Gambier Islands.

A high level of mutual intelligibility persists among the distinct languages that had emerged by the time of European exploration in the Pacific. Yet different experiences of missionization and colonization in each area have had an impact on the subsequent development of autochthonous performance traditions. Complicating this situation is the hegemony of Tahitian language and performance traditions that has extended to all areas throughout the territorial area since 1880.

(i) Society Islands. The name of the principal island, Tahiti, is frequently applied to all the Society Islands and occasionally to all of French Polynesia. Lying between 15° 48′ and 17° 53′ S and 148° 05′ and 154° 43′ W, the Society Islands are further subdivided into a south-east Windward group (Tahiti, Moorea, Maiao) and a north-west Leeward group (Huahine, Ra'iatea, Taha'a, Bora Bora and Maupiti), a division reflected in choral singing practices.

Tahiti was the first of the Pacific Islands to attract widespread interest in Europe. First visited by the English navigator Samuel Wallis in 1767, Tahiti was named New Cythera by the French navigator Bougainville, who visited in 1768. Bougainville took a native named Aoutouru (Auturu) to France, where he fascinated many leaders of the Romantic movement, to whom he exemplified a 'noble savage' from an island paradise. In 1774 the English navigator James Cook took another native named Omai from the island of Huahine to England, where he became the subject of O'Keefe's popular musical of 1785, *Omai; or a Trip round the World*, with music by William Shield.

Musical practices prior to conversion to Christianity can be generalized from descriptions in accounts by voyagers. Drumming on various sized drums called *pahu* and chanted recitation of prayers were integral components of elaborate state rituals held on *marae*, outdoor temple platforms (fig.5). In public settings, formal entertainments called Heiva were presented by professional travelling musicians and actors who were initiated members of the Arioi society, a cult dedicated to the god 'Oro; their entertainments included singing, dancing and dramatic enactments. In private settings, recreational

5. Tall drums played in a marae sacrificial ceremony on Tahiti: engraving after John Webber from the atlas of Captain Cook's 'A Voyage to the Pacific Ocean' (1784)

participatory singing was accompanied by nose flutes and occasionally small drums.

The commencement of Christian evangelization in 1797 by members of the newly formed, non-denominational London Missionary Society, and the conversion of Tahiti by 1815, marked a turning point in Pacific history. Missions from Tahiti were launched into other areas of Polynesia, which in turn initiated subsequent missions elsewhere in the Pacific. The use of native catechists facilitated the dissemination of vernacular languages and musical practices, thus extending the sphere of Tahitian influence within Protestant areas. The English missionaries introduced British hymn and psalm tunes. By the late 19th century, the emergence of three indigenized genres of choral singing reflected a confluence of Western harmonization and an indigenous framework for vocal parts.

Missionary-instigated censure of 'pagan practices' failed to uproot indigenous performance traditions, for surreptitious performances of dance are described in travel accounts throughout the 1830s. By the early 1850s, the French colonial administration (established in 1842) openly encouraged the revival of dance performances. The most important development for stimulating Tahitian performance traditions was the 1881 inauguration of the Fête National, commemorating the 14 July 1789 storming of the Bastille; it was renamed Heiva in 1985 on the establishment of internal autonomy. The annual July revels, popularly called Tiurai, have included folkloric competitions of Tahitian choral singing since 1881; Tahitian dance was added to the competitions in 1892. Professional Tahitian dance troupes also perform in hotels and restaurants, especially since the rise of mass tourism in the 1960s. Their shows are often scaled-down versions of their elaborate spectacles first unveiled in the Heiva competitions.

The rise of wage labour and corresponding acceleration of a cash economy in the 20th century instigated mass migrations of islanders to the capital town of Pape'ete and the immediate neighbouring districts. Enclaves of islanders live alongside urban 'demis' (of mixed Tahitian and French descent), French and Chinese residents. In the 1990s, Chinese residents, largely descendants of plantation labourers imported in the 1860s and 1870s, used Chinese music and dance as part of their assertion of Chinese identity.

Performance traditions in the late 20th century included choral singing, dance drumming, string-band accompanied dance songs, and popular songs. Choral singing, performed *a cappella*, is called *hīmene* (*see* HĪMENI). Originally applied to Christian hymn singing, the term was extended to choral singing in secular civic contexts. Tahitians distinguish five genres according to musical criteria; additional terms distinguish categories of choral singing differentiated by criteria other than musical ones (e.g. age-group of singers, whether or not a hymn originates in a printed hymnal, when instrumental accompaniment is added etc.).

Hīmene puta are Western hymn tunes performed in chordal note-against-note style; this style is applied to vernacular-language hymn texts in printed hymnals called *puta*, which are largely translated from British and American sources. *Hīmene nota* are arrangements performed from notated scores with new Tahitian-language texts; generally in four parts, these arrangements depart from the chordal style with techniques such as antiphonal alternation and textural variation among sections.

The indigenized choral styles, *hīmene rū'au*, *hīmene tārava* and *hīmene tuki*, emerged by the late 19th century in the context of Protestant worship and devotion exercises. *Hīmene rū'au* ('old hymn') manifests an 'old way of singing' owing to the association of the musical style with Protestant hymn texts that predate 1880. This orally transmitted singing style combines stereotyped melodic motion and formulaic cadential patterns among basically three vocal parts. *Hīmene tārava* ('hymns that lie horizontally') are performed in a stanzaic multipart style in which named vocal parts are either fully texted,

rhythmically punctuative or melodically decorative. Western harmonization (but not functional harmonic progressions) results from the combination of vocal parts. The specific musical content and names of vocal parts, which range in number from five to thirteen, differentiate three broad regional styles practised in the Windward, Leeward and Austral Islands. In performance, one woman called *fa'aaraara* ('to awaken') begins a stanza; others in the chorus join in by 'catching' (*haru*) her melodic line; rhyhthmic punctation consists of a grunting (*hā'ūr*) performed by men seated at the rear of the group; melodic decoration by one or more soloists called *perepere* ('to soar') consists of contrasting high-pitched lines using vocables; at the end of a stanza, all parts converge and hold on a unison tonic. Stanzas may be repeated at will. This singing style originated at Bible-study meetings, where repetition of biblical passages or paraphrases within the *hīmene tārava* framework served didactic purposes. *Hīmene tuki* is the Tahitian name for the counterpart to *hīmene tārava* as performed in the Cook Islands to the west. Sung using Rarotongan-language texts, its name derives from the Rarotongan term for the men's grunting.

All indigenized choral styles are performed in the annual Heiva competitions. The subject-matter of specially composed poetic texts called *paripari fenua* ('to glorify the land') relate indigenous legendary and historical episodes.

Dance presentations in the Heiva competition include group dances in four genres, all accompanied by a drum ensemble. The discrete pieces that accompany discrete dance pieces are called *pehe* song. In *'ōte'a*, a group dance of varying formations in rows and columns by male and female dancers, the accompanying *pehe* are solely percussive, made up of repeated 8- or 16-beat rhythmic patterns. In the *pā'ō'ā*, a male solo chanter declaims a poetic text, which is frequently comical; sections are concluded by a chanted response declaimed by dancers seated in a circle on the ground. The drum ensemble, situated in the centre of the circle, maintains a steady rhythmic pulse, enhanced by the dancers who slap their thighs and the ground. Male–female couples of dancers take turns performing inside the circle. In the *hivinau*, dancers are lined in two concentric circles, moving in opposite directions. A chanted poetic text by a male solo chanter alternates with emphatic vocable syllables chanted by the dancers; the soloist and the drumming ensemble are at the centre of the circles. The *'aparima* is an interpretive dance performed to a poetic text sung en masse by singers and drummers, the latter also providing accompaniment on guitars and ukuleles. *'Aparima* usually conclude a dance programme and are performed in costumes of gaily coloured printed fabric rather than the grass skirts used in the other three dance genres.

Also included in dance presentations are *'ūtē*, satirical songs performed by one or two soloists and accompanied by guitarists and ukulele players who also provide a vocable-based melodic accompaniment. The customary melodic contour descends from the upper leading tone to the tonic below over the course of a text line; the harmonic accompaniment alternates between the dominant and tonic harmonies.

Contemporary Tahitian-language popular songs dominate radio broadcasts and a thriving commercial recording industry, as well as entertainment in hotel and waterfront bars. In addition to the songs performed to accompaniment of ukulele-based string bands, contemporary recording artists also draw on international styles, including Jamaican-inspired reggae (largely by way of Honolulu-based Hawaiian reggae) and African-American rap music.

The Tahitian drum ensemble consists of three basic types of drum: a slit-log drum called *tō'ere*, held upright on the ground and beaten with a stick, which provides the main rhythmic pattern (fig.6); a single-headed upright drum called *fa'atete*, played with two sticks, which provides a counterpoint to the *tō'ere*; a single-headed drum called *pahu tupa'i rima*, beaten with fingers or palms; and a double-headed bass drum called *tariparau*, which marks a basic pulse. Drum ensembles include multiple *tō'ere* of various sizes and thus contrasting pitches. The lead *tō'ere* player begins with a *pehe* with a solo rendition of the basic rhythmic pattern, after which the rest of the ensemble enters. Since the 1970s, Tahitian drum ensembles have included a Cook Island style of playing small-sized *tō'ere* horizontally using two sticks. The use of a five-gallon kerosene or biscuit can called *tini* in early decades of the 20th century is now discontinued. An instrument called *ihara* described by European visitors before 1800, consisting of a length of bamboo bounded by two nodes with a slit running parallel to the length and beaten with sticks, was revived in the late 1980s.

Guitars and ukuleles (Tahitianized as *'uturere*) are used to accompany the Western melodies of *'aparima* and *'ūtē*; in the early decades of the 20th century the accordion was also popular. Travellers described the use of the *vivo* nose flute, which was revived along with the bamboo *titapu* flute in the 1980s. The pre-Christian signalling function

6. *Tō'ere (slit-drum), Tahiti*

7. *Conch-shell trumpet, triton type, with blowing hole at end, Tahiti*

of conch-shell trumpets called *pū* have been maintained in contemporary presentations of Tahitian dance (fig.7).

(ii) Austral Islands. The five inhabited volcanic islands south-west of Tahiti stretch over 1450 km; at 27° S and 140° 20′ W, the southermost island of Rapa lies well outside of the tropics. Very little is known about performance traditions in the pre-European era. Few explorers called at any of the islands, and few artefacts from the islands made their way into museum collections, save for several elaborately carved tall drums associated with indigenous religious practices, which are occasionally found mainly in Europe. The continuing isolation of the islands stems from difficult anchorages and a lack of natural and recreational resources, deterrents to the streams of European, and later American traders and tourists, who have called instead at Tahiti.

The Austral Islands were evangelized by native Tahitian catechists in the 1820s, since which time the archipelago has remained staunchly Protestant. The exception is the island of Tubuai, which hosts a mélange of Christian denominations. All Protestant Church affairs are conducted in the Tahitian language, although each of the islands maintains a separate dialect. The Austral Islands were formally brought under French colonial control when the territory was established in 1880. Tahitian-language performance traditions have eclipsed any autochthonous traditions that may have predated conversion to Christianity.

In the 1990s, performance traditions in the Austral Islands were generally those choral-singing and dance genres found throughout the Society Islands, albeit with local variations in performance styles. In choral *hīmene tārava* singing, each of the five Austral Islands maintains a distinct style (although all are considered outside the region to be variations on one broad regional style, to the displeasure of Austral Islands residents). On the island of Tubuai, the choral singing resembles that found on the island of Tahiti, with eight vocal parts. The islands of Rimatara and Rurutu have ten and twelve vocal parts respectively; their high-pitched soloist parts, as well as pronunciation variations owing to dialect differences, clearly distinguish their choral style from those in the Society Islands. Choral singing in the southern islands of Ra'ivavae and Rapa have 11 and 13 vocal parts respectively, with the richest and fullest textures of Tahitian-language *hīmene* to be heard anywhere. Local differences are also manifest in variant names for other choral genres.

The annual July folkloric competitions continue to be the primary occasion for the peformance of Tahitian drum dances (*'ōte'a, pā'ō'ā, hivinau* and *'aparima*), and for choral performance of *hīmene* that relate indigenous subject-matter. Major holidays include New Year's Day and the annual May contributions; both are occasions for competitions of newly composed *hīmene* in all genres.

(iii) Tuamotu archipelago. No ethnomusicological field study has yet been made in the Tuamotu archipelago. What is known is derived from sound recordings made during anthropological expeditions, as well as brief descriptions in the subsequent reports. Moreover, studies have concentrated on the more isolated eastern atolls; comparatively little attention has focussed on central and western atolls.

The isolation of the mostly low coral atolls, situated between 14° and 24° S and 135° and 149° W, stems from a combination of limited natural resources (coconuts, fishing and pearls), hazardous navigation conditions and long intervals between shipping schedules. Populations on many atolls number only 100–200 people. Many people migrate to Tahiti in search of greater educational and employment opportunities. The southern end of the archipelago serves as the site for the French nuclear testing programme administered from Tahiti, which accounts for a strong military presence and imported workforce.

European exploration dates from Medaña's sighting of Pukapuka in 1521; the archipelago was not fully and reliably charted until 1820. Successful conversion to Christianity was achieved by Mormon missionaries in western islands after 1845, in competition with Roman Catholic missionaries dispatched from the Gambier Islands to the south. French authorities in Tahiti brought most of the eastern islands under the French protectorate between 1849 and 1858. Increased interaction with Tahiti, especially by people in the central and western areas, has resulted in highly Tahitianized lifestyles.

Archaeological remains of outdoor platform temples suggest pre-contact religious practices similar to those in the Society Islands, involving the use of drums and chanted prayers and incantations. Indigenous singing combines performance styles differentiated by musical criteria and various classifications of poetic texts by function.

In the eastern Tuamotus, the archaic *fagu* chanting style involves recitation on a principal pitch, or a small number of tones arranged phrase by phrase that rise stepwise from, and return to, the principal pitch. Phrases conclude with a quavering called *fakatututuku*, which combines progressive increase in velocity and decrease in interval between two pitches. In performance, a leader intones an introduction called *hua*; the response by a second person is called *maro*, then a chorus group sings the main text, called *popoki*. The *fagu* chanting style is used for poetic texts of indigenous sacred lore called *vanaga*, laments which are also *fagu*, and chants of glorification such as *fakataratara* (praise of land), also called *fakateniteni*, and *rorogo* (praise of heroes).

Various categories reported from the eastern Tuamotus in the 1930s include *haka, hurihuri vaka, katoa, kihau, koke, nihinihi, putu, tirivara*; dance categories from other Tuamotuan areas presented in Heiva competitions in Tahiti in the 1980s have included *heahea, koivi, kapa, nuka, piirara, ruta* and *tikoti.* Dance chants combine rhythmic monotonic recitation and occasional wide leaps

with indefinite pitched portamento, particularly descending at phrase endings. The musical style called *patakutaku* is a rapidly intoned chant with hand clapping; the accompaniment by guitar and ukulele is used for the rhythmic, rather than harmonic quality of the rapid strumming on one or two chords. The term *kapa* is apparently used in western areas for dance songs in *patakutaku* style.

Tuamotuans have embraced Tahitian polyphonic choral singing styles called *hīmene tārava* and *hīmene rū'au* as practised in the Windward (Society) Islands. The musical styles are used to perform poetic chants of praise; they are also used by Catholics and Mormons with doctrinally appropriate texts.

Chanting in archaic styles has been largely replaced by Westernized popular songs sung with guitar and ukulele accompaniment. However, the subject-matter of indigenous legendary and historical episodes has been maintained. Many popular songs recorded in Tahiti in the 1950s and 60s had Tuamotuan-language poetic texts.

Early indigenous instruments included a drum and conch trumpet characteristic of eastern Polynesia, and a bamboo nose flute that may have been imported from Tahiti. Body percussion continues to be important.

The Tuamotus are also famed for the accompaniment style called *ta'iri pa'umoto*, a rapid percussive strumming developed before 1934, after the guitar was introduced by anthropologist Kenneth Emory during the Bishop Museum's first Tuamotu expedition. This strumming style has become a fundamental characteristic of commercial recordings of Tahitian popular songs.

(iv) Gambier Islands. The archipelago is commonly referred to as Mangareva, the name of the largest of eight volcanic islands fringed by a surrounding reef. The group lies at the south-eastern end of the Tuamotu archipelago, on the Tropic of Capricorn at 135° W.

The little that is known of pre-contact practices stems from museum artefacts, ethnographic descriptions by Catholic priests and travel accounts. Roman Catholicism was unanimously embraced by 1838 and remains the dominant faith in the archipelago. In contrast to Protestant efforts elsewhere to abolish indigenous performance styles, Roman Catholic priests actually encouraged the adaptation of indigenous singing styles to Catholic devotional material. *'Akamagareva* ('to make Mangarevan'), sacred counterparts to secular *kapa* songs, flourished alongside Latin Gregorian chant. Following the vernacular language reforms of the Second Vatican Council in 1967, the archdiocese in Tahiti mandated the discontinuation of Latin (including Gregorian chant) and advocated the adoption of hymns in the Tahitian and French languages, which are the regional lingua franca.

Traditional Mangarevan music consists of four genres differentiated by musical criteria. The *keko* style of rapid speechlike declamation reported by Buck was not recorded in 1985. The other three, *'akatari pē'ī*, *kapa* and *tagi*, are combined in performances called *pē'ī*, which are enactments of episodes from legends and historical narratives (both of which are called *atoga*). *Kapa* and *tagi* are both song forms in stanza-chorus alternation and are both performed in free unmetred time. *Kapi* and *tagi* songs use two principal pitches, one in the stanza and the second, a minor or major second above, in the refrain; additional neighbouring pitches add melodic interest. In performance, there may be alternation between a soloist who sings the stanzas and a chorus that sings the refrain. The performances of *tagi*, meaning 'to cry', is distinguished from *kapa* by the use of a shrill, higher-pitched, plaintive vocal quality evocative of crying, and a slower tempo. *'Akatari pē'ī* are metred, for they function as an accompaniment for dancers to dance onto the performing area at the start of a *pē'ī* enactment. Poetic texts for *kapa* and *tagi* are classified by their subject-matter, such as *porotu* (honorific songs), *tagitagi* (love songs) and *tau* (laments).

Tahitian dance genres are also practised, although only two genres were reported in 1985, the *pā'ō'ā* and the *'aparima*. Both use Mangarevan-language texts. Although the texts of both could be based on themes of *pē'ī*, Tahitian dance genres are placed at the conclusion of the *pē'ī* and are not considered integral to it.

By the time of the Bishop Museum's Mangarevan Expedition in 1934, none of the pre-Christian musical instruments were extant; Te Rangi Hiroa (Buck) based his published descriptions on museum artefacts. Instrumental accompaniment for *pē'ī* enactments is provided by a kerosene tin. Performances of Tahitian dance genres are accompanied by the Tahitian drum ensemble (see §(i) above).

(v) Marquesas Islands. The 12 volcanic islands of the Marquesas, known to the islanders as Te Fenua 'Enata, lie approximately 1500 km north-east of Tahiti. A predominantly Polynesian population of about 7000 inhabits six of the islands, sharing a unique musical legacy that exhibits both archipelago-wide cohesion and rich regional variation. The continuation of this legacy in the 1990s was remarkable, because Western contact, colonization and evangelization in the 19th century brought intense social disruption, severe depopulation and radically altered contexts for music-making. In the 20th century, Tahitian cultural, economic and political hegemony relegated Marquesan music to the periphery of country-wide interests and governmental support. Nevertheless, traditional performances continue, underscoring the value Marquesans place upon retention of their arts and highlighting the desire of Marquesans to maintain and assert their distinct identity.

The first published transcription by Tilesius of a Marquesan song dates from 1805, although detailed comments on the music and dance do not appear until after the Bayard Dominick Expedition of 1920–21. Drawing on the manuscripts of early missionaries and the comments of informants who knew ancient chants, Handy (1923) describes musical genres that large groups performed as an indispensable part of major rituals and community festivities, as well as chants used by individuals for spells, courting and daily personal interactions. No sound recordings were made, but Winne later transcribed Handy's remembered version of performances he witnessed (Handy and Winne, 1925). The first systematic audio documentation of the music occurred in 1989, when a UNESCO-sponsored Territorial Survey of Oceanic Music provided field recordings of over 700 Marquesan vocal and instrumental performances. Moulin's 1991 and 1994 studies contained musical ethnographies of late 20th-century Marquesan practice.

Ancient Marquesans were highly articulate in speaking of their musical life. Both 19th and early 20th-century sources reveal an extensive vocabulary related to music and document the richness of traditional performance.

Marquesans acknowledged separate vocal registers, sounds produced by different ways of clapping hands and striking the body, and over 130 genres of music and dance (a number of which they still perform). They also used a variety of musical instruments (including shell and wooden trumpets, whistles and flutes, percussion sticks, a small wooden xylophone, jew's harp, mouth bow and several types of drums) and onomatopoeic drum 'sounds', which identified rhythmic patterns.

Marquesans divide their music into two well-delineated categories: old/indigenous and new/imported. Both demonstrate a preference for vocal, logogenic music and public performance by large groups; in traditional performances, a prominent group leader provides introductory oratory as well as chanted invocations. Marquesans employ a wide range of vocal production, from singing to forceful chanting, rhythmic recitation, shouted declamation and a vigorous rumbling of the vocal cords; one traditional genre, the famous pig dance, consists entirely of rhythmic grunting.

The term *mea kakiu* ('old things') embraces several traditional performative genres as well as new compositions in traditional style. Solo genres performed in the 1990s included a variety of declamatory chants (*ha'anaunau/anaunau*, *mauta'a*, *tapatapa*, *va'ahoa/vakahoa*), genealogies (*matatetau/matatatau*; *pei* if accompanied by juggling), women's improvised greeting calls (*hahi/mave*) and laments (*uē tūpāpa'u/puhi nui/uē pahevaheva; uhaki*). Some genres, such as the *mahohe-/maha'u* (pig dance) and the *putu*, a circle dance accompanied by hand-claps, are for male groups; however, women join these dances in some regional variants. Mixed groups most frequently perform *rari/ru'u*, topical songs, and *tape'a/rikuhi*, energetic songs to end a performance.

Traditional music displays features in common with other eastern Polynesian musics: limited melodic range, a primary chant tone with a small inventory of secondary pitches (often including either a major or a minor 3rd below the chant tone and the major 2nd above it), the use of indefinite pitch, a prevalence of speech-rhythm (solo chants) and duple rhythm (group chants), the use of melodic descent and descending glides to mark structural ending points, and a sectional approach to musical composition. Dance is an important accompaniment to all traditional genres intended for group performance; both standing and sitting dances are found. *Mea kakiu* use the Marquesan language; old songs texts often contain archaic expressions and altered words, rendering meaningful translation difficult, even for native speakers.

Mea hou ('new things') include church songs (*hīmene pure*; *hīmene tārava*), entertainment songs in pan-Pacific style (*hīmene 'eka'eka/hīmene 'a'a nui*) and dance music from Tahiti (*tapiriata/tapriata*, *'aparima*, *pā'ō'ā*, *hivinau*). Although Marquesans compose *mea hou* in all of the above genres, many pieces are imported, usually from or via Tahiti. These songs exhibit language diversity, wide melodic range, functional harmony and strophic or verse-refrain form. Continued updating occurs in these genres as Marquesans incorporate new practices and compositions from Tahiti and beyond, although it often takes time for new ideas to reach the Marquesas and appear in Marquesan performances.

Musical instruments reflect this same division of indigenous and introduced. Although nose and mouth flutes and the single-reed *pū hakahau* disappeared in the early 1980s, following the death of the last performers, some traditional sound-producers remain: handstruck, single-membrane drums in various sizes (*pahu*); shell trumpets (*pū*, *pū tona*, *pū'i'u*, *pū tupe*); wood trumpets (*pū'akau/pū rohoti*); jew's harp (*tioro/tita'apu*); and children's amusements such as whistles (*kī*), the leaf whizzer (*pinao*) and leaf oboe (*pū*). Popular imported instruments include guitar (*kīta*), ukulele (*'ukarere*), Tahitian slit-drums (*tō'ere*) and skin-drums (*pahu*), the tin-can drum (*tini*) and electronic instruments (guitar, keyboard, drums). Locally made banjo-ukuleles (also called *'ukarere*), spoons (*tuita*) and the one-string bass (*tura*) accompany entertainment songs on occasions of informal music-making. Few historic instruments remain in the islands; the technical skills and highly acclaimed artistic merit of earlier examples is represented in museums around the world but largely unknown to this generation of Marquesans.

4. HAWAII. Although the name actually refers only to the principal island of the Hawaiian Islands archipelago, it is now commonly used to designate all the islands of that group. Lying in the North Pacific about 3070 km south-west of San Francisco, Hawaii was the northernmost archipelago settled by Polynesians and had a flourishing Polynesian culture when discovered by Captain Cook in 1778. Since 1959 Hawaii has been a state of the USA, and its population of about 1.3 million is known for its cultural pluralism; in addition to descendants of early Polynesian settlers there are also Polynesians from other island groups (e.g. Samoa), as well as Asians (Chinese, Japanese, Korean, Filipino and Vietnamese) and Caucasians (European and North American). Certain genres of the musical heritage of all these peoples are perpetuated, some primarily by the peoples themselves, others by all the inhabitants jointly, providing an annual calendar of many colourful festivals. The discussion here centres on music identified as traditional Hawaiian; for Western art music *see* HAWAII.

(i) Traditional vocal music. In traditional Hawaiian performance that descends from indigenous culture before contact with Europeans, music was predominantly vocal. The term *mele* applies to poetic texts as well as their recited presentation. With the exception of a few poetic genres improvised on informal occasions, poetic texts are composed prior to performance. The subject-matter of texts, classified in named categories, range from sacred prayers (*mele pule*), genealogical chants (*mele ko'ihonua*), honorific name chants (*mele inoa*), love songs (*mele ho'oipoipo*) and funerary laments (*mele kanikau*) to various kinds of spontaneous expression and informal game chants.

In performance, a basic distinction obtains between *oli* and *hula*. *Oli* are chanted without instrumental accompaniment and dance and are thus unmetred recitation, with phrase lengths entirely dependent on completing the thoughts expressed in the poetry. *Hula* are poetic texts intended for presentation as dance; they are metred and incorporate instrumental accompaniment.

Oli is a term that covers five sub-styles from speechlike to song: the *kepakepa* style is a rapid speechlike declamation with clear enunciation; the *kāwele* style involves some pitch prolongation in otherwise speechlike declamation; the *olioli* style incorporates prolonged phrases on one basic pitch and the use of various named vibrato

techniques, among them the widely admired *i'i* tremelo; the *ho'āeāe* style incorporates multiple pitches in prolonged vibrato phrases; the *ho'ouwēuwē* style, used for lamenting, involves the greatest use of pitches and prolongation in vibrato phrases and may be punctuated by outbursts of wailing. Each of the five sub-styles of *oli* is appropriate to particular poetic subjects and incorporates various named vocal articulatory techniques. A trained chanter thus applies chant style and vocal techniques based on their appropriateness to a poetic text.

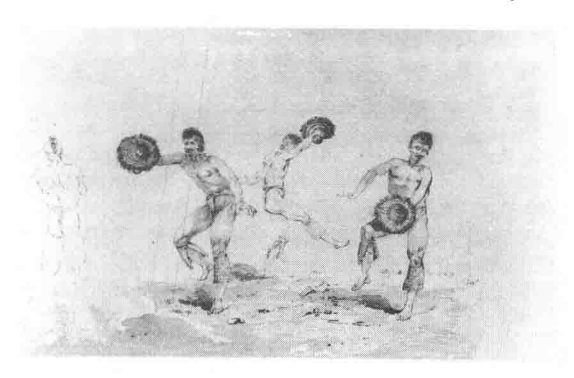
Hula delineates a domain of repertory that bridges extensive transformations in musical practices embraced by Hawaiians throughout the 19th century. In the *hula pahu* and *hula 'āla'apapa*, the two categories held to descend directly from pre-European practices, the vocal recitation style called *'ai 'ha'ha*, which incorporates melodic patterning, is used. Both categories involve a division of labour between dancers (*'ōlapa*) who perform the movements, and chanters (*ho'opa'a*) who recite the text and provide the instrumental accompaniment using solely indigenous instruments. The accompaniment for the *hula pahu* consists of sharkskin-covered log membranophones called *pahu*, often played together with the smaller fishskin-covered coconut drum called *pūniu* (also called *kilu*); the accompaniment for the *hula 'āla'apapa* consists of the double-gourd idiophone variously called *ipu* (gourd), *ipu heke* (double gourd), and *ipu hula* (dance gourd). In both categories, musical phrases are determined by poetic phrase and variable section length; each category is also distinguished by the use of specific choreographic sequences.

In the 1860s, after decades of missionary-inspired censure during which *hula* had been maintained underground, a revival of *hula* spawned a period of creativity. A new style of *hula* emerged called *hula ku'i*, the term *ku'i* meaning 'to join old and new'. The *hula ku'i* combined indigenous vocal recitation techniques and dance movements with Western pitch, harmonization and instrumental accompaniment, including guitar, ukulele and piano. These performance characteristics were applied to poetic texts in a new format that combined consistent line length of four or eight beats, a stanzaic organization of couplets (or occasionally quatrains) of text, corresponding strophic form resulting from the repetition of a basic melody for as many stanzas as necessary, and the separation of stanzas by a brief instrumental interlude performed with an associated movement sequence specific to *hula ku'i*.

Many melodies of *hula ku'i* songs incorporate leaps of a 4th or greater interval. Among male singers, keys are chosen to place the melody within the vocal range so as to exploit contrasts between lower and upper falsetto vocal registers and to emphasize, rather than minimize, the break in the vocal line when alternating between registers; falsetto singing is called *leo ki'eki'e*, meaning 'high voice'.

The *hula ku'i* category encompasses repertory that specifically combines Western and indigenous components. *Hula* songs in the couplet poetic format, however, continued to be performed to the accompaniment of solely indigenous instruments such as the *ipu* gourd idiophone for standing dances, and with various rhythmic implements (see below) played by the dancers who performed seated and recited the text. In the early 20th century, the term *hula 'ōlapa* came into use to distinguish *hula* songs with solely indigenous instrumental accompaniment from their Westernized *hula ku'i* counterparts.

(ii) Instruments. Musical instruments were primarily used for accompanying vocal recitation during dance performance; in purely instrumental performance (i.e. without poetic text), instruments either functioned as a voice substitute, or sound production was for non-musical purposes, such as signalling or in games. Materials for making instruments were selected for their quality of sound.



The *pahu* is a wooden drum made from a log (either coconut or breadfruit) with one large upper and one smaller lower cavity carved out on each side of a thick partition. Shark skin is stretched over the rim of the large cavity and is secured in place with cord lashings drawn taut through the carved openwork patterns of the smaller cavity. The drummer strikes the membrane with one or both hands. According to Hawaiian tradition, the *pahu* was introduced about six centuries ago by the distinguished visitor La'a-mai-Kahiki (La'a-from-Tahiti). Temple priests also used the drum for religious ceremonies on *heiau*, outdoor temple platforms.

The *pūniu* is a coconut-shell drum traditionally covered with the skin of a surgeon-fish (though other types of skin are now used as well), which is firmly lashed to a ring under the shell. Cords are braided at the ring lashings to tie the *pūniu* to the player's thigh. The drum is struck with a braided thong of leaf or fibre. It is played either in conjunction with the *pahu* drum for *hula pahu*, at which time both drums are played by the one performer. It may also be used for self-accompaniment in seated dances, during which the performer also recites the poetic text.

The *ipu* is a gourd idiophone used to accompany dancers in standing *hula 'āla'apapa* and *hula 'ōlapa* dances. The *ipu* may also be used as self-accompaniment in seated dances, in which case the dance is categorized as either *hula kuolo* or *hula pāipu*. The *ipu* may be made from a single hollowed gourd (*Lagenaria siceraria*). For standing dances, the double-gourd *ipu heke* is used. It is made from combining two gourds; the lower is large, long and globular, and the upper is short and squat. Both are selected for the quality of sound produced by striking the dried, hard rind. The stem ends are cut off, inner seeds removed, and the two gourds are joined by gluing one neck inside the other. A hole is centred above the resonance chamber. With the instrument grasped in the left hand, the performer alternates thumping the instrument on a mat and slapping the lower gourd on its side with the fingers of the right hand. Named rhythms include *kū*, a single thump; *kūkū*, a triple thump; *pā*, a single slap; and *kāhela*, a double slap; combinations of these rhythms are associated with the use of named lower-body movement motifs in the *hula*.

The next six instruments are implements manipulated by dancers in self-accompaniment, usually (though not always) in seated dances. Dances that use these implements are often classified by the name of the implement, e.g. *hula'ili'ili, hula kāla'au*, etc. The percussive rhythms aid groups of dancers in maintaining coordination.

'Ili'ili are stone pebbles played as clappers. Two matched pairs of water-worn, dense (usually basaltic lava), flat, round or oval pebbles are selected both for quality of sound (lava from recent flows gives a preferred brighter sound) and for comfortable fit in the seated dancer's hands.

8. 'Ōlapa (dancers) performing hula 'ulī'ulī (gourd rattle dance) with kūpe'e niho 'īlio (dog-teeth anklets): drawing by John Webber, Captain Cook's artist, pen and ink with wash, c1778 (Bernice P. Bishop Museum, Honolulu)

Kāla'au are paired sticks. They are made from two rods of hard, resonant wood, traditionally *kauila* (*Alphitonia ponderosa*), but now rose-wood and coffee-wood introduced by Europeans are also used. An older form of the instrument, used in standing rather than seated dances, requires one rod about a metre long and another about a third as long, both slightly thicker in the middle and tapered at each end. The shorter rod, held in the right hand, is struck against the longer rod. A newer form dating from the 1870s is a matched pair of rods the size and shape of the smaller of the older rods. In standing *hula kāla'au*, the *papa hehi* treadle footboard may also be used by the dancers in conjunction with the *kāla'au* sticks.

The *pū'ili* is a bamboo rattle made from a section of native Hawaiian bamboo (*Bambusa vulgaris*), about 5 cm or longer. One end with a node serves as a handle; narrow longitudinal slits, evenly spaced, are inserted in the remainder of the tube. The *pū'ili* is held in the right hand, and the dancer gently taps the palm or back of the left hand, the shoulders, or the ground. In the Westernized *hula ku'i*, *pū'ili* are sometimes used in pairs and are struck together.

The *'ulili* is a spinning rattle. It consists of three small circular gourds mounted on a stick. The two end gourds, filled with seeds, spin when a cord wound around the stick is pulled through a hole in the middle gourd.

The *'uli'uli* is a feather-decorated rattle, used in either sitting or standing dances. It is made from a single small gourd receptacle containing seeds, fitted with a fibre handle, at the end of which is a flat circular disc mounted perpendicular to the handle and fringed with feathers. Traditionally one implement is manipulated in the right hand by shaking it in the air, tapping it against the left hand, the shoulders, the thighs and the ground. In some Westernized *hula ku'i*, dancers now use a pair of *'ulī'ulī*, one held in each hand. In 1779, Captain Cook and his men observed a *hula 'ulī'ulī* dance at Kealakekua, Hawaii (fig.8). The male dancer wore *kūpe'e niho 'īlio* (dog-teeth anklets) made from multiple rows of canine teeth strung on a net backing. The rustling sound produced by rattling teeth contributed aurally to a performance, and facsimiles, sometimes made with shells, are occasionally seen.

Instruments for serenading include the *'ohe hano ihu* (bamboo nose flute; fig.9), which consists of a length of native Hawaiian bamboo with a nose-hole cut at an angle above the closed node end and two or three finger-holes along the tube towards the open end; the *ipu hōkiokio* (gourd whistle), a globular flute; and *ūkēkē*, a mouth bow with two or three fibre strings. These instruments are considered a substitute for a vocalized poetic text.

Sound-making devices include the *pū lā'ī* (ti leaf trumpet) made of a rolled leaf; the *oeoe* (bullroarer); and the *nī'au kani* (sounding coconut midrib), a jew's harp. The *pū kani* (sounding horn), a shell trumpet used for blowing signals, is usually made from either the triton (*Charonia tritonis*) or the helmet shell (*Cassis cornuta*). It is similar to shell trumpets found elsewhere in Polynesia.

(iii) Westernized music. American Protestant missionaries began evangelizing in the islands in 1820. In addition to teaching rudiments of Western music in order to sing Christian hymns (*hīmeni*), missionaries also taught literacy in Western staff notation; printed tunebooks first appeared in 1834. By the 1860s, musically literate Hawaiians began to compose secular songs, using alternating verse-chorus format of the American Sunday-school and gospel hymns for models. Hundreds of songs have been published in sheet music beginning in 1869, and song folios beginning in 1893.

By the beginning of the 20th century, with tourism on the rise and the Hawaiian language in decline, songs about Hawaii by Hawaiian composers using English-language lyrics began to appear. These songs came to be called *hapa haole* (half foreign) songs. In their most extreme form, from tunesmiths in New York's Tin Pan Alley, overly sentimentalized images were combined with phony nonsense syllables; the consistent use of the 32-bar popular song form (AABA), however, served as a model for Hawaiian composers of *hapa haole* songs in subsequent decades.

Commercial recording of Westernized Hawaiian songs began in 1905 and sold especially well during various Hawaiian music fads that swept the US mainland in the late 1910s through the 1920s, and during and following World War II. What fuelled the fads was interest in the ukulele and the 'Hawaiian guitar' style of playing melodies, in which a metal bar was used to stop the guitar strings. The fads spawned a proliferation of instruction books as well.

In the 1950s, a more elaborate guitar style came into prominence, which combined picking a melody on the higher-pitched strings while simultaneously maintaining a rhythmic bass line on the lower-pitched strings. This style is called slack key or *kī hō'alu*, after the practice of slackening the strings to obtain altered tunings.

9. 'Ohe hano ihu (bamboo nose flute), Hawaii

In the 1970s, indigenous Hawaiian culture underwent a renaissance as Hawaiians revived non-commercial styles, including *oli*, *hula pahu*, *hula ʻālaʻapapa* and *hula ʻōlapa*, which had waned almost to the point of disappearing altogether. This renaissance continued in the 1990s. Annual competitive events such as the Merrie Monarch Festival, the King Kamehameha Chant and Hula Competition, and the Queen Liliʻuokalani Keiki (Children's) Hula Competition serve as major performance occasions for privately operated schools of *hula*. Institutions involved in fostering perpetuation of and research into Hawaiian music include the Bernice P. Bishop Museum (for maintaining historically important manuscript collections), the Kamehameha Schools and the University of Hawaii at Manoa, which inaugurated a BA degree in Hawaiian Music in the autumn of 1995.

III. Western Polynesia

1. Niue. 2. Samoa: (i) Vocal music (ii) Instruments (iii) Music in society. 3. Tokelau. 4. Tonga. 5. Tuvalu.

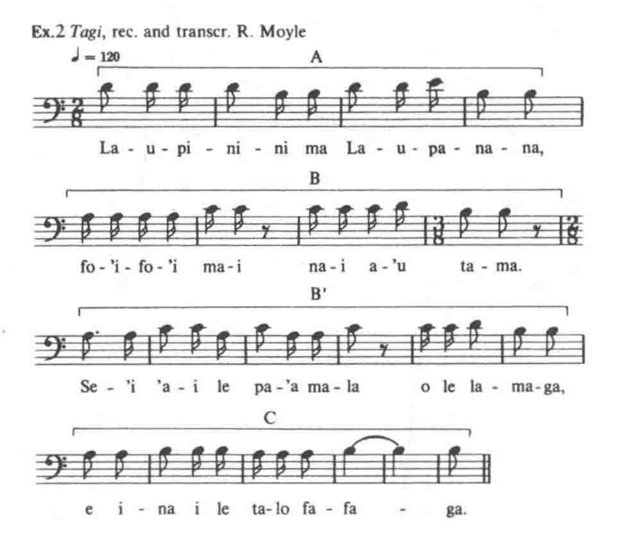
1. Niue. The musical culture of Niue, a solitary uplifted atoll at the easternmost corner of Western Polynesia, shows a blend of homogeneity with neighbouring islands (Samoa, Tokelau, Tonga) as well as distinctive features. Despite the island's small population (around 1500 and falling through emigration to New Zealand, where some 7000 Niueans now live), two linguistic dialects exist.

The success of 19th-century missionization may be gauged by the extreme dearth of even early references to song and dance and the present numerical dominance of European-style compositions. Designative terms for song types appear not to exist: the generic term *lologo* prefixes a distinguishing word, e.g. *lologo takalo* (challenge song), *lologo fakahula* (boasting song). Several children's game songs exist, similar in type and language to those elsewhere in Western Polynesia, but are in decline in the face of ever-increasing European material and cultural influence.

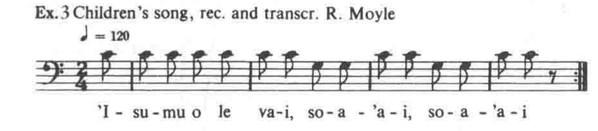
Within *koli*, the generic term for dance, several genres are identified. In the men's *takalo* (challenge dance), dancers divide into two opposing warrior groups and enact alternating martial movements to loud rhythmic recitations of ancient origin, culminating in mimed hand-to-hand combat. The *meke* men's dance features vigorous movements of the whole body accompanied by *nafa*-beating. The *tamē* dance involves synchronized seated or standing actions by mixed dancers, formerly accompanied by rhythmic recitations but now by guitar-accompanied acculturated songs. The *tafeauhi* dances are no longer performed because they are considered morally lax, except with greater propriety as part of school exhibitions.

Niue's nose flute, of which very few specimens are still in existence, is noteworthy for both its nomenclature and construction. At the turn of the century its name was *kofe*, the local term for bamboo; since that time, however, the term for bamboo changed to *kaho* and the flute name to *kikikihoa* or *kikihoa*. Curiously, favoured construction material appears to have shifted from wood to bamboo during this same period. Possessing two or three finger-holes, the instrument was blown as a source of personal entertainment; among museum specimens there is no evidence of a preferred tonal inventory or scale.

Smaller than its namesake in neighbouring islands in the prehistoric era, the hand-held Niuean *nafa* slit-drum is used for accompanying dances of the *meke* and *tamē* genres, beating fast, unchanging rhythms. The larger *logo* slit-drum, evidently introduced from Samoa in the 19th century, is used exclusively for announcing church services.



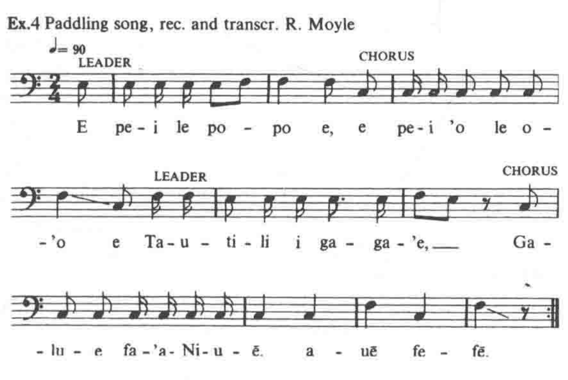
2. Samoa. The music of the Samoan Islands has long been the object of travellers' admiration and the subject of extended and detailed investigation. The nine inhabited islands of the Samoan archipelago (the four islands of the independent state of Samoa and the five islands that comprise the territory of American Samoa) form a homogeneous musical area whose style appears to be distinct from those of neighbouring island groups, although some of these, Tonga in particular, adopted Samoan songs and dances up to the 20th century.



(i) Vocal music. Samoan music is primarily vocal and is performed on a wide variety of public and private occasions; the songs themselves do not have titles but are identified according to their use. In a few cases (e.g. dancing and paddling), virtually any composition will suffice as an accompaniment to the actions; but in general, textual content restricts the occasions on which a song is performed. Samoan speech distinguishes formal and colloquial systems of pronunciation; in song, however, only the formal type is used. The texts themselves usually have rhyming lines occupying an equal number of bars; non-rhyming lines or lines of unequal length tend to be followed by a refrain. Nonsense syllables are virtually unknown. Older songs often refer to practices now obsolete, such as traditional marriage ceremonies, food homages and some games. Words of unknown meaning are also occasionally found.

A common song type is the *tagi*, which is the sung section of a type of legend called a *fagono*; several hundred *fagono* are extant, and narrating them is a popular form of night-time entertainment. A large number of *tagi* use one or more of three stereotyped melodic phrases; the form of these tends to be *ABC*, with *B* always and C occasionally in series (ex.2). Occasionally the *B* type of phrase occupies the entire *tagi* melody. *Fagono* may last from five minutes to more than an hour and may contain from one to 16 *tagi*.

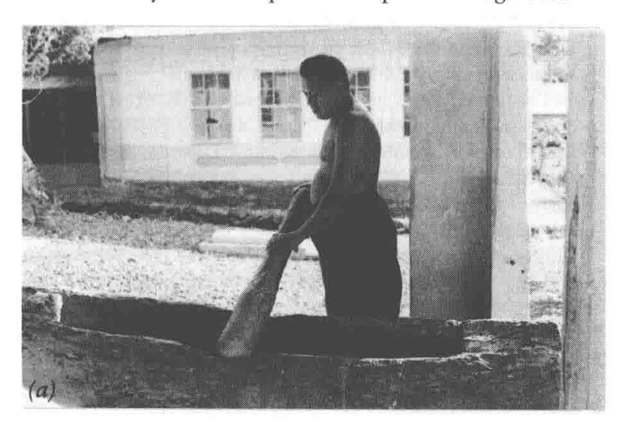
There are a few medicinal incantations performed by only one or two people in a village; nonetheless they are widely trusted to cure headaches, choking on a fishbone, hiccoughs, skin blemishes and carbuncles. An incantation



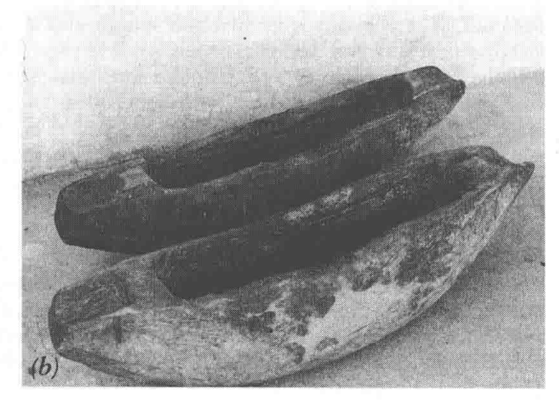
Ex.2 *Tagi*, rec. and transcr. R. Moyle

Ex.3 Children's song, rec. and transcr. R. Moyle

either addresses the malign spirit thought to be possessing the patient and threatens it with destruction, or invokes the native doctor's family spirit to effect a cure. Samoan children have numerous group games incorporating songs, which are usually short and are performed in time to actions described in the texts. Many of the melodies centre on two notes a perfect 4th apart (ex.3). Children also sing



Ex.4 Paddling song, rec. and transcr. R. Moyle



when gathering shellfish, massaging adults, teasing a cat, losing a tooth etc. Chief among songs no longer performed in their original contexts are those of war and paddling. Both types tend to be short, with alternation between leader and unison chorus, and are capable of indefinite repetition (ex.4). Where they are still sung, they often serve as dance-songs, two or more strung together forming a longer composite whole. Despite this change in purpose they continue to be identified according to their former contexts.

Around the beginning of the 20th century, Samoan dance styles changed: the large groups of singing performers carrying out movements in unison were replaced by non-singing dancers who performed independently. Very few songs are composed specifically for dance accompaniment; there are, however, a small number of mostly humorous texts used exclusively for dances that imitate animal and human behaviour. Modern group songs in traditional style are composed for specific village occasions (e.g. welcome, farewell, praise, sorrow) and are often freely performed thereafter at festive gatherings. Other song types performed less frequently include obscene, funeral and marriage songs, lullabies and intoned historical texts. There is no written record of music associated with pre-Christian religion.

Analysis reveals four sub-styles of Samoan song, each distinguished on the basis of musical texture – solo, unison, responsorial and part-singing. Solo songs are characterized by a predominance of stepwise movement, intervals smaller than a 4th, usually rising, and descending intervals larger than a 4th at phrase endings. Unison songs contain a considerable amount of melodic repetition, especially at the opening of a song, and their melodies centre on two notes a perfect 4th apart, with cadences often rising a 4th before falling approximately one octave in a terminal glissando. Responsorial songs also concentrate on notes a perfect 4th apart. There are similarities too between the level opening of the unison song and the melodic repetition of the leader's line in the responsorial song. The cadential outline of the chorus line in the responsorial song also resembles that of the unison song. Overlap between leader and chorus is rare. Relatively few non-acculturated homophonic or polyphonic songs have been recorded; these songs appear to be characterized by movement in parallel 4ths and 5ths and a cadence formula in which the highest voice remains level above two falling parts. Stylistic features common to Samoan music as a whole include a wide range of tempos, the frequent use of simple duple metre and a dactylic rhythmic figure, and the constant appearance of the perfect 4th, not only as a harmonic and melodic interval but also as the total melodic range and as an integral part of several cadence formulae.

(ii) Instruments. Idiophones, membranophones and aerophones are found in Samoa, although aerophones are now rare; there is no evidence of chordophones. The three principal wooden slit-drums, the *pātē*, *lali* and *logo*, serve to signal church events. The smallest, the *pātē*, was brought from Tahiti by English missionaries; the larger *lali* had its origin in Fiji, probably coming to Samoa as part of the normal equipment of the large Fijian double canoe. The largest of all, the *logo* (fig.10*a*), appears to have been created by missionaries in the 19th century for use as a church 'bell'; in design, it is modelled on the Samoan *lali*. No particular rhythmic patterns are evident for any instrument. The *pātē* and *logo* are struck with single beaters, but *lali* are played with two drumsticks,

10. Slit-drums of Upolu, Samoa: (a) logo, struck with a single beater; (b) a pair of lali

and they are always beaten in pairs (fig.10*b*), one man to each instrument. Beating a rolled floor mat is a common form of rhythmic accompaniment to group singing; mat-flicking and hand-clapping are also features of dance-songs. A jew's harp, fashioned from two pieces of coconut leaf, is used as a children's toy. Early writings indicate the former presence of stamping tubes, sounding boards, half coconut shells and at least one other type of slit-drum, but these instruments are now obsolete.

Flutes were once common, including end-blown and side-blown types, the syrinx and the nose flute. For reasons not yet clear none of these types is still used, although they are well remembered by older Samoans. Finger-holes varied in number from two to eight, but little is known of the scale patterns used. The conch-shell trumpet is commonly employed as a signalling device on both land and sea. Children sometimes make toy whistles and squeakers out of grass. Drums with single or double skin-heads are used principally as signals for applause at cricket matches; these types of drum may originally have been introduced from the Marquesas Islands in the 19th century, although modern examples tend to be European in design.

(iii) Music in society. Larger villages have a resident composer, normally male, who provides songs for specific occasions: arrivals or departures, deaths, political and social achievements. The more renowned among them are often engaged by villages other than their own. The composer also teaches his songs to the village choir and may even act as song leader for a first public performance. In return he is paid in fine mats, bark cloth and cash. In partsongs the lowest voice (*malū*) is taught first, a whole strophe at a time, before the upper parts (*usu* and *ato*) are added. Missionary influence has been responsible for two developments, apart from introducing new melodic outlines and stereotyped harmonic progressions: four-part harmony (earlier songs were in two or three parts) and mixed choirs (earlier group songs appear to have been exclusively male).

There is no organized system of song ownership, but local pride effectively discourages widespread use of a song that has specific references to a particular village, and because most group songs are composed for particular occasions, textual content tends to determine the appropriateness of further performances. Particular funeral and marriage songs may be performed only by certain villages or districts on pain of public shame or even physical violence, and medicinal incantations are sung only by the native doctor, whose supernatural power is essential to the cure. Where a song is known and sung over a wide geographical area and where its origin is not known, it is usually referred to simply as a 'Samoan song' and is the common property of the whole country; several paddling, war and game songs are of this type.

The attributes of a good singer include a strong, clear voice and the ability both to maintain a given pitch and tempo and to memorize a voice part and song text. A song leader is also expected to know all the voice parts and be prepared to correct any uncertainties in melody or text, to choose a comfortable pitch and tempo, and to introduce and regulate the hand-clapping that accompanies dance-songs. Most group songs are performed seated, sometimes with the leader standing in the middle of the group. In the older, standing group dances, the dancers themselves sang; however for the newer, individualistic performances, a seated choir accompanies the dancers. Most funeral, food-homage and marriage songs are performed while walking or carrying out prescribed body movements. Medicinal incantations are delivered from a variety of postures, as are children's game songs.

Samoan concepts of music have song as their focal point; all musical performances by voices or instruments are called 'songs' provided they have a melody; instruments producing unpitched rhythm, on the other hand, are said to be 'struck'. Samoans believe that all children are born with equal musical talent and seem to have no notion of the inheritance of such skills, although they appear to consider that musical ability is but one manifestation of a generally superior intelligence. The value of song is seen as twofold: it heightens emotions, especially humour and sorrow, through the compression and balance of contrasting ideas and rhyming lines; and, particularly in the form of group songs, it adds dignity and formal significance to any ceremonial occasion. For group songs there is no recognized optimal choir size: 'the more, the better' is generally the opinion. However, *kava* calls (the shouted parts of the *kava*-drinking ritual), intoned poetry and incantations may not be performed by more than one person. Voice grouping in single-sex partsongs strongly favours the bass, which may have two or even three times the number of tenors; even the largest choirs, though, have but one leader, who sings the highest vocal line. Mixed choirs tend to have equal numbers in all parts.

3. TOKELAU. The three coral atolls of Tokelau (Atafu, Nukunonu, Fakaofo) are situated on the northern edge of Western Polynesia, isolated by considerable distances from their nearest Pacific Island neighbours. The population of the atolls at the end of the 20th century, approximately 1500, is outnumbered by approximately 3560 people who live in four centres in New Zealand, where music and dance performance is also strongly continued.

The music of Tokelau was affected by the wave of modernization in this region of Polynesia, which altered the traditional arts of music and dance in the late 19th and early 20th centuries. The new dance and music forms experimented with at this time contained Western tonal vocal harmony, traditional drumming with some new instruments, and dance that illustrated song texts. Although this experimentation has been equated in the larger settlements in Polynesia with the presence of outsiders, in Tokelau there were no tourists and few visitors, and the experimentation must reflect a genuine desire of the islanders to create new music and dance forms that relate to the modern world.

The survival of many different kinds of traditional chant was encouraged by the Catholic mission on the island of Nukunonu, which unlike Protestant missions on the other Tokelau atolls did not prohibit traditional forms. The kinds of chant that have survived in greatest numbers, however, are those that have a contemporary function: *haumate* are chants performed at a funeral, at the laying out of the body for mourning; *tuala* are performed at weddings, at the procession around the village of a newly married couple. Within traditional *kakai* (tales), short chants called *tagi* are sung, with historical narratives concluded with a song.

Traditional chants of many different types are subsumed into two poetic categories: *vale* (unison, with a

characteristic refrain at the end of each line) and *hoa* (in which the lines overlap and two-part singing is common). Dance or body movement occurs with most music forms. *Hiva hahaka* (action song), *tafoe* (paddle dance), *tapaki* (a form now forgotten) and *hikaki*, a dance of welcome with fishing poles, are further examples of these.

Several types of contemporary music can trace connections to another part of the region: *mako*, a solo love song, uses Tuvaluan language; *mauluulu* originated in Samoa; *upaupa* came from Pukapuka in the Northern Cooks; *hake*, a stick dance, derives from Uvea and Futuna. While connections can be demonstrated, it should be noted that such introductions often involve only one feature, such as the text of a song, the movements of a dance or an instrument. In the case of *hake*, the stick dance may have existed all round the region before it was subsequently introduced in the 1870s as a memorial to the martyrdom of St Peter Channel.

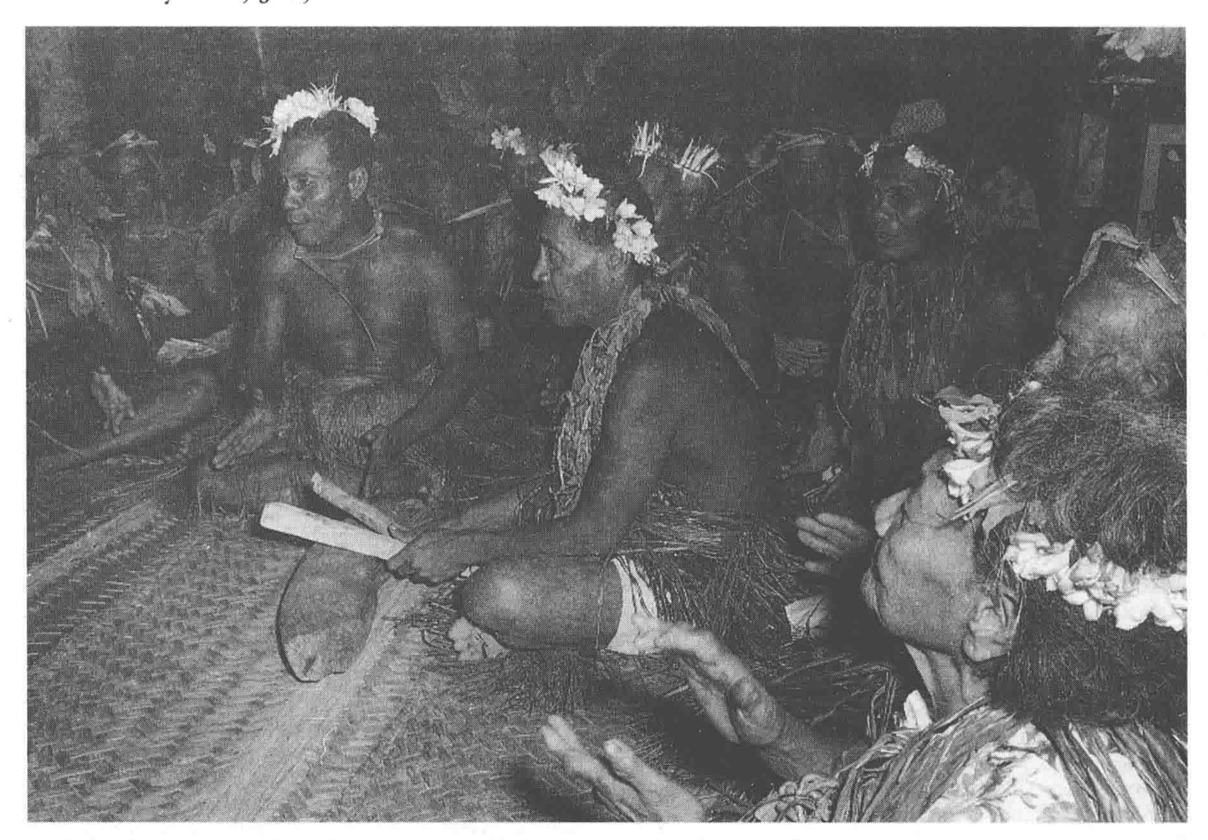
The *fatele* (action song), currently the most popular and distinctive Tokelau dance and music form, has connections to the Tuvaluan dance of the same name. However, its form in Tokelau is distinctive, and Tokelauan composers create new songs in their own idiom (Thomas, 1996). The competitive singing of *fatele* on all festive occasions, in the meeting house in each Tokelau atoll and in New Zealand displays many of the most admired qualities of Tokelau character and community. At festivals the songs of a performing group are answered in turn by another group, who are also the principal audience. The dialogue that results from this competitive singing emphasizes the importance of the words in such Polynesian song.

4. Tonga. The variety of Tonga's song and dance styles first came to European notice after visits by Captain Cook in the 18th century. One of the very few Polynesian groups not colonized by the 19th-century Western powers, Tonga continues to retain musical features and styles readily identifiable as indigenous alongside genres in which European musical influence is clear.

Several forms of dance are known to have been discontinued because of mainly Protestant missionary opposition. Surviving dances of the old tradition, associated within Tonga with the more liberal Catholic church but increasingly included in overseas performances merely as 'Tongan', include *ula* and *faha'iula*, and a single specimen of the formerly numerous *me'etu'upaki* club-dance. Dances of the new tradition include the locally developed *lakalaka* and *'otuhaka*, the *mā'ulu'ulu* and *tau'olunga* from Samoa, and the *kailao* brought from Uvea. Typically, dancers also sing, their voices boosted in the *lakalaka* and *me'etu'upaki* by a separate and equally large group of singers standing at the rear.

Although serious use of the *fangufangu* nose flute for personal entertainment has virtually ceased in the face of forms of imported recorded music, executant ability is taught in schools. Similarly, the blowing of multiple conch trumpets for entertainment at cricket matches has sharply declined in recent years. Small groups of *nafa* skin drums accompany the *mā'ulu'ulu* dance, a single mat-drum or slit-drum beats for the *'otuhaka*, and various combinations of European string instruments accompany *hiva kakala* songs and *tau'olunga* dances.

Lali slit-drums, introduced from Fiji in prehistoric times, function as signalling devices for both secular and religious events. Other idiophones, including stamping tubes, sounding boards, jew's harps and one other form of slit-drum, are now obsolete. The simultaneous beating of bark-cloth by two or three women is organized rhythmically into rapid, even beats that continue for long periods during the day.



Multipart singing, which impressed early visitors, is still integral to all choral compositions and uses three to eight parts. Stereotyped melodic progressions and cadence formulae are the standby of minor composers of *lakalaka* and *mā'ulu'ulu* dances, whereas accomplished men called *punake*, who create the poetry, music and dance movements, are more likely to be more individualistic. A feature of *hiva kakala* songs is male falsetto for the highest part. In all choral compositions, including those with clear European elements, the melody is positioned in the second-lowest part and exercises a degree of melodic and rhythmic flexibility, in contrast to the other, fixed parts, imparting stylistic continuity and national identity to even heavily acculturated styles.

Combining features of two European forms, a system of numerical notation was introduced in the late 19th century and is in widespread use for the teaching of hymns. Tongan-composed hymns, through-composed in multipart arrangements with occasional solo sections and sung unaccompanied, are characteristic of some minority denominations.

Large numbers of children's activity songs exist, as do spoken *fananga* fables that contain one or more *fakatangi* (short songs); at least three melodic stereotypes are in wide use.

Audience participation is integral to successful large-scale dancing; responding to shouts of encouragement and the spontaneous donation of cash and cloth onto their oiled bodies, dancers are inspired to raise their standards and achieve a state of *māfana* (ecstasy). Tongan audiences also participate mentally, deciphering a style of song poetry that avoids direct referencing in favour of historical and mythological allusion, metaphor and oblique mention, and for this reason verses are normally repeated; the more complex the poetic references, the greater the satisfaction in understanding them.

5. Tuvalu. Tuvalu (formerly, as the Ellice Islands, part of a British protectorate and subsequently colony, and since 1978 an independent country) is an archipelago of nine low coral islands, lying between 5° and 11°S and 176° and 180°E, some 1200 km north-west of Samoa. The inhabitants (*c*9000) speak a Polynesian language, except for those on the island of Nui, which was conquered by Gilbertese from Micronesia. The archipelago was first populated by Polynesians in the 16th century by migration from the west. Sporadic contacts with European sailors in the early 19th century and, after 1861, systematic Christianization, primarily through Samoan missionaries of the London Missionary Society, led to drastic changes in the religion, social organization and, consequently, music and dance of Tuvalu. The establishment of church choirs, mission and government schools, migratory work and the introduction of radios have contributed to an intensive process of cultural change. In the 1960s, music and dance in Tuvalu were dominated by European-American traits, but the 1980s brought a resurgence and revival of traditional local forms in the context of Tuvalu nationhood and the projection of a national identity, for instance at Pacific Arts Festivals (*see* Pacific Arts, Festival of).

11. Singing, hand-clapping and a small slit-drum accompany the onga dance, Niutao, Tuvalu, 1963

Before the arrival of missionaries, indigenous music and dance were closely connected with religious ceremonies and social organization. The only instruments were the *pu* (shell trumpet), used exclusively for signalling, and the *pātē* and *nafa* (slit-drums), which were used for signalling but also served to accompany dances (fig.11). Categories of song included *taanga* (genealogical songs), *onga* and *fakanau* (dance-songs), play songs etc. These songs were typically in one of three styles: a kind of speech-song (strophic, strictly metrical recitation without definite pitches); level recitative (strophic, metrical recitation on two or more tonal levels simultaneously); and triadic melody (strophic songs emphasizing the 3rd and the 5th, with a second line in parallel movement or as a bourdon). Both speech-song and level recitative are common phenomena throughout Polynesia; there are specific similarities between Tuvalu songs and those of the Tuamotu Islands. The triadic melodies may represent influences from eastern Melanesia.

Another type of song structure, the pentatonic responsorial, which prevails in dance-songs of the categories *mako fakaseaseo*, *mako fakatangitangi* and *fatele*, was introduced after the arrival of Samoan missionaries and flourished between 1890 and 1915. It is characterized by a melismatic, pentatonic solo line answered by an overlapping, syllabic chorus line a 5th to an octave lower. Outside Tuvalu, similar songs have been found only in Samoa; historical data make a Samoan derivation for this probable.

Since 1915, adaptations of tunes from Christian hymnbooks (e.g. those of Sankey) and functional-harmonic polyphony have gained prominence, shaping also the style of secular songs. In the 1950s, local composers began to create multi-part church and secular songs that combine local elements with those of Samoan and European derivation. Along with American-European popular songs and music from other Pacific nations, acoustic and electric guitars and electronic keyboards have entered musical practices. A heightened sense of competitiveness is reflected in faster tempos and stepwise rising pitch levels during performances. The reinterpretation of revived or reconstructed 'old' songs extends to their functions: ceremonial and work songs whose original contexts have become obsolete are now performed for entertainment and projection of group identity, while former gender restrictions are ignored. For almost all dances rhythmic accompaniment is now provided by men sitting round a wooden crate and beating it with their hands.

Unpublished field recordings of Tuvalu music are archived at the Musikethnologische Abteilung, Museum für Völkerkunde, Berlin, and at the Center for Ethnomusicology, Columbia University, New York.

Polyphon (i). A MUSICAL BOX playing music from interchangeable steel discs. It was invented in Leipzig in 1886 by G.A. Brachhausen and P. Riessner. The trade name was also used for other products of their firm, the Polyphon-Musikwerke: it was subsequently used by some to mean any make of disc-playing machine. *See also* MECHANICAL INSTRUMENT.

Polyphon [polyphone] **(ii).** *See* POLIPHANT.

Polyphony. A term used to designate various important categories in music: namely, music in more than one part, music in many parts, and the style in which all or several of the musical parts move to some extent independently. *Polyphōnos* ('many-voiced') and *polyphonia* occur in ancient Greek without any connotations of musical technique. After classical antiquity, forms of the adjective came into use in modern languages, designating both non-musical phenomena such as birdcalls, human speech and multiple echoes, and musical phenomena such as instrumental range and tonal variety, as well as the various tunes playable on an automatic musical device.

I. Western. II. Non-Western.

I. Western

1. Multiplicity of parts. 2. Several parts of equal importance. 3. Equal development of individual parts. 4. Subordinate importance of

harmony. 5. Simultaneous use of several structures. 6. Ideals of polyphony. 7. Relationship to counterpoint.

1. MULTIPLICITY OF PARTS. In connection with the technique of composition, the Latin terms *polyphon(ic)us* and *polyphonia*, and their modern derivatives, were first used to refer to 'music in multiple parts'. An author named 'Johannes' contrasted *cantus simplex* for one part with *polyphonia* for more than one (*Summa musice*, ?*c*1200, wrongly attributed to Johannes de Muris; *GerbertS*, iii, 239*a*). He described polyphony as *dyaphonia*, *triphonia* or *tetraphonia*, according to the numbers of parts, and distinguished between *basilica* (sustained-note organum) and *organica* (discant). *Polyphonia* is mentioned in an anonymous treatise, probably of the mid-14th century (*B-Br* 10162–6), not so much as an all-embracing term for *dyaphonia*, *triphonia* and *tetraphonia*, but rather as the alternative to *dyaphonia*. The treatise distinguishes between music for one voice and music for more than one voice, describing the former as *monophonia*, the latter as *dyaphonia seu poliphonia* (f.48). *Dyaphonia* and *poliphonia* differ both in the number of parts ('unio duarum' or 'plurium vocum') and in the setting. *Dyaphonia* (the Guidonian organum and the extempore discant of the late 13th century, based largely on parallel 5ths and octaves; *see* DIAPHONIA) is regarded as an essentially homorhythmic setting ('duarum vocum simul in eodem tempore vel quasi eodem prolatarum unio' [the bringing together of two voice parts performed simultaneously or more or less simultaneously]; 'finaliter tamen ad unum aliquid revertuntur et dyaphoniam causant' [but finally they return to a certain unity and form a *dyaphonia*]), despite the use of hocket and other devices. *Poliphonia*, on the other hand, can have great rhythmic diversity in its parts – although only parts 'cum discretione mensurabilis' [with mensuration], not liturgical parts 'sine discretione, puta organica' [without mensuration, that is to say in accordance with organum] (f.54). These two treatises may appear to represent historically isolated instances, but from at least the time of Luscinius's *Musurgia seu praxis musicae* (1536), in which instruction in the notation and composition of music for several voices is given under the heading 'De concentus polyphoni ratione', there has been a continous tradition for the concept, extending through Johann Heinrich Alsted (*Scientiarum omnium encyclopaedia*, 1649) and Kircher to the present day. Where 'polyphony' is used more specifically for composition involving several parts of equal importance (see §2, below) – that is, in most languages except English and French – the older terminology survives almost exclusively in its more general sense, as in *SchillingE*, Mendel and Reissmann (1877/*R*) and Kurth (*Grundlagen des linearen Kontrapunkts*, Berne, 1917, p.59, n.1). In English and French, however, the older, non-specific usage is the primary one (see, e.g., Nettl).

Since the early 17th century the terms 'polyphonic' and 'polyphony' have also been used in a narrower sense to denote musical composition for more than four parts (see Alsted, Eng. trans., 1664, pp.70, 89), Kircher (i, 322), Häuser (*Musikalisches Lexikon*, 1828, 2/1833, 'Vielstimmig, polyphonisch') and Bellermann (p.291).

2. SEVERAL PARTS OF EQUAL IMPORTANCE. Perhaps as early as Kircher (1650), and certainly since Marpurg (*Kritische Einleitung in die Geschichte und Lehrsätze der alten und neuen Musik*, 1759), *polyphonicus* and its modern-language equivalents have also been used in the sense of 'consisting of several parts of equal importance'. Kircher undoubtedly had polyphonic writing in this sense in mind when he challenged the belief that polyphony cannot move the emotions (i, 561). He also used the term 'homophonous' in its modern sense in speaking of 'voces ... [homophones] sive aequali processu ... progredientes', in which 'semibrevium syncopae' and 'fugae' are avoided (i, 314). However, he never contrasted polyphony and homophony. Not until Bellermann (1862), to whom 'in many parts' (*vielstimmig*) was 'the real and natural meaning' of 'polyphonus', were both the 'homophonic' and the 'polyphonic' style characterized by the rhythmic relationship of the parts to each other (p.292). In this Bellermann did not follow Kircher, considering that the 'more modern' usage dated from not long before 1800. However, the contrast is clear in Marpurg, who in turn followed the tradition of Printz.

Printz himself had used the terms *monodicus* and *polyodicus*, applying the former to music with only one main voice (the principal part) and the latter to counterpoint consisting of several parts of equal importance (*Phrynis*, iii, 1696, pp.97, 131). He seems to have been one of the first to draw a terminological distinction between monody and polyphony (in the sense used here), although he did not use those terms. His distinction was adopted, sometimes word for word, by Nichelmann (*Die Melodie*, 1755), although the latter saw 'polyody' as determined by harmony (quoted in Marpurg, *Historisch-kritische Beyträge zur Aufnahme der Musik*, ii, 1754–8, p.264); a century later polyphony was defined by the secondary importance in it of harmony (see §4 below). More specifically, Nichelmann, like Marpurg, had in mind the contrast between melodies devised together with their harmonies, and those devised regardless of harmonic considerations. Marpurg, however – and this must have been a deciding factor in future linguistic usage – preferred the terms 'polyphonic' and 'homophonic' (*polyphonisch* and *homophonisch*) to 'polyodic' and 'monodic' (*polyodisch* and *monodisch*), which he associated with the chorody and monody of classical antiquity (*Kritische Einleitung*, 1759, p.234).

The next occurrences of 'polyphony' are in Koch (1782–93, iii, index, 1802, 'Polyphonische Schreibart', 'Styl Schreibart' and 'Hauptstimme'); in the last-named entry Koch referred to the linguistic usage of certain unnamed music theorists (possibly Marpurg), implying that this was not yet generally accepted, as it obviously was after Koch. Since Koch, however, reference works have differed in the precise definitions that they offer and in the ideals of polyphony that they propound.

3. EQUAL DEVELOPMENT OF INDIVIDUAL PARTS. Since Koch's *Musikalisches Lexikon* (1802/*R*), full development of the separate parts – the investing of several parts with the character of a main voice and the raising of accompanying voices to the status of counter-voices – has been regarded as a defining feature of polyphony. Even authors who otherwise distinguish between polyphony and homophony primarily on the grounds of the compositional function of harmony (see §4) consider this a valid criterion in defining 'the most genuine polyphonic composition' or 'true polyphony' (e.g. Adler, p.53). The definition of polyphony by the melodic structural value of the parts allowed writers concerned with the differentiation of styles to distinguish among different kinds of

polyphony. Mersmann, for instance, defined polyphony as either 'constructive', 'contingent on sound' or 'linear' (also 'absolute'), depending on the relative importance of rhythmic, harmonic or melodic forces; he admitted 'linear polyphony' only before and after the epoch of major and minor tonality (*Die Tonsprache der neuen Musik*, 1928, p.36). Harburger distinguished polyphony from homophony by citing the 'refined polyphony of Mozart's and Haydn's melodics' at one extreme, and from heterophony by citing the polyphony of late Beethoven and the later developments of 'linear counterpoint' at the other (*Form und Ausdrucksmittel in der Musik*, 1926, p.130).

In addition to Koch's definition of this technical feature of polyphony (i.e. that 'several parts can claim the character of a main part'), his observation that 'the feelings of several people are expressed' also deserves emphasis. This is not simply a description of the way music is experienced in general. Even genres such as the fugue were felt by Forkel, Sulzer and Koch to carry a heightened expression of feeling (it was only in the course of the 19th century that they came to be pronounced in general 'objective', that is, emotionally neutral). Koch's remark applies more specifically to the kinds of music he cited as examples of polyphony: operatic ensembles, duets, trios and quartets. Gathy (*Musikalisches Conversationslexikon*, 1835, 2/1840) mentioned among other examples the finale of Act 1 of Spontini's *Olimpie* and the finale of Act 4 of Salieri's *Axur* ('polyphonic composition'). Küster, who several times claimed that polyphony could express 'dramatic liveliness' (*Populäre Vorträge*, iv: *Das Ideal des Tonkünstler*, 1877, p.88), cited the chorus 'Fuggiamo, corriamo' from Mozart's *Idomeneo* (*Populäre Vorträge*, ii: *Die höheren Tonformen*, 1872, p.189). However, the understanding of polyphony as the simultaneous expression of different feelings was diminishing; Koch's definition was significantly weakened by the words 'as it were' in Schilling, who described polyphony as the type of writing 'in which ... as it were, the feelings of several persons are expressed simultaneously' and later abandoned the definition altogether. Typical of the tendency to find polyphony 'objective' is A.B. Marx's article on J.S. Bach in the second edition of Schilling's encyclopedia, which emphasized the distant, grave objective and universal nature of polyphonic music, opposing it to the greater subjectivity of homophony. Marx regarded Bach's polyphony as his ideal (see §6, below), and he viewed polyphony as part of the 'strict' style. Koch (1802, 'Styl, Schreibart') described it as including both monothematic and imitative elements (and thus being particularly suitable for sacred music); he also characterized it by the 'grave progress' of the melody and the strict handling of dissonance. However, if polyphony cannot be consigned to the 'strict' style (*MCL*, 'Styl'), that is due not least to the contribution of the Viennese Classicists and 19th-century composers to the individual development of polyphonic parts and their use of contrapuntal techniques. (The distinction between 'strict' counterpoint and 'free' polyphony in the writings of Riemann and Knorr also took account of this; see §7, below.) Mendel and Reissmann went so far as to prefer a distinction drawn on the grounds of musical forces – e.g. between vocal, keyboard and orchestra polyphony – to one between a strict and a free style, even within polyphony.

In using the term 'polyphony' to classify musical compositions, writers have been aware that polyphony and homophony represent two extremes, separated by intermediate stages. Bellermann (p.292), for instance, objected to the terms 'polyphonic' and 'homophonic' because 'in every song for more than one voice the parts are to be developed melodically, and therefore independently, and because of the different rhythmic movement of individual parts there will be an enormous number of pieces in which the separate parts appear too independent for the style to be reckoned homophonic, or even, polyphonic'. Consequently, some writers, such as Koch, favoured a tripartite division of compositional styles: of Koch's three 'processes' of composition the first two represent 'homophonic' procedures and the third 'polyphonic' procedure (1782–93, ii, 82–3; cf Marx, *Anleitung zum Vortrag Beethovenscher Klavierwerke*, 1863, 5/1912, pp.97–8).

4. Subordinate importance of harmony. Since the middle of the 19th century, with the gradual rediscovery of medieval and Renaissance music for several voices, polyphonic music has been defined as such by the subordinate importance in it of harmony. The term 'polyphonic' has also been used by some musicologists to designate a historical period (though less convincingly so as polyphony has increasingly come to supplant harmony in contemporary music). One of the earliest of these references occurs in Helmholtz, who distinguished between 'three main phases of development' in music (*Die Lehre von den Tonempfindungen*, 1863, 6/1913, p.396; cf. *AmbrosGM*, iii, 121):

> (1) the homophonic (one-part) music of antiquity, with which is linked the music now being produced by the peoples of Oriental and Asiatic lands; (2) the polyphonic music of the Middle Ages – in many parts, but still without reference to the independent musical significance of the simultaneous sounds – extending from the 10th to the 17th century when it passes over into (3) harmonic or modern music, characterized by the independent significance accorded to harmony as such. Its origins lie in the 16th century.

Many authors take the function of harmony as a criterion so seriously that they describe even Bach's organ polyphony as secondary and illusory (Spitta, *Johann Sebastian Bach*, i, 1873–80, 3/1921, p.101), or consider its harmonies the product of the part-writing (Adler, p.266), although Riemann thought that the true nature of polyphony was revealed only within the harmonic framework of major/minor tonality (*Grosse Kompositionslehre*, i, 1902, pp.175–6). Later authors, on the other hand, regarded Bach's polyphony as a transition between (or a unification of) polyphony and functional harmony (A. Berg, 1930), quoted in W. Reich, *Gespräche mit Komponisten*, 1964, pp.234–5, and L. Balet and E. Gerhard [Rebling], *Die Verbürgerlichung der deutschen Kunst: Literatur und Musik im 18. Jahrhundert*, 1936, p.342). Others saw the practice of continuo serving as a historical link between polyphony and homophony (E. Pepping, *Der polyphone Satz*, i, 1943, p.10).

Schoenberg (*Harmonielehre*, 1911, 3/1922, p.466) even credited the polyphonic style of writing with the ability to legitimize new harmonies. Conversely, new and more particularly dissonant harmonies were described by others as 'polyphonic' (e.g. E. Stein, 'Schönbergs Klang', *Arnold Schönberg zum 60. Geburtstag*, 1934, p.27; T.W. Adorno, *Philosophie der neuen Musik*, 1949, 4/1972, pp.55–6). As harmony assumed this new position within polyphony, however, a precise balance between the parts was demanded, what Boulez called a 'mutual responsibility of

the notes' ('Contrepoint', *FasquelleE*). Schoenberg himself did not approve of establishing the principles of part-writing or harmony as absolutes, however, and ascribed to harmony in polyphonic composition the function of 'controlling taste' (*Das Komponieren mit selbständigen Stimmen*, 1911; ed. R. Stephan, 248).

The systematic musicology of the early 20th century radicalized the principles of harmony and polyphony, seeing pure 'harmony' as created by the parallel movement of parts at a constant interval, and pure 'polyphony' as created by the melodic differences between the parts (as in the drone, ostinato and heterophony); medieval discant and the kinds of polyphony that succeeded it were regarded as 'harmonic-polyphonic forms' (C.H. Hornbostel, 'Über Mehrstimmigkeit in der aussereuropäischen Musik', *IMusSCRIII: Vienna 1909*, p.208). Similarly, though staying closer to Helmholtz, Stumpf (*Die Anfänge der Musik*, 1911, pp.99–100) distinguished strictly between 'polyphony' as 'the simultaneous performance of several different melodies, coming together only now and then in consonant intervals or in unison' and 'harmonic music' as 'finding aesthetic pleasure or the opposite in the simultaneous sounding of several different notes and the succession of such tonal complexes'.

5. Simultaneous use of several structures. For Webern, the individual voice parts are less important as an element of polyphony than the sequence of notes contained in them. Although that sequence serves as an 'original form' or 'basic set' (*Grundgestalt* cf. Adorno) in the composition process, is subjected to familiar procedures and is arbitrarily endowed with a rhythm, Webern still described the style as 'polyphony' (p.37), even though the notes sometimes sound together in chords. Webern's own serial forms, however, are clearly reminiscent of part-writing, even of canon, which has given rise to the expression 'serial polyphony', a usage criticized by Eggebrecht because 'polyphony' no longer refers to genuine parts: 'Polyphonie', *RiemannL12*). According to Boulez (*Penser la musique aujourd'hui*, 1964, p.153), on the other hand, the compositional parts are not done away with, but are freshly defined as 'constellations of events obeying a certain number of common criteria; distribution of families of evolving structures in a mobile and discontinuous time dimension, with variable density and using non-homogeneous timbre; these constellations are mutually dependent in a very special way as far as pitches and durations are concerned'. Correspondingly, when referring to his own technique of composition Boulez also spoke of polyphony in addition to monody (music in one part), homophony ('density-transformation of monody': 'the structure unfolds its objects horizontally, the vertical density of the object being variable', p.135) and heterophony ('the superposition upon a primary structure of a modified aspect of the same structure'). He defined polyphony as a combination of structures of which one is answerable to the other. The 'forms of syntactical organization' that he mentioned may also be combined to make a 'polyphony of polyphonies', a 'heterophony of heterophonies', a 'heterophony of polyphonies' and so on (p.133). Likewise, transitions may be effected between them; in other words, 'a monody may in fact represent a "reduced" poyphony, just as a polyphony will in actual fact be the distribution of "dispersion" of a monody' (pp.138–9).

Non-serial and post-serial music, on the other hand, adheres to an essentially traditional concept of polyphony, although one that embraces new stylistic possibilities. Among them is Ligeti's 'micro-polyphony', the 'technique of the close, dense amalgamation of instrumental and vocal parts' that he used particularly in the late 1950s. That it was still conceived within the framework of traditional polyphony is evident from its gradual transformation into a 'more transparent, more clear-cut, thin and more brittle polyphony', closer to the ideal of compositional part-writing (introduction to Ligeti's *San Francisco Polyphony*, 1973–4, in *Musik und Bildung*, vii (1975), 500).

6. Ideals of polyphony. The different emphases of meaning conveyed by the term 'polyphony' reflect different concepts of the polyphonic ideal. Marx, who valued Bach's polyphony above all, measured even the polyphonic writing of the late Beethoven by that standard. Harmony, he considered, while only a contingent factor in Bach, was the very foundation and point of departure in Beethoven (and the reason why his polyphony remained rooted in homophony); the parts which came together in Bach were striving for freedom in Beethoven and the double counterpoint which was a guiding principle and purpose in Bach was only a means to Beethoven, and was thus less perfect ('Beethoven', *SchillingE*, i, 518). In line with this ideal of polyphony, Brahms denied the polyphonic character of the 'sound-surfaces' in Richard Strauss's F minor Symphony: 'One may weave together several triadic themes but that is still not polyphony' (quoted in 'Polyphonie', H.J. Moser, *Musik-Lexikon*, suppl. 1963). Mahler, on the other hand, strove for the greatest possible differentiation of parts, referring to the random sounds of a forest festival – noises from swings and merry-go-rounds, shooting-galleries and puppet theatres, a military band and a male-voice choir – as the archetype of his polyphony. (That Mahler emphasized the need to observe strict compositional organization in these sound-pictures sets him apart from Ives, who preferred the disorganized chance factor in such phenomena.) Mahler distinguished polyphony from 'something merely written in many parts' or 'disguised homophony':

> 'Do you hear that? That is polyphony and that is where I have got it from ... Exactly like that, coming from quite different sides, this is how the themes must be completely distinct in their rhythmic and melodic character (anything else is merely something written in many parts, disguised homophony); it requires that the artist should organize it and unify it into a congruous and harmonious whole'. (N. Bauer-Lechner, *Erinnerungen an Gustav Mahler*, 1923, p.147)

Busoni, for whom only melody was capable of a real function and harmony existed only as the aural result of polyphony, wanted polyphony to obey any impulse, to be nonthematic (and emancipated from fugue) and indeed atonal (*Von der Einheit der Musik*, 1922, pp.207, 211, 278) – an ideal that he approached most closely in his *Berceuse élégiaque* op.42 (1909) and in the second Sonatina for piano (1912), and to which Schoenberg's free atonality largely corresponded. To Webern, finally, polyphony was the manner of writing in which melodic relationships between the parts could be made to form a musical synthesis (p.28).

7. Relationship to counterpoint. The relationship between the terms 'polyphony' and 'counterpoint' depends less on definitions than on traditional musical classifications. Indeed, the two terms have been clearly

differentiated only occasionally, as by the anonymous author of *Harmonie oder Kontrapunkt* (*MMg*, iv, 1872), who took counterpoint to mean the older method of composing in several parts and polyphony the newer method (although in discussing each method he spoke of both homophonic and polyphonic composition). More commonly, 'polyphony' has been used as a synonym for 'counterpoint': 'Polyphonism ... composition in parts; contrapuntal composition. ... – Polyphonist ... a master of the art of polyphony; a contrapuntist' (*Dr. Webster's Complete Dictionary of the English Language*, ed. C.A. Goodrich and N. Porter, 1864). However, 'counterpoint' is often used specifically for the actual process of forming additional parts (or the theory of doing so), while 'polyphony' refers to a composition constructed in parts e.g. Schucht, 'Wie und warum studiren wir Contrapunct?', *NZM*, xlvi (1880), 382*b*). Consequently, stylistic changes are ascribed to polyphony rather than to counterpoint. According to Riemann, for instance, polyphonic composition is taught as free composition, in contrast to strict counterpoint (Stephan, 241). Knorr, too, in his *Lehrbuch der Fugenkomposition* (1910), called for 'mastery of free modern polyphony' (p.vi); he used the fugue from Brahms's *Variations and Fugue on a Theme by Handel* as a model (p.137). Kamiński distinguished in a positively polemical way between polyphony and counterpoint (as the traditional theory of the process of forming additional parts ('Über polyphone Musik', *Musica*, i (1947), 82). However, Anselm Hughes and Eric Blom ('Polyphony', *Grove3–5*) and Viret ('Polyphonie', *HoneggerD*) used 'counterpoint' only to describe the teaching of composition, while 'polyphony' denoted a style of writing. In the *Harvard Dictionary of Music* (1944), Apel recommended the use of 'polyphony' for medieval music, in opposition to monophony, and 'counterpoint' for personal styles, employed in teaching, apparently assuming that 'polyphony' has a wider sense than 'counterpoint' (i.e. involving a multiplicity of parts, see §1, above) and that medieval multiplicity of parts is not yet counterpoint as written by Palestrina and Bach. However, in view of the re-emergence of polyphony in the 20th century, both in a historicizing context and as determined by chromaticism, new harmonies continue to be created and indeed justified, by part-writing (see §4, above). Here polyphony becomes objectively opposed to counterpoint, which of its very nature is bound by the rules of harmony (Eggebrecht, *RiemannL12*).

If, despite differences in usage, the terms 'counterpoint' and 'polyphony' are practically synonymous, they nonetheless signify two different styles of writing in Adorno's view: 'counterpoint' denotes a composition in which parts are graduated according to rank, 'polyphony' is a melodic arrangement of parts of equal importance ('Die Funktion des Kontrapunkts in der neuen Musik', *Nervenpunkte der neuen Musik*, 1969, pp.69, 73).

II. Non-Western

1. General. 2. The Mediterranean: (i) General (ii) Structure (iii) Vocal styles and the singers' interaction (iv) Contemporary trends. 3. Russia and west-central Asia. 4. Africa.

1. GENERAL. Multi-part music is encountered in many regions of the world. However, ethnomusicologists have frequently felt uneasy about using the term 'polyphony' for all its various manifestations, adopting instead such terms as 'polivocal', 'polyphonic parallelism', 'plurivocal', 'multi-phonic', 'multi-sonance' and 'diaphony'. This is partly due to a pervasive feeling among early scholars who looked at non-Western music within an evolutionary framework (in which learned European contrapuntal and harmonic traditions stood at the apex and 'polyphonic' had acquired a rather specialized meaning) that orally transmitted folk and 'primitive' traditions could not possibly share the same terminology. Some ethnomusicologists have nevertheless used 'polyphony' to cover all kinds of multi-part singing. William P. Malm proposed that it serve as an umbrella term embracing homophony, heterophony and 'disphony'. He coined the last term to denote music 'in which the different parts have different pitches and are relatively independent rhythmically', in other words, music that is neither heterophonic nor monophonic and which in the past may often have been called polyphonic (Malm, 1972, p.249). His use of 'disphony', however, has not been taken up by other ethnomusicologists.

Although German ethnomusicologists – for instance, Erich von Hornbostel and his successor at the Berlin Phonogramm-Archiv, Marius Schneider – found multi-part styles of considerable interest, they used the label *Mehrstimmigkeit* in preference to *Polyphonie*. Schneider's *Geschichte der Mehrstimmigkeit* (1934–5), though dependent on the limited research of the day, was the first attempt at a comprehensive survey of multi-part practices. Simha Arom, who attempted to classify 'African polyphonies' (see §4 below), is rigorous in his definition of polyphony and maintains that 'all multi-part music is not necessarily polyphonic'. Among non-polyphonic multi-part procedures he lists heterophony, overlapping, drone-based music, parallelism and homophony. For him, true polyphony is a procedure which must be 'multi-part, simultaneous, hetero-rhythmic and non-parallel' (1991, pp.34, 38). Other ethnomusicologists continue to use the term polyphony at the most general level and concern themselves more with indigenous labels and concepts when discussing a particular multi-part musical style in detail.

Continuing scholarly interest in multi-part music has been evident in periodic conferences focussing on the theme (e.g. International Folk Music Council meetings in 1963 and 1967, and the Colloque de Royaumont in 1990). The high status accorded by scholars to such musical practices has undoubtedly been one factor in the revival of a number of older multi-part styles (see Goffre, 1990). Furthermore, in European folk revivals, especially since 1960, monophonic singing styles have increasingly been abandoned in favour of multi-part singing based on European triadic harmony and drone techniques; examples are the multi-part harmonized renderings by folk groups of monophonic English and Scottish ballads and lyric songs. There is a long history to this process, however: for example, in the rural and popular music of Latin America the widespread practice of singing and playing in parallel 3rds can be viewed as a Hispanic introduction sometimes blending with pre-Hispanic multi-part pentatonic traditions. Similarly, throughout the Pacific Islands traditional habits of choral singing (which frequently incorporates drone polyphony, heterophony and overlapping responses) are now found to be inextricably blended with choral styles derived from hymns introduced by European missionaries and later influenced

by European and American popular music styles (*see* MELANESIA, MICRONESIA and POLYNESIA).

Scholars are increasingly interested in socio-cultural aspects of multi-part singing. Uri Sharvit, for instance, in his discussion of new 'plurivocal' processes in present-day Jewish musical culture, suggests that a lack of individual musical initiative 'reflects an uncohesive community' and that the 'process which creates the sound of parallel 5ths and seconds, is not only an aesthetic value . . . but is also a socio-cultural tool with which a community educates its members to contribute to the society and thus strengthen its own cohesiveness' (1995, p.13). Africanists have made similar observations.

The sections that follow focus on a small number of regions which together exemplify many of the different musical and social processes giving rise to multi-part vocal music. (Multi-part layering of instrumental music is so widespread that it is not discussed in this article.) Further references to multi-part vocal styles may be found in the articles on individual countries.

2. THE MEDITERRANEAN.

(i) General. Polyphonic singing styles have been preserved in the oral traditions of many parts of the wider Mediterranean area, including Albania, northern Epirus (Greece), Bulgaria, Macedonia, Serbia, Croatia, Bosnia-Hercegovina, Italy, Sicily, Sardinia, Corsica and Portugal. They are typically, though not exclusively, found among agro-pastoral communities organized on a strong collective basis, in mountainous regions where indigenous populations have habitually found refuge in the face of invasion and whose inaccessibility has allowed for the preservation of numerous archaisms. In general, the aesthetic values governing folk polyphonic systems are very different from those associated with the Western art tradition. Within localized stylistic areas, musical forms often remain relatively stable and serve for a wide variety of genres such as laments, love songs, wedding songs, harvest songs, dance songs, satires and historical songs. Stanzas may also be improvised. In many places, polyphonic singing has also been preserved in the churches. A range of styles is involved, and questions concerning the exact provenance of these repertories, which tend to be more complex structurally than related profane material, while often sharing similar stylistic characteristics, remain unanswered.

In some cultures, polyphonic singing is almost exclusively the prerogative of either men (e.g. Sardinia and Corsica) or women (e.g. Bulgaria). In others (e.g. southern Albania and areas of former Yugoslavia), both men and women sing polyphony, but clear gender distinctions are drawn and mixed groups remain the exception (Sugarman, 1989; Petrović, 1995). Polyphonic singing in the church tradition is usually male-dominated. Threatened by recent liturgical reform, oral repertories have often been best preserved in connection with Holy Week rituals.

(ii) Structure. A wide diversity exists both between and within different cultural areas. Partsinging in the Balkans is predominantly diaphonic. Corsican *paghjella* singing involves three voices (*see* CORSICA, ex.2) and Sardinian *tenore* four (*see* SARDINIA). Songs in two, three or four parts are found in southern Albania, the lower parts often being sung in chorus by several singers (*see* ALBANIA). More rarely, the melody passes from one voice to another in the course of the song. The underlying conception can be either horizontal or vertical or both. Some forms include drone parts (simple or double, straight or alternating, continuous or rhythmic), ostinatos or parallel movement between voices; some have a chordal basis; others are more complex, combining a variety of structural principles. Responsorial forms are also found (e.g. in parts of the Balkans and Italy). Where there is a strong connection with dance, the songs have a clearly discernible rhythm. Others are non-mensural and the voices rhythmically non-aligned; often described as 'long' or 'drawn out', some feature sustained notes that produce 'ringing' harmonic effects, alternating with dense melismatic activity. Some forms suggest older modal systems, the voices interacting without any concern for concordance in the Western European scholastic sense; in many parts of Bulgaria and former Yugoslavia, the preferred interval is the major or minor 2nd. More recently developed styles reflect the influence of 'Western' harmonic functions with the 3rd and 5th as the most common intervals. While most song types retain the same tonal centre throughout, others include characteristic modulations (*see* SARDINIA).

Despite the heterogeneity in terms of musical structure, many features relating to the organization of the voices are common to different areas of the Mediterranean. The lead part is often sung by a solo voice which begins alone and is sometimes the only voice to sing the whole text, while the accompanying voices use the vowel sounds of the text or patterns of unrelated vocables. The text itself can also be deformed to the point of incomprehensibility to the outside listener, both by the manner of its intonation and by the way in which it is adapted to the musical phrase with word breaks or the omission, repetition or addition of syllables characteristic of some styles (Sugarman, 1989; Petrović, 1991; Ricci, 1993; Salini, 1996). Other recurring features include staggered entries, slight anticipations and suspensions, non-tempered intervals and subtle modal inflections, rhythmic elasticity and an element of improvisation.

(iii) Vocal styles and the singers' interaction. Each individual voice has its own strictly defined role; local terminology often provides a graphic description of how each part is conceived (*see* ALBANIA and BULGARIA). Many styles feature a tense or vibrant voice-production associated with singing outdoors, while each vocal line has its own distinctive timbre; the resulting 'polyphony of timbres' (Lortat-Jacob, 1993) is often popularly compared with environmental sounds. Timbre can be specifically selected in order to produce a characteristic clash of overtones and fundamentals (as in the Balkans) or the phenomenon of an additional 'virtual' voice, as described by Lortat-Jacob (1993), in Sardinia. Often associated with timbral quality is pitch mobility: Rice noted that in the case of Bulgarian singing 'pitch is manipulated subtly along a continuum to achieve a particular harmonic effect' (1980). Many styles also feature a pronounced vibrato or 'trembling' and the incorporation of shouts, yips, yodels, slides, glottal stops or a sobbing effect which contributes to both rhythm and resonance. Staggered breathing can be employed to maintain continuity of sound.

Typically, the songs are performed for the benefit of the singers themselves as much as for an audience. A sense of complicity is vital and it is common for the same group of singers to perform together for many years. For men in particular, polyphonic singing combined with alcohol

consumption induces a transcendent state of heightened spiritual harmony (Sugarman, 1989; Petrović, 1995). Intense concentration and close physical contact between the performers are crucial for their successful interaction, in particular with respect to both timing and the ultimate fusion of the individual voices; hence the horseshoe formation commonly adopted. The hand is often used to cup the ear or is held with the fingers touching the ear and the palm turned towards the mouth (Rihtman, 1952; Lortat-Jacob, 1993; Ricci, 1993).

(iv) Contemporary trends. In many areas, polyphonic practices have inevitably declined as a result of increasing modernization, urbanization and changing fashions. Where such singing was the prerogative of small select groups of men (e.g. in Corsica), continuity was severely compromised by losses suffered in the two world wars. Elsewhere (e.g. in Portugal), marked regional differentiation in terms of economic development and mechanization of agriculture also had an effect on polyphonic singing practices.

While early studies in 'folk' polyphony were concerned predominantly with the analysis of musical structure and the description of style, more recent research has drawn attention to contexts and social function (Sugarman, 1988), psycho-physical factors and the singers' interaction (Lortat-Jacob, 1990, 1993), emic conceptualization and symbolism (Rice, 1980), and responses to social and political change and the manner in which polyphonic genres have sometimes assumed an emblematic role in issues of national identity (Petrović, 1995; Bithell, 1996, 1997). Römer (1983) and Macchiarella (1994) have investigated formal and stylistic relations between oral and written traditions in sacred music with reference to Corsica, Sardinia and Sicily.

The increased valorization of polyphony in the late 20th century, as reflected in the number of international conferences and festivals devoted to polyphonic singing, has been charted by Goffre (1990). In Corsica and elsewhere this has led to reconstructions of semi-forgotten polyphonic repertories and, following the trend-setting phenomenon of the *Mystère des voix bulgares* recordings, the generation of new compositions based on traditional styles, accompanied by a shift from the domain of popular expression to that of artistic product. Folk polyphonic practices have also attracted renewed attention for the light they might throw on questions of performance practice in former times.

3. Russia and west-central Asia. With the exception of parts of Siberia and central Asia, partsinging is ubiquitous in Russia, Belarus' (especially in the Poles'ye region) and Ukraine, including the multi-ethnic Volga River basin (especially Mordoviya and Komi, as well as the republics of Udmurtiya and Mari, and among the so-called Tatar-Kryashen), in all three Baltic countries (Latvia, Lithuania and Estonia), and in the northern, central and western sections of the Caucasus (Georgia, Osetiya, Abkhaziya, Adygey and western Dagestan), as well as in the Carpathian Mountains and throughout the Balkans.

There are two types of singing ensemble in the region. One involves groups that are 'closed' in terms of membership; the same people sing together for years. The second, associated with collective activities such as line-dances, harvesting and indoor working parties, is 'open' to all who know the tradition, though in practice groups consist of not more than 16–18 people. Instrumental polyphony is more widely distributed throughout Eurasia; the following discussion, however, focusses on vocal polyphony of the oral tradition.

The first examples of sung polyphony in this region were recorded at the end of the 19th century, although isolated cases were known much earlier (e.g. in the 18th-century anthology of Russian folksongs by L'vov and Pratsch), and a few examples were published by Mily Balakirev in 1866. In 1878 the first collection of Georgian partsinging (edited by Mily Machavariani) appeared, and the following year Yuly Melgunov transcribed and published a collection of Russian popular songs in which he pointed out that Russian folksinging was essentially polyphonic. In 1891 Angel Bukureshtliyev documented the existence of Bulgarian polyphony. Other polyphonic cultures of Europe did not reach the scholarly world until the 1920s, 30s or even later; for instance, the first examples of Albanian sung polyphony were published in the 1950s and 60s (see §2, above).

Melgunov (1846–93) described the fundamental characteristics of Russian folk polyphony, such as the dependence of all voices on one tune, the use of unison to mark the end of sections, the equal aesthetic value of all the voices, and certain principles of part-writing distinct from those of classical European harmony (see Melgunov, 1979). He introduced the terms 'zapev' for the solo introduction sung by the 'zapevala' (intoner) and 'podgolosok' (literally, 'undervoicelet') for subsidiary voices. Despite the essential work on partsinging in Russian villages by Nikolay Palchikov (1888) and Nikolay Lopatin and Vasily Prokunin (1889), many scholars continued to doubt its existence. Definitive proof was provided by Yevgeniya Lineva (1853–1919), who in 1904 published her seminal work, *The Peasant Songs of Great Russia*, transcribed from phonograms (see Taruskin, 1996, pp.723–32).

In 1937 Yevgeny Gippius and Zinaida Ėval'd pointed out that the functional differentiation of voices in north Russian choirs was reflected in folk terminology. In 1979 Anna Rudneva, Svetlana Pushkina, B. Shchurov and other Russian musicologists used multi-channel recording to capture exactly what each voice was singing. As a result, the concept of Russian polyphony as based on one main voice accompanied by subsidiary voices was revised; most Russian ethnomusicologists no longer speak of *podgoloski*, preferring instead to refer to the wide range of polyphonic textures that reflect variations in musical thinking and local traditions. In Estonia the most significant multi-channel recordings of Setu partsinging (the Orthodox ethnic group in southeastern Estonia, on the Russian border) were made by Yaan Sarv in 1980. The similarity between Setu and Mordoviyan partsinging may reflect the extended contact between the two peoples in the remote past. Villis Bendorfs has hypothesized a kinship between Baltic, Balkan and Caucasian multi-part singing based on the drone principle (Zhordaniya, 1988).

Five main types of Russian vocal polyphony have been identified. The first is monodic, that is, the singing is almost in unison (sometimes described as 'wide unison'; Ėval'd called this 'unison-heterophonic'). The second is truly heterophonic and is widespread from the Smolensk region in the west to the White Sea in the north: its many local and structural variations include parallel octaves (in the Ural Mountains) and other forms of multi-registered

singing. These types can be distinguished by the intentions of the performers: in the first, the intention is monophonic but produces a heterophonic result; in the second, the intention is polyphonic and creates a heterophonic structure.

The third type of Russian polyphony consists of a melody and a drone sung to a text. It is especially typical of the Bryansk region in the west and the Voronezh region in the south. At cadences, the drone merges into a unison or octave with the melody. The drone may be above or below the melody, or it may frame it both above and below (a frame of droning 5ths is characteristic of the Bel′gorod region). Along the River Oka and in some areas around Bryansk is found the so-called fake drone, which is not sung by a single voice but emerges from the combination of several voices. Drone polyphony (especially with a two-part drone) is also popular in the Balkans, Latvia and Belarus′.

The fourth – and the most widespread and characteristic – type of Russian polyphony is that in which two voices are differentiated in range, register, timbre and melody. The lower, leading voice is sung by a chorus, sometimes heterophonically, and is called the 'bass' (*bas*) or 'thick' (*tolstïy*) voice, whether sung by men or women. The higher voice consists of an anhemitonic tune without text. Among the Cossacks in the South, it is sung by a solo singer known as a *golosnik* or *diskant*; in the north it is sung by a chorus to the same melody as the bass and one octave above it. In central Russia, among non-Slavic Finno-Ugric peoples such as the Mordoviyans, Udmurt and Komi-Permyak, the bass voice is commonly accompanied by an improvised descant (*podvodka*), as documented by Margarita Yengovatova (1989). The most elaborate examples of this type of sung polyphony are found among the Old Believers (*semeyskiye*) in Siberia, around Lake Baykal and the Buryat city of Ulan-Ude (Zemtsovsky, 1972; Dorofeyev, 1989; Shchurov, 1998). The many folk expressions relating to this type of polyphony show that Russian villagers recognize the texture of partsinging as polyphonic.

The fifth type of polyphony involves three functionally distinct voices. It is found in central and southern Russia in the regions around Bel′gorod, Voronezh and Ryazan′, and among the Don Cossacks and Mordviniyans. Most of the singers perform a texted bass part. The second voice (*golosnik*) is an upper drone, sometimes without text. The third or 'thin' voice (*tonkiy golos*) is performed by at least two women in heterophony with the bass; their voice production is characteristically tense. Dmitry Pokrovsky (1980) discovered four functional parts within this general type among the Cossacks: a relatively stable *bas*; a decorative and relatively independent *diskant*; an unnamed and previously unrecognized part that somehow coordinates the other parts; and another voice called *tenor* in close contact with the third part.

In general, the more complicated the polyphonic structure, the fewer the singers involved. It has also become clear that these complicated traditions require a kind of specialization and that there are certain master singers capable of creating complex forms while leading these polyphonic performances.

In the 1920s Gippius recorded duets and trios in the Russian north sung by men and having independent voices, but this style seems to have disappeared. Yet another kind of polyphony occurs when different songs are sung simultaneously at such rituals as weddings, spring-summer circles or women's cemetery laments (Folkways 40462). A rare wedding canon has been recorded in the Bel′gorod region of southern Russia. In the old Russian settlements of the Urals, the middle Volga and Sibir′, another type of partsinging involves two voices moving mainly in parallel 3rds. This style, which resembles Western European homophony, is also characteristic of urban songs and peasant songs in the so-called late-traditional style.

The Mordoviyan (or Mordviniyan) tradition of multi-part singing is one of the most remarkable among the Finno-Ugric peoples. There are three main types: heterophonic, three-part polyphony, and a two-part texture (in which the upper voice, or *vtora*, often duplicates the bass melody at the interval of a 3rd) akin to the style of Russian and Ukrainian group singing in the late 19th century and the early 20th. Three-part polyphony is most characteristic of Mordoviyan folksong; it consists of a lower voice (*alu vaygyal*), upper voice (*vyari vaygyal*) and middle voice (*mora vaygyal*; literally, 'voice of a song'). Both lower and upper voices function as drones, while the middle voice is a kind of cantus firmus. The upper voice correlates to the middle voice at the interval of a 5th. Although all three parts are intrinsically heterophonic, they are functionally homogeneous within the polyphonic texture. This complex form has become more or less clear only since the development of recordings made with multiple microphones.

4. Africa. Sub-Saharan Africa provides such a rich variety of multi-part singing styles that it was regarded by some comparative musicologists almost as a laboratory for the study of how polyphony may have evolved. Three factors may be seen to play an important part in such diversity. First there is the essentially participatory nature of African music-making. Second, the ubiquitous use of call and response demands two or more voice parts by its very nature, and overlapping of parts frequently gives rise to polyphony. Third, the use of cyclical forms, some as brief as a few seconds, provides repetitive frameworks which encourage variation making. Rycroft's study of the multi-part organization of Nguni vocal music (1967) adopted a circular model based on its cyclical form to demonstrate how overlapping, non-simultaneous entry of voices and choral ostinatos could all contribute to the polyphonic texture of Zulu, Xhosa and Swazi songs. He also pointed out how such singing can be linked to the innately polyphonic nature of musical bows (both gourd- and mouth-bows), the strings of which produce a drone bass (which can be varied during play), each drone pitch supporting simultaneously its own set of harmonics, which are selectively emphasized as required.

Much partsinging among Bantu peoples is homophonic, using mostly parallel motion. This parallelism follows mainly from the need to preserve tonal structures inherent in Bantu and other languages. Kubik (1994) demonstrated that an underlying principle of 'skipping' (of notes in the scale) leads to partsinging in 3rds among peoples using heptatonic systems (exceptions occur south of latitude 14–15°S), and in 4ths (with occasional 3rds) in pentatonic areas. In the case of the former he suggested that a scale temperament is adopted to avoid producing minor 3rds. However, Kubik pointed out instances where parallelism is present only in theory, and cited singing in eastern Angola, where a relatively loose combination of voices,

fluctuating between triads, bichords and more or less dense accumulations of notes, leads to a rich texture. Brandel also remarked that in Africa different polyphonic features rarely occur in isolation but may often intermingle within one piece and may appear in any vocal and instrumental combination (*HDM2*, p.19).

Simha Arom concerned himself mostly with polyphony produced by melodic instruments in his major work on African polyphony and polyrhythm (1985), but he and colleagues have analysed the similarly complex vocal polyphony of pygmy and Bushman peoples. For example, Fürniss (1990) identified four different principal melodic parts in the singing of certain songs of Aka pygmies: *motangole*, the part that carries the text; *ngue wa lembo*, 'the mother of the song'; *osese*, 'underneath'; and *diyei*, 'yodel'. Even when performing alone a singer will draw readily from more than one of these four parts during a performance. Fürniss and Olivier, comparing the superficially similar polyphonic sounds of pygmy and Bushman peoples (1997, p.25), confirmed the findings of England (1967), who showed that the different melodic strands of Bushman polyphony result from the application of variation techniques to a single melody. These techniques include rhythmic displacement, imitation and melodic transposition up or down at the 4th or 5th. Thus Bushman polyphony is conceptualized as monophonic, Aka music as polyphonic. Yodelled parts, common in both Bushman and pygmy singing (as well as in that of some related peoples), are also heard as ostinatos among the rich mosaic of parts which make up the *edho* (polyphonic) songs of the Dorze people of southwestern Ethiopia (Lortat-Jacob, 1994).

Recent developments in many parts of Africa include the composition of polyphonic religious works by Western-schooled musicians (for examples, see Kishila w'Itunga, 1987) and the frequent use of multipart singing in popular genres such as Nigerian juju.

Polyplectron. A SOSTENENTE PIANO invented by JOHANN CHRISTIAN DIETZ (ii).

Polyrhythm. The superposition of different rhythms or metres. It is an important characteristic of some medieval polyphony (particularly late 14th-century French secular song), and also a common technique of 20th-century composition (used successfully by such composers as Stravinsky, Bartók and Hindemith, as well as in modern jazz). The term is closely related to (and sometimes used synonymously with) CROSS-RHYTHM, though the latter is properly restricted to rhythm that contradicts a given metric pulse or beat.

See also RHYTHM.

□

Polytonality. The simultaneous presentation of more than two tonalities in a polyphonic texture, hence an extension of BITONALITY.

Polzelli [Polcelli; née Moreschi], **Luigia** (*b* Naples, *c*1760; *d* Kaschau [Kassa, now Košice], 5 Oct 1830). Italian mezzo-soprano. In March 1779 she and her husband, the violinist Antonio Polzelli (*b* Rome; *d* Vienna, 1791), went to Eszterháza on a modest two-year contract, after having apparently lived in Bologna. Before their contract expired Prince Nicolaus Esterházy commanded its termination, though the dismissal was later reversed. Despite their indifferent talents they remained in service until the dissolution of the Kapelle (1790) – probably through the intercession of Haydn, who had taken Luigia as a mistress. In spite of Haydn's private instruction she was never assigned a leading role at Eszterháza, and her restricted range and musicality made it necessary for him to rewrite even secondary parts for her. She appeared only twice in Haydn's operas (as Silvia in *L'isola disabitata* and Lisetta in *La vera costanza*), though most of Haydn's insertion arias were composed for her.

After the dissolution of the Kapelle and the death of her husband Polzelli sang in lesser Italian theatres (Piacenza, Bologna). Haydn granted her continual requests for money, and oversaw the education of her musician sons Pietro (1777–96) and Antonio (1783–1855); the latter was rumoured without proof to be by Haydn. Polzelli later married the singer Luigi Franchi; they remained until 1815 in Bologna, and went in 1820 from Cremona to Hungary.

HORST WALTER

Pomius, Franciscus. *See* DEL POMO, FRANCESCO.

Pommer. The German name for the alto, tenor and bass SHAWM (the treble being known as the *Schalmei*). The term is an alteration of *Bombarde* (the general 15th-century name for the alto shawm), through *Bomhart*, *Pumhart* and *Pommert*, all of which are found in 16th-century German writings. The form *Pommer* occurs in Praetorius's *Syntagma musicum*, ii (2/1619) and is much used by modern German writers and museum curators.

See also BASSOON, §2, and ORGAN STOP (*Bombardon*).

ANTHONY C. BAINES/R

Pommer, Josef (*b* Mürzzuschlag, 7 Feb 1845; *d* Gröbming, 25 Nov 1918). Austrian folk music collector. After studying at the University of Vienna (1864–70), where he took the doctorate in philosophy, he taught at gymnasiums in Vienna (1874–1912). He was interested in folksongs as a schoolboy, and studied music so that he could transcribe those he heard. In 1885 he became director of the choir of the Verein der Deutschen Steirer in Vienna and in 1889 founded the Deutscher Volksgesang Verein to foster traditional folksong. In 1892 he founded the *Flugschriften zur Kenntnis und Pflege des deutschen Volksliedes* and in 1899 he launched the monthly journal *Das deutsche Volkslied*, which remained, until 1949, the leading German-language publication in its field. He also took a major part in planning the state-sponsored project *Das Volkslied in Österreich*, which was prevented from publication because of World War I. Pommer strongly influenced folksong performance and research through his enthusiasm and detailed investigations. A pioneer in the research of Austrian folksong, his collections of yodel songs are particularly valuable, for it was through them that this song form first became known to the musical world.

WALTER DEUTSCH

Pommier, Jean-Bernard (*b* Béziers, 17 Aug 1944). French pianist and conductor. He studied the piano from the age of four with Mina Kosloff and later with Yves Nat and Pierre Sancan, receiving a *premier prix* at the Paris Conservatoire in 1961. He also studied conducting with Eugène Bigot. In 1962 he received a First Diploma of Honour in the Tchaikovsky Competition in Moscow, and this was followed by performances throughout Europe, the USA, the Soviet Union and Japan. Since 1980 he has been active as a conductor, principally with the Philharmonia Orchestra and the Northern Sinfonia. As a pianist he has recorded a wide repertory, including concertos by Grieg, Rachmaninoff and Tchaikovsky, but his refined

and even-tempered pianism is perhaps best suited to Beethoven and Mozart, whose complete sonatas he has recorded with outstanding success. Pommier also plays in chamber music, and has made a notable recording of the cello sonatas of Brahms with Leonard Rose.

CHARLES TIMBRELL

Pompeati, Signora. *See* CORNELYS, THERESA.

Pomposo (It.: 'pompous', 'ceremonious'). A tempo (and mood) designation, but more often a qualification for such designations. Handel used it in the overture to *Samson*. Koch (*Musikalisches Lexikon*, 1802) indicated that, like *grave, pomposo* implied the use of over-dotting; but his word is hardly authoritative and should not be taken as universally applicable.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Ponape. *See* MICRONESIA, §II, 5.

Ponc, Miroslav (*b* Vysoké Mýto, 2 Dec 1902; *d* Prague, 1 April 1976). Czech composer and conductor. He graduated from Suk's masterclass at the Prague Conservatory in 1930 and from Hába's department of quarter-tone music in 1935 with his Suite for quarter-tone piano. Ponc also studied composition with Hába (1922–3, 1925–7) and took private lessons with Schoenberg, first probably in 1927 and then in 1932. He attended lectures on acoustics and on ethnomusicology at Berlin University; in Berlin he completed his piano studies with Breithaupt and his conducting studies with Scherchen. Apart from Hába, the most powerful influence on Ponc's career came from the Berlin avant-garde group Der Sturm, of which he became a member after the exhibition of his stage designs in 1927. He settled in Prague in 1932, by which time he had already produced a number of pieces following the principles of his teacher; *Předehra k starořecké tragédii* ('Overture to the Ancient Greek Tragedy') was also performed at the ISCM festival in Vienna in the same year. On 11 May 1935 the Prague National Theatre produced his full-length ballet *Osudy* ('The Fates'), a work of little merit although it initiated a long period of work for the stage. In 1945 he established a permanent orchestra at the Estates (later Tyl) Theatre and joined the staff of the National Theatre; he worked as a conductor and composed more than 100 sets of incidental music. Ponc also wrote music for radio (in excess of 300 scores) and films.

JIŘÍ VYSLOUŽIL

Ponce, Juan (*b* c1476; *d* after 1520). Spanish composer. Possibly of aristocratic Andalusian origin, he studied with Lucio Marineo, the Sicilian humanist who from 1484 to 1496 occupied a chair at Salamanca University; while there he composed a four-voice version of the student drinking-song, *Ave color vini clari* (ed. S. Rubio, *TSM: supplemento polifónico*, xl, 1953, pp.80–3). A published exchange of Latin letters between Marineo and his pupil (Valladolid, 1514) identifies Ponce as a *cantor regius* ('royal singer'). On the death of Ferdinand II in 1516 Ponce may have joined the household of Charles I (Holy Roman Emperor Charles V). A version of his patriotic villancico *Françia, cuenta tu ganançia* refers to events of 1521.

Ponce's 12 songs (seven for four voices, four for three and one for two) in the *Cancionero musical de palacio* (MME, 1947–51, v and x) include a solmization villancico *La mi sola, Laureola* and a mirror canon *Para verme con ventura* which reveal him as one of the most polished and ingenious composers of his generation. His one surviving sacred work is a three-voice *Salve regina* (*E-Sc* 5-5-20) with alternating sections in plainsong and treble-dominated polyphony.

ROBERT STEVENSON

Ponce (Cuéllar), Manuel (María) (*b* Fresnillo, Zacatecas, 8 Dec 1882; *d* Mexico City, 24 April 1948). Mexican pianist and composer. He was the leading Mexican musician of his time, and made a primary contribution to the development of a Mexican national style – a style that could embrace, in succession, impressionist and neoclassical influences.

1. LIFE. Born into a musical family, Ponce began his studies with his sister Josefina and went on to study with Cipriano Ávila. Around 1893 he joined the choir at S Diego, Aguascalientes, where he later became assistant organist (1895) and organist (1898). Between 1900 and 1901 he studied in Mexico City with Vicente Mañas (piano) and Eduardo Gabrielli (harmony). The latter encouraged him to continue his studies in Europe and offered to introduce him to Marco Enrico Bossi, director of the Liceo Musicale in Bologna, where he duly arrived in 1904 with the intention of studying composition. Bossi introduced him to Cesare Dall'Olio (Puccini's teacher) who became his teacher for a few months. Also in Bologna he met Torchi, whose friendship and lessons undoubtedly determined Ponce's subsequent career as an editor and musicologist. In December 1905, following the death of Dall'Olio, he moved to Berlin, where he decided to continue studying the piano with Martin Krause. However, financial circumstances forced him to return to Mexico in January 1907.

Back in Aguascalientes he taught the piano and at the end of that year moved to Mexico City to take up a post teaching the piano at the Conservatorio Nacional. In 1910 he formed part of a prestigious panel of judges, also including Pedrell, Fauré and Saint-Saëns, in a composing

competition marking the centenary of Mexican independence. Among the numerous recitals given by his pupils was one in 1912 dedicated to the music of Debussy (the first public performance of Debussy's music in Mexico); the recital was opened by the 11-year-old Carlos Chávez. Also in 1912 Ponce gave a concert of his own works, including the première of his Piano Concerto, which confirmed him as the most important figure in Mexican music at the time. In 1913 he gave a lecture entitled, 'La musica y la canción mexicana', which was immediately published and formed the catalyst for the Mexican 'nationalist' school. Ponce's prominence in Mexican intellectual life was assured.

However, political and social difficulties arising from the Mexican Revolution (1910–20) forced him to vacate the country from 1915 to 1917. Like other Mexican artists and intellectuals, he went to Havana, where he gave concerts, lectures and classes and wrote music reviews for *El heraldo de Cuba* and *La reforma social*. In March 1916 he gave a recital of his works which went virtually unnoticed, coinciding with the attack on the frontier town of Columbus by Francisco Villa.

Returning to Mexico, he took up his piano teaching post at the conservatory again (1917). He also conducted the National SO (1917–19), which accompanied soloists such as Rubinstein and Casals, and gave numerous Mexican premières. From 1919 to 1920 he directed the first of his many publishing enterprises, the magazine *Revista musical de México*. In 1925, feeling the need to update his idiom, and conscious of the rapid transformations taking place in music at that time, he returned to Europe and settled in Paris, where he studied with Dukas until 1933 and also founded the *Gaceta musical*, a Spanish-language magazine which numbered Villa-Lobos, Alejo Carpentier, Dukas and Milhaud among its contributors. During this period he worked closely with Segovia, whom he had met in Mexico (1923) and with whom he remained friends until his death. Also during this period, on the recommendation of Dukas, Albéniz's family commissioned him to finish the score of the opera *Merlín*, on the basis of which he wrote a symphonic suite.

Back again in Mexico in 1933, he concentrated on teaching and composing. He was director of the National Conservatory (1933), founded the chair in folklore at the National School of Music (1934) and edited a third magazine, *Cultura musical* (1936–7). A prolific writer, he published numerous articles and features on musical topics ranging from piano technique to issues surrounding the media. The 1930s and 40s saw the most important premières and performances of his works, including *Chapultepec* (Philadelphia Orchestra under Stokowski, 1934), *Poemaelegíaco* (Mexico SO under Chávez, 1935), *Suite en estilo antiguo* (Mexico SO under Ansermet, 1935), *Merlín* (Mexico SO under Revuletas, 1938), *Ferial* (Mexico SO under Kleiber, 1943) and the Violin Concerto (Szeryng and the Mexico SO under Chávez, 1943). During a tour of South America in 1941 he attended the première in Montevideo of his *Concierto del sur* with Segovia as soloist. In 1945 he was appointed director of the National Music School. He died having received numerous prizes and distinctions, including the Premio Nacional de Artes (1947).

2. WORKS. Although he is best known internationally for his song *Estrellita*, Ponce's work embraces a whole spectrum of genres and styles. An obviously eclectic composer, he could integrate a variety of tendencies and styles, ranging from the Romanticism of his first piano works to the almost atonal language of his Sonata for violin and viola or the bitonality of his *Quatre pièces* for piano. At the same time he was Mexico's first nationalist composer, though his musical language later evolved away from Romanticism, nationalism and the use of popular Mexican themes towards a more personal and contemporary style. He wrote a large number of works reflecting his preoccupations with style, such as his six guitar sonatas (*Clásica*, *Romántica*, *de Paganini*, *Mexicana* etc.), his preludes and fugues on themes by Bach and Handel (which fall within the neo-classical tradition), his works in Spanish style (*Diferencias sobre las folía de España*) or his works inspired by Cuban music (*Suite cubana*, *Elegía de la ausencia*). The influence of the impressionists is also evident, especially in *Chapultepec*, a symphonic poem which marked him as one of the most important exponents of American impressionism.

According to Segovia, Ponce was the composer who had the greatest influence on the revival of the guitar repertory and the reinstatement of the guitar as a concerto instrument. Indeed his sonatas, preludes and other works form a corpus of guitar music rivalled in the 20th century only by the works of Villa-Lobos or Brouwer, and his *Concierto del sur* is unequalled in its balance of soloist with orchestra. Notwithstanding, Ponce was also a consummate pianist and wrote a large number of piano works which combine a profound knowledge of the instrument with his Romantic heritage and, in many cases, nationalist tendencies. His works display a happy combination of Lisztian virtuosity, Romantic genre (ballade, rhapsody, barcarolle, albumleaf, mazurka) and popular Mexican tunes or melodic turns of phrase inspired by Mexican songs. He also transcribed and edited a large quantity of Mexican songs, the recovery and preservation of which put him on a par with such as Bartók or Grieg, and his interest in his Mexican musical heritage is also given didactic expression in his *Veinte piezas fáciles*, which offer the young Mexican pianist a representative selection of traditional Mexican music.

The transformation of the Mexican idiom in Ponce's hands had great significance: heir to a rich and well-established Romantic tradition, he passed through nationalism and Impressionism before producing, in his late works, some of the most significant works of Latin American modernism. These late, lesser known works include some of his best moments. Particularly fine examples are his Violin Concerto, in which he seems to synthesize the whole of his musical evolution, his sonatas for harpsichord and guitar or cello and piano, and the symphonic poem *Ferial*, which uses indigenous Spanish and Mexican melodies – for the first time, and in an all-embracing sense, to portray the cultural mosaic of a typical Mexican village. His high place in musical history will be due as much to these works as to his more popular output.

WORKS

DRAMATIC

El patio florido (op, 2, C. González Peña), 1913, inc.; La verdad sospechosa (incid. music, J. Ruiz de Alarcón), 1934

RICARDO MIRANDA PÉREZ

Ponce de León, José María (*b* Bogotá, 16 Feb 1845; *d* Bogotá, 21 Sept 1882). Colombian composer. From 1867 he spent three years in Paris, becoming acquainted with the conservatory system and studying with Gounod and Thomas. On his return to Bogotá in 1871 he conducted military bands (the Banda de la Guardia Colombiana and the Banda de Bogotá), and composed religious and salon music as well as the first Colombian operas and musical works for the stage. His opera *Ester*, based on Racine, was first performed in 1874; his *Sinfonía sobre temas colombianos* is one of the first exercises in Colombian symphonic nationalism. Although his style was greatly influenced by Italian opera composers, especially Rossini, the zarzuela *El castillo misterioso* includes numbers based on such popular forms as the waltz, bolero and march.

WORKS
(*selective list*)

Stage: Un alcalde a la moderna y dos primos a la antigua (comic op, 2, J.M. Samper), Bogotá, 17 Dec 1863; Ester (biblical op, M. Briceño after J. Racine), Bogotá, 2 July 1874; El castillo misterioso (zar, 3, J.M. Gutiérrez de Alba), Bogotá, 27 April 1876; Florinda (ópera mayor española, 4, R. Pombo after Duqe de Alba: *La Eva del imperio Godo Español*), Bogotá, 13 May 1880; El alma en un hilo; Un embozado de Córdoba; Levantar muertos; La mujer de Putifar; El vizconde; El zuavo

Sacred music: Misa de Requiem; Misa de Gloria; Mass, d, S, SATB, orch; O salutaris, 3vv, orch

Voice and orch: Apoteósis de Bolívar; La voz humana, cant.

Orch: Canción; Sinfonía sobre temas colombianos; Dos oberturas

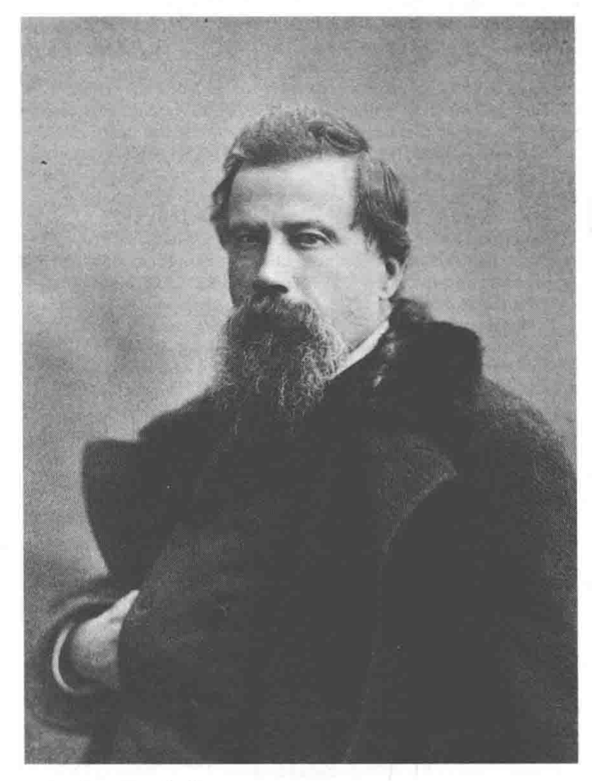
ELLIE ANNE DUQUE

Ponchielli, Amilcare (*b* Paderno Fasolaro [now Paderno Ponchielli], 31 Aug 1834; *d* Milan, 17 Jan 1886). Italian composer. He was the most important opera composer (Verdi apart) between the mid-19th century and the advent of the so-called 'Giovane Scuola'.



1. LIFE. The son of a shopkeeper who was organist in the village church, he studied music first with his father and then with the organist of a neighbouring village. In 1843 a wealthy benefactor helped him to obtain a free place at the Milan Conservatory, where his teachers included Pietro Ray (theory), Arturo Angeleri (piano), Felice Frasi (composition to 1851) and Alberto Mazzucato (music history and aesthetics, and composition from 1851). By the age of ten he had already composed a symphony, although without orchestrating it; other works followed, among them two pieces for the operetta *Il sindaco babbeo*, composed in 1851 in collaboration with three fellow pupils (Marcora, Cagnoni and Cunio), and the remarkable *Scena campestre* (1852).

Having taken his diploma on 4 September 1854, Ponchielli settled in Cremona as a music teacher and organist at the church of S Maria with the small annual stipend of 1000 lire, but as a protégé of Ruggero Manna, who was in charge of the local Teatro della Concordia and *maestro di cappella* at the cathedral, he was appointed his deputy at the theatre in 1855. In 1860 he directed several operas at the Teatro Carcano in Milan and in Alessandria. In the meantime he had ventured on a full-length opera of his own, *I promessi sposi*, based on Alessandro Manzoni's novel, which had its first performance at the theatre at Cremona in 1856. Its reception was enthusiastic, but the poor libretto, whose authorship remains unknown, discouraged publishers and impresarios alike from acquiring the rights. Ponchielli's next opera, *Bertrando dal Bornio*, was scheduled for the autumn season of 1858 at the Teatro Carignano, Turin, but for undisclosed reasons the performance never took place. *La Savoiarda* (1861, Cremona), an *opera semiseria* in the style of Donizetti's *Linda di Chamounix*, but with a tragic ending, attracted only local attention. *Roderico re dei Goti* (1863, Piacenza) was taken off after a single performance owing to the indisposition of the baritone. An operatic project undertaken with Piave in 1867 (probably *Vico Bentivoglio*) was brought to an end by the stroke that laid the poet low until his death in 1876.

Throughout the 1860s Ponchielli made his living as municipal bandmaster, first at Piacenza (from 1862), then at Cremona (from 1864), during which time he directed several operas and gave one of his ballets. In 1867 he competed for the professorship of counterpoint at the Milan Conservatory. Although he was adjudged the winner, the nomination went to Franco Faccio, due partly to the influence of Giulio Ricordi. Once more Ponchielli took part in a composite opera, *La vergine di Kermo* (1870, Cremona), his fellow contributors including Cagnoni, Lauro Rossi and Mazzucato. Finally, in 1872 a long period of frustration came to an end with the unexpected success of *I promessi sposi* at the Teatro Dal Verme, Milan, set to a new text written by the 'scapigliato' poet Emilio Praga with the addition and substitution of several numbers. Part of the enthusiasm was due to the anti-Wagnerian reaction that was gathering strength in Italy, and part to the interest already aroused by Petrella's opera on the same subject. Critics noted, however, a stylistic discrepancy between the old and the new pieces, while Verdi observed that both were behind their respective times. Two minor successes followed: the ballet *Le due gemelle* (1873, La Scala) and a comic monodrama, *Il parlatore eterno*, written for the baritone Antonio Pini-Corsi (1873, Lecco, Teatro della Società).

Meanwhile Giulio Ricordi had resolved to groom Ponchielli as Verdi's successor and accordingly commissioned a grand opera set in northern Europe to a libretto by Antonio Ghislanzoni. During its composition Ponchielli consulted the editor at every step; and eventually *I lituani* went on stage at La Scala in March 1874, splendidly cast and mounted. Critics and public were respectful, but found room for improvement, which Ponchielli brought to it the following year, enlivening the subject with a few dances, a drinking-song and a battle scene. Nonetheless, *I lituani* was not destined for the repertory, though after Ponchielli's death many writers urged it on impresarios as his best work; and indeed a concert performance in Cremona in 1984 showed it to be a powerful, if sombre, score. Later in the year of its première Ponchielli married the soprano Teresa Brambilla, his first Lucia in the revised *I promessi sposi*, who bore him two sons and a daughter. In 1875 his cantata *Omaggio a Donizetti* was performed at the Teatro Riccardi, Bergamo.

With his next opera, *La Gioconda* (1876, La Scala), Ponchielli finally hit the mark, though three years were to pass before he succeeded in hammering the score into its definitive shape. Here he allowed free rein to his lyrical impulse, which, fuelled by the deft mechanism of Boito's libretto (an adaptation of Victor Hugo's *Angélo, tyran de Padone* in the sensational manner of Scribe) and his own propensity for vigorous dance rhythms, ensured the opera's lasting vitality. Among its most inspired pages – apart from the ever-popular 'Danza delle ore' – are the

1. Amilcare Ponchielli

highly original tenor *romanza* 'Cielo e mar', La Cieca's 'Voce di donna o d'angelo' and the heroine's 'Suicidio', where the vocal writing foreshadows that of Mascagni and the 'Giovane Scuola'. The critic Filippo Filippi, a champion of Wagner and the avant garde, declared that among contemporary Italians only Verdi could have written a work of similar importance.

No such success attended *Lina* (1877, Teatro Dal Verme), a revised version of *La Savoiarda*, rightly judged impossibly old-fashioned. Over the next two years Ponchielli took up a couple of subjects – Ghislanzoni's *I mori di Valenza* and Carlo D'Ormeville's *Olga* – only to lay them aside in favour of Angelo Zanardini's *Il figliuol prodigo* (1880, La Scala). Although recognized as his most carefully written work to date, the action was considered too slow and the subject too oratorio-like ('not very prodigal towards the management's coffers!!' was the comment of the singer Teresa Stolz). However, Ponchielli's fame was now firmly established, and he received countless invitations and commissions during the last nine years of his life. In 1878 he deputized for the conductor Luigi Mancinelli at the Teatro Apollo, Rome, where he directed performances of *Lohengrin* and Massenet's *Le roi de Lahore*. He held the chair of composition at the Milan Conservatory from May 1880 (he resigned in September but returned at the beginning of 1881). His pupils there included Puccini, and, for a short time, Mascagni, both of whom recalled him with affection (indeed he was instrumental in procuring for Puccini his first libretto). In 1882 he was appointed organist at S Maria Maggiore, Bergamo, for which he turned out a number of sacred compositions, the most important being the *Lamentazioni di Geremia* (1885). In 1884 he was in St Petersburg, where *La Gioconda* was given at the Mariinsky Theatre, and also *I lituani* under the title of *Aldona*. In his last opera, *Marion Delorme* (1885, La Scala), Ponchielli attempted to diversify his style with elements derived from French *opéra comique*; but the growing exhaustion of his melodic invention was becoming apparent. Acting on Verdi's advice he shortened the libretto with the help of Ghislanzoni for a revival at Brescia the same year, without, however, materially altering the opera's fortunes. His death from pneumonia the following January was mourned throughout Italy, not least by Verdi, whose initial doubts as to his capability had been fully overcome by the success of *La Gioconda*.

2. WORKS. Ponchielli was a highly accomplished musician, whose misfortune it was to have grown up during a period of transition in Italy's musical history. By nature conservative, he was further handicapped by a lack of self-confidence and a retiring temperament which put him at a disadvantage in the competitive world of the theatre. Such success as he obtained would have been impossible without Ricordi's efforts on his behalf. Though possessed of a genuine dramatic instinct combined with a lyrical flair, he never took charge of an operatic structure as Verdi always did; rather, he remained dependent on the invention of his librettists, among whom Boito alone was able to satisfy his requirements in full. His masterpiece, *La Gioconda*, inevitably suffers compared with those of his great contemporary. Bernard Shaw held it up as 'a mere instance of the mischief which great men bring upon the world when small men begin to worship them'.

But if Ponchielli's idiom rarely advances beyond that of mid-1860s Verdi, he is far from a mere imitator. His

2. Scenes from Ponchielli's 'La Gioconda', La Scala, Milan, 8 April 1876; engraving by Prima from 'L'illustrazione italiana' (28 May 1876)

melodic style is his own, marked by sinuous contours (e.g. the motif of La Gioconda's filial love, or the opening strain of her duet with Laura); and he had the ability to site commonplaces in a context that purges them of vulgarity (e.g. in the Furlana of *La Gioconda*). One does not blame Webster for not being Shakespeare – and in fact the parallel with Verdi and the Ponchielli of *La Gioconda* runs remarkably close. Nor should one overlook Ponchielli's skill in evoking an ambience, whether night on the Venetian lagoon (*La Gioconda*), the contrasting worlds of Judaea and Nineveh (*Il figliuol prodigo*) or the snows of northern Europe (*I lituani*), a gift taken up and developed by his most famous pupil, Puccini. Similarly, a Puccinian device that owes its origin to Ponchielli is the use of a *fortissimo* orchestral peroration based on a preceding theme to bring down the curtain on an act. First exploited in Act 3 of the revised *Gioconda*, it attracted much critical attention at the time.

The trite remark that makes Ponchielli out to be a crude and trivial composer, a 'bandmaster', is entirely unfounded. On the contrary, as Tebaldini observed, 'he did not bring the band into the orchestra, but rather, the orchestra into the band'. Indeed, his compositions for band are conceived in a truly symphonic spirit with complete formal freedom and sometimes with almost impressionistic touches. Freedom and variety are to be found even in his operas, from *I lituani* onwards, fostered sometimes by themes which recur, either exactly or in subtle and meaningful variants. His youthful compositions already proclaim this; in the Quartet for wind

instruments and orchestra (1857) the form is capricious and is entirely in terms of parodistic play of timbres (dominated by the strident colour of the piccolo clarinet) which even foreshadows Stravinsky. Remarkable, too, is the fact that many of his vocal chamber *romanze* are really operatic arias of wide-ranging span. A writer of dances he heads what is admittedly a slender field south of the Alps. Hackneyed though it be, disfigured by comic arrangements, the 'Danza delle ore' remains the only Italian operatic ballet whose music bears performance on its own, divorced from its theatrical setting.

WORKS

OPERAS

I promessi sposi (melodramma, 4 pts, after A. Manzoni), Cremona, Concordia, 30 Aug 1856, excerpts, vs (Milan, n.d.); rev. (E. Praga), Milan, Dal Verme, 5 Dec 1872, *I-Mr**, vs (Milan, 1872 [defective], 1873)

Bertrando dal Bornio, 1858, *Mr**, unperf.

La Savoiarda (dramma lirico, 3, F. Guidi), Cremona, Concordia, 19 Jan 1861; rev. 1870, *US-CA**; rev. as Lina (C. D'Ormeville), Milan, Dal Verme, 17 Nov 1877, vs (Milan, n.d.)

Roderico re dei Goti (3, Guidi, after R. Southey: *Roderick*), Piacenza, Municipale, 26 Dec 1863

Il parlatore eterno (scherzo comico, 1, A. Ghislanzoni), Lecco, Società, 18 Oct 1873, vs (Milan, n.d.)

I lituani (dramma lirico, prol., 3 , Ghislanzoni, after A. Mickiewicz: *Konrad Wallenrod*), Milan, Scala, 7 March 1874; rev., Scala, 6 March 1875, *I-Mr**, vs (Milan, n.d.)

I mori di Valenza (dramma lirico, 4, Ghislanzoni, after E. Scribe: *Piquillo Alliaga*), begun 1874, Act 4 completed by Annibale Ponchielli and A. Cadore, Monte Carlo, Opéra, 17 March 1914, vs (Turin, 1914)

La Gioconda (dramma lirico, 4, Tobia Gorrio [A. Boito], after V. Hugo: *Angélo, tyran de Padoue*), Milan, Scala, 8 April 1876; rev., Venice, Rossini, 18 Oct 1876, *US-NYpm** (rough draft); rev., Genoa, Politeama Genovese, 27 Nov 1879, *I-Mr**; (Milan and New York, n.d.)

Il figliuol prodigo (melodramma, 4, A. Zanardini, after Scribe: *L'enfant prodigue*), Milan, Scala, 26 Dec 1880, *Mr** (Milan, n.d.)

Marion Delorme (melodramma, 4, E. Golisciani, after Hugo: *Marion de Lorme*), Milan, Scala, 17 March 1885, *Mr**, vs (Milan, n.d.)

Music in: Il sindaco babbeo, 1851; La vergine di Kermo, 1870

BALLETS

Grisetta (azione mimica), Cremona, Concordia, carn. 1864–5; polka, arr. pf, pubd as Un bacio di più (Milan, n.d.)

Le due gemelle (azione coregrafica, prol, 6, A. Pallerini), 1st known perf., Milan, La Scala, 4 Feb 1873; *Mr**, *US-STu**, arr. pf (Milan, n.d.)

Il genio della montagna (Barracani), early work, perf. Milan, Cannobiana, Feb 1874; excerpts, arr. pf (Milan, n.d.)

JULIAN BUDDEN (with FEDELE D'AMICO)

Pone [Poné], **Gundaris** (*b* Saldus, 17 Oct 1932; *d* New York, 15 March 1994). American composer of Latvian descent. He fled Latvia as a war refugee in 1944 and studied violin and composition at the University of Minnesota (BA 1954, MA 1956 and PhD 1962). From 1963 he taught music theory and composition at SUNY, New Paltz, where he founded and directed the Contemporary Chamber Orchestra, host of the annual Music in the Mountains Festival since 1982. From 1972 Pone visited Latvia as a conductor of his own works.

Pone's style changed from the Romanticism of his early works to radical serial and aleatory techniques, particularly after six months of study in Venice with Nono in 1967. After 1980 he turned to a synthetic post-serial style and a more multi-faceted approach. A ballet of the history of Riga remained unfinished. Pone received first prize in the Kennedy Center Friedheim contest and the 'Città de Trieste' award (both 1982).

ARNOLDS KLOTIŅŠ

Pongrácz, Zoltán (*b* Diószeg, 5 Feb 1912). Hungarian composer. He studied composition with Kodály at the Budapest Academy of Music (1930–35), and then took lessons in conducting with Rudolf Nilius in Vienna (1935–8) and with Krauss in Salzburg (1941). Pongrácz won the Ferenc József Prize in 1939 and worked on non-European music at Berlin University (1940–41) before becoming répétiteur at the Hungarian State Opera. He then worked for Hungarian radio as a music adviser, producer and choral conductor, and he was professor of composition at the Debrecen Conservatory from 1947 to 1958, a period when he was also active in the Hungarian Musicians' Union. An interest in exotic traditions influenced his early creative work. Later he turned in the direction of Schoenberg and Berg and, after a period of silence, began to work with tape, this latter development being stimulated by the Darmstadt summer courses which he attended in 1964, 1965 and 1972, and by his participation in Koenig's courses at Utrecht University. From 1975 to 1995 he was professor of electronic composition at the Budapest Academy. He was awarded an honorary title from GMEB (Group de Musique Expérimentale de Bourges) and UNESCO in 1988; the national title Artist of Merit (1989); and the Grand Cross of the Hungarian Republic (1992). A member of the Magyos Művéveti Akadémia (Hungarian Academy of Arts), he became vice-president of this organization in 1996.

F. ANDRÁS WILHEIM/ANNA DALOS

Poniatowska, Irena (*b* Góra Kalwaria, nr Warsaw, 5 July 1933). Polish musicologist. She studied music at the Warsaw College of Music and then entered Warsaw University to study musicology with Chomiński (MA 1962), where she took the doctorate with a dissertation on piano structure in Beethoven (1970). She completed the *Habilitation* in 1983 with a thesis on piano music and playing in the 19th century. In 1994 she qualified as a full professor. Her career was connected with the Institute of Musicology at Warsaw University, where she became tutor (1970), reader (1984), professor (1991) and head of the Institute (1996). She was dean of the history faculty of Warsaw University (1988–90 and from 1993). She was

active as a president of the international congress *Musica antiqua Europae orientalis* (1988–94), and of the Polish Chopin Academy. She is also an honorary member of the Accademia Filarmonica in Bologna. Her main field of research is music of the 19th century with an emphasis on piano music, performing and interpretation. She is an editor of the series Chopin w Kręgu Przyjaciół (1995–97) and has also undertaken research into music of the 17th and 18th centuries. She is the author of more than 100 papers in various musicological periodicals.

ZYGMUNT M. SZWEYKOWSKI

Poniatowski, Józef (Michał Ksawery Franciszek Jan) (*b* Rome, 20 Feb 1816; *d* London, bur. Chislehurst, 3 July 1873). Polish composer and tenor. He was a great-nephew of the Polish King Stanislas August Poniatowski. He studied in Rome, then in Florence under C. Zanetti and F. Ceccherini. At the age of 17 he won a prize in mathematics, but devoted himself to composition, also first appearing as a singer in the theatres of Florence, Lucca, Bologna and Genoa, mostly in works by Rossini and Donizetti. His first opera, *Giovanni da Procida*, was staged privately in Florence (1838), and publicly in Lucca (1839) with Poniatowski singing the tenor part; it was well received. *Don Desiderio* was performed in Pisa (1840) and then, with great success, in Venice, Florence, Milan, Livorno, Bologna, Rome and Naples; in 1858 it was given at the Théâtre Italien in Paris. Of his other operas, *Bonifazio de' Geremei* (1843) was the most popular in Italy. He wrote librettos for some of his operas.

Poniatowski held diplomatic posts in Brussels (1849), London (1850–53) and finally Paris, where his *Pierre de Médicis* was staged at the Opéra in 1860, and his *Au travers du mur* at the Théâtre Lyrique in 1861. In that year he was appointed director of the Théâtre Italien. He accompanied Napoleon III into exile in England; his *La contessina*, written for Adelina Patti, was performed in London (as *Gelmina*), as were excerpts from his Mass in F. His operas are marked by melodic inventiveness and effective orchestration. Warsaw critics wrote that he sang like Rubini and composed like Donizetti (*Kurier Warszawski*, 3 March 1844). His ballad *The Yeoman's Wedding Song* remained popular in England for a long time. He wrote a booklet, *Le progrès de la musique dramatique* (Paris, 1859).

WORKS

OPERAS

MSS lost unless otherwise stated

Giovanni da Procida (os, 3, J. Poniatowski, after G.N. Niccolini), private perf., Florence, 25 Nov 1838; public, Lucca, Giglio, 1839
Don Desiderio, ossia Il disperato per eccesso di buon cuore (dg, C. Zaccagnini, after G. Giraud), Pisa, Accademia dei Ravvivati, 26 Dec 1840, *F-Pn*, excerpts arr. pf (Milan, *c*1841), vs (Paris, ?1858)
Ruy Blas (os, Zaccagnini, after V. Hugo), Lucca, Giglio, 2 Sept 1843
Bonifazio de' Geremei (os, 3, Poniatowski), Rome, Argentina, 28 Nov 1843, *Po*, excerpts (Milan, *c*1845); rev. as Marzio Coriolano e Lambertazzi, Florence, Pergola, 1848
La sposa d'Abido (os, 3, G. Peruzzini, after Byron), Venice, Fenice, Feb 1845, lib (Venice, 1845)
Malek Adel (os, 3, after S. Cottins: *Mathilde*), Genoa, Carlo Felice, 20 June 1846
Esmeralda (os, 3, F. Guidi and Poniatowski, after Hugo), Florence, Palazzo Vecchio, 26 June 1847
Pierre de Médicis (os, 4, J.-H. Vernoy de Saint-Georges and E. Pacini), Paris, Opéra, 9 March 1860, vs (Paris, 1860–61)
Au travers du mur (oc, 1, Vernoy de Saint-Georges), Paris, Lyrique, 9 May 1861, vs (Paris, 1861); rev. version, London, St George's Hall, 6 June 1873
L'aventurier (oc, 4, Vernoy de Saint-Georges), Paris, 26 Jan 1865, vs (Paris, 1870–72)
La contessina [La jeune contesse] (dg, 3, A. de Lauzières, after Vernoy de Saint-Georges and J. Adenis), Paris, Italien, 28 April 1868, *Pn*, vs (Paris, n.d.), rev. as Gelmina (F. Rizzelli), London, CG, 4 June 1872, lib (London, 1872)

IRENA PONIATOWSKA

Pönick, Johann Peter. *See* PENIGK, JOHANN PETER.

Ponnelle, Jean-Pierre (*b* Paris, 19 Feb 1932; *d* Munich, 11 Aug 1988). French director and stage designer. He studied in Strasbourg and at the Sorbonne, and made his début in 1950 with the sets for Henze's ballet *Jack Pudding* in Wiesbaden. In 1952 his sets for the première of Henze's *Boulevard Solitude* in Hanover made him internationally famous. Ponnelle's first stage production, in 1961, was Camus' *Caligula* at the Düsseldorf Schauspielhaus. He made his début as an operatic director with *Tristan und Isolde* at Düsseldorf in 1963, and within a few years was one of the most sought-after directors in opera. In 1968 he directed Rossini's *Il barbiere di Siviglia* at the Salzburg Festival, where he subsequently directed operas including *Le nozze di Figaro*, *La clemenza di Tito*, *Idomeneo*, *Don Giovanni*, *Die Zauberflöte*, *Così fan tutte* and *Moses und Aron*. He and Nikolaus Harnoncourt produced a Monteverdi cycle in Zürich in 1975–9 that has gone down in theatrical history. He directed a notable Mozart cycle in Cologne in the 1960s, and another in Zürich two decades later. In Munich he was director of the premières of Reimann's *Lear* in 1978 and *Troades* in 1986. At Covent Garden Ponnelle was designer and director of *Don Pasquale* (1973), *Aida* (1984) and *L'italiana in Algeri* (1988); he also directed *Falstaff* at Glyndebourne in 1977, the *Ring* in Stuttgart (1977–9) and *Tristan und Isolde* for the Bayreuth Festival (1981). In the USA he worked at the Metropolitan and in Chicago, Houston and San Francisco. He was also interested in the televising and filming of opera and made film versions of many of his productions.

Ponnelle's work, based on a profound knowledge of the texts and music of the operas he directed, was notable for its imagination, refinement and visual beauty, qualities that went hand in hand with his extraordinary sense of theatre.

IMRE FABIAN

Pons, José (*b* Gerona, *c*1768; *d* Valencia, 2 Aug 1818). Spanish composer. He was a choirboy at Gerona Cathedral, where he studied with Jaime Balius and probably with Manuel Gonima. In 1789 he is mentioned as 'a musician of Madrid'. In 1791 he was made choirmaster at Gerona Cathedral, and subsequently was appointed vice-choirmaster at Córdoba Cathedral. In 1793 he was named choirmaster of Valencia Cathedral, where he remained until his death. All his known works are religious, apart from a few overtures and symphonies (ed. in *The Symphony 1720–1840*, ser. F, v, New York, 1983), which were, however, composed for the religious concerts that took place in some cathedrals at the more important feasts. He wrote masses, psalms, Lamentations for Holy Week, motets and villancicos. Particularly noteworthy are his responsories for Christmas. His work survives in several Spanish archives (*E-VAc*, *G*, *C*, *SC*, *Bc*). He was a gifted composer and a solid technician whose individuality emerges more vividly in large-scale works than in small. Pons enjoyed a considerable reputation in his lifetime.

JOSÉ LÓPEZ-CALO

Pons, Juan (*b* Ciutadella, Menorca, 8 Aug 1946). Catalan baritone. He studied in Barcelona and joined the Liceu chorus, singing bass roles such as Banquo, Tom (*Ballo in maschera*) and the King (*Aida*). As a baritone, he sang Ernesto (Donizetti's *Parisina*) and Giorgio Germont in 1978, followed by Gérard (*Andrea Chénier*) in 1979. That year he made his Covent Garden début as Alfio (*Cavalleria rusticana*) and sang Egberto (*Aroldo*) in concert at Carnegie Hall, New York. His decisive breakthrough came in 1980, when he stood in at short notice as Verdi's Falstaff at La Scala. During the next 15 years he appeared in most of the leading European opera houses; he made his Metropolitan début in 1985 as Amonasro, and has also sung in San Francisco and Chicago. Pons's repertory includes Henry Ashton, Belcore, Scarpia, Sharpless, Jack Rance, Massenet's Herod, and many of the great Verdi baritone roles, several of which he has recorded. On the opening night of the 1994–5 Met season, he sang Michele (*Il tabarro*) and Tonio (*Pagliacci*). A fine actor, with a large, evenly produced voice, he is equally assured in tragic parts such as Boccanegra and comic roles like Melitone, Gianni Schicchi and, especially, Falstaff.

ELIZABETH FORBES

Pons, Lily (Alice Joséphine) (*b* Draguignan, nr Cannes, 12 April 1898; *d* Dallas, 13 Feb 1976). American soprano of French birth. A piano student at the Paris Conservatoire, she received her first vocal instruction from Alberti de Gorostiaga, and then studied with Zenatello in New York. She made her operatic début in 1928 at Mulhouse as Lakmé, with Reynaldo Hahn conducting. She then sang in French provincial houses as Gretel, Cherubino, Blonde, the Queen of Night and Mimì. On the recommendation of Zenatello, she went to the Metropolitan, making her début in 1931 as Lucia. She caused a sensation and thereafter remained with the company for 28 seasons. She had success as Gilda, Amina, Marie (*La fille du régiment*), Philine (*Mignon*), Olympia and, above all, Lakmé. In 1935 she sang Rosina at Covent Garden and Gilda and Lucia at the Paris Opéra. She sang in South America, San Francisco (where her roles included the Queen of Shemakha and Violetta), Monte Carlo and Chicago, and made several films. She was married to André Kostelanetz from 1938 to 1958. She made her stage farewell at the Metropolitan in 1958 as Lucia. Pons possessed a pure, agile, high coloratura voice, as can be heard on her many recordings.

DENNIS K. McINTIRE/ALAN BLYTH

Pons [Ponset, Ponsett] **de Capdoill** [Capduill, Capduoill, Cabdueill, Capduch, Capduelh, Capdueil, Chapteuil] [Pontius de Capitolio] (*fl* before 1190–after 1220). Troubadour. According to the brief medieval *vida*, he was a knight from the diocese of Puy-Ste-Marie-en-Velay (Haute-Loire). He can probably be identified with the Pontius de Capitolio who is documented from 1195 to 1220 in relation to his wife's property of Vertaizon, and who seems to have died by 1236. He must have been well known as a courtly poet by about 1190, to judge from a poem by Elias de Barjols which praises his 'guaieza' (literally 'cheerfulness', but with connotations of courtly elegance and general good breeding). At about this time he may also have exchanged verses with Folquet de Marseille and with the Catalan Guillem de Berguedà. His crusading songs have been convincingly dated to *c*1213, and two of his poems may be addressed to Beatrice of Savoy, who married Raymond-Berenger IV, Count of Provence, in 1217–19. The lady Azalaïs or Alazais, whose death he commemorated in a *planh* (lament), is described by the *vida* as the wife of Oisil (Odilon) de Mercuor, but no such person can be identified historically; nor is there any corroboration for the *vida* claim that Pons died on crusade in the Holy Land.

The 27 lyrics usually attributed to Pons include three crusading songs, the lament for Azalaïs and one piece which claims to be a *descort*, but does not show the irregular metrical form usually associated with that genre. The others are love songs of conventional type, in which the poet presents himself as being ennobled by his faithful love for a lady who is indifferent to his attentions. Pons has received little critical attention, and his works have not even been re-edited in the 20th century. His is a typical rather than a distinctive voice: there are few memorable turns of phrase and his versification is unambitious. He descends to gimmickry in *Us guays conortz*, in which each stanza uses a particular word and its derivatives as many times as possible, usually more than once in each line.

Only four of his poems survive with music, all love songs. The melodies are clearly structured, with a good

deal of varied repetition and much use of melodic rhyme. Two of them make conspicuous use of triadic phrases, which is quite an unusual feature in troubadour song.

STEPHEN HAYNES/GWYNN SPENCER McPEEK

Pons d'Ortafas (*fl* 1214–40). Troubadour. Two works are ascribed to this poet, probably identifiable with Pons I d'Ortaffa (in the vicinity of Perpignan), who appears in documents of 1214 and 1240. *Si ay perdut mon saber* (PC 379.2; of contested authorship) survives with music. In bar form, the melody is interesting for the manner in which it develops in the cauda the opening motif of the second phrase.

THEODORE KARP

Ponse, Luctor (*b* Geneva, 11 Oct 1914). Dutch pianist and composer of Swiss origin. He studied at the Valenciennes Conservatory receiving the *prix d'excellence* in theory and solfège (1930) and piano (1932). He continued his piano studies with Johny Aubert and Roger at the Geneva Conservatoire (*prix de virtuosité* 1935). In 1935 he settled in the Netherlands as a concert pianist with a particular predilection for the modern repertoire. He introduced the music of Bartók into the Netherlands. Even before Ponse took composition lessons under Badings, his *Fantasie* for orchestra was awarded a prize at the Leboeuf Concours (1936). Later on Ponse attended courses in electronic music, after which he was employed at the University of Utrecht (1965–79). During that period he was also principal teacher of piano at the Groningen Conservatory.

Ponse composes in a 12-note style which is characterized by great clarity. He wrote a great deal of ballet music, and later devoted himself to composing electronic music, such as the Concerto no.1 for piano, orchestra and tape (1980). He twice won prizes in the Queen Elizabeth Competition, in 1953 (Symphony no.1) and in 1965 (Violin Concerto no.2). In 1995 *Triptyque* (1992) was awarded third prize in the Kerkrade World Music Competition.

EMILE WENNEKES

Ponselle [Ponzillo], **Rosa (Melba)** (*b* Meriden, CT, 22 Jan 1897; *d* Green Spring Valley, MD, 25 May 1981). American soprano. She studied singing with her mother and then with Anna Ryan. She began to appear in film theatres and vaudeville, often with her elder sister Carmela (a mezzo-soprano who was to sing at the Metropolitan from 1925 to 1935). In 1918 her coach William Thorner brought her to the attention of Caruso and Gatti-Casazza. In the first Metropolitan *La forza del destino* she made an unprecedented début – the first operatic performance of her life – as Leonora (1918), opposite Caruso and De Luca. She had prepared the role with Romano Romani, who remained her principal operatic and vocal tutor. She sang at the Metropolitan for 19 seasons, undertaking 22 roles. Perhaps most celebrated as Norma, she also enjoyed extraordinary successes in *Oberon*, *Ernani*, *Don Carlos*, *La Gioconda*, *Andrea Chénier*, *Guillaume Tell*, *L'amore dei tre re*, *Don Giovanni* (Donna Anna), *Cavalleria rusticana*, *La traviata*, *La vestale* and *L'Africaine*. She also participated in Breil's *The Legend*, Montemezzi's *La notte di Zoraïma* and Romani's *Fedra*. In 1935 she attempted Carmen, and experienced her only notable failure. Two years later she retired from opera, reportedly after her request for a revival of *Adriana Lecouvreur* was rejected, and vowed never again to set foot in the Metropolitan after her final performance (Carmen, 1937). She made her Covent Garden début as Norma in 1929, returning as Violetta, Leonora (*Forza*) and the heroine of Romani's *Fedra*; at the Florence Maggio Musicale in 1933 she sang Julia (*La vestale*). Although her repertory

Rosa Ponselle in the title role of Bellini's 'Norma'

was broad, she never sang Puccini or Wagner, about which she later confessed regret.

Ponselle's voice is generally regarded as one of the most beautiful of the century. She was universally lauded for opulence of tone, evenness of scale, breadth of range, perfection of technique and communicative warmth. Many of these attributes are convincingly documented on recordings, among them a nervously vital portrayal of Violetta from a complete Metropolitan recording of *La traviata* (1935). In 1939 and 1954 she made a few private song recordings, later released commercially, the later set revealing a still opulent voice of darkened timbre and more limited range.

MARTIN BERNHEIMER/R

Ponset [Ponsett] **de Capdoill** [Cabdueill, Capduch, Chapteuil etc.]. *See* PONS DE CAPDOILL.

Pont [de Ponte], **Jacques** [Giaches, Jacobus, Jacquet] **du** (*b c*1510; *d* after 1546). French composer active in Italy. He was taken as a young man into the service of Cardinal Giovanni Salviati, papal legate in France, in 1527. Cardinal Salviati returned to Italy with Du Pont in the autumn of 1529, settling in Rome towards the end of 1530. Du Pont remained in the Cardinal's service for at least 20 years, but that did not prevent him from working in other capacities as a musician in Rome. He was probably the 'Jacquet' who sang in the papal chapel between February 1531 and March 1532, as Jacquet of Mantua was almost certainly already settled in Mantua. Du Pont was probably also the 'Jacobus alias Giachetto', a Frenchman who sang in the Cappella Giulia of S Pietro from 1 April 1536 until some time in 1537–8 (for which the accounts are lacking). This would coincide with a definite period of service as *magister capellae* of S Luigi dei Francesi from some time before 14 October 1536 to the end of January 1538, but the entire choir of S Luigi at that time comprised only one adult singer besides the choirmaster and one or two boys, so it should not have been difficult for Du Pont to fulfill his duties to both institutions. About 1540 he was the first composition teacher of the Bolognese composer Bartolomeo Spontone. He was the only member of Cardinal Salviati's household to be specially mentioned in the cardinal's will of 1544.

Du Pont's most important work is his cycle setting the whole of Pietro Bembo's *Stanze* (a discursive poem in *ottava rima*) for four voices, perhaps the most ambitious cyclic composition between the Naples L'HOMME ARMÉ masses and Palestrina's motets on the Song of Songs. The cycle's unity is shown by the climactic eight-voice setting of the final stanza as well as by the coherent, closed tonal structure (it begins in G-Dorian and ends in G-Mixolydian, with many stanzas in other tonalities, but it is not ordered in linear fashion by the modes). There is considerable variety of texture, pacing and scoring as well. Du Pont's madrigals reflect the style of Arcadelt, to whom (as well as to Corteccia) the immensely popular *Con lei fuss'io* was ascribed in early, uncorrected editions of *Il primo libro di madrigali ... a misura di breve* (RISM 154217, 154317; 19 editions from 1546 to 1634 assign it to Du Pont). Du Pont's was the first of many madrigals to set these words by Petrarch. His soprano part was re-set with three new voices by Jacquet de Berchem, and Andrea Gabrieli wrote a *Capriccio sopra 'Con lei foss''o'* for keyboard. *Cald'arost!* is a lively setting of a roast-chestnut seller's patter, while *Tant'è l'assentio* combines simulaneous duple and triple metres in a striking and unprecedented fashion. Metrical playfulness also distinguishes Du Pont's chansons, which resemble those of Janequin more than those of Sermisy. (Two of them were ascribed to Nicolas Payen on their first appearance in RISM 153819, but this was corrected to Du Pont in all later editions of the collection.) His motets for four and five voices are attractive, if conventional, but the setting of Psalm iii, *Domine, quid multiplicati sunt*, is a forceful and varied work, which may have been modelled on a lost motet by Josquin.

WORKS

Cenantibus illis accepit Jesus panem (i), 4vv, ed. in SCM, xiii (1993); Domine, quid multiplicati sunt, 8–9vv, 15641; Letabundus exultet fidelis chorus, 5vv, ed. in SCM, xiv (1995)

50 stanze del Bembo, 4, 8vv (Venice, 1545, 5/1567), ed. in Musica rinascimentale in Italia, vii (1981–2)

Cald'arost!, 4vv, ed. in CMM, lxxiii/4 (1980); Con lei fuss'io, 4vv, ed. in CMM, lxxiii/1b (1978); Tant'è l'assentio e'l fel, 4vv, ed. in CMM, lxxiii/2 (1978)

Fringotés, jeusnes fillettes, 4vv, 15485; Gracieuse en dictz et faictz plaisante, 4vv, 15365; Hau de par Dieu, hau m'amie, hau, 4vv, 15485

DOUBTFUL WORKS

Cenantibus illis accepit Jesus panem (ii), 4vv, 15427; attrib. Nicolas Payen by 16th-century hand in *GB-Lbl* copy, probably attrib. Du Pont by confusion with his other setting

JEFFREY DEAN

Ponta [Ponte], **Adamus de** [Pontanus, Adamus] (*fl* 1563–85). Flemish composer. He was a singer at the Hofkapelle in Vienna from 1 September 1563 until 31 August 1564. On the death of the Emperor Ferdinand I both he and Jean Guyot, the Kapellmeister, were pensioned off. After entering the service of the Archduke Ferdinand of Tyrol, he was sent to the southern Netherlands in 1567. He remained in Liège, where from 1567 to 1569 he was succentor at St Jean l'Evangéliste and rector of the altar of St Ambroise. He was succeeded in 1570 by J. Rolandi d'Oreye, and from that year his name appears in the payrolls of St Lambert's Cathedral, Liège, as succentor and as beneficiary of the altar of St Denis, one of the 12 altars of the cathedral designated for musicians.

On 15 September 1576 de Ponta was elected canon of St Materne in the cathedral. The appointment resulted in tensions between de Ponta and the cathedral chapter, and he resigned on 2 May 1577. He may have returned directly to St Jean, where he was a singer by 10 September 1581. On 1 March 1582 the chapter of St Jean named 'M. Adamus de Ponte' succentor. On 10 June 1585 'M. Adam sanckmeister zu S Johann zu Lüttich und seine zwey Jungen' were among the 15 musicians assembled by Martin Peudargent to celebrate the marriage of Wilhelm, Duke of Kleve, to the Countess Jacobea de Bade in Düsseldorf. This is the last known reference to de Ponta.

His style is predominantly imitative, characteristic of Flemish composers, showing considerable expertise and invention. The beginning of the motet *Apparuit* well illustrates his technique: the six voices are divided into two groups of three which repeat the same entry; two of the three sing a descending motif in canon at the octave, while the third takes up the same motif in inversion. Similarly, in the two sections of the motet *Tu es pastor*, four of the five voices sing a motif in canon, and then they sing a number of imitative motifs against which the fifth voice repeatedly states the first six notes of the plainsong *Tu es Petrus* in semibreves, spread out at intervals of eight breves. These highly organized works display an impressive technical facility. Four of de Ponta's motets, for four to five voices, are in RISM 1568[3] (ed. J. Quitin, *Les musiciens de Saint-Jean l'Evangéliste à Liège de Johannes Ciconia à Monsieur Babou vers 1400 – vers 1710*, Liège, 1982); other works survive in manuscript (*D-AAm*, *Dl*, *Z*).

JOSÉ QUITIN/HENRI VANHULST

Pontac, Diego de (*b* ?Zaragoza, 1603; *d* Madrid, bur. 1 Oct 1654). Spanish composer. For details of his early years we are indebted to his brief autobiography, *Discurso . . . remitido al racionero Manuel Correa*, dated 22 June 1633. He began studying music at the age of nine at Zaragoza, studying singing and 'a little counterpoint' there under Joan Pau Pujol and Francisco Berge. From about 1614 he studied with Francisco de Silos and later studied counterpoint with Pedro Rimonte. In 1620 he became *maestro de capilla* at the Hospital Real, Zaragoza, and later was sent to Madrid to study composition under Mateo Romero and Nicolás Dupont. After failing to obtain an appointment at Plasencia, Pontac received a prebend as *maestro de capilla* at Salamanca; he soon became examiner in singing at the university there. He was preferred to many other competitors for a chaplaincy at Madrid and in 1627 became *maestro de capilla* at the Iglesia Mayor at Granada. In each position he took pride in having many students. In 1644 he became *maestro de capilla* at Santiago de Compostela, and from 7 September 1649 to 8 July 1650 he held a similar position at the Cathedral of La Seo, Zaragoza. He was at Valencia Cathedral from 4 August 1650 to September 1653. Finally he moved to Madrid, where on 22 March 1654 he became deputy *maestro de capilla* of the royal chapel.

In 1631 Pontac prepared two large manuscripts of his works for publication, one of which, lacking about 20 leaves at the end, still exists at the Generalitat de Catalunya, Barcelona. It was submitted to the critical scrutiny of numerous prominent musicians, who spoke highly of its contents, and Pontac wrote his autobiography to support publication. However, none of the music was printed before the 19th century. The manuscript originally contained six four-part masses, one for six voices, and two four-part mass antiphons; five four-part and two five-part motets; four six-part responsories and two four-part *Salve regina* cycles. Additional Latin works include two masses (*E-E*, *MO*), 11 psalms (*BO*, *E*, *V*, *VAcp*, *Zac*), two *Nunc dimittis* settings (*E*, *VAcp*), four settings of the *Magnificat* (*E*, *VAcp*, *Zac*) and two motets (*VAcp*). Works with Spanish texts include a *jácara* and a *romance* (both *Zac*). Additional works may be in Córdoba Cathedral, and seven villancicos are listed in the catalogue of the library of João IV of Portugal, destroyed in an earthquake in 1750.

The Latin sacred works are in a polished *a cappella stile antico*. Four motets, *Laetatus sum*, *Magnificat*, *Cum invocarem* and *Beatus vir* (in *Zac* B-35, ed. in Ezquerro Esteban), are for eight-part double chorus. Mostly chordal, they feature speech rhythms, quick alternation between choruses and use of an organ *basso seguente*. The *jácara* and *romance* (ed. E. Ezquerro Esteban, *El músico aragonés Diego de Pontac (1603–1654)*, Zaragoza, 1991), for double chorus with *basso seguente*, are in a popular style with liberal use of hemiola.

Ponte, Jacques du [Giaches de]. *See* PONT, JACQUES DU.

Pontelibero, Ferdinando ['Ajutantini'] (*b* Como, 1770; *d* Milan, 1835). Italian violinist and composer. His surname derives from the translation of the surname of his paternal grandfather Ferdinand Stekbucher, who was lieutenant of the Imperial garrison stationed in Como; the nickname 'Ajutantini' refers to the military rank of 'Adjutant', which his grandfather also held. After working as an orchestral violinist in Como, Pontelibero became a member of the La Scala orchestra at the end of the century. According to Rovani's historical novel *Cento anni* (1857), he composed the controversial republican ballet *Il Generale Colla in Roma* (1797). Rovani draws an effective picture of Pontelibero who 'from reading Rousseau, became one of the first to pay close attention to what was happening in France; one of the first to long for the revolutionary wave to break on the shores of Italy'. He provided scores for at least ten more ballets between 1799 and 1812. A trip to Paris in 1806, mentioned by Fétis but otherwise unverified, may account for the publication there of his opp.3 and 4.

In 1814 Pontelibero became first violin for the ballet at La Scala, a promotion criticized by the *Allgemeine musikalische Zeitung*: 'How they chose a Mr Pontelibero . . . even the orchestra cannot comprehend'. During the tenure (1812–21) of Salvatore Viganò as principal choreographer of La Scala, he is known to have contributed to only a few ballets, since Viganò generally ignored local composers. Only one of these works, *Numa Pompilio* (1815), was choreographed by Viganò, whom the *Allgemeine musikalische Zeitung* reported to have 'done no one a favour' by choosing Pontelibero. During Pontelibero's last years at La Scala (1819–33), he appears to have composed only chamber music. The *Allgemeine musikalische Zeitung* also reported several unsigned collaborations in the 1820s with the Milanese amateur composer Count Cesare Castelbarco, in which Castelbarco provided 'the principal [first violin] part along with the obbligato portions of the others', and Pontelibero 'the accompaniment, which consists chiefly in *Brillen* [Alberti bass figures]'. In spite of his German critics, Pontelibero was admired by the Milanese, for whom his masterful string writing and brilliant, if less than profound, style had an immediate appeal. Two comedies by a Ferdinando Pontelibero, perhaps this one, were performed in Milan and published there in 1832.

WORKS

BALLETS

performed at La Scala, Milan, unless otherwise stated

Il Generale Colla in Roma (Il ballo del Papa), 25 Feb 1797; Gonzalvo in America, Jan 1799; I francesi in Egitto (Buonaparte in Egitto), 11 Feb 1799; Zulima, Jan 1800; Sadak e Kalasrad, Jan 1801; Il sagrifizio di Curzio, 26 Dec 1804; Alcina e Ruggiero, aut. 1805; Magri e grassi, 16 June 1806; Cambise in Egitto, 30 Sept 1807; La morte di Whaytsong, ultimo imperatore della dinastia chinese, 24 Jan 1809, Acts 2–5 by G. Ferliga

Dances in Azione da eseguirsi nella festa del Senato Consulente per la Pace di Vienna e pel ritorno dalla guerra di S.A.I. il Principe Vicere, 1810; Manco-Capac, Milan, Cannobiana, sum. 1812; Ov. to La noce di Benevento, 25 April 1812, *I-Mc*, ballet composed by F. Süssmayr; Numa Pompilio, 25 Feb 1815, 2 excerpts, arr. hpd (Milan, n.d.), with some music by others; dances in Il mistico omaggio (cant.), 15 March 1815

Dances in La mania del ballo, 9 Aug 1815, 2 excerpts, arr. pf (Milan, n.d.); 1 dance in Tamerlano, 29 May 1816 (Milan, n.d.); dances in Ramesse, o sia Gli arabi in Egitto, 5 June 1819; dances in Elena e Gerardo, Venice, La Fenice, carn. 1820

KATHLEEN KUZMICK HANSELL, GILDA GRIGOLATO, MAURIZIO PADOAN

Ponti, Michael (*b* Freiburg, 29 Oct 1937). American pianist. He studied in Washington with Gilmour McDonald from 1943 to 1955, and was then taught in Frankfurt by Erich Flinsch, a former assistant of Sauer. Ponti made his first concert tour in 1954 and two years later entered the Busoni Competition in Bolzano. Placed fourth, he re-entered the contest another three times and in 1964 was awarded first prize. His reputation rests largely on the many recordings he made for Vox in the 1970s, which include piano concertos by such 19th-century composers as Bronsart von Schellendorf, Goetz, Stavenhagen, Scharwenka and Moszkowski, and sets of complete piano music by Tchaikovsky and Skryabin. Ponti's outstanding technique and ability to master the intricacies of virtuoso piano works made him an impressive champion of such music, although all too frequently he allowed his exceptional facility to swamp the qualities of musical insight that he was capable of conveying. More recently he has toured widely with a piano trio, formed in 1977 and featuring Robert Zimansky (violin) and Jan Polasek (cello).

JAMES METHUEN-CAMPBELL

Ponticello (It.). *See* BRIDGE (i) and SUL PONTICELLO.

Pontifical (from Lat. *pontificale*). A liturgical book of the Western Church containing rites proper to a bishop: the dedication of churches, the consecration of altars, the blessing of sacred vessels, conferral of clerical ordination, the blessing of abbots and abbesses, confirmation, the blessing of the holy oils. It often contains music for these rites. *See* LITURGY AND LITURGICAL BOOKS, §II, 2(iv).

Pontio [Ponzio], **Pietro** [Johannes Petrus] (*b* Parma, 25 March 1532; *d* Parma, 27 Dec 1596). Italian theorist and composer. His first documented position (1565–7) was as *maestro di cappella* at S Maria Maggiore, Bergamo. He was recommended for the post by Cipriano de Rore; no evidence exists, however, that Pontio was Rore's student. Forced to leave Bergamo following hearings centring on allegations of poor teaching, gambling and consorting with prostitutes, he returned to Parma to serve as *maestro* at the church of the Madonna della Steccata. In March of 1569 he was hired as *maestro* at S Alessandro in Colonna, Bergamo, a post he held until September of 1574. He may have spent the next few years in Pavia serving Girolamo

Cornazzano, a nobleman from Parma and cavalier to the King of Portugal. In April of 1577 Pontio was called to Milan Cathedral, where he served as *maestro* until November, 1582. Although he left of his own volition, letters indicate that Cardinal Borromeo (who oversaw the cathedral) had concerns about Pontio's behaviour and was anxious to replace him. He returned to Madonna della Steccata, serving there for nearly ten years. On 22 May 1592 he was admitted to the *Consorzio* of Parma Cathedral, having received a benefice there. He served his final years at Parma, and he is buried there. In his will he left all his music to the *Consorzio*; this collection has not survived.

Pontio's fame rests primarily on his treatises, the *Ragionamento* (1588) and the *Dialogo* (1595). Both are rich in textual and musical citations, showing Pontio to be well-read and encyclopedic in his musical knowledge. The *Ragionamento*, the more practical of the two, is most notable for its integration of the concepts of psalm tone and mode. Pontio also presented a clear system of cadential hierarchies within the modes. His discussion of the difference between singer and musician provides valuable information on the nature of unwritten contrapuntal practice. The treatise also offers cogent treatment of the rules of composition for various genres, vocal and instrumental. The most important contributions in this area concern psalms and *Magnificat* settings and the techniques of parody. The *Dialogo* continued the programme begun in the *Ragionamento*. In the first portion, Pontio discussed musical ratios as well as humanistic and theological aspects of music. In the final dialogue he presented a minor summa of contrapuntal techniques. The most intriguing section, however, is the central dialogue. Here, couched in terms of the *varietà* among composers, he dealt at length with musical criticism in an intelligent and practical manner, citing nine specific qualities in musical composition. Pontio's works were cited by later writers, two of whom stand out for the scope of their indebtedness. Pietro Cerone incorporated into his *El Melopeo y maestro* (1613) a paraphrase of virtually the whole of the *Ragionamento*, along with text and examples from the third portion of the *Dialogo*. Valerio Bona's *Regole del contraponto* (1595) is little more than a skeletal version of the *Ragionamento*.

Significantly, Pontio's most important theoretical contributions are illustrated in his music. His compositions (excepting a single madrigal) are all sacred. He produced multiple collections of masses and motets and single collections of *Magnificat* settings, psalms, hymns and Lamentations. His style is typical of the many north Italian composers of the period, and seems to owe more to Jacquet of Mantua (who is the most frequently cited composer in his treatises) than to his reputed teacher, Rore. His music is relatively thick textured, with lines of short duration and sometimes surprising direction. His harmonic procedure is straightforward and tied inextricably to the cadential hierarchies of the mode. He is most intriguing in his use of pre-existing materials. In his Requiem and in the hymns, chant melodies are integrated into the texture in a manner that departs from typical paraphrase style. This finds clearest expression in his *Missa de Beata Virgine*, a remarkable work based not on a series of chant paraphrases, but on the parody-like working out of the Kyrie, which is based solely on the plainsong Kyrie. He also shows ingenuity in his other parody works, most notably his *Missa 'Vestiva i colli'*, which makes use of identifiable material from both the original madrigal and Palestrina's own parody of it.

RUSSELL E. MURRAY JR

Pontoni, Bruneto [Bruneto dalli Organi; Bruneto dalli alpichordi] (*b* 1499–1506; *fl* 1530–64). Italian maker of keyboard instruments. Active in Verona, he is known from four signed and dated virginals (1532, 1556, 1558 and 1564). A further three virginals and one harpsichord have been attributed to him (see Wraight) and he is linked with two other harpsichords. He is also known to have worked on the organ of S Maria in Organo, Verona, in 1530 and again in 1540–41. His virginals display a style of construction that is midway between the Milanese and the Venetian. The casework is like Venetian virginals but the keyboards are only partially projecting. These virginals are unusual in showing the use of a high 8′ pitch (a′ = *c*530). One harpsichord (Musée de la Renaissance, Ecouen) is unusually decorated compared with other Italian harpsichords and may have been made for a foreign customer, possibly from southern Germany or Austria.

DENZIL WRAIGHT

Ponty, Jean-Luc (*b* Avranches, 29 Sept 1942). French jazz violinist. His father was a violin teacher and the director of the school of music in Avranches, and his mother taught the piano. He played the violin and piano from the age of five and the clarinet from the age of 11. At 13 he left school to concentrate on becoming a concert violinist; he studied for two years at the Paris Conservatoire, winning the *premier prix* when he was 17. He then played with the Lamoureux Orchestra for three years, during which time he was introduced to jazz.

After his military service (1962–4) Ponty performed in swing and bop groups, but in March 1969 he went to Los Angeles to work with Frank Zappa. After returning to France he led a free-jazz group, the Jean-Luc Ponty Experience (*c*1970–72). He settled in the USA in 1973 and toured with Zappa's Mothers of Invention, then with the second Mahavishnu Orchestra (1974–5). From 1975 into the 1980s he led jazz-rock bands, touring extensively and reaching a large audience with his recordings. In the 1990s he strove to achieve a synthesis of jazz and Afro-pop.

By developing a range of new sounds, grounded in electronic effects, Ponty has made a place for the violin in modern jazz styles. At first he simply amplified his acoustic violin in order to be heard, but from 1969 he used mainly electric violin and violectra (an electric instrument tuned an octave below the violin), which he played through distortion, Echoplex, phase shifter and wah-wah devices, sometimes combining these with the conventional mute. In 1977 he replaced the two instruments with a five-string electric violin, the lowest string on which (tuned to *c*) offered part of the violectra's range. With his own bands he also plays a violin synthesizer, and in the 1980s he often reverted to the acoustic instrument, using the synthesizer to create electronic effects. The broad spectrum of sounds he produces and the contrast between them and conventional jazz timbres may be heard on the swing album *Violin Summit* (1966, Saba), recorded with Svend Asmussen, Stephane Grappelli and Stuff Smith, and the jazz-rock album *Jean-Luc Ponty–Stephane Grappelli* (1973, Amer.).

Ponty is a supreme exponent of jazz-rock. *Upon the Wings of Music* (1975, Atl.) marked his move away from the raucous styles of Zappa and the Mahavishnu Orchestra; instead he developed a style in which his imaginative themes and improvisations – at times soaring and lyrical, at times bluesy, biting and rhythmically complex – are accompanied by rich, highly polished ostinatos based on soul and rock rhythms.

Arias, duets etc, *D-Dl*, *I-Gl*, *Nc*

JAMES L. JACKMAN

Poole. Coastal town in south-east England, near BOURNEMOUTH; in 1985 its Arts Centre became the new base for the Bournemouth orchestras.

Poole [Poul], **Anthony** (*fl c*1670–90). English composer. He may be the Anthony Poole (*b* Spinkhill, Derbys., 1627/1629; *d* Liège, 13 July 1692) who was educated at St Omer's College (*c*1641–6) and at the English College, Rome (1646–8), and who was already ordained when he became a Jesuit on 8 October 1658. He is recorded at St Omer's College at various times between 1659 and 1678, and at Liège in 1672 and from 1679 until his death in 1692.

Nearly all Poole's surviving music is for one or more bass viols, suggesting that he was a player-composer. 15 solos by him (*GB-Ob* Mus.Sch.C.71) are mostly divisions on a ground, but include also dance movements grouped into short suites. Three sets of elaborate 'divisions' for two bass viols and continuo (*GB-DRc* D.4), one of which is by Jenkins, are attributed to 'P. Poul'; it is not clear if this is the same man. Most of the pieces in the Oxford manuscript also appear in a manuscript bearing the arms of James II (*F-Pn* VM^7 137323 and 137317) with three more pieces which are unknown elsewhere. Another piece (in *A-ETgoëss* A) is attributed to 'Poli'. In the Paris manuscript three of the Poole pieces are given saints' names. John Playford's *The Division Violin* (1684) includes two of his violin solos, and two sonatas for violin, bass and continuo by Poole are in the Chicago University Library (MS 929). Four three-part airs attributed to 'Mr Poole' (*GB-Ob* Mus.Sch.E.443–6) match the style of six sets of 'divisions' and a sonata for violin, bass viol and continuo by 'F. Poole' (*B-Bc* Litt XY no.24910).

ANDREW ASHBEE

Poole, Chris (*b* New York, 23 June 1952). Danish composer, flautist and saxophonist of American birth. She was the first woman to complete the applied music programme at Berklee College of Music in Boston (1974). In 1975 she moved to Denmark, taking Danish citizenship in 1986. In addition to establishing herself as a performer, she grew rapidly as a composer during the 1980s and early 90s, her musical activities marked by her feminism (she was one of the driving forces behind two major Danish women's music festivals in 1978 and 1996). She has composed music for the ballet and for the theatre, collaborating with the Norwegian actress Juni Dahr in *Joan of Arc* (1988), *Ibsen Women* (1990), *The Lady from the Sea* (1993) and *The Doll's House* (1997); she and Dahr performed these works in Pakistan, India, Venezuela, Colombia, Russia and the USA, as well as in Europe. *The Lady from the Sea* won the annual critic's award in San Francisco for best music drama. In her music Poole explores a broad spectrum of traditional and untraditional flute sounds in a synthesis of jazz, minimalist, folk and New Age styles. She has released two compact discs featuring her own music and also music composed in collaboration with the pianist Pia Rasmussen, *Solo Flute* (1990) and *To the Powers that Be* (1993).

WORKS
(*selective list*)

Dramatic (incid music unless otherwise stated): Joan of Arc, 1988; Ibsen Women, 1990; Liv Laga, slide projections, 1991; Rødder (Trio no.1), dance score, 1991; Troll, film score, 1991; Spejl [Looking Glass], dance score, 1992; The Lady from the Sea, score, 1993; Trae [Tree], dance score, 1994; The Doll's House, 1997

Chbr: Swim!, 1v, fl, digital delay, 1986; Bamboo Boogie, bamboo fl, synth, 1988; Memories of Thailand, 3 bamboo fl, 1988; Regnbuen Synger, 4 solo vv, fl, 1990; Sangen til Hildegard von Bingen, 1v, a fl, 1990; Caught in the Act, fl, kbd, 1994; Tango Light, a fl, pf, accdn, 1995

Solo fl: Breath/Attack, 1985; Langeland Ladies, 1985; En hilsen til gudinderne, 1986; A Woman Unfolding, 1986; Mavedans for Ishtar, 1988; Missing You Ma-dier-a, 1988; Til minde om Maren Urtegaard, 1988; Silly Spheres, 1990; Hilsen til Godtved Salen, 1991; Nr.40, 1992

INGE BRULAND

Poole, Geoffrey (Richard) (*b* Ipswich, 9 Feb 1949). English composer. He studied at the University of East Anglia with Philip Ledger (1967–70) and at Southampton University with Alexander Goehr, Jonathan Harvey and Eric Graebner (1970–71). He resumed his studies with Goehr at Leeds University (1973–5), where he was also a lecturer (1975–6). He then taught at Manchester University, where he became a senior lecturer in composition and contemporary music. He has also taught at Kenyatta University, Nairobi (1985–7). He was awarded the DMus by Southampton University (1990) and has won the Clements Memorial Prize (1974) and Radcliffe Award (1977). From 1997 to 1998 he was a Visiting Fellow at Princeton University.

To call Poole eclectic is an understatement; he is a classic blend of academic, maverick, craftsman, idealist and dissident. While the influences of Ligeti and of African and Asian music lurk in the background, he is an obsessive, if undogmatic, experimenter. He eschews notions of stylistic consistency in pursuit of solutions to specific ideas which frequently stretch expression and content. He has used microtones, ethnic cross-over, extended notational and performance techniques, polyrhythms, occasional electronics, and a language ranging from the intensely mystical and intimate to the brightly extrovert. He can also write conventionally and compose good tunes.

WORKS

Stage: Forcefields, dancers, tape, 1980; Biggs V Stompp does it again and again . . . (music theatre), 3 actors/singers, 5 insts, 1981–2; Rune Labyrinth (Anglo-Saxon texts), narr, dancer, ob, hp, 1997

GILES EASTERBROOK

Poot, Marcel (*b* Vilvoorde, nr Brussels, 7 May 1901; *d* Brussels, 12 June 1988). Belgian composer and teacher. A son of Jan Poot, director of the Royal Flemish Theatre, Brussels, he first took music lessons with the organist Gérard Nauwelaerts. At the Brussels Conservatory he studied harmony and the piano with Sevenants, Lunssens and De Greef; he was then a pupil of Mortelmans in counterpoint and fugue at the Royal Flemish Conservatory, Antwerp. In 1916 he went to Gilson for lessons in composition and orchestration. At this time Poot was greatly interested in the cinema: his three symphonic sketches *Charlot* (1926) were suggested by Chaplin's films. Later he composed numerous scores for silent films, particularly for documentaries on aspects of Belgian life. Also he discovered the possibilities of jazz, using them in *Jazz Music* and in his first ballet, *Paris in verlegenheid*, staged at the Royal Flemish Opera, Antwerp, in 1935. At the same time he composed music for several radio plays.

In 1925 Poot – together with Bernier, de Bourguignon, Brenta, De Joncker, Otlet, Schoemaker and Strens – formed the Synthétistes, an association of pupils of Gilson founded on his 60th birthday. They had no common aesthetic, but each sought the strength of the group in establishing his own style. This collaboration lasted for five years, assisted by performances given by the conductor Prévost and the pianist Scharrès. Poot won the Rubens Prize in 1930, and this enabled him to move to Paris, where he worked under Dukas at the Ecole Normale de Musique. On his return to Brussels he began a career as a teacher, at first in secondary schools, later at the Vilvoorde Music Academy and finally at the Brussels Conservatory, where he taught practical harmony and then counterpoint. He was also for a time reader at the Institut Supérieur des Arts Décoratifs, Brussels. With Gilson he founded the *Revue musicale belge*, and he wrote for many Belgian and foreign periodicals: for 15 years he was music critic of the Brussels newspaper *Le peuple* and from 1944 to 1949 that of *La nation belge*. In 1943 he was appointed inspector of Belgian music schools, but during the German occupation he was prevented from carrying out his duties. He directed the Brussels Conservatory from 1949 until his retirement in 1966. He was also rector of the Muziekkapel Konigin Elisabeth (1970–76). Poot was a member of the Royal Flemish Academy, chairman of the Queen Elisabeth competition and president of the SABAM, the Belgian author rights society; he served on many national and international music committees.

Poot's reputation as a Belgian composer has become well established internationally, and he is one of the best represented Belgian composers in the concert halls of the world. A comparatively early work, the *Vrolijke ouverture* (1935), has many of the qualities that have remained characteristic of Poot's music. It is a short, light piece, strongly rhythmic and essentially tonal. His works are characterized by a complete and deliberate avoidance of existing systems, an absence of routine and an abundance of good taste and direct expression. His early works are entertaining, but his later works have greater profundity and poignant emotion.

WORKS
(*selective list*)

STAGE AND VOCAL

Het ingebeeld eiland [The Fabulous Isle], opera, 1925; Paris in verlegenheid, ballet, 1925; Het vrouwtje van Stavoren [The Little Woman of Stavoren], operetta, 1928; Moretus, chbr op, 1944; Pygmalion, ballet, 1951

CORNEEL MERTENS/DIANA VON VOLBORTH-DANYS

Pop. A term applied to a particular group of popular music styles. Originating mostly in the USA and Britain, from the 1950s on, these styles have subsequently spread to most parts of the world. In Western countries, and in many others too, they became the predominant popular music styles of the second half of the 20th century. Closely connected with the development of new media and music technologies, and with the growth of large-scale recording and broadcasting industries, mostly based in the West, pop music has generally been associated with young people. However, audiences have tended to broaden in the later part of the period. At the same time, new centres of production have emerged, including Japan, Africa and Australasia. By this time, in many parts of the world, pop music styles, derivatives and hybrids, could be regarded as the vernacular *lingua franca*.

I. Introduction. II. Implications of technology. III. North America. IV. Europe. V. Non-Western cultures.

I. Introduction

The term pop music originated in Britain in the mid-1950s as a description for ROCK AND ROLL and the new youth music styles that it influenced, and seems to have been a spin-off from the terms pop art and pop culture, coined slightly earlier, and referring to a whole range of new, often American, media-culture products. The etymology is less important than the sense, widespread at the time on both sides of the Atlantic, that in both musical styles and cultural patterns a decisive break was taking place. Indeed, in the early 1960s 'pop music' competed terminologically with BEAT MUSIC, while in the USA its coverage overlapped (as it still does) with that of 'rock and roll'. Complications increased when, in the later 1960s, the term rock music emerged, to cover further new developments in musical style. Ever since, 'pop' and 'rock' have performed a confusing dialogue. The relationship is discussed in more detail elsewhere (*see* POPULAR MUSIC, §I, 3). Briefly, though the distinction – as made in particular contexts – often has stylistic validity ('rock' is generally thought of as 'harder', more aggressive, more improvisatory and more closely related to black American sources, while 'pop' is 'softer', more 'arranged' and draws

more on older popular music patterns), the boundary is fuzzy, moveable and controversial. Fundamentally, it is an *ideological* divide that carries more weight: 'rock' is considered more 'authentic' and closer to 'art', while 'pop' is regarded as more 'commercial', more obviously 'entertainment'. Because of these definitional difficulties, the whole spectrum of styles commonly grouped under both 'pop' and 'rock' is considered together here.

The focus here is on the pop/rock mainstream. The boundaries of 'pop music' are as difficult to determine as those of POPULAR MUSIC as a whole, and the decision to provide detailed coverage of some subsidiary pop genres elsewhere was purely pragmatic. Thus, even though the formative influence of black American music on pop has been enormous, its own genres have at the same time maintained a substantially separate existence, and hence merit self-contained entries (*see* DISCO, DOO-WOP, FUNK, HIP HOP, MOTOWN, RAP, RHYTHM AND BLUES and SOUL MUSIC); much the same is true of the 1980s and 90s pop styles grouped under the term 'dance music', all of which have black American roots (*see* DANCE MUSIC). A similar policy has been applied to Afro-Caribbean music (*see* DUB (ii), REGGAE, SKA), to Latin-based genres, to Country music (*see* BLUEGRASS MUSIC, COUNTRY MUSIC, COUNTRY ROCK) and to folk-music derivatives (*see* FOLK MUSIC REVIVAL, FOLK-ROCK), all of which have not only influenced mainstream pop but have been influenced in return. There is also separate treatment for the SINGER-SONGWRITER, who often stands as close to folk, country, blues and cabaret styles (and even, on occasion, art-song models) as to pop.

The impact of the social and technological changes to which pop music is related would no doubt have ensured that something like pop would have emerged in many areas of the world, whatever the state of the actual economic and cultural geography (indeed, pop-like styles were arguably already evolving, before rock and roll arrived, in parts of Latin America, Africa, the Caribbean and India). However, in practice Western economic and cultural hegemony during the period since World War II made it unavoidable that the major historical trends would be the spread of English-language styles – especially those originating in the USA and Britain – and responses to them. While this process has been continuous and to some extent pre-dates rock and roll, three particularly important phases can be identified. In the mid- to late 1950s, rock and roll, following its emergence in the USA, spread to Europe. Even in America, it was still just one popular music style among many. In the early and mid-1960s, adaptations of the new style by British groups, headed by the Beatles, 'invaded' the USA; the range of pop/rock hybrids that resulted spread widely throughout Europe and, to significant if varying extents, beyond. In these areas pop was now, or was well on the way to becoming, the dominant popular music style. Then, in the 1970s, a further leap in the Western music industry's global reach, together with the impact of new technology (digitization) and new sound-carriers (cassettes, CDs), virtually completed the world-wide dissemination of Western pop but at the same time stimulated the development of innumerable indigenous hybrid styles.

As this sketch implies, pop music is inseparable from certain developments in technology. These have affected musical production (for example, through multi-track recording, with the studio increasingly replacing notation as a compositional resource), dissemination (recorded rather than live forms becoming the norm, for instance), and reception (which increasingly can take place anywhere and at any time). The technological changes are so important that they receive separate discussion below. Pop is also generally associated with a bundle of social changes, all of which are often considered aspects of a certain phase of 'modernization'. On the whole pop music is a leisure product or practice taking commodity forms. It also often presents itself as culturally and socially iconoclastic. Its typical context is a society, urban and secular in sensibility, which is changing quickly in structure, where wealth is growing (and especially is spreading into previously less-favoured parts of the social hierarchy), and where information and culture are increasingly mass-mediated. The forms, themes and pleasures of most pop, then, are marked both by the effects of 'consumerism' and by the tensions resulting from a tilt in the structure of social feeling towards 'youth', 'change' and 'modernity'. The pattern was set by the context within which pop originated, that of the post-war 'long boom' in North America and Western Europe, with its shifts in gender and class relations, its youth movements, its myriad subcultures and its upheavals in social morality.

Generalization about the musical characteristics of pop is difficult except at the most basic level. It is equally hard to separate what is specific to pop (amplified and electronic sounds, for instance) from features that are typical of popular musics generally: for example, a focus on dance genres on the one hand, and short songs on secular themes (often to do with love), on the other (and often both at once). Some commentators argue that, on a certain level, all the essential musical characteristics of pop were in existence (if only embryonically) by the early 20th century; others lay more stress on elements that they see as radically new. What is clear is that the single most important pop music sources lie in black American vernacular music genres, and that consequently the success of Western pop represents in one sense a remarkable cultural triumph of the African diaspora. It is possible to explain this as a historical 'accident' resulting from the economic hegemony of the USA. But this does not seem to answer the question why black American styles should be so favoured. To account for this may require note to be taken of the compatibility of these styles with production and dissemination through recordings, their amenability to syncretic relationships with other vernacular music styles, and perhaps thirdly their capacity to address themes, feelings and desires that may be widespread in late-modern capitalist societies. The central role played in the development of pop by the influence of black American practices has imposed considerable demands on pop music scholars, for analytic methodologies drawn from mainstream musicology have needed to be modified in an attempt to cope with music that is often difficult or impossible to notate, and that features new sorts of timbre (including non-standard singing styles), complex rhythms, varied types of pitch inflection, and an insistence on socially grounded (rather than purely musical) meanings. (More detailed discussion of aspects of the social and aesthetic significance of pop music can be found in the article on popular music.)

II. Implications of technology

1. Introduction. 2. The advent of rock. 3. The progressive rock era and punk reaction. 4. CD, sampling and interactivity.

1. INTRODUCTION. From the advent of recorded sound in 1877 to sampling in the 1990s, technological developments, mainly originating from within the Anglo-American and European pop markets, have had a crucial impact on the practice of popular music. This is not to say that technological innovations have always determined the production and consumption of popular music on a global scale: certain styles of popular music, particularly those operating on a grass-roots level (such as the community choir, the brass band or the folk concert), have remained relatively unaffected by technological changes; likewise, local traditional music scenes throughout the world have developed at a slower pace. But, on a more basic level, technological changes (for example innovations within instrumentation, the rise of amplification and increasingly sophisticated recording techniques) and changes in patterns of consumption (the development of the phonograph from a breakable shellac 78 r.p.m. disc to the CD) have revolutionized the manner in which pop has been disseminated. The basic structure of what we would now recognize as the modern music industry was in place by the end of World War II. Records were made with radio in mind, singers began to replace bandleaders, and the relative demise of Tin Pan Alley music saw a shift 'from the publisher/showman/song system to a record/radio/film star system' (Frith, B1988, p.19). The advent of microphone technology heralded the era of crooners, such as Bing Crosby and Frank Sinatra, who developed an intimate, conversational style of singing. Utilizing new recording technology, they became the first superstars of the radio era, and their voices were perfected to create the illusion of an intimate conversation. This new generation of singers was far more concerned with creating a private space for listening, rather than a public demonstration of vocal power. The beginnings of a teen-based, predominantly female mass market for recorded popular music centred on an individual male was established.

2. THE ADVENT OF ROCK. The rise of rock and roll in the 1950s bypassed the intermediate stage of written publication and transmission through records and radio (Hatch and Millward, A1987, p.72). Unlike classical music or that of Tin Pan Alley and ragtime, which was written down in the form of the score, popular music styles such as blues, country and rhythm and blues were improvised and only later written down and stored as sheet music. The musical event (a record or a performance) thus replaced the score as the defining moment of individual creation. Sounds could be stored on tape and be edited, multi-tracked and treated with effects. Introduced in 1948, this new technology revolutionized music-making and gave the producer a new pre-eminence in the recording process, leading to the appearance of producer-auteurs such as Sam Phillips, who discovered Elvis Presley, Phil Spector and Joe Meek, and gave each an instantly recognizable production technique. A second major development was the use of amplification and the rise of the electric guitar, as pioneered by Les Paul and others.

Technological advances fundamentally altered the distribution and consumption of popular music and these advances had a huge effect on the music being produced. The late 1940s witnessed the 'battle of the speeds', which resulted in the new 12-inch, 33 r.p.m. format, developed by Columbia, becoming the primary medium for classical music, and the 7-inch, 45 r.p.m. format, developed by rivals RCA, becoming the medium for popular music. The new 45s were far more durable than the existing 78s, which meant that music could be distributed far more easily, thus helping the new independent labels such as Sun from Memphis and Chess from Chicago to become the major conduits for the dissemination of race records and rhythm and blues in the 1950s. The mid-1950s witnessed the beginnings of a bifurcation between a market led by pop singles and one based on rock albums.

The impact of new technologies such as television (by 1955 65% of all American homes had a set) and the transistor radio, imported from Japan, challenged the ways in which music was consumed. Pop stars had to have a visual presence and be able to project a distinct identity through radio. Transistor radios made the consumption of sounds portable, thus helping create the space for teenagers to be outside the parent culture in a physical sense and to claim the new forms of music as their own. Some cultural critics at the time bemoaned these changes and argued that new mass culture was weakening the traditional ties of family and class. Entertainment was no longer centred on home life or even town or village life. Television, radio, cinema, recorded music and mass-circulated newspapers and magazines created a network of individuals with common interests and ideas who, however, began to find themselves 'atomized', alone within the mass (Bradley, A1992, p.94). The rise of new technologies, therefore, defined a new and distinctive baby-boom youth market for popular music.

3. THE PROGRESSIVE ROCK ERA AND PUNK REACTION. In the 1960s recording technique became increasingly sophisticated. Multi-track recording meant that individual tracks could be recorded simultaneously or individually, allowing more flexibility for musicians who could now perform separately. The producer, whose role became increasingly pre-eminent, could then treat tracks with a number of effects such as reverberation and delay. Landmark recordings were the Beach Boys' single *Good Vibrations* (1966) and the Beatles' *Sgt Pepper* album (1967). Certain psychedelic rock groups such as the Jimi Hendrix Experience further widened the sonic palette of rock through the use of volume and intricate layering of sound. By the late 1960s mono was being phased out, and the early 1970s were characterized by intricate stereo sound recordings on 16-track studios. Landmark recordings from this era include Mike Oldfield's largely instrumental *Tubular Bells* and Pink Floyd's *Dark Side of the Moon* (both 1973). By the mid-1970s 32-track recording was possible, and the late 1970s saw artists such as Stevie Wonder record totally digitally with his album *Journey through the Secret Life of Plants* (1979).

As a reaction to this increasing studio sophistication, new wave and punk bands in Europe and America self-consciously made a more low-fidelity music. The advent of affordable recording equipment and cheap synthesizers in the late 1970s and early 80s further democratized music-making with the rise of electronic groups such as the Human League and Ultravox. However, the pioneers of electronic music were artists such as Brian Eno and Kraftwerk, who used the studio as an instrument in its

own right, making it possible for musicians to work exclusively in the studio, creating sounds which could never be performed in the traditional live context. Indeed, when Kraftwerk toured in the 1990s they reassembled their recording studio on stage in order to perform.

The emergence of cheap cassette technology in the early 1970s allowed for the global dissemination of Anglo-American popular music. Although it was often still necessary for non-Anglo-American artists to sing in English to reach a global market (as with the success of Swedish bands Abba in the 1970s, Roxette in the 1980s and Ace of Bass in the 1990s), a new cultural diversity was created, shown by the end of the 1980s, with important music industries in, for example, Japan, Australasia and India.

4. CD, SAMPLING AND INTERACTIVITY. By the early 1980s pop stars often found that it was not enough to be a talented musician. The promotion of pop music had been greatly affected by the rise of Music Television (MTV), which began broadcasting in the USA in 1981 and became a global phenomenon of the 1980s. Music video favoured those artists such as Michael Jackson, Madonna and Prince who had a strong visual appeal, and this industry innovation initially had an adverse effect on less telegenic performers.

A basic shift occurred in the mid-1980s when the technique of SAMPLING became widespread, allowing any sound to be stored digitally and manipulated. The rise of sampling therefore repositioned the role of pop artists who no longer created 'new' sounds, but could now be judged by their skill in assembling aural collages of 'old' music: they became curators rather than originators and their music-making depended on their appreciation of old musical forms. Sampling became a commonplace in rap, hip hop, ambient and rock styles throughout the 1990s. Sampling also led to some bizarre developments: in 1991, for example, Natalie Cole was able to sing a duet with her long-dead father, Nat 'King' Cole, on a cover of his recording of the standard *Unforgettable*. The advent of sampling therefore questioned notions of originality within popular music and engendered an ethical and economic debate within the music business concerning the ownership of recorded sound, which led to a set of guidelines determining what constituted musical theft.

Also in the 1980s the dominance of the CD as a form redefined the role of popular music and its audience. Just as sampling recombined the old and the new, so the rise of the CD saw the repackaging of old musical artefacts using a new technology and created a new, post-twenty-something market for popular music.

In the 1990s, the rise of new interactive technologies such as the CD-ROM and the World Wide Web put into question the existing power nexus within the recording industry. Artists such as David Bowie began bypassing record companies by making music available on the Internet only for a restricted fan base. In 1998 the same artist also put an unfinished song on the Internet and ran a competition inviting fans to finish the lyric, thus opening up new vistas of audience/fan co-operation for future generations of recording artists. In 1999 his album *Hours. . .* was released on the Internet two weeks before its retail release.

III. North America

1. Introduction. 2. Rock and roll. 3. The 1960s. 4. The 1970s. 5. The 1980s. 6. The 1990s.

1. INTRODUCTION. Midway through the 20th century, commercially-mediated, Southern-based music by black and white working-class musicians displaced Tin Pan Alley popular song to dominate national culture and lay the foundations of a new global lingua franca. 'Untrained' performers replaced the previously-dominant, professional network of composers, orchestrators, singers and studio orchestras; through the 1950s the major record labels lost nearly half their share of the popular music market to independent record labels. New cultural fusions were particularly encouraged by migrations from south to north and from country to city, as well as by new communications technologies that accelerated musical interactions and pushed music and musicians across geographical and cultural boundaries. Mass culture brought the views of marginalized groups to the mainstream, and previously separated groups discovered new identities and affinities through popular music. Such changes forced realignments of the genre categories that were in general use. The ways in which record companies separated artists and audiences by race, region and class ('race records', 'hillbilly' and 'popular', for example), hid the fact that such music had not developed from mutually exclusive sources, as genre labels have tended to reflect prevalent social, especially racial, categories more than differences of musical style. In addition, commercial success and monetary rewards have not always matched up with musical traditions and creativity: although rock and roll was primarily created by black Americans, its financial rewards have gone disproportionately to white singers and businessmen.

'Rock and roll' had been used in blues lyrics to celebrate sexuality and dancing long before its first print appearance (*Billboard*, 1946) to describe the rhythm and blues of Joe Liggins and his Honeydrippers. The phrase has been used ever since: sometimes narrowly, to describe the music made by black and white popular musicians of the late 1950s; sometimes as a means of disguising black origins or of distinguishing white-identified music from soul, funk, disco and hip hop; sometimes more broadly to label the whole range of popular styles that developed in the wake of the paradigm shift of the 1950s. Certain shared characteristics differentiated rock and roll, country music and rhythm and blues from Tin Pan Alley. Most notable were the blues influences, including forms derived from the 12-bar blues, amplified electric instruments and a rhythmic drive led by drums and bass. Yet the 32-bar verse-chorus forms of Tin Pan Alley persisted, as did a wide range of singing styles, and the new music's characteristic rocking rhythms can be heard as far back as the late 1920s in blues recordings, especially during the piano boogie-woogie craze of the 1930s, which supplied the left-hand ostinato pattern that became one of the foundations of rock and roll guitar style. Moreover, driving straight-quaver note grooves appeared in recordings by white country musicians of the same period. Although it was called HILLBILLY MUSIC until the mid-1940s, COUNTRY MUSIC did not develop exclusively from Anglo-American folk traditions, but rather incorporated the multicultural influences of Spain, Hawaii, Africa, Italy, Switzerland, Tin Pan Alley popular song, black and white gospel music and black-American blues.

Growing reliance upon the electric guitar is in some ways an index of the shift to rock and roll, yet such central figures of the 1950s as Jerry Lee Lewis and Little

Richard continued to base their ensembles around the piano, and the guitar was not a prominent feature of the 'girl group' performances of the early 1960s. New ways of drumming did most to unite the newer styles, but rock and roll still incorporated the crooning and song formats of previous popular song along with gospel, hillbilly, blues and boogie-woogie characteristics. The adoption of the pedal steel guitar in the early 1950s helped make country music sound different from other popular post-war genres, but the growing use of drums from the late 40s brought it closer to other popular styles. However important these genres were as marketing categories, they grew from shared origins in black American blues, jazz, gospel and white country music, and they reflected their technological moment in their use of electric amplification, mass mediation, magnetic tape technology that spread from Germany after World War II, and commercial distribution.

The jazz, jump blues and rhythm and blues of the 1930s and 40s established crucial conventions for later popular styles: the rhythmic energy and riff style of Count Basie's band; the honking saxophone solos and sexual energy of Wynonie Harris; the small jazz-influenced combos of Los Angeles's Central Avenue scene; the fusion of black and white styles that were heard in Louis Jordan's music; the gospel ecstasy that singers such as Sister Rosetta Tharper, Little Richard and Ray Charles brought to secular music; T-Bone Walker's creation of an electric blues guitar style that Chuck Berry would later develop into the foundation of rock guitar playing.

There are not enough differences between songs such as Wynonie Harris's *Good Rockin' Tonight* (1948) and Big Joe Turner's *Shake, Rattle, and Roll* (1954) to justify the perception that a whole new style of music had emerged in the mid-1950s. Postwar cultural mixtures, migrations and technology brought Southern white and black working-class music to the attention of audiences that had previously not been exposed to its techniques and sensibilities. But earlier mixings have been too little acknowledged as well, such as the black musicians who taught Hank Williams to play guitar and influenced his songwriting or the impact of country star Jimmie Rogers' yodelling on the blues howl of Howlin' Wolf. Although record companies and radio stations marketed music according to the race of the performers (presumed to match that of their audiences), white listeners increasingly sought out black music in the late 1940s. Mass culture established a common frame of reference among previously separate communities, making regional, class-based and ethnically-specific cultural forms increasingly attractive and relevant to new audiences. Country and rhythm and blues artists often recorded versions of each other's songs, and the white team of Leiber and Stoller wrote many songs for black and Chicano artists that became hits on both the pop and rhythm and blues charts. Another important interaction was that of self-taught country and blues musicians with jazz-trained studio session players. As country music incorporated jump blues influences it became ROCKABILLY, just as blues had evolved into rhythm and blues by embracing influences from jazz, Tin Pan Alley and gospel; as the story is usually told, these two streams eventually united to produce rock and roll.

2. ROCK AND ROLL. Some historians date the beginning of this era to June of 1955, when Bill Haley's *Rock around the Clock* became the number one record on *Billboard's* 'best sellers' chart and an icon of teenage rebellion. The early 1950s provide an alternative date, when white teenagers started to listen and dance to the rhythm and blues of black musicians, and the Cleveland disc jockey, Alan Freed, gained more and more white listeners for his rhythm and blues radio shows. By 1954, he was calling the music 'ROCK AND ROLL', a name that distracted attention from the cultural miscegenation that was taking place. Records, jukeboxes and especially radio were particularly important for breaking down racial barriers still maintained in public spaces, and rock and roll concerts were the first integrated public events in many communities. Despite the emphasis on youth culture in rock and roll, the musics out of which it developed had been adult. Over-emphasis of teenage rebellion disguises the role of the music in breaking down racial boundaries, proposing new ideals of gender and sexuality, and promoting working-class perspectives through lyrics that criticized hierarchy and celebrated freedom, leisure and community.

Most white rock and roll performers were Southern country musicians who adapted some of the features of rhythm and blues, and many of the best (such as Jerry Lee Lewis, Elvis Presley and Carl Perkins) had grown up learning from black musicians. Bill Haley, Buddy Holly and others kept their country instrumentation but developed rhythmic swing and blues inflections under the influence of jump blues artists such as Louis Jordan. Many of the most successful black rock and roll musicians (Fats Domino and Ruth Brown, for example) were established within rhythm and blues before they were redefined as part of a new cultural and commercial movement. The whole idea of rock and roll was 'that Fats Domino had more in common with Bill Haley than he did with Wynonie Harris, that Elvis Presley had more in common with Ray Charles than he did with Ernest Tubb' (Ward, Stokes and Tucker, A1986, p.97).

Chuck Berry drew upon blues, country and the jump blues of Louis Jordan to produce some of the founding conventions of rock and roll, including lyrics that celebrated mobility, play and youth, as well as the double-string riffs that made him one of the most influential guitarists of the 20th century. His first record was a version of a country song, and he might have been categorized as a country singer if he had been white. Although tenor saxophone solos and rolling piano triplets continued to be used in rock and roll, the dominant trend was to move from horns, piano and swing rhythms to guitars and straight quaver-note grooves. Berry's *Rock and Roll Music* (1957) records a transitional moment, as some of the musicians swing the beat while others evenly subdivide it.

Black vocal groups, mostly male (the Coasters and the Drifters, for example), were among the most popular musicians of the decade, and sang romantic ballads with smooth harmonies (often based on I–VI–IV–V progressions) that extended the legacy of the gospel quartets and of popular 1940s vocal groups such as the Mills Brothers and the Ink Spots, while their up-tempo numbers displayed more overtly the rhythmic drive of rock and roll. Such groups typically placed less emphasis on instrumental backing, but singers often imitated instrumental sounds and sang non-verbal syllables that caused their music to be known as DOO-WOP. White groups such as Danny and the Juniors contributed to the style but succeeded on the

pop charts without first having to prove themselves through rhythm and blues chart success, as was normally required of black artists.

The most successful performer of this period was Elvis Presley, a white singer who learned to sing in the Pentecostal Church and by imitating the blues and country music he heard on the radio. Presley's musical talents, charisma and sexiness soon made him the most successful figure in American music. His first commercial studio session yielded a cover of *That's all right, mama*, which had been recorded by rhythm and blues artist Arthur 'Big Boy' Crudup, paired with a version of Bill Monroe's *Blue Moon of Kentucky* – a white interpretation of a black song and a black-influenced performance of a white song. His commercial appeal, however, was still related to racial dynamics, as white audiences bought Presley's versions of rhythm and blues songs instead of those by the original black performers. Still, he took as much from country as he did from rhythm and blues, and sales of country music suffered more from the popularity of rock and roll than did the rhythm and blues market.

The success of Presley and other rockabilly-styled artists helped undermine the music industry's assumptions about race-based genres and separate audiences. At this moment 'one strain of popular music cut across racial, social, and geographic lines in a way not seen in the USA since the days of Stephen Foster' (Hamm, C1983, pp.62–3). By spreading elements of Southern working-class black and white culture to national and international audiences, Presley had a profound impact on music history.

Country music was divided by Presley's success, however, with the rockabilly singers such as Carl Perkins, Jerry Lee Lewis, Gene Vincent, the Everly Brothers, Eddie Cochran and Buddy Holly developing a style that reflected their absorption of black culture and that was distinct from the straight country singers who followed the example of Hank Williams. Country music expanded rapidly in the years after World War II and Nashville emerged as the centre of its recording business. In the 1950s, the dominant country style was HONKY TONK MUSIC, but Chet Atkins developed a new, Tin Pan Alley-influenced NASHVILLE SOUND, a country-pop fusion that was designed to attract larger audiences.

As white teenagers were increasingly moved by and moving like black entertainers, critics attempted to discredit rock and roll by linking it to racial conflicts, promiscuity and juvenile delinquency. With hindsight, such attacks are frequently dismissed as bigotry, misunderstanding and over-reaction, but censorship and other techniques for weakening rock and roll's impact reflect accurate perceptions of its power to challenge and disrupt accepted behaviours. At the end of the decade, Congress conducted hearings into the practice of payola, whereby disc jockeys were bribed to play particular records (*see* DJ (i)). This practice had been common since the rise of the music industry in the 1890s, and was not in fact illegal, but persecution of Alan Freed and other prominent figures was partly driven by the feeling that the music threatened social order. Meanwhile, the large record companies were regaining their control of the industry and promoting white singers, such as Pat Boone, who could outsell black performers with COVER versions of the same songs; such adaptations served large white audiences who were attracted to rock and roll but resisted some of its cultural challenges. These events, along with the death of Buddy Holly and the disrupted careers of Presley, Chuck Berry, Little Richard and Jerry Lee Lewis (by the draft, jail, religion and scandal respectively), have been regarded by many as marking the end of the original era of rock and roll, although its musical and social precedents resonated throughout the rest of the century.

3. THE 1960S. The rock and pop of the 1960s differed from rock and roll of the 50s in several respects. Musicians embraced solid-body electric guitars, powerful amplification with deliberate distortion effects, new recording techniques and greater use of keyboard instruments, including synthesizers. The longer playing time of the $33\frac{1}{3}$ r.p.m. album accommodated longer song forms that often included lengthy improvisations. Many song lyrics continued to be concerned with romance, but some now also participated overtly in political protest and the search for new identities and communities. Perceptions of a generation gap sharpened as 17-year-olds became the largest age cohort in 1964, and ROCK music dominated the output of the record industry. The diversity of the decade, however, can be lost to a collective memory that emphasizes Woodstock, psychedelia, sexual freedom and transgression: the most popular musicians of the decade included not only the Beatles, Elvis Presley and Ray Charles, but also Connie Francis, Brenda Lee and Percy Faith. It was because 1960s' rock resounded in an environment that resisted many of its challenges that it proved so explosive and transformative.

Historians often characterize the early part of the decade as a lull between the interrupted careers of the first rock and roll generation and the arrival of the 'British Invasion'. Neil Sedaka, Carole King and other songwriters at the Brill Building in New York were moving popular music back towards the sentiments and production methods of Tin Pan Alley, while white 'teen idols', such as Dion, Ricky Nelson and Frankie Avalon, defused the dangerous sexuality of Presley, Little Richard and Chuck Berry. Yet the same period (1959–63) saw the rise of SOUL MUSIC in Chicago and Memphis, the development of the MOTOWN sound, and a doo-wop revival that included tremendous popularity for 'girl groups'. The Shirelles, the Crystals, the Ronnettes and the Shangri-Las were among the most successful groups, and the most influential producer of such music was Phil Spector, who merged features of Tin Pan Alley song with the energy of rhythm and blues, and used innovative studio techniques to create his 'wall of sound'. This golden age for female and black-American artists has been unjustly maligned by rock critics, who, until the 1990s, were almost all white men whose writings marginalized these groups. The most critically respected group of the early 1960s was probably the Beach Boys, who used virtuosic vocal lines in the style of doo-wop, a rock and roll rhythm section, and adventurous recording practices to produce successful vignettes of surfing and other romanticized features of middle-class Californian culture.

Throughout the decade, country music remained marked by the influence of rock and roll, as electric instruments and drums became routinely used. The Country Music Association (founded in 1957) helped promote both the music and the industry, and the music continued to grow in popularity, with three shows devoted to it appearing on network television by the end of the decade. Some of this increased popularity came from female stars who presented a new assertive image, such

as Loretta Lynn and Tammy Wynette, and from singer-songwriters who crossed over to broader audiences, such as Willie Nelson and Kris Kristofferson.

The black artists on Berry Gordy's Motown record label developed gospel-influenced, sexy but polished, elegant music that successfully crossed over to large white audiences. Its writers and producers (such as Holland, Dozier and Holland) supplied songs and arrangements to a virtuosic house band and singers that included Stevie Wonder, the Temptations, the Four Tops, Diana Ross and the Supremes, Smokey Robinson and the Miracles and Marvin Gaye. The 'southern soul' of Stax Records in Memphis produced a more gritty and blues-derived style for mostly black audiences later in the decade, using an integrated house band to back singers that included Wilson Pickett, Aretha Franklin and Otis Redding. James Brown invented FUNK and set the stage for subsequent dance music and rap by placing his rough, soulful vocals over instrumental grooves that suspended harmonic motion in favour of unprecedentedly percussive and polyrhythmic interlocking lines, including complicated, virtuosic bass lines.

Folk singers, many of whom were political activists, may have initially avoided the instrumentation and attitudes of rock and roll because of its location within commercial culture, but rock's rhythmic and timbral energy made it well suited to protest, and it became increasingly associated with protest movements, alternative lifestyles and perspectives and the breakdown of social and attitudinal barriers. Bob Dylan became arguably the most influential American musician of the 1960s by creating lyrics that pushed folk music towards a more critical, personal and self-consciously poetic tone, and his rough voice and loose intonation established an influential model for performance. He blurred the line between rock and folk with his controversial decision to 'go electric' (1965), and brought rock and country closer together in 1968, just as the Byrds and the Band were also developing the COUNTRY ROCK fusions that would be followed by Buffalo Springfield, the Flying Burrito Brothers, the Grateful Dead, Neil Young and the Eagles. Rock criticism grew up around Dylan and the Beatles as the lyrics of both and the music of the latter provided material for complicated and serious analysis. Joan Baez, Tom Paxton and Phil Ochs were other protest singers who developed the poetic and political vocabulary of popular music and helped prepare for the boom, during the latter part of the decade, of personal, often confessional singer-songwriters such as Judy Collins, Joni Mitchell, Carole King and Paul Simon (*see* SINGER-SONGWRITER). For the most part, black audiences displayed little interest in FOLK-ROCK or rock, despite the strong blues influences on the latter.

British bands were formed after the models set by US rock and roll musicians on recordings and tours. The extraordinary songwriting abilities of John Lennon and Paul McCartney helped earn the Beatles an extreme level of popular and critical success, and they produced catchy and memorable songs in a great range of styles, even as they explored unusual musical forms, harmonies, studio techniques and instrumentation, as exemplified on their influential album, *Sgt Pepper's Lonely Hearts Club Band* (1967). Their success also helped establish an expectation that bands would write their own material, and their androgynous haircuts continued the rock and roll challenge to gender norms. Their string of number one singles in the USA in 1964 paved the way for the other bands of the 'British Invasion': the Rolling Stones, Herman's Hermits, the Yardbirds, the Kinks, the Animals and others. For many, these bands revived the interrupted energy of 1950s rock and roll, and they quickly displaced girl groups (except the Supremes) and soul singers on the pop charts.

Hard rock developed as American and British musicians adapted and extended the blues, following such models as Robert Johnson and Muddy Waters, and the guitar became rock's main solo instrument. Jimi Hendrix's virtuosic technique reinvented the electric guitar, and Eric Clapton's blues-style playing also inspired many followers. The Doors' brooding music and the Who's forceful 'power chords' (the interval of a 4th or 5th timbrally distorted by an amplifier to produce resultant tones) helped set crucial precedents for subsequent decades. Like the Beatles, the Rolling Stones made no secret of their debts to the black American musicians they had studied, although other bands, such as Led Zeppelin, took songwriting credit and royalties for music they had plainly copied.

Popular culture continued to be an important forum for challenges to dominant representations of identity and values in the late 1960s, reflecting the influences of civil rights struggles, global decolonization, the postwar diversity of higher education that made campuses an important site of activism, the working-class perspectives of many musicians, and a variety of disruptions of what had been taken to be 'natural' gendered and sexual behaviour. San Francisco became the main locus of the 'counter-culture' of young people who explored alternatives that were meant to increase individual freedom and collective harmony. Psychedelic light shows, artwork, and drugs such as marijuana and LSD joined extended improvisatory jams and experiments with drones (inspired by the sitar playing of Ravi Shankar and the jazz of John Coltrane and Miles Davis) as means to the transformation of consciousness. Social harmony and equality remained paramount ideals of the counter-culture, emblematized by rock festivals such as the Monterey Pop Festival during the 1967 'Summer of Love'.

The ideals of the ART ROCK and PROGRESSIVE ROCK of the late 1960s and 70s were often more elitist; taking their cue from *Sgt Pepper's Lonely Hearts Club Band*, groups such as the Moody Blues, Deep Purple, Yes, Pink Floyd and Emerson, Lake and Palmer incorporated musical techniques and references from classical music and various non-Western traditions in pursuit of what they saw as greater seriousness, complexity and virtuosity. Another aesthetic development took place in the pages of such new magazines as *Hit Parader*, *Rolling Stone* and *Crawdaddy*, as writers such as Lester Bangs, Dave Marsh and Greil Marcus developed ways of arguing about the meanings and artistic significance of rock music, establishing the profession of the rock critic and furnishing influential models for subsequent criticism.

4. THE 1970S. The music industry doubled in size between 1973 and 1978, and increased the efficiency of its marketing by hardening genre categories and by relying upon more narrowly defined radio formats. These changes helped fragment the rock community and largely resegregated broadcasting, despite the continued appeal to a broad audience of such artists as Elton John, Fleetwood Mac and Stevie Wonder. FM-radio's new 'album-oriented

rock' format narrowed the popular definition of 'rock', excluding music made by women and black-Americans in favour of stadium rock bands such as Led Zeppelin, REO Speedwagon, Rush and Journey. Technological developments enabled some musicians, notably Stevie Wonder, Prince and John Fogerty, to perform most or all of the instrumental and vocal parts on their albums. In live performance, amplification of all instruments, with their balance and timbre controlled by a sound mixing specialist, became standard practice.

Protests against social injustice and violence remained a theme for rock groups such as Crosby, Stills, Nash and Young, as well as the Motown artists Marvin Gaye and Stevie Wonder. Gaye's *What's going on* (1971) not only became Motown's best-selling album but also established the idea of unifying a concept album through social criticism. The singer-songwriter style of personal confession and introspection was a stronger trend, however, led by albums such as James Taylor's *Sweet Baby James* (1970), Carole King's *Tapestry* (1970) and Joni Mitchell's *Court and Spark* (1974), and work by Paul Simon, Neil Young, Jackson Browne and Billy Joel. The folk-based singers of 'women's music', such as Cris Williamson and Meg Christian, created a gentle, acoustic alternative to mainstream rock and pop, even as all-women bands like the Runaways and Fanny claimed rock's power for women. Bruce Springsteen began to make his prominent mark by combining the personal approach of the singer-songwriters, the grandeur of Spector's 'wall of sound', lyrics that spoke to working-class concerns and experiences, a hard-edged rock sound and soul-inspired passionate, gritty vocals.

The continuing influence of Tin Pan Alley-styled pop, present in the 1960s music of the Lovin' Spoonful and the Mamas and the Papas, expanded in the 1970s with the success of Elton John, Olivia Newton-John and Abba. Miles Davis brought jazz to the pop charts with his fusion of rock, funk and modal jazz in *Bitches Brew* (1969), and jazz-rock bands such as Chicago, and Blood, Sweat and Tears flourished. Jazz could also be heard in the complex harmonies of Steely Dan, and in the continuing impact of 1960s guitarists who had been influenced by saxophonist John Coltrane. Carlos Santana's mixture of blues-based guitar virtuosity with Latin rhythms spoke from and to complex cultural identities. Blues and country influences were brought together by a number of rock bands that came from the South and emphasized their regional identity, most notably Lynyrd Skynyrd, the Allman Brothers Band and ZZ Top.

Country rock grew as a genre with the Byrds, the Eagles and the Nitty Gritty Dirt Band, all following in the wake of Dylan's success, while the most prominent musicians of mainstream country included Dolly Parton, Conway Twitty, Merle Haggard, Loretta Lynn, and the only black American major country star, Charlie Pride. A group of musicians in Austin, Texas, brought country music to larger youth audiences through the 'outlaw' or 'progressive' style that was exemplified by Willie Nelson and Waylon Jennings. The perspectives of marginalized peoples also entered pop music through Bob Marley, the only Jamaican reggae musician to achieve great success in the USA. REGGAE influences, especially off-beat guitar chords and fragmented, melodic bass lines, eventually showed up all across American popular music.

The tendencies of many 1960s bands to explore greater volume, distortion and transgressive lyrics came to fruition in HEAVY METAL, established in 1970 by albums by Led Zeppelin, Black Sabbath and Deep Purple. Drawing upon the world views and musical techniques of much earlier blues musicians like Robert Johnson and Howlin' Wolf, these bands explored occult topics, mysticism and paranoia in their lyrics while developing heavier sounding drums, bass, distorted guitar and wailing vocals. Guitar and drum solos became increasingly virtuosic, culminating in Van Halen's eponymous first album (1978), which revealed Edward Van Halen as the most innovative and influential guitarist since Hendrix, and established the level of technique to which most metal guitarists of the 1980s would aspire. The spectacular costumes and stage sets of heavy metal contributed to its aura of power, and the experience of live concerts became particularly important for this genre, both because of the communal experiences it offered and because it was rarely played on the radio. In 1973 Led Zeppelin broke the concert attendance record held by the Beatles, and Kiss became the most successful band of the decade, with 13 platinum albums. Grand Funk Railroad, Judas Priest, AC/DC and Aerosmith confirmed these heavy metal conventions; some bands followed the lead of Deep Purple in adapting riffs, harmonies and improvisatory styles from the music of Bach and Vivaldi, although this would become much more pronounced in the 1980s. Within heavy metal, Kiss, Alice Cooper and others appeared in gender-bending 'glam' clothes and make-up, just as David Bowie and other transgressive androgynes were doing in other musical styles.

Another spectacular genre, DISCO dominated the latter part of the decade; the success of this often quite erotic style was in part due to advances in birth control methods, changes in the legal status and social position of women and sexual minorities, the laxity of US drug-enforcement policy and other demographic shifts. Although it eventually crossed over into mainstream pop and achieved international success, disco began as the music of marginalized peoples, especially gay and black urban audiences. A dance-floor music, initially developed outside of the music industry, disco arose from the practices of New York and San Francisco DJs who cut and mixed records on two separate turntables, managing an uninterrupted flow of music and dancing all night. Using many of the soft soul techniques of the O'Jays and other groups on the Philadelphia International label, disco added an invariably fast (100–130 beats per minute) and heavy rhythmic pulse. It also drew upon salsa and funk, which was built on James Brown's rhythmic innovations but was expanded technologically and psychedelically by Earth, Wind, and Fire, George Clinton and Sly and the Family Stone; the latter group presented in every performance a microcosm of a society free of racism and sexism. Disco used few polyrhythms, however, and it even moved away from the dialectical bass drum-snare drum alternation of most rock and pop in favour of a rhythmic framework of regular, quaver-note thumping. It was a singer's music, often overtly incorporating the ecstatic techniques of gospel music, and 'disco divas' such as Donna Summer were among its biggest stars. It was also a producer's music, with backing tracks often created in the studio by solo figures like Georgio Moroder. Sometimes using open grooves and accretionary structures

rather than verse-chorus form, disco songs celebrated sustained pleasure in various forms: dance, sex and communal identity.

These features helped make disco perhaps the most maligned genre of American popular music. Racism, homophobia and misogyny helped fuel a 'disco sucks' backlash at the end of the decade, alongside criticism of its studio creation and trademark beat, the characterization of dancing as mindless, comparisons with art rock's complexity and live performance and with the introspection of singer-songwriters. Although disco's biggest stars were more representative of the mainstream – the straight, white male group the Bee Gees broke all previous sales records with *Saturday Night Fever* (1977) – the genre brought together the most diverse fan base of any popular style since the rock and roll of the 1950s. From its peak in 1979, when 200 all-disco radio stations broadcast in the USA, it declined suddenly as a named genre, but its musical features remained a strong presence through subsequent decades, particularly in various forms of DANCE MUSIC.

PUNK ROCK contrasted in nearly every way with disco: deliberately crude rather than polished in its musical techniques and performance styles; a guitar-driven instrumentation in place of lavish soundscapes filled with strings, horns and synthesizers; stripped-down harmonies insistently strummed, instead of lush chords and counterpoint; short, simple songs rather than extended dance grooves; ripped clothes and other signifiers of alienation from dominant conventions, all in strong contrast to disco's celebration of fantasy, attractiveness and opulence. Influenced by the 1960s cynicism of Lou Reed and the Velvet Underground, punk musicians explored calculatedly offensive topics and noisiness, downplaying virtuosity because it seemed artificial and elitist. It extended the rebellious aspects of the rock and roll tradition, only differing in its inclusion of mainstream rock among its targets. After the first American punk rockers, including the Ramones and Iggy Pop, England followed with younger and more working-class bands, of whom the Sex Pistols and the Clash were among the most influential. Black Flag, the Dead Kennedys, the Plasmatics and others continued the harder style of punk, while others such as the Cars, Devo and Talking Heads developed NEW WAVE by subtracting some of punk's anger and adding synthesizers and irony.

5. THE 1980s. Drum machines, samplers, synthesizers, personal computers and sequencers became widely available in the 1980s, enabling musicians to create any imaginable sound, to use pre-existing music as compositional material, and to manipulate and store sounds as digital information. The worldwide spread of cassettes promoted more diversity in worldwide music production and distribution, reducing the dominance of American music from two thirds in the 1970s to one third in the 80s. The introduction of the compact disc (1983) raised the quality of audio playback and increased industry profits, since they cost no more to produce but were sold at much higher prices. Global marketing plans became essential to the growth of the music industry and, although five huge corporations gained control of two thirds of the world music markets, only one was American-owned, complicating debates over cultural imperialism.

Full-time cable television broadcasts of music videos began on MTV in 1981, increasing the popularity of bands and stars who had particular visual appeal and those whose audiences transcended narrow genre boundaries, including Madonna, Michael Jackson, Prince and Bruce Springsteen. Especially innovatory videos helped build the careers of Jackson, Madonna, and other artists such as Peter Gabriel. Despite MTV's national scope and the expense of producing videos, it played a broader range of music than most radio stations and gave some artists easier access to audiences. Michael Jackson's worldwide success with *Thriller* (1982), which sold an unprecedented 40 million copies worldwide, helped break down MTV's initially racist programming policies and revive a slumping music industry. Prince's fusions of rock and funk, particularly *Little Red Corvette* (1982) and *Purple Rain* (1984), helped break down some of radio's racially-defined boundaries at the same time that he challenged conventional gender norms. MTV's emphasis on spectacle had the effect of encouraging sexism and objectification in many videos, but several female performers, including Madonna, Tina Turner, Pat Benatar and Cyndi Lauper, effectively used the new medium to project images that were both sexy and powerful.

Despite an increasingly centralized music industry, musical sounds and experiences were diverse. Rock charity concerts such as 'Live Aid' and 'USA for Africa' publicized campaigns against injustice and raised money on their behalf. Whitney Houston, Janet Jackson, Lionel Richie and George Michael dominated the pop charts with songs about love and dance, along with the male vocal groups who developed 'new jack swing' by combining smooth vocals with HIP HOP rhythms. U2's passionate vocals and polyrhythmic accompaniments, and REM's fusion of country and punk influences, made them two of the most influential bands of the decade. Billy Joel and Paul Simon continued to extend the singer-songwriter tradition. Differing interpretations often add to the popularity of mass-mediated texts, as when Bruce Springsteen found that many listeners, including both major presidential candidates in 1984, heard only the celebratory music of his *Born in the USA*, missing the lyrics' bitter indictment of America's involvement in the Vietnam War and treatment of that war's veterans.

A revival of 'traditional' elements was prominent in country music in the 1980s, with Randy Travis, Reba McEntire, Dwight Yoakam, George Strait, and Ricky Skaggs drawing upon earlier honky tonk, rockabilly, western swing and bluegrass styles; many of the country stars of the 1970s continued their success in the 80s. Alabama, the Statler Brothers and others revived gospel influences and vocal harmonies within country music, and the film *Urban Cowboy* (1980) made 'Western' dancing and clothing more broadly fashionable for a time.

Heavy metal grew to become the dominant genre of pop at the end of the 1980s. Recordings by Iron Maiden, Def Leppard, Motörhead and others at the beginning of the decade became known as the 'New Wave of British Heavy Metal', and the catchy songs and high production values of Def Leppard in particular set important precedents. Several factors contributed to the growth of the genre: the androgynous glam metal of Mötley Crüe, Ratt and Poison; the success of Black Sabbath's singer, Ozzy Osbourne, as a solo artist; Bon Jovi's balance of pop romance and rock rebellion. It began to receive significant radio exposure, and MTV's 'Headbangers'

Ball', first aired at the end of 1986, quickly became that station's most popular show. Throughout the decade, guitarists such as Randy Rhoads, Yngwie Malmsteen and Steve Vai followed Van Halen in developing ever more virtuosic techniques. The influence of classical models (especially Bach, Vivaldi and Paganini) on harmony, virtuosity, pedagogy and analysis became paramount. The 'underground' styles of THRASH METAL, death metal and speed metal, with their faster tempos, heavier distortion, ensemble virtuosity and more complicated song forms, arose primarily in the San Francisco Bay area and quickly spread, led by Slayer, Testament, Megadeth and especially Metallica.

RAP, the aural component of a hip hop culture that included break dancing and graffiti writing, was perhaps the most innovative and influential musical development of the 1980s. During the previous decade, DJs at block parties and dances extended disco mixing techniques so that bits of one piece of music were superimposed on another, and this recontextualizing of musical fragments (SAMPLING) became basic to the style; manipulation of turntables as percussion instruments also provided rhythmically complicated patterns (SCRATCHING). MCs (from 'master of ceremonies') who exhorted the crowd and advertised the group of musicians became rappers, whose intricately rhymed and phrased lyrics were rhythmically declaimed against the background of the DJs' music. Rap musicians drew upon long traditions of black American signifying and Jamaican toasting even as they utilized the latest technology, often (as in scratching) in unintended ways. Recordings of these practices began to be issued in 1979 and, in the early 1980s, Kool Moe Dee, L.L. Cool J and others demonstrated the virtuosic potentials of the new style. Grandmaster Flash, with songs like *The Message* (1982), established a tradition of social critique through rap lyrics, which was extended later in the decade by the innovative and virtuosic music of Public Enemy. Female rappers such as Queen Latifah and Salt-n-Pepa positioned black women's concerns and perspectives prominently within popular culture and used rap as a forum for debate about gender. Later in the decade, Run DMC brought rap and heavy metal together by covering *Walk this way*, a song by Aerosmith; fusions of these two styles were explored by many musicians in the following decade. Ice Cube, NWA and Ice-T led GANGSTA RAP, and provoked great controversy by addressing racism and ghetto life in violent terms. Complex generational and class connections made black American rappers popular with large white audiences even as they became more Afro-centric. Particularly skilled and imaginative production teams, such as the Bomb Squad, combined dozens of sampled bits of previous music into noisy urban collages, often polyrhythmic and sometimes polytonal. Extraordinarily virtuosic rappers, such as Public Enemy's Chuck D and Queen Latifah, combined the rhetorical techniques of black-American preaching with bebop's rhythmic flair as they delivered vivid and often critical lyrics.

Like heavy metal, rap was often deliberately noisy when compared to other styles, which often caused its particular forms of creativity and virtuosity to go unnoticed. Both genres were musically and lyrically diverse and differed greatly, but rap and metal fans and musicians often found themselves grouped together and demonized by politicians and the mainstream press. The Parents' Music Resource Center, launched in 1985 by a group of politicians' wives, instigated congressional hearings about 'offensive' music, mostly metal and rap, promoted censorship campaigns against particular artists and brokered a 'voluntary' programme whereby record companies put warning stickers on certain albums, so making them unavailable in some parts of the USA. As had happened in the early days of rock and roll, such controversies betrayed fears about the reproduction of values, miscegenation, and the power of popular music to challenge and critique dominant assumptions and to present and naturalize alternatives.

6. THE 1990S. This period was marked less by technological developments than the 1980s had been. Sampling and sequencing remained important compositional techniques, although increased corporate control of popular music and related changes in copyright law made it more difficult to sample pre-existing recordings freely. CD sales surpassed those of cassettes, and the internet emerged as an important and contested site for the distribution and exchange of music. The popular MP3 compression format preserved much of the high fidelity of a CD source but reduced sound files to a tenth of their former size, making feasible the widespread transfer of music via personal computers. The music industry fought to regulate musical uploads and downloads, which they saw as a new frontier of piracy; in contrast, many fans and artists celebrated the new medium's potential to subvert corporate control of musical life.

Media conglomerates pursued mergers that enabled greater profits through synergy, as when soundtrack albums and films promote each other. The major record labels prioritized the music of a few consistent megastars, such as Michael Jackson, Janet Jackson, the Rolling Stones, Madonna, Prince, Aerosmith and pop balladeers Mariah Carey and Whitney Houston, yet their dominance of the domestic market declined somewhat as smaller labels nearly tripled their share to one fifth. Despite the emergence of new styles linked to youth culture, audiences for popular music remained generationally diverse; in 1992, only 24% of records were bought by people in their teens and younger.

A number of factors combined to end the unusual prominence of heavy metal at the turn of the decade. The rise of 'alternative' music, especially as represented by the Seattle GRUNGE of Nirvana and other bands, blurred genre lines by retaining heavy metal's energy and distorted guitars but eschewing its overt instrumental virtuosity and spectacular stage style. The introduction of electronic point-of-sale reporting in 1991 showed that rap and country were much more popular than had been indicated by previous *Billboard* charts and other measures of sales, which had overstated the dominance of heavy metal. Besides the decline of heavy metal, the biggest musical trends of the 1990s were the movement of 'alternative' to the mainstream, the growth of 'world music' as a marketing category, another period of crossover success for country music, the popularity of film soundtrack albums and the sudden expansion of Latin pop at the end of the decade, propelled by demographic changes that were making the USA ever more culturally diverse.

Growing out of the college radio and post-punk scenes of the 1980s, and building on the increasing popularity of REM during that decade, 'alternative' emerged as a successful marketing category in 1991 when Nirvana's *Nevermind* unexpectedly sold over ten million copies,

and led to national prominence a wave of grunge bands, including Soundgarden and Pearl Jam. All-female 'riot grrrl' bands such as Bikini Kill and Hole, and other punk-influenced bands such as Green Day, were also part of this alternative movement, which increasingly called its genre designation into question by outselling mainstream stars such as Michael Jackson. What united alternative musicians and fans was a generational identity characterized by disaffection and malaise: with an ongoing decline in real wages, 'Generation X' was the first cohort of Americans who could not expect to be better off than their parents. Thus, themes of downward mobility, loss of faith and an ironic, distrustful attitude towards modern life abound in alternative music. The more detached commentary of REM and Beck contrasted with the intense desire and frustration articulated by Nine Inch Nails, P J Harvey and Nirvana.

Few people anticipated the tremendous breakthrough of country music to mainstream popularity in the 1990s, with new artists such as Brooks and Dunn, Allan Jackson, and sexy, often overtly feminist female singers like Martina McBride and Shania Twain, all led by the agile voice and sincere stage presence of Garth Brooks. Along with successful performers of the previous decade like Reba McEntire, Alabama and George Strait, these country stars accounted for as many as 40% of the top-selling albums. Early in the decade, the popularity of country music seemed to owe something to the fact that it offered a less aggressive alternative to the noisy sounds of rap, heavy metal and grunge.

Gangsta rap was the decade's most controversial musical genre, with widespread debate as to whether rappers such as Ice Cube, Ice-T, Dr Dre and Tupac Shakur accurately depicted lives marked by racism and violence; critics alleged that they glorified criminality and misogyny. Such music responded to factors including the greater incidence of child poverty, infant mortality and youth unemployment among black Americans, as well as disproportionate felony convictions and prison time for blacks and whites who committed the same crimes. The large white male audiences for gangsta rap were sometimes deliberately cultivated by rappers to interrupt the familial reproduction of white racism. Rapping spread around the world, as it served various cultural needs for working through local issues of identity and making connections with a global hip hop culture (*see* §V).

1980s styles of rap and pop ballads continued to be popular in the 90s, especially with hip hop touches introduced by such neo-doo-wop groups as Boyz II Men, En Vogue, a number of artists who worked with influential producer Kenneth 'Babyface' Edmonds, and the best-selling female group TLC. Dance music achieved great popularity with new styles, such as JUNGLE (soon renamed 'drum 'n' bass'), featuring virtuosic snare drum samples as a prominent part of the mix. It grew out of the 1980s progression through house and techno, and through new venues, such as all-night 'raves'.

At the end of the millennium, the music of the 50-year rock and roll era was still widely perceived as comprising a reasonably coherent and living paradigm, despite accreted innovations in technology and musical style. New institutionalizations of the music, in college textbooks, musicology dissertations, and the Rock and Roll Hall of Fame in Cleveland, treated this period inclusively and with growing seriousness. The future of the music industry, however, seemed uncertain. The growth of the internet as a medium of musical exchange, the increasingly widespread capacity for people to make their own CDs, the popularity of MP3 and other compression formats, and denunciations of and rebellions against major labels by such stars as Prince and George Michael, all raised questions about which forms and structures would shape the commercial distribution of music in the future. There is not likely to be any shortage of music; like recording itself, new technologies can help one style of music to spread throughout the world even as they stimulate creative interactions and fusions. Mass mediated popular music, even though it has depended upon exploitative commercial practices, has both registered the desires and inequities of a conflicted world and facilitated the exchange of experiences and insights among people who have been separated by geography, power and time.

IV. Europe

1. The British Isles: (i) From rock and roll to rock (ii) From rock to dance (iii) Dance music and after. 2. Continental Europe: (i) Effect of English-language music (ii) Traditional music and European pop (iii) Survival of older genres (iv) Transnational developments.

1. The British Isles.

(i) From rock and roll to rock. The larger historical context for the development of pop music in Britain and Ireland is constituted by the intricate and long-running relationship between popular musics there and in the USA. Transatlantic popular music traffic had been two-way since the 19th century. Each new American style was greeted by its British adherents as a symptom of modernity or exoticism, a route to liberation from entrenched cultural habits; critics, by contrast, attacked each one as a manifestation of barbarism, commercial excess or cultural levelling down. The reception of rock and roll was no different. For critic Steve Race (*Melody Maker*, 5 May 1956) this new style was 'the antithesis of . . . good taste and musical integrity', while its fans, according to the *Monthly Musical Record* (lxxxvi, 1956, p.203), were 'essentially primitives, untouched by the West European culture of which they ought to be the heirs'. But Bill Haley had several hit records during 1955, culminating in the success of *Rock around the Clock* (heard also in the film *The Blackboard Jungle*), and Elvis Presley arrived in 1956 with six Top 20 hits. *Rock around the Clock* became the first single to sell a million copies in Britain, and, though most top-selling records were still in more conservative styles, the notorious if exaggerated 'riots' which accompanied screenings of Haley's films, and the moral panic surrounding the association of the music with the flashy and aggressive working-class teddy boy subculture, signal the impact that rock and roll made on the popular imagination.

The foundations for rock and roll's popularity had been laid during and immediately after the war, when the presence of American troops and their radio stations, imported American records and visiting musicians, fed a hunger for cultural change that was intensified by postwar austerity and the apparent rigidity of the British social structure. By the mid-1950s the beginnings of an increase in disposable income, especially significant for the working-class young, made the cultivation of a new leisure style possible. The BBC was slow and reluctant to broadcast rock and roll, but it could be heard easily enough on the commercial station, Radio Luxemburg.

Some American stars visited, for example Bill Haley in 1957 and Jerry Lee Lewis in 1958. Over the same period revivalist jazz, built on a desire to recreate what was taken by purist enthusiasts to be the authentic jazz style of pre-1917 New Orleans, was gradually developing from the status of a cult into a substantial if short-lived commercial success. Its peak of commercial popularity, in the guise of 'trad' or TRADITIONAL JAZZ, came at the hands of Kenny Ball and Acker Bilk during the period 1960–62. A mid-1950s offshoot of revivalist jazz was SKIFFLE, a do-it-yourself, acoustic proto-folk style that drew its repertory from black and white American folk sources, including blues. This too enjoyed brief commercial success (1956–8), largely through the recordings of Lonnie Donegan. (After their moments of visibility, both traditional jazz and skiffle continued, as largely amateur performing traditions, skiffle feeding into the 1960s British folk revival.) The growing interest in black American music indicated by the success of the jazz revival, skiffle and rock and roll led to visits from several blues singers in the late 1950s and early 60s, including Muddy Waters, Sonny Boy Williamson 'II' and John Lee Hooker. Rhythm and blues clubs also formed, where local bands laid the foundations of the 1960s British blues revival. So, by 1960, the appeal of black music in Britain was probably more broadly based than it ever had been and, more important, it was producing not only listeners but also performers.

There is no doubt that to its young fans rock and roll represented some sort of revolt: freer use of the body and of the voice were central to its appeal. But, while the British record industry soon accommodated itself to the new trend, most of the singers whom they deliberately groomed to compete with the Americans (Tommy Steele, Marty Wilde, Terry Dene, Billy Fury and Cliff Richard) were imitative at best, lacking charisma, unrelaxed in the idiom, pale copies of their principal model, Elvis Presley; often they were accompanied by session musicians. Steele became a variety entertainer and Richard a middle-of-the-road ballad singer. Nevertheless, these performers figured strongly in the late 1950s to early 60s record charts, along with white Americans groomed by their industry to supply a blander, more respectable version of rock and roll (Pat Boone, Ricky Nelson and Bobby Darin) and singers in older styles, including Shirley Bassey, Perry Como and Frankie Vaughan. Historically more important were the instrumental recordings of Cliff Richards's backing group, the Shadows, such as *Apache* (1960), which not only popularized the all-electric guitar format for pop groups (previously, rock and roll groups generally used a string bass and often included piano and saxophones) but demonstrated that, through the use of tremolo, sustain and echo, for example, it could generate sounds that were quite new. Similarly, Joe Meek (one of the first independent producers to work in Britain) pioneered the creative use of studio effects in, for instance, the 'echo-y', other-worldly sound of the Tornadoes' *Telstar* (1962).

Not until the emergence of the Beatles in 1962, however, was there a stylistically substantive British response to rock and roll. The Beatles were one of many hundreds of groups, located in Merseyside and other provincial urban centres, who had learned by playing skiffle, imitating the Shadows and copying American records. The Beatles were special not so much because of their performing ability but because of their self-presentation – cool, self-mocking, witty – and because they composed much of their own material (still unusual, though shortly to be commonplace). They also added fresh musical qualities to rock and roll with a new sort of tunefulness, harmonic and subsequently structural sophistication and a native 'folkiness'. Their success was quick and immense. After *Love Me Do* (1962), virtually every one of their single releases reached number one in the British charts; their first album, *Please please me*, was the British bestseller for six months in the year of its release (1963). With six number one hits in the USA during 1964, their records accounted for an estimated 60% of all record sales there in the first quarter of the year, and their first American tour (February 1964) was one of the most publicized events of the decade. 'Beatlemania', compounded of fanatical audience response and intense media publicity, spread from Britain to the rest of Europe, North America and beyond. Many other groups such as Gerry and the Pacemakers, Herman's Hermits, Freddy and the Dreamers, the Hollies, the Swinging Blue Jeans and the Dave Clark Five also achieved success at home and abroad (*see* BEAT MUSIC). The phenomenon was clearly linked to the 'cultural revolution' of the 1960s, involving political change with a Labour government elected in 1964, changes to the class structure brought on by new employment and education patterns, the full establishment of a youth cultural sphere and the enthronment of an ideology of 'style' and technological modernity. The new music was heard everywhere on transistor radios, at first on pirate radio stations as much as the BBC, though in 1967 the Corporation responded to this competition by creating Radio One, a dedicated pop channel. The Beatles were irrefutably the leaders: bringing together John Lennon's taste for rock and roll simplicity on the one hand, aesthetic experiment on the other, and Paul McCartney's melodic inventiveness and intuitive harmonic ear, their fusion of rock and roll rhythm, blues-style and modal harmonies, vocal harmonizing and Tin Pan Alley sectional song forms was both influential and hard to match.

A parallel tendency during the period 1962–4 was represented by an emerging group of rhythm and blues bands (the Rolling Stones, the Yardbirds, the Animals, the Kinks, Them and the Who, for example) who drew not only on rock and roll but also on the 'dirtier' city blues of such performers as Muddy Waters and John Lee Hooker, transferring the aggression and macho sexuality typical of Chicago rhythm and blues to themes of adolescent alienation and desire (quintessentially in the Rolling Stones' 1965 hit, *Satisfaction*). The Stones' image was to remain defiantly iconoclastic, with lead singer Mick Jagger the first British singer to match Elvis Presley as a symbol of eroticism and revolt, but their own material developed an individual style; similarly, the Kinks absorbed elements of music hall, and the Who evolved a theatrically violent mode of expression epitomized by the classic *My Generation* (1965).

Between 1965 and 1967 many pop groups began to break the bounds of existing pop norms, stimulated by a booming popular music market, by new technological possibilities, by aspects of the emerging 'counterculture' and by the demands of an audience now extending further into middle-class grammar school and college students. The Beatles' albums *Rubber Soul* (1965), *Revolver* (1966) and the celebrated *Sgt Pepper's Lonely Hearts Club Band*

(1967; one of the first LPs designed to be a coherent whole) display new influences (Indian, folk and classical music), new instrumentations (strings, brass and keyboards of various types), unorthodox chord progressions, unpredictable phrase-lengths and sectional relationships, and innovative usages of studio techniques (overdubbing, collage and electronically treated sound). *Sgt Pepper*, in particular, was hugely influential, setting off a trend for concept albums, laying bare the need for a new musical category (rock), forcing listeners to question their preconceptions about the differences between popular and art musics, and hence rendering inevitable a growing fragmentation of pop and its audience.

Increasing stylistic breadth is clear even within the make-up of the burgeoning countercultural rock itself. American influences included the Beach Boys' intricate studio compositions, West Coast blues-, folk- and jazz-influenced acid rock (*see* PSYCHEDELIC, Bob Dylan and the folk-rock he inspired, blues-rock singers such as Janis Joplin, and singer-songwriters as varied as Joni Mitchell, Randy Newman and Simon and Garfunkel. British rhythm and blues reached new heights of virtuosity at the hands of Cream, whose ex-Yardbirds guitarist Eric Clapton extended the instrument's potential for fast runs, expressive bending of pitch and vocalized effects and went on to become the most celebrated rock guitar player. Black American Jimi Hendrix, who settled in Britain, fused acid rock and blues and developed an equally startling electronically mediated guitar style through novel use of wah-wah, vibrato and feedback. Such developments in the rhythm and blues lineage fed into the highly amplified heavy rock of such late 1960s bands as Deep Purple and Led Zeppelin (featuring dramatic vocal styles and exhibitionistic guitar solos) which in turn was to evolve into HEAVY METAL. British rock at this time was less overtly political than its American counterpart, or rather its politics tended to be personal and hedonistic, and protest was less common than avant-garde experiment on the one hand and art-music influences on the other. Pink Floyd's extended collage forms fusing mainstream rock with electronic sound, elaborate tape effects and light shows, exemplify the first tendency. Proto-classical textures, sometimes using orchestral instruments, through-composed sectional forms, thematic integration techniques and unorthodox harmonies can all be found in the PROGRESSIVE ROCK associated with Procol Harum, Genesis, Yes, the Electric Light Orchestra, Jethro Tull and Emerson, Lake and Palmer. A further influence in the case of some of this latter group was the 1960s British folk music revival, which at the same time was itself giving rise to a strand of FOLK-ROCK, represented by, for example, Fairport Convention and, later, Steeleye Span. Irish folk, along with country, blues and jazz, was an influence on the notable ex-Them singer from Belfast, Van Morrison in, for example, *Astral Weeks* (1968).

These countercultural styles were not to the taste of all listeners. Throughout the decade many records by black American performers were popular in Britain, starting with Motown artists and then 'heavier' soul singers such as Aretha Franklin, Wilson Pickett and Otis Redding, and the funk of James Brown and others. Whatever the stylistic differences between these musicians, they tended to stay closer than progressive rock to dance rhythm, simple, repetitive formal schemes and direct vocal expression; even when not in the foreground of chart success, they furnished some of the principal repertories for dancing, especially for underground subcultures such as the 'Northern soul' clubs of Northern England. At the same time SKA, a fusion of West Indian traditional musics and American rhythm and blues, was developing in Jamaica and among British Afro-Caribbeans, and this provided a further dance-music style popular not only with black British youth but also some white groups. Moreover, simpler, mainstream white pop continued to compete against more progressive trends; indeed, the first signs of a deliberate attempt to target a pop as against a rock market can be seen in the success of 'manufactured' American group, the Monkees. Ballad singers had considerable success: for all its drug-driven 'summer of love', 1967's bestselling solo artists were balladeers Tom Jones and Engelbert Humperdinck (for both singles and albums), and the bestselling groups were the Beach Boys (with a retrospective compilation) and the Monkees.

(ii) From rock to dance. The cultural situation favouring progressive and heavy rock shifted in the early 1970s with the decline of the counterculture as an active force and with the economic downturn that followed the oil-price rise of 1973. Nevertheless, many of the most successful bands of the late 1960s, such as the Rolling Stones, the Who, Genesis, Pink Floyd and Led Zeppelin, continued to tour and sell records heavily. Their appeal was weighted towards the same listeners (now older) whom they had first attracted, and, as the music was absorbed into the accepted patterns of cultural life and of the music industry, losing much of its previous frisson of subversiveness, it could be seen as rather safe and self-interested. The scale of concerts tended to grow ever larger, with bigger audiences, more performance equipment and more elaborate stage presentation, and thus a new category sometimes called stadium rock emerged. Overblown and pretentious to its critics, this middle-of-the-road music could actually be seen as encompassing a wide range of styles, and in its essentials it continued up to the 1990s. At one extreme stands the experimentalism of Pink Floyd and the old-style progressive rock of the Moody Blues and Mike Oldfield (whose one-man studio album *Tubular Bells* was a major success in 1973), at the other the straightforward blues-and-boogie of Status Quo. In between are the mainstream rock of Ultravox and Simple Minds, the powerful but more eclectic approaches of the Irish group U2 and Queen (whose *Bohemian Rhapsody*, 1975, was the first record to make integral use of a video, setting a trend that would become increasingly important), the soft-rock of Fleetwood Mac, the 'white soul' of Simply Red and the more pared-down, 1960s-related style with blues and country resonances of Dire Straits. In addition, star solo singers drew on the same range of styles and appealed to similar audiences; in the 1970s the composer, singer and pianist Elton John and the grittier, rhythm-and-blues-styled Rod Stewart were the leading figures, while subsequently the rock and soul fusion of Phil Collins (previously in Genesis), the jazz-tinged ballads of Sting and the 'white soul' of George Michael stand out. Throughout the period, heavy metal bands (Black Sabbath, Thin Lizzy, Iron Maiden, Judas Priest and many more) also drew on late 1960s rock roots but developed them into a distinctive mix of thundering riffs, simple and repetitious harmonies, lengthy and virtuosic guitar solos, anthemic choruses and theatrical performance, and appealed to a distinct audience of their own.

By the 1980s, if not before, many of the musicians listed above are very difficult to categorize stylistically. This fluidity has a broader context, however, going back to attempts in the late 1960s and early 70s to produce a simpler 'pop' music which would compete with 'over-complicated' progressive rock and attract a younger teenage market. The Sweet, Slade, T. Rex and the Bay City Rollers all had success with straightforward dance records, dressing them up with the visual trappings of 'glitter' and GLAM ROCK. The success of disco in the second half of the decade, mostly through imported records but also some British groups such as the Bee Gees (especially in their film *Saturday Night Fever*, 1977), continued the dance focus. In the early 1970s David Bowie embarked on a lengthy career which has coupled together a succession of relatively simple musical styles based on hard rock and soul influences and a sequence of theatrical personae, including Ziggy Stardust, Aladdin Sane and the Thin White Duke. Startling hairstyles and clothing and camp performance modes queried the cultural and gender stereotypes of rock stardom, as, in such albums as *The Rise and Fall of Ziggy Stardust and the Spiders from Mars* (1972), Bowie placed himself in quotation marks, undermining the rock assumption that seriousness necessarily implied expressive realism. Roxy Music, featuring the studiously 'romantic' self-presentation of singer Bryan Ferry and partly electronic sounds produced by the avant-garde Brian Eno, used different means in pursuit of a somewhat similar aesthetic end.

In both his cultivation of 'style' (in the sense of deliberate artifice) and his back-to-basics musical approach, Bowie was an important source for PUNK ROCK, along with the abrasive, stripped-down sounds and shock tactics of the New York avant garde (Velvet Underground, New York Dolls and Patti Smith), earlier British hard rock (the Who) and the raw, good-time American 'garage band', and British 'pub-rock' traditions surviving in the margins of the 1960s and early 70s. Nevertheless, punk's arrival on the British musical scene in 1976, orchestrated with carefully cultivated outrage by pioneering band the Sex Pistols and their manager Malcolm McLaren, drawing knowingly on French 'situationism', was dramatic. The Sex Pistols, the Clash and other leading bands deliberately insulted audiences, constructed bizarre visual styles and tackled provocative subjects (see, for example, the Sex Pistols' *Anarchy in the UK* (1976), and *White Riot* (1977) by the Clash). Their short, high-speed and painfully loud songs, with shrieked vocals, feedback-laden 'buzzsaw' guitars, relentlessly thumped drums (with little syncopation) and calculated crassness, were meant to infringe not only mainstream social and cultural values but also progressive rock's pretensions. In this pure form, punk lasted only a couple of years, yet, internationally as well as at home, it was the most influential British popular music style since the Beatles. Punk rehabilitated simplicity and crudeness and suggested that they could be used for aesthetic purposes. Its rejection of studio trickery and music industry gigantism legitimized a return to do-it-yourself music-making; together with a fall in the cost of production technology, its innovations stimulated the formation of many small, independent record companies and a host of new performing groups.

Punk clearly presented itself as a subculture, connecting a music and a people. Yet it fell apart partly because of the tension between the 'realist' strategy of its 'dole-queue politics' and the 'formalist' implications of its constructed aesthetic; and the artifice with which its musical, visual and behavioural styles were pinned together suggested that any simple equation between a musical style and a social group would henceforth be problematical. Ironically, at the very same time, previous pop subcultures (working-class rockers, mods and skinheads, with tastes for the visceral thrills of rock and roll, rhythm and blues, soul and ska, ranged against middle-class hippies and their progressive rock) were being obsessively theorized by sociologists, as symptoms of active resistance to the workings of political hegemony. The feminist critique of subcultural theory pointed out that women's roles in music were ignored, and that both the subcultures and the theory were complicit with patriarchy. Successful female singers in the 1960s, such as Lulu, Cilla Black, Sandie Shaw and Dusty Springfield, drew on contemporary pop and soul and older ballad styles, but they tended to be stereotyped as either young and sexy (and therefore limited in career prospects) or 'sophisticated' (and hence musically conservative): in neither case did rock do anything to subvert older patterns of male chauvinism. Punk, however, opened the way both to female instrumentalists, non-stereotyped singing styles (Siouxsie of the Banshees, Poly Styrene) and all-female bands (the Slits, the Raincoats).

Punk's legacy was varied. The musical style itself remained available, as in the THRASH METAL of such bands as Motörhead, the punk-folk fusion of Irish group the Pogues, the punk-dance hybrid developed in the 1990s by the Prodigy and the dedicated if relatively invisible bands of the hardcore scene. The avant-garde deconstructionist impulse was continued by post-punk bands such as Public Image Limited and Scritti Politti. There was greater visibility, however, for post-punk groups favouring styles influenced by blues, soul and British rhythm and blues (Squeeze, the Jam and the Style Council), as there was too for ska and reggae. Not only were these styles popular in themselves (for instance, reggae superstar Bob Marley's popularity in Britain peaked in the late 1970s) but their influence can be detected in some punk (notably the Clash) and in the work of many subsequent bands (Madness, the Police, UB40 and the Two-Tone groups of the English Midlands such as the Beat and the Specials).

In large part, the punk legacy was not directly stylistic but rather related to punk rock's effect in crystallizing a change in the pop aesthetic (so that the complex, large-scale and 'deep' were either rejected or became just one option) and in the structure of the music industry: the punk model of self-management, and the hundreds of new studios, production and distribution companies and shops that it inspired, facilitated an extension of stylistic possibilities. Even though the major companies retrieved the position by buying out or making deals with independents within a few years and re-conceptualizing stylistic variety as 'niche marketing', the basic network-like pattern of production remained. Diversification was furthered too by the spread of local radio (independent local radio began in 1973 and control of its programming was significantly relaxed during the 1980s; BBC local radio began in 1967 but had little impact until put under pressure by its commercial competitors), by the appearance of the CD (first marketed in 1983, and used, among other things, for a massive programme of back catalogue

reissues), by the spread of audio cassettes, home taping and the personal stereo and by the increasing breadth of the pop audience age. In the 1980s, therefore, it is very difficult to find a sense of a centre to the pop field.

The so-called New Romantics of the early 1980s, such as Duran Duran, Spandau Ballet, ABC and Culture Club, which featured the cross-dressing singer, Boy George, were presented as a reaction against punk, their visual glitter and knowing commercialism epitomizing the metropolitan hedonism of the dawning Thatcher era. A strand of light dance-pop continued throughout the decade, often aimed at a very young age-group ('teeny-boppers'), representative examples being the work of female vocal group Bananarama and the singers managed by the production company Stock, Aitken and Waterman, including Kylie Minogue, Jason Donovan and Rick Astley. Starting around the same time, 'synth-pop' or 'electro-pop' drew on the innovatory use of synthesizers in the late 1970s by such bands as Kraftwerk, in Germany. The recordings of Gary Numan, Depeche Mode, Human League, Bronski Beat and Soft Cell (featuring the singer Marc Almond, who subsequently enjoyed a successful solo career) cover a variety of styles, from post-punk experimental to light soul, but all place emphasis on deploying new kinds of sound. Much of this music has a strong dance component, usually carried through disco influences, and its content commonly plays with gender stereotypes, often featuring camp or openly gay imagery and sensibility. This is true, as well, of two of the most successful 1980s groups, both employing a good deal of synthesized sound in their white pop-soul/disco styles, the Eurythmics and the Pet Shop Boys.

It would appear that the electric guitar had become closely connected with the expression of a masculinist sexuality, whereas both synthesized sound and disco (with its novel orchestrations, use of electronic and extravagant studio effects and associations with gay dance-clubs) allowed opportunities to subvert this. Nevertheless, guitar-rock comprises a third important 1980s pop strand. In the hands of several bands starting in or just after punk rock (Joy Division, later named New Order, the Cure, the Fall and the Smiths with their charismatic if agonisingly introspective singer, Morrissey) and such successors as the Jesus and Mary Chain and Primal Scream, this strand took on the status of a genre as indie (*see* INDIE MUSIC), developing its own specialized record companies, sales charts, radio shows and audience (serious, student-based, preponderantly middle-class and, it would seem, male). Positioning itself against the 'commercial' pop promoted by the major companies, indie's poeticism and emotional extremism represented an exception to the prevalent 1980s sensibility: a hedonistic though often ironic consumption of the aural surface, grounded on a knowing use of past pop repertories.

Singer-songwriters offered a further alternative to this sensibility, but covered a variety of styles themselves. These ranged from the politicized folk-influenced songs of Billy Bragg to the jazz-tinged social comment of Joan Armatrading, from the theatrical mood-pieces, with often unorthodox arrangements and forms, of Kate Bush to the stylistically eclectic but emotionally incisive repertory of Elvis Costello. Older styles of rock were still popular, though mostly in the hands of already established musicians, as were the varied genres of black music, especially for dancing. The Soul II Soul production collective, founded in 1982 by DJ and producer Jazzie B, was associated with much of the best black British soul, funk and reggae of the 1980s. Dance rhythms were foregrounded too in the late 1980s music of 'Madchester' bands (in Manchester) the Stone Roses, Inspiral Carpets and Happy Mondays. But their success was linked to the rise of the British rave scene, which was the context for the development of a new sort of dance music.

(iii) Dance music and after. The musical background to this development was the continuing popularity of black American dance genres in British clubs, updated in the 1980s through the influence of electro-funk and HIP HOP, and then HOUSE and TECHNO. The social context was the swelling of the dance scene from the middle of the decade through the impact of lengthy and often all-night 'raves', fuelled by recreational drugs; at first informal and sometimes illegal, these were subsequently largely absorbed into a commercial system. They were presided over by a new breed of DJ-producer, whose innovative use of new technology (through techniques of SAMPLING, SCRATCHING and remixing, live and in studio work) transformed notions of dance music form and performance. Operating largely in a separate sphere with its own record companies, studios, venues, magazines and sales charts, the new practice generated a continually mutating chain of styles and hybrids and through the late 1980s and 90s was probably the most creatively energetic area of British popular music. Its musical norms include foregrounding rhythm, timbre and texture, downplaying harmony and singing (though the latter varies somewhat between styles), largely abandoning formal sectionalism and symmetry in favour of collage, slowly mutating textures built over repeated rhythm 'loops', and open-ended additive process. These can be seen both as carrying certain tendencies present in pop since its very beginnings in rock and roll to their furthest point of development and as moving as far away from the norms of mainstream Western musical traditions as popular music has gone.

Aspects of the new dance music percolated into the pop mainstream, however. Indeed, by the mid-1990s 'dance beats' were common on TV commercial and film soundtracks and in pubs and shops. As early as 1987 (*Pump Up the Volume* by M/A/R/R/S), hit records were drawing on similar techniques; Pop Will Eat Itself and KLF (the Kopyright Liberation Front) were other groups in this category. By the mid-90s such bands as Prodigy, the Chemical Brothers and Underground were taking dance music effects out of the clubs and into a wider market by grafting them on to established rock techniques; Goldie and Roni Size did the same for the Afro-Caribbean variant, JUNGLE (later named drum 'n' bass). By this date too, quite mainstream pop records would routinely pay homage to dance music by copying a characteristic rhythm track or including snatches of rap, scratching or 'looped' effects.

Older lineages continued to be successful. The increasingly global reach of the music industry oligopoly dictated its obsession with the search for mega-stars and mega-hits. Large quantities of American music were still imported into Britain, and by now included rap as well as the leading pop stars such as Michael Jackson, Madonna and Whitney Houston. New home-grown solo singers also emerged: the soul-influenced Lisa Stansfield and the impassioned balladeer Sinead O'Connor, for example. More 'alternative' styles, such as guitar-based indie music,

prospered too. Rock expressive traditions of anger and anguish were continued by the Welsh band, Manic Street Preachers; the strikingly intense P J Harvey brought a singer-songwriter's confessional sensitivity to the genre, while Suede pursued sexually ambiguous performance styles; Radiohead were musically more eclectic and experimental, The Verve more tuneful and romantic; and primal Scream married indie sensibilities with dance-music rhythms. Chart pop, aimed largely at younger audiences, generated its usual stream of mostly transient performers. The most striking phenomenon here, though, was the renewed popularity of vocal groups, in the form of 'boy bands' singing in a soft harmony style (Take That, East 17 and Boyzone), and 'girl groups' such as the Spice Girls, whose recordings of light, expertly crafted pop songs, allied to a message of 'girl power', brought them extraordinary worldwide success in 1996–7. Partly on the back of the new dance music's popularity, some bands with roots in older dance genres also enjoyed considerable success, the most notable examples being the jazz-funk of the Brand New Heavies, Jamiroquai and M People.

The most publicized development of the mid-1990s was BRITPOP, a movement unified less by musical style than discursively, through its positioning against American rock (notably grunge) and in favour of songs (as opposed to dance music). The recordings of Oasis, Pulp and Blur, in particular, brought a predominantly guitar-based music back into the pop mainstream and constructed sometimes quite explicit links with styles of the 1960s and 70s, including the Beatles and the Kinks. The mood of Britpop was generally celebratory, 'English' and often nostalgic and was duly called upon by the propagandists of the new Labour government of 1997. During much the same period, TRIP HOP, associated with black musicians based in Bristol, explored darker aspects of contemporary life. Massive Attack, Portishead and the strikingly original composer-producer Tricky brought together rap, reggae, soul, and electronic and studio effects typical of modern dance (especially AMBIENT HOUSE styles) and portrayed a very different Britain. While the new dance music was claimed by some as signalling the end of rock (that is, the end of a certain mode of self-authored personal expression in favour of collective gesture and ecstatic abandon), trip hop in its own way, as much as Britpop, suggested that popular music was not yet ready to give up its long tradition of song forms. Rather, the sheer range of styles making up the British pop field as the century came to an end indicated a healthy variety of creative activities.

2. CONTINENTAL EUROPE. The impact of American and British styles and the massive growth in music media caused the quantity of popular music created in continental Europe to grow exponentially in the second half of the 20th century. In a continent of over 30 nation states with differing political histories (particularly between the West and the countries with communist governments prior to 1989) and numerous ethnic or regional cultures, it is difficult to confidently discern pan-European trends, but several broad themes in the development of the music since 1955 can be outlined.

(i) Effect of English-language music. The response of European musicians to the 'invasion' of Anglo-American rock and pop music has involved its imitation and assimilation to local or national themes or genres. The music of Bill Haley and especially Elvis Presley inspired copies across Europe but the assimilation of rock and roll's stylistic innovations was limited to local language translation of song lyrics, a practice which continued into the 1960s when French-language versions of Beatles and Bob Dylan songs were common. The best known of the European performers in the Presley mould is Johnny Hallyday who became the first French rock star and created an image of rebellion which has nourished a career of over 40 years. Other Elvis impersonators such as Per Granberg in Norway and the Sputnicks (Czechoslovakia) are now only a footnote in musical history. In the early 1960s the guitar instrumental music of the Ventures and the Shadows provoked numerous imitators particularly in Scandinavia, from the Boys (Finland) and the Vanguards (the Norwegian group where the country's most renowned guitarist Terje Rypdal began his career) to the Swedish group the Spotniks who had an international success with the Israeli song *Hava Nagila* (1963).

The choice of English-language names was widespread among the European groups inspired by the beat music emanating from Britain in the early 1960s. The Vienna Beatles from Austria were the most transparent in acknowledging the source of their style but elsewhere there were such groups as the Rattles (Germany), Butlers (GDR) and Blues Section (Finland). In a number of cases such beat groups were the training ground for musicians who later made significant contributions to European music. In Greece the leading groups the Beatkins and Formix included singer Demis Roussos and film music composer Vangelis respectively, while Sweden's Hep Cats included Benny Andersson, later of Abba.

The impact of punk and rap in Europe was significantly different. While European exponents of these genres imported the rhythms and instrumental modes of the Anglo-American genres, these were used as a springboard for national language lyrics expressing the concerns of disaffected youth in Naples or Helsinki rather than London and Los Angeles. The punk rock movement in Britain between 1977 and 1980 inspired such groups as Stinky Toys (France), Bad Semen (Denmark), Big Balls and the Great White Idiot (West Germany), Hanoi Rocks (Finland), Watercloset Band (Czechoslovakia) and Pershing (Poland). Despite their English names, these groups performed songs in their own languages.

Although its musical origins in black American youth music were very different from that of punk, rap music also acted as a catalyst for musical innovation in mainland Europe, most notably in France where M.C. Solaar (from an African emigrant background) became a major star and the groups Supreme NTM and Alliance Ethnik were popular. Elsewhere, rap performers were found throughout the continent. Some groups crossed ethnic divides, such as Cartel, a German-based group with members from Cuba, Turkey and Germany, Portugal's General D, formed by the younger generation of African emigrants, Sens Unik (Switzerland) and Mission Hispana (Spain).

(ii) Traditional music and European pop. Folksong and folkdance had been an important inspiration for many European art music composers in the early part of the 20th century but had made a lesser impact on popular music, which was more concerned with American influences. This impact increased significantly after 1950 on both sides of the Iron Curtain. In most communist-ruled states folk music enjoyed a new status as proletarian art and folk ensembles received political and financial support

from public authorities, whereas pop and rock groups were either forbidden to perform or were regarded with disapproval. One notable beneficiary of this policy were the Bulgarian choirs whose recordings were issued in the West by Marcel Cellier as *Le mystère des voix bulgares*. Later (post-communist) flowerings of this trend included the work of Ivo Papasov in Bulgaria and the important partnership of the Transylvanian group Muzsicas and singer Marta Sebestyen (whose mother had been an assistant to Kodály).

In the West traditional music was taken up by new generations often with a similar radical political motivation. In Spain a *nuevo flamenco* movement appeared in the form of guitarist Cameron de la Isla, singer Rosario and rock group Ketama; in France the Celtic traditions of Brittany were revived by harpist Alan Stivell and others; in Portugal *fado* was 'rediscovered'; and in Greece the despised *rebétiko* – the music of the underclass often compared with blues or tango – was rehabilitated by Opisthodromiki Kompania and others in the 1980s. The electric folk and folk trends pioneered in Britain by Fairport Convention and Steeleye Span had their continental counterparts in groups such as Flairck in the Netherlands and Basque group Oskorri in the 1980s and Värttinä in Finland, Celtas Cortes in Spain and Hedningarna in Sweden in the 1990s. At that period critics discerned a Mediterranean alternative genre whose exponents included Radio Tarifa (Spain) and French groups Mano Negra and Les Negresses Vertes who combined flamenco with Algerian *rai* and Latin brass with French chanson. In the 1990s groups such as Palatz from Belarus mixed traditional instruments and tunes with current dance beats.

(iii) Survival of older genres. Several European countries had entered the postwar period with firmly established songwriting traditions often allied to national poetry modes. These included the French chanson, the German *Schlager*, the *nova canco* in Spain and the Italian canzone. In France the key figures as composers and performers included Georges Brassens, Leo Ferré, and the Belgian Jacques Brel. Chanson was associated with the left bank milieu of existentialism and modern art, and lyrics were provided by poets like Boris Vian and Jacques Prévert. In addition to the composers, the renowned performers of the chanson included Juliette Greco and Barbara. Charles Aznavour provided a bridge to the more mainstream French popular song associated with such legendary singers as Edith Piaf and Charles Trenet, while the compositions of the mercurial Serge Gainsbourg linked chanson with the teenage 'ye ye' stars like Françoise Hardy and Claude François. The *Schlager* of Germany is less defined, deriving from the mainstream German-language pop of the 1950s as performed by Drafi Deutscher, Conny Froboss and others. In later years the genre has become more conservative, moving closer to *Volksmusik*, the rurally-themed genre (like American country and Japanese *enka*) usually defined by musicologists as folklike music.

In Italy the worldwide success of Domenico Modugno's song *Volare* (1958) marked a moment when the tradition of Neapolitan ballads gave way to the *canzone d'autore* which came to be associated with the jazz-influenced singer Paolo Conte and the Florentine Lucio Battisti, who achieved what the critic Thad Wick called a 'union of Anglo-Saxon rock vocal phrasing with distinctly Italian emotion and melody'. The repressive cultural regime of the Franco era gave the *nova canco* movement in Spain (which flourished between 1962 and 1975) a sharper political edge, especially in the work of those such as Juan Manuel Serrat who defied the ban on the use of the Catalan language. Other singer-composers associated with the movement are Joaquin Sabina and Ana Belen and Victor Manuel.

To the extent that these national lyric forms were created by singer-performers, they made a certain rapprochement in the 1960s with the emerging singer-songwriter genre of Anglo-American pop. The effect of the singer-songwriters, and in particular Bob Dylan, was most evident in the adoption by European performer-composers of rock music rhythms and in a shift in thematic emphasis, notably towards songs of social and political protest. Many countries produced singers described as the national Dylan, such as Boudewijn de Groot in the Netherlands and Vladimír Merta in pre-Velvet Revolution Prague.

The evolution of European traditions since that period has included a large industry of soft-rock ballads and also a more gritty and unpredictable singer-songwriter mode exemplified by Serge Gainsbourg and Conte and the Russian star Boris Grebenshikov. The most characteristic exponents of the soft-rock ballad – comparable to such Anglo-American performers as Elton John and Billy Joel – have included the Italian Eros Ramazzotti, the Frenchman Patrick Bruel and the German singer-songwriters Herbert Groenemeyer and Westernhagern.

(iv) Transnational developments. Although the impact of anglophone music on continental Europe has been considerable, a significant amount of pop music from within Europe has found international audiences during the past half century. Some singers, notably Caterina Valente and the Greek-born Nana Mouskouri, specialized in performing in numerous European languages, while it was not unusual during the 1950s and 60s for British pop singers such as Petula Clark and Dusty Springfield to record their anglophone hits in French, German and Italian.

Additionally, Italian ballads were frequently heard in translation in Germany, France and Britain where Dusty Springfield's hit *You Don't Have To Say You Love Me* was originally *Io che non vivo (senzate)* (by Pallavicini and Donaggio). With the outstanding exceptions of Brel's repertory, which was taken up in particular by the American Rod McKuen and the European-based Americans Mort Shuman and Scott Walker, and of Jacques Prévert and Jacques Rigaud's *Comme d'habitude* (translated by Paul Anka as *My Way*), a smaller proportion of French song was translated.

By the late 1960s, this type of transnational transaction was supplanted by the widespread use of English as a lyric language, particularly in northern Europe. Progressive and heavy rock bands like Focus (Netherlands), Tasavallen Presidenti (Finland), Scorpions (Germany), Krokus (Switzerland) and Europe (Sweden) were able to compete on equal terms with the Anglo-American artists and also enjoyed international success. A bizarre offshoot of heavy metal is the Norwegian death metal genre whose exponents used their native language and were embroiled in satanic arson and violence. Yet, the most outstanding example of a continental European contribution to

international pop music came from the German-based groups Kraftwerk, Tangerine Dream and Can, whose work took inspiration not from rock but from the electronic experiments of Stockhausen. This 'industrial music' of the 1970s led directly to the techno dance music of Detroit which in turn inspired house music, a dominant trend in European pop during the 1990s.

The apogee of anglophone pop music from continental Europe was achieved in the late 1970s by the Swedish group Abba. Their recordings were equal in professional quality to any of their Anglo-American contemporaries as were those of subsequent pop groups from Scandinavia such as A-Ha, Roxette, the Cardigans and Aqua. Abba's success had coincided with the vogue for disco music which provided a further opportunity for European producers to craft hit records for international audiences. Following in the footsteps of such orchestra leaders as Bert Kaempfert and James Last from Germany and Paul Mauriat from France, the new generation was led by Frankfurt-based composer and producer Frank Farian who created a series of hits with the group Boney M. Farian's work provided a template for a much larger wave of dance music producers from all around Europe during the late 1980s and the 90s. Apart from the heavily accented dance rhythms performed on synthesizers, these later records were notable for their strong melodies, minimal lyric content and use of session singers or even samples for the vocal element. The leading exponents of this Euro-dance genre included the Italian production team Riva and Pignagnoli (responsible for hits by Whigfield), Sweden's Denniz Pop (Dr Alban), the Dutch partners Phil Wilde and Jean Paul de Coster (2 Unlimited) and the French duo Air.

The producers of Euro-dance and their more left-field contemporaries like the creators of Dutch 'gabba' house music were experts in the utilization of the cutting edge of computer and digital recording technology. But at the close of the 20th century probably the single most popular European recording artist was Andrea Bocelli, an Italian tenor singing popular classics, who was heir to a long tradition of classical singers as pop stars that stretched back through Luciano Pavarotti to Enrico Caruso at the dawn of the European recording industry a century earlier.

V. Non-Western cultures

1. Global dissemination. 2. Local interpretations and identities.

1. Global dissemination. Western-derived pop styles, whether coexisting with or marginalizing distinctively local genres, have spread throughout the world and have come to constitute stylistic common denominators in global commercial music cultures. In the process many syncretic hybrids have emerged which combine Western and indigenous features in various degrees and forms. Many such genres resist categorization either as Western or local. Often, however, Western-derived musics stand in sharp contrast to more indigenous idioms, whether modern or traditional, and are recognized as such in local discourse. Most scholarly research on popular music outside the West has concentrated on distinctively indigenous music genres (e.g. Manuel, E1988), but Western-derived styles play such significant roles in most cultures worldwide that they must be incorporated into any attempt at a holistic perspective. Such musics also merit attention in terms of their sheer quantity; for example, the output of the Japanese record industry, most of which is devoted to Western-style pop, for several years has surpassed in quantity that of every nation except the USA. Since the popular music genres in question themselves largely correspond to Western counterparts, more important than their technical and stylistic description is the study of their interaction with other indigenous and imported genres and their local and global significance.

Some of the most globally influential popular music styles have originated from the peripheries of mainstream Western music culture. Cuban-style dance music enjoyed extraordinary popularity throughout Francophone urban Africa and parts of Asia in the mid-20th century. Jamaican reggae came to attain similar appeal in the 1970s through its infectious rhythms and associated message of political and ideological liberation. Country and western music, as recorded by Jim Reeves and others, also became widely popular throughout much of Africa and elsewhere. Since the 1960s, however, greater international popularity has been attained by the more central genres of Euro-American popular music. Most conspicuous among these are the black American-influenced forms of Western popular music, especially mainstream rock and such related subgenres as disco, heavy metal, punk and techno. These have been rearticulated in various forms throughout the world, often acquiring new labels, such as *string* in Thailand, *ponchak rock* in Korea and *stereo* in Myanmar (Burma). Since the late 1980s rap music, with its emphasis on texts, has also been a popular vehicle for adaptation in numerous societies worldwide.

The global popularity of rock music and rock-influenced pop, although prodigious, is at least equalled by that of another category of Western-derived music, comprising sentimental ballads and easy listening music. In this category falls much of Indonesian pop and *lagu cengeng* ('weepy song'), Vietnamese *ca Khuc* ('modern songs'), Thai *sakon* and *luk Krung* ('child of the city') and the vast majority of contemporary Chinese commercial popular music, especially Cantopop and other styles of light music emerging from Taiwan and Hong Kong. This genre, in its various regional manifestations, is distinguished by soft, non-percussive textures and sentimental love lyrics crooned in an intimate, sensual style; it corresponds to the Western genres least associated with dancing, youth, black American influence and explicitly countercultural or anti-commercial ideologies.

Western-derived pop styles occupy different places in regional soundscapes, in accordance with the socio-musical dynamics of each culture. Such relationships cannot be comprehended in terms of a reductionist 'core-periphery' model, but are better seen, in Slobin's terms (E1992), as a complex matrix of overlapping, intersecting and interacting 'supercultures' (of which Western pop would be one), regional 'intercultures' and local 'micromusics'. Thus, for example, Indian film music and Egyptian urban music can be seen as constituting regional 'cores' or music supercultures whose popularity spreads well beyond national and even linguistic boundaries.

In cultures with strong indigenous popular music traditions, such as flourish in Africa, South Asia, the Arab world and Java, Western-style pop may be relatively marginal or may co-exist with thriving local commercial genres. At the same time, syncretic local genres in these regions may embody prominent Western-derived features.

Thus, for example, in India, while rock music *per se* is enjoyed only by the most Westernized urbanites, disco influence has become increasingly marked in Bombay film music, and a disco-style 'Hindi pop' has become the favoured idiom of many urban bourgeois young people in the North. In Indonesia, *pop Indonesia* flourishes as a Western-style soft-rock genre sung in the national language; regional-language versions of this music – collectively called *pop daerah* – also thrive, a few of which (such as *pop Sunda*) introduce local instruments as iconic markers of regional identity. Meanwhile, these syncretic Indonesian styles co-exist with more indigenous forms of popular music, including Sundanese *jaipongan* and the rock- and Indian-influenced *dangdut* (Yampolsky, E1989).

In other countries, Western-derived styles enjoy virtually complete and unchallenged hegemony. In countries such as the Philippines, indigenous music traditions have been too socially marginal to syncretize into modern urban styles. In Japan, Taiwan and Korea, with their rich traditional music cultures, the dominance of Western-style pop clearly derives from other reasons which, although complex, would presumably involve the forms of cultural nationalism adopted since the early 20th century and the related desire to emulate the West in culture as well as technology. State policies have often played roles, in some cases unwitting, in promoting Western popular music. In Iran the fundamentalist Islamic government, which came to power in 1978, effectively silenced or exiled the extant local popular music scene, thereby contributing inadvertently to the popularity of recordings of Western rock among urban middle-class youth. In China the totalitarian policies of the Cultural Revolution (1966–76) created a musical vacuum which was filled by Western-style pop ballads sung by crooners from Taiwan and Hong Kong.

The international recording industry has generally been dominated by Western-based multinationals, for whom the global marketing of Western pop has been a primary source of profit. (The purchase of CBS Records in 1987 by Sony and of MCA in 1990 by Matsushita has not altered the prevailingly Western orientation of those companies' core output.) New technologies, by increasing the sheer amount of music recorded and disseminated, have intensified trends toward both greater Western penetration as well as regional individuation. Satellite technology distributes MTV around the world, exposing consumers to slick, capital-intensive American music videos, with which local products are hard-pressed to compete. While cassettes have stimulated the growth of regional pop musics throughout the developing world, they have also brought Western pop to the most remote areas.

Cassette piracy has also tended to promote Western pop music at the expense of local styles. In countries such as Tunisia, for example, rampant piracy bankrupted local music producers in the 1970s and 80s; Western multinationals, however, were able to absorb the losses caused by such piracy, such that their products came to dominate Tunisian recording sales (Wallis and Malm, E1984). In other countries, such as Indonesia, copyright enforcement has protected local producers while tolerating piracy of foreign musics. While such policies have allowed legitimate local producers to emerge, their products have had difficulty competing with cheaper pirate cassettes of Western pop. Thus, while Western artists and multinationals themselves are deprived of direct profits, pirated versions of their products nevertheless inundate local markets, often to the detriment of local musics.

2. Local interpretations and identities. The presence of Western pop music recordings constitutes only a first stage in the entrenchment of these musics in non-Western cultures. More significant are the local productions and reproductions of these genres. In many cases these begin with local 'copycat' bands, performing global hits like the *Lambada* tune or the songs of Abba, the Bee Gees, Led Zeppelin and the like. An initial form of local resignification occurs when bands indigenize cover versions of Western hits by substituting lyrics in a local language and whose topics may naturally address local concerns. Subsequently, bands may start composing original songs in their chosen style; rap, with its emphasis on lyrics, is particularly suitable for the expression of local values and themes. Although stylistically derivative of Western pop, such musics may be of fairly high quality, and their song texts may resonate with local issues and aesthetics. De Launey (E1995) and Regev (E1992) have outlined the successive stages of the development of Japanese and Israeli rock, respectively, in such terms, noting the eventual emergence of 'credible' local rock musics and their effective legitimization by local afficionados, journalists and other institutionalized critics.

In some cases a 'saturation-maturation' process may occur in which imitative rock musicians move on to synthesize innovatory and distinctively local musics, as did the Zimbabwean bandleader Thomas Mapfumo in the 1970s with his eventual adaptations of features of *mbira* music to dance-band format. However, in a country such as Japan, where indigenous traditional musics have become so marginal and irrelevant to popular youth culture, it may be too late for any such 'return to the roots'. Since the imitation of foreign artists carries no particular stigma in that country, distinctive innovation is more likely in the form of self-consciously manneristic mimicry or the avant-garde postmodernities of groups like the Boredoms or the Japanese-American duo Cibo Matto.

The international spread of Western-style pop music has been interpreted variously as representing Americanization, homogenization, modernization, creative appropriation, cultural imperialism, and/or a more general process of globalization. Critics debate whether the Westernization process should be seen as an instance of neo-colonialist penetration of global markets or, alternatively, as reflecting the informed choices of discriminating and empowered consumers and performers. Much discussion has focussed on the values implicitly or explicitly associated with Western-style music when consumed or cultivated outside the West (e.g. Garofalo, A1992). On the whole, it has been natural for consumers to associate such musics with modernity, fashion and notions of personal freedom, whether articulated through the stentorian manifestos of rap and heavy metal or the sense of individual autonomy implicit in sentimental love songs. While such values may be perceived as liberating by many listeners in traditional societies, conservative moralists may find them threatening and may disparage Western-style music for its perceived shallowness and its links to commercialism, hedonism and Western imperialism. Hence, nationalist governments from China to Malaysia

have sought, however ineffectually, to limit dissemination of Western-style music. Cultural policies and popular attitudes toward Western-style pop music have often served as focal articulations of broader debates regarding national identity, pitting advocates of cosmopolitanism and modernization against ethnic essentialists seeking to preserve local aesthetics.

Depending on the specific sub-genres and local socio-musical configurations, regional efflorescences of Western-derived musics are often linked to specific social sub-groups. In developing-world countries with strong local music traditions, Western-style music is most typically associated with urban bourgeois consumers, especially of the younger generations. Individual sub-genres may have more specific social affiliations. Singer-songwriter ballads and protest music, for instance, generally emerge from politically-conscious higher-education students. In Malaysia local heavy metal, with its more visceral and assertive style, is associated with lower-class urban migrants, dubbed *kutu* ('lice'). Similarly, rap's association with the black American 'underclass' and its generally aggressive ethos has contributed to its adaptation by subaltern minorities like New Zealand Maoris and ethnic Koreans in Japan. Rock consumers tend to be urbanized youth who are to some extent Westernized and alienated from indigenous traditional music and culture. In many societies preference for Western-style pop music among young people is so universal that it cannot be linked to any particular sub-group.

A different dynamic of local-global music relationships obtains in geographically non-Western but otherwise predominantly European countries like Australia and New Zealand and among the substantial white populations of South Africa, Zimbabwe and other former colonies. In such societies Western idioms like rock music dominate popular music scenes. While there may be no significant stylistic differences between local and imported musics, issues of cultural nationalism and Western hegemony nevertheless provoke journalistic and academic debates.

Although the textures and associations of a genre such as rock may tend to predispose it toward values of modernity and sensuality, the inherently polysemic nature of music allows rock and related styles to serve a wide variety of agendas and to express markedly divergent values in different contexts. Thus, for example, while rock in Puerto Rico has generally been associated with upper-class, pro-American bourgeois youth, in Argentina *rock nacional* became a vehicle of progressive and often anti-imperialist protest in the 1970s. Similarly, the Chinese dictatorship has released disco versions of pro-regime songs, while Cui Jian's 'Northwest Wind' rock music idiosyncratically critiques both capitalism and the Chinese Communist Party. Contradictions may be inherent to genres such as Latin American NUEVA CANCION, some of which uses a North American singer-songwriter ballad style to criticize US imperialism and celebrate local cultures. During apartheid in South Africa, similar contradictions can be seen in the use of black American-derived styles as imported solutions to the problem of finding music that could be somehow modern and progressive without being ethnically exclusive. In recent decades, black youth in South Africa and Brazil have increasingly embraced black American soul and disco as vehicles for their own self-assertion, as more stylistically indigenous genres such as samba or *mbaqanga* come to be perceived as having been co-opted and commercialized. Noting the adoption of rap and reggae by young Maoris and Australian Aborigines, Lipsitz (A1994) argues that such musical borrowings represent less acquiescense to cultural imperialism than a practice by which alienated communities can effectively 'become more themselves' by identifying with Western underclass musics. In the process, local versions of rock music and related genres, while not enriching the global style pool, may come to constitute meaningful idioms that are experienced as both indigenous and cosmopolitan.

These rearticulations, like such seemingly oxymoronic American idioms as Hasidic rock and Christian heavy metal, illustrate the ability of listeners, performers and interpretive communities worldwide to resignify Western-derived styles in accordance with their own predispositions. Accordingly, genres such as rock, rap and the sentimental ballad can no longer be categorized as Western *per se*, but rather constitute international idioms which can form components or even bases of authentic music cultures throughout the world, even if their global cultivation may be at the expense of indigenous styles.

See also POPULAR MUSIC, §II. For more detailed discussion of specific styles see articles on individual countries.

RICHARD MIDDLETON (I; IV, 1), DAVID BUCKLEY (II), ROBERT WALSER (III), DAVE LAING (IV, 2), PETER MANUEL (V)

Pop, Adrian (*b* Cluj, 10 Sept 1951). Romanian composer. He studied composition with Toduţă and Ţăranu at the Cluj Academy, graduating in 1976. Pop taught at the city's Arts Lyceum (1976–92) and was artistic secretary and director general of its Filarmonica (1983–90); he became a lecturer at the Academy in 1994 and programme director of the Filarmonica in 1996. Pop is known particularly for his choral music. The modern character of his scores derives from his exploration of elements of Romanian folk music including modalism, rhythmic spontaneity, ornamentation and multi-layered textures. Incisive, dynamic, unconventional and laden with tension, his work contains references to techniques derived from the study of acoustic resonance.

WORKS
(selective list)

Chorus: Colinde laice [Romanian Carols], 1974–85; 8 Transylvanian Folk Songs (trad. texts), 1977–92; 3 madrigali (S. Quasimodo), 1979–87; Trouvers (G. Brule, C. Muset), 1981; Galgenlieder-Bagatellen (C. Morgenstern), 8 pieces, 1983–7; Canti trentini

(trad. It. texts), 12 pieces, 1983–93; Lieben (R.M. Rilke), 3 pieces, 1988;
Orch: Vc Conc., 1975, rev. 1986; Etos I, 1976; Solistice [Improvisations for Soloist], 1979
Chbr: Colinda soarelui [Song of the Sun], fl, perc, tape, 1974; Monocromie, 2 fl, tape, 1975; Hexagon, 3 perc, 1981; Invenzioni, fl, va, vc, perc, 1992
Songs: 2 Lyric Recitatives (L. Blaga), 1976; 7 fragments (T. Tzara), 1995

OCTAVIAN COSMA

Pope, Alexander (*b* London, 22 May 1688; *d* Twickenham, 30 May 1744). English critic, poet, satirist and wit. He was the son of a wealthy Catholic linen draper. The publication of *An Essay on Criticism* (1711) marked the beginning of his fame. He was acquainted with the leading political and artistic figures of his day including Lord Burlington, Lord Bolingbroke, the Earl of Oxford, Congreve, Joseph Addison, Richard Steele, Aaron Hill, Jonathan Swift, John Gay, John Arbuthnot, Maurice Greene and Handel. Pope's skill with the 'heroic couplet', his grammatical precision and his rhetoric supplemented his talent for irony, invective and satire.

Since theories of harmony were so much a part of the contemporary canon of taste, it was inevitable that Pope should explore musical terminology and theory. He was known as the 'little nightingale' for his sweet voice as a child, but his interest in music was not as profound as that of Dryden or Congreve. His comments on Giovanni Bononcini, for example, in a letter to the Duchess of Buckingham (27 January 1722) declare approval for the man's 'great Fame' and a 'Personal Knowledge of his Character', but omit discussion of his music. About this time Pope was involved with the Burlington circle, and helped Handel in the preparation of *Haman and Mordecai*, a masque libretto based on the *Esther* of Racine and Brerton. Arbuthnot and Gay probably did most of the work on the libretto, which suffers from static episodes and a lack of sustained dramatic pace. Several Handel works incorporate lines from Pope: lines from the pastorals are inserted in *Acis and Galatea* and *Semele*, and Handel himself added the famous 'Whatever is, is right' (from the *Essay on Man*) to the final Act 2 chorus of *Jephtha*.

Pope supplied choruses, set to music by Bononcini in 1723, for the Duke of Buckingham's *Marcus Brutus*. He was also involved with operatic projects by Gay, including *Achilles* (for which he contributed the prologue) and *The Beggar's Opera*. He altered his own *Ode to St Cecilia* when Greene set it in 1730 and may have prepared the text of a cantata for Durastanti in 1724 on the insistence of the Earl of Peterborough. Mainwaring claimed that Pope declared himself to be unmusical, but if so he certainly took his friend Arbuthnot's recommendations to heart since his defence of Handel in the 1742 *Dunciad* (iv, 45–70) is spirited (see also Brownell). Of his own poems, the most frequently set to music was *The Dying Christian to his Soul*, particularly popular in a version of 1795 by a Methodist, Edward Harwood. Hubert Parry, Panufnik, Schubert and Havergal Brian set texts derived from Pope.

DUNCAN CHISHOLM

Pope [Conant], **Isabel** (*b* Evanston, IL, 19 Oct 1901; *d* Bedford, MA, 7 Feb 1989). American musicologist and philologist. She attended Radcliffe College, taking the AB in 1923, the MA in 1925 and the PhD in Romance philology in 1930. In 1935 she was appointed a tutor in French and Spanish literature at Radcliffe; from then until 1936 she studied musicology at Harvard with Hugo Leichtentritt. She remained at Radcliffe until 1940, then from 1941 to 1944 she worked in Mexico with Adolfo Salazar, whose *La música moderna* she translated for the Norton series. She was again at Radcliffe as tutor from 1945 to 1949. In 1950 she received a joint fellowship from the Mexican government and the Rockefeller Foundation which enabled her to travel to Spain to study Spanish musical influences in colonial Mexico. In 1951 she studied Spanish musical sources in Spain, Italy and France as a Guggenheim Fellow; she continued research in those countries from 1959 to 1960.

Pope was particularly interested in the relationship between music and poetry in Spanish vocal music of the Middle Ages and Renaissance. Her background in Romance philology enabled her to edit the literary texts in both Helen Hewitt's edition of the *Odhecaton* and Hans Tischler's edition of 13th-century French motets. She studied the musical and literary aspects of the villancico, concluding that the 15th-century villancico still bore traits of the lyric type of 13th-century oral tradition. She published studies of the manuscript *I-MC* 871, an important source of late 15th-century music from the Aragonese court of Naples.

PAULA MORGAN

Pople, Anthony (John Leonard) (*b* Croydon, 18 Jan 1955). British musicologist. He studied music at St John's College, Oxford (1974–80), where his teachers included Hugh Macdonald, David Lumsden, Denis Arnold and Derrick Puffett; he was also influenced by Arnold Whittall. From 1980 to 1983 he was De Velling Willis Fellow at the University of Sheffield. In 1983 he moved to the University of Lancaster, where he was successively lecturer (1983–93), senior lecturer (1993–5) and professor of music theory and analysis (1995–7). In 1997 he became professor of music at the University of Southampton and in 1999 he moved to the University of Nottingham to take up the same post.

Pople's principal area of study is 20th-century music, in particular the theory of late tonal and early post-tonal music and the analysis of music from the earlier part of the century. He is also interested in the use of computers, both in the composition of music and in music education, and has developed two applications for music analysis, RowBrowser and SetBrowser (both 1994). He has written on the music of Berg, Skryabin, Messiaen, Vaughan Williams, Bridge and Tippett, and his monographs on Berg's Violin Concerto (1991) and Messiaen's *Quatuor pour le fin du temps* (1998) are authoritative guides to the works and their cultural and musical context. He was the founding editor of the journal *Musicus: Computer Applications in Music Education* (1989–93; consulting editor 1993–7), a member of the editorial board of *Musical Analysis* (1990–; editor 1995–), and is a member of the consulting board of *Musicae scientiae* (1996–).

F. Bridge: *Allegro Moderato* [completion of sketch from unfinished Symphony for String Orchestra, 1940-41] (London, 1978)

ROSEMARY WILLIAMSON

Popma van Oevering, Rynoldus [Reinolt] (*b* Warga, bap. 6 Jan 1692; *d* Leeuwarden, bur. ?6 April 1782). Dutch organist and composer. He presumably studied music with his father Georgius (Jurjes) Oevering, schoolmaster and organist at Warga until 1707. He became organist of the Galileeërkerk in Leeuwarden on 16 September 1712, and of the Grote (Jacobijner) Kerk there on 26 February 1713. On his recommendation, Christian Müller built the organ of the Grote Kerk in Leeuwarden, which was dedicated on 19 March 1727. He remained organist at Leeuwarden until 1741, and was concurrently carilloneur until 1757. Later he was churchwarden of Warga, although he continued to live in Leeuwarden.

Popma van Oevering's works include a psalmbook (in *B-Bc*) and a collection of six keyboard suites op.1 (ed. H. Brandts Buys, Amsterdam, 1955, with biographical details in the afterword). As Prince Johan Willem Friso, who died in 1711, is mentioned in the dedication it would seem that the work was published in about 1710, when the composer was only 18 years old. Each suite consists of an overture followed by several dances, with chiefly French influences. The melodic invention is not profound, but the general style is fluent and attractive.

L. VAN HASSELT

Popov, Aleksandr Georgiyevich (*b* Leningrad, 13 March 1957). Russian composer of Armenian extraction. He graduated from the Leningrad medical institute (1980) and from the conservatory there (1988) where he studied with A. Mnatskanian. He works as a doctor in the clinic of the St Petersburg State Medical Academy. Although he has never lived in Armenia, a 'genetic' memory of Armenian culture has determined the composer's immersion in the past of that country. His interests in archetypes (and 'primordial' timbres), Asian traditional music and Zen Buddhism has proved to be highly influential; likewise, links to eras of European history – especially to Renaissance and Baroque periods – manifest themselves

not in polystylistic terms, but in his drawing on material which is then freely interpreted, leaving the listener free to attribute a specific meaning. Armenian canticles can appear inseparable from Gregorian chant, or Baroque instruments may be combined with a prepared piano and a metronome. Despite the absence of programmes, a legend, myth or biblical parable could be confidently suggested for each of them. The refinement of his counterpoint and the symbolism inherent in his writing similarly links him to the past. In his use of ascetic textures he attempts to study the acoustic life of a sound or motif; this tendency is coupled with a concentration of expression and a propensity towards aphorism.

WORKS

Stage: Tot, kto zhdyot [Someone Who is Waiting] (mono-op, Popov, after R. Bradbury), 1976; Korolevskiy buterbrod [The King's Sandwich] (op-burlesque, after A.A. Milne), 1981

OL'GA MANUL'KINA

Popov, Gavriil Nikolayevich (*b* Novocherkassk, 30 Aug/12 Sep 1904; *d* Repino, Leningrad Region, 17 Feb 1972). Russian composer and pianist. His father, a teacher at the university of Rostov-on-Don, was an exceptionally gifted musician – a violinist, conductor and composer. His mother gave him his first music lessons; he then studied the piano with L.M. Presman at the private conservatory in Rostov-on-Don (1917–21) and took lessons in composition with Gnesin and then at the Don Conservatory with V.V. Shaub (1921). Concurrently, he entered the engineering and architecture faculty of the Polytechnical Institute of the Don and the physics and mathematics faculty of Rostov University, a year later also passing exams in the first part of a course at the Rostov Archaeological Institute in the art history department. Later, at the Leningrad Conservatory he studied harmony with Steinberg, counterpoint, orchestration, formal analysis and composition with V.V. Shcherbachyov, and piano with M.N. Barinova and L.V. Nikolayev (1922–30); concurrently, he began studies in the architectural faculty of another Polytechnical Institute, which he soon abandoned. In 1924, he was dismissed from the Leningrad Conservatory in the course of a social purge of 'hopeless' students; Glazunov, Nikolayev and Yavorsky all helped to reinstate him in 1925.

In the 1920s, Popov participated in all the professional musical organizations in Leningrad such as the Leningrad Association of Contemporary Music or LASM (1926–8), the Circle of Friends of Chamber Music (1926–9), the New Music Circle (1926–7) and the Circle for New Musical Culture (1929–30). His music was frequently performed by these organizations and published by them in collections.

Popov's debut as a pianist occurred in Rostov-on-Don in 1924 with a classical programme; he next performed his own works in Leningrad and Moscow; he played in memorable productions of Stravinsky's *Les noces* (1927–9) and performed Mozart's Concerto K365 for two pianos with Shostakovich (1927). From 1921, he worked as an accompanist in the opera theatre and conservatory of Rostov-on-Don, and from 1924 to 1927 as a pianist-improviser at the Leningrad School of Plastic Dance. From 1927 to 1931 he taught composition and piano at the State Central Musical College, where A.M. Balanchivadze, N.V. Bogoslovsky, I.I. Dzerzhinsky and G.V. Kiladze were among his students.

During the first months of the siege of Leningrad (1941–2) Popov worked on his opera *Aleksandr Nevsky* (1938–42) which he never completed. In 1943 he was evacuated together with the staff of Leningrad's cinematic studios to Alma-Ata, where he worked on scores to patriotic war films, Ermler's *Partizanï (ona zashchishchayet rodinu)* ('Partisans She is Defending the Fatherland') and the Vasil'yev brothers' *Front*. Popov settled in Moscow in 1944. He was a member of the secretariat and committee of the Leningrad Union of Composers from its inception in 1932. He was awarded prizes at the all-Union competitions of 1932 and 1968 and a State Prize in 1946; he was made an Honoured Artist of the RSFSR in 1947.

From his earliest career as a composer, Popov was singled out by critics and senior colleagues, together with Shostakovich, as one of Russia's most promising new composers. Prokofiev noted the work of the young Popov on his visit to Soviet Russia (1927), and at the beginning of the 1930s sought to introduce his music to the West; he later proposed to Popov that he should collaborate with him on the music for the second part of Eisenstein's film *Ivan the Terrible* (1945), but the plan was not realized. Popov's early works display an urge towards innovation and renewal of musical content and, consequently, of stylistic solutions. In his early years Popov made an intensive study of the works of Skryabin, Ravel, Stravinsky, Hindemith, Schoenberg, Prokofiev and Krenek, and the experience fuelled his experimentalism. Spontaneous instrumental writing, linearity, rhythmic pungency, emotional uplift, thematic inventiveness and melodic gift were the chief elements of Popov's early style. His *Septet* (1927) and First Symphony (1934) drew a wide and enthusiastic response from musical circles. Popov and his work became the focus of critical, and later ideological debate, being subjected to special attack in the 1930s, when performance and public discussion of the First Symphony, the Orchestral Suite no.1 and other

works were banned. The 1948 Resolution of the Central Committee of the CPSU on Muradeli's opera *The Great Friendship* sharply criticized Popov – along with Khachaturian, Myaskovsky, Prokofiev, Shebalin and Shostakovich – as an 'exponent of Formalism'.

Popov's characteristics as a natural symphonist permeate all his music, including his film scores. His symphonies, which follow the epic tradition of Borodin and Glazunov, occupy a central place in his output and renewed the development of classic Russian symphonism. The Second Symphony has links with the traditions of the Russian epic symphony, moving towards a new embodiment of Russian melos with its inherent principle of germination, polyphony and a metrorhythmic freedom of melodic flow; fairground gaiety and buffoonery proceeds alongside high tragic tension. Popov's music displays an overall emotional expressiveness, a sharp-edged harmonic language, a tendency towards polyphonic styles, and a mastery of orchestral writing. His numerous choral compositions possess a monumental dramatic quality, and are shot through with Russian melos in the traditions of Glinka late Rimsky-Korsakov and Stravinsky's *Les noces*. His work has a variety of links with folklore, primarily Russian, such as Cossack songs; his Third Symphony (1945) draws on Spanish folk music.

Popov made a significant contribution to music for the theatre and cinema (both feature and documentary films), working with many leading figures such as the Vasil'yev brothers, Meyerhold, Eisenstein, Dovzhenko and others. His music in these genres has artistic qualities of a high order, and often served as the impulse and basis for major orchestral, choral and symphonic works, such as *Komsomol – shef èlekrifikatsii* ('Komsomol is the Boss of Electrification') and the Orchestral Suite no.1. Popov worked on many large-scale projects at various times that remained unfinished, among them an opera *Aleksandr Nevsky*, a violin, a piano and a cello concerto, and a seventh symphony.

WORKS
(*selective list*)

Orch and choral: Sym. no.1, op.7, 1927–34; Sym no.3, g 'Geroicheskaya' [The Heroic], op.45, str, 1939–46 [dedicated to Shostakovich]; Sym. no.2, 'Rodina' [The Homeland] op.39, 1943; Sym. Aria, vc, str, op.43, 1945; Sym no.4 'Slava otchizne' [Glory to the Homeland] (I.L. Sel'vinsky), op.47, 4 soloists, mixed chorus, 1948–9; Sym. no.5, 'Pastoral'naya', op.77, 1956–7; Sym. no.6, 'Prazdnichnaya' [Festive], op.99, 1969; Ispaniya [Spain], 7 sym. frag.

Chbr: Septet (Chbr Sym.), fl, cl, bn, tpt, vn, vc, db, 1927; Str Qt-Sym., op.61, 1951

PIANO

Pf: 2 p'yesï: Ekspressiya [Expression], Melodiya [Melody], op.1, 1925; Grosse Klaviersuite op.6, 1927: Inventsiya, Khoral, Pesnya, Fuga [Invention, Chorale, Song, Fugue]; 2 skazki [2 Tales], op.51, 1948

Incid music, numerous other vocal works

LYUDMILA KOVNATSKAYA

Popov, Todor (*b* Drzhanovo, 23 Jan 1921). Bulgarian composer. He graduated from the Sofia Music Gymnasium in 1942 and from the Sofia State Music Academy in 1949. From 1946 to 1949 he was composer to the folksong and dance ensemble of the Ministry of the Interior, and for a short time was musical director for Sofia Radio's children's broadcasting. Then after a period of five years as music editor for a youth publication, he continued his studies at the Moscow Conservatory (1952–7) under Golubev, Sposobin, Skryabkov and Rakov. Popov was secretary (1962–5) and general secretary (1965–9) of the Bulgarian Composers' Union, and in 1968 he began work as a composer to the army. Although he has written chamber music and some orchestral pieces, Popov is principally known as a composer of song; many of his works betray the influences of Soviet mass songs and light music. Primarily a melodist, he writes uncomplicated music bearing the stamp of national colour, derived mainly from folk music.

WORKS

LADA BRASHOVANOVA

Popov, Valery (Sergeyevich) (*b* Moscow, 9 Sept 1937). Russian bassoonist. After studying at the Moscow Conservatory he joined the USSR State SO in 1962. He won the all-Russian competition in 1963 and the Budapest competition two years later. In 1971 he was appointed to teach at the Moscow Conservatory. The outstanding Russian bassoonist of his generation, his playing is warm and virile. He has become well known in Russia and beyond through a number of recordings, several with the Moscow Contemporary Music Ensemble. Over two dozen works have been dedicated to him by composers such as Mikhail Alekseyev, Edison Denisov and Lev Knipper, as well as the Duo, Trio and concerto by Sofiya Gubaidulina.

WILLIAM WATERHOUSE/R

Popovici, Doru (*b* Reşiţe, 17 Feb 1932). Romanian composer and musicologist. He studied composition with Jora and Andricu at the Bucharest Academy (1950–55) and attended the summer courses in Darmstadt in 1968. Between 1968 and 1997 he was musical editor at Romanian Radio. After an early flirtation with serialism, for instance in *Porumbeii morţii* (1957), Popovici returned to the neo-romantic style to which he has subsequently adhered, in which chromaticism is combined with a resonant, archaic modalism, free from the influences of traditional and Byzantine music. In the early 1960s he began to experiment less and to move towards a greater accessibility. He achieved a particular success with *Codex Caioni* (1967–8), a setting of melodies from the 17th

century anthology by Ioan Căianu. His lyrical, expressive scores convey a meditative sense of dramatic narrative.

WORKS

OCTAVIAN COSMA

Popovici, Timotei (*b* Tincova, nr Lugoj, 1/13 Sept 1870; *d* Lugoj, 11 July 1950). Romanian choirmaster, composer and teacher. He studied in Caransebeş with Antoniu Sequens and Victor Nejedly, and in Iaşi (1893–95) with Gavriil Musicescu. As choirmaster of the music societies of Caransebeş, Braşov and Sibiu, as a prominent teacher in these cities, and as conductor of the Metropolitan Choir of Sibiu, Popovici was one of the leading artists in Transylvania at the beginning of the 20th century. His compositions, suited to the capacities of schoolchildren and amateurs, were designed to be both educational and patriotic. He wrote what was the first music dictionary in Transylvania-Romania (1905), after the incomplete lexicon of Titus Cerne (1889).

WORKS
selective list

Sacred choral: Irmosul Paştilor [Eastern Hymn], 3 equal vv, 1896; Troparele chemării Duhului Sfînt [Invocations to the Holy Ghost] (1901); Cîntări liturgice: liturghia Sf. Ioan Chrisostom [Songs on the Liturgy of St John Chrysostom], children's chorus (1902); Cuvine-se cu adevărat (Byzantine hymn), male vv (1902); Imn la centenarul I al Seminarului Andreian [Hymn for the Centenary of St Andrew's Seminary] (I. Teculescu), male vv, 1912; Repertor coral, male vv (1914); Cîntările liturghiei [Liturgical Songs], 2–3 equal vv, 1942; Cîntările liturghiei, 1943

Secular choral (on trad. texts unless otherwise stated): M-aş mărita [I Shall Marry], male vv, 1895; Foaie verde de trifoi [The Green Cloverleaf], op.5, male vv, 1898; Ştii, mîndro, cînd ne iubeam [You Remember, Dear, when we Were in Love], op.11, male vv, 1901; Doina (M. Eminescu) (1904); Cîntece naţionale [National Songs], male vv (1919); Regele munţilor [The Mountain King], S, T, chorus, 1924; Florile dalbe [White Flowers], bk 1, chorus, male chorus (1928); Hora lui Iancu [Iancu's Dance] (I. Soricu), male vv, 1940; Florile dalbe [White Flowers], bk 2, chorus, male chorus (1945); La oglindă [The Mirror] (G. Goşbuc), S, chorus, pf

Other works incl.: Potpuriu de cîntece populare, orch; Poem despre Avram Iancu [Poem in Honour of Iancu], orch; marches for military band

ROMEO GHIRCOIAŞIU/VIOREL COSMA

Popp, Lucia (*b* Uhorská Ves, 12 Nov 1939; *d* Vienna, 16 Nov 1993). Austrian soprano of Slovak birth. After studying at Bratislava, she made her début there as the Queen of Night in 1963, then sang Barbarina in Vienna, where she was engaged at the Staatsoper, and First Boy (*Die Zauberflöte*) at Salzburg. She made her Covent Garden début in 1966, as Oscar, returning as Despina, Sophie, Aennchen, Gilda and Eva. She first appeared at the Metropolitan in 1967 as the Queen of Night (a role she recorded with Klemperer), and later sang Sophie and Pamina there. Engaged at Cologne, she sang throughout Europe in a repertory including Zerlina, Susanna, Ilia, Blonde, Konstanze, Marzelline, Rosina and Zerbinetta. In the 1980s she took on heavier roles such as Elsa, Arabella and the Marschallin in Munich; subsequently she sang the two Strauss heroines at Covent Garden. Her voice, which was initially light and perfectly suited to the soubrette and coloratura repertory, matured to encompass the more intense emotions of the roles undertaken in her later career. Popp was also a delightful concert singer and a noted interpreter of a wide range of lieder, which she sang with charm and perspicacity. Among her many cherished recordings are Susanna, Pamina, Vitellia, Sophie, Gretal, Bystrouška (*Cunning Little Vixen*) and lieder by Schubert and Strauss.

ALAN BLYTH

Popper, David (*b* Prague, 18 June 1843; *d* Baden, Vienna, 7 Aug 1913). Austrian cellist and composer. He was born in the Prague ghetto, the son of Angelus Popper, cantor at two local synagogues. Having auditioned for the Prague Conservatory at the age of 12 as a violinist, he matriculated as a cellist because of the shortage of cello students, and became a pupil of Julius Goltermann. He made such rapid progress that within six years he presided over the cello class when Goltermann was on tour. At the age of 18 he was appointed assistant principal cellist of the Löwenberg Court Orchestra, and the following year assumed the post of principal. During this time he was engaged by Bülow and the Berlin Philharmonic as soloist in Robert Volkmann's newly composed concerto. In 1868 he secured the position of principal in the Vienna Hofoper and the Vienna PO (the youngest player to hold such a post) and later joined the Hellmesberger Quartet. In 1872 he married Liszt's pupil Sophie Menter (daughter of the cellist Joseph Menter), with whom he also toured. Denied leave for his solo engagements, he resigned from the orchestra the following year. In 1886 his marriage was

dissolved, and he was appointed by Liszt as professor at the National Hungarian Royal Acadamy of Music, where he established the cello and chamber music divisions. He remained until his death, having also served as a member of the Hubay Quartet.

A cellist of superior technique and a warm, powerful tone, Popper was a champion of new music, and the composer of more than 75 works, mostly for his own instrument. His most important contribution is certainly the *Hohe Schule des Violoncello-Spiels*, a set of 40 studies that examine the positions of the left hand within a highly chromatic, Wagner-influenced setting. His concert music has enjoyed a revival, and has been the subject of several recordings.

Popular Concerts. London concert series established in 1859. *See* LONDON (i), §VI, 2(ii).

Popular music. A term used widely in everyday discourse, generally to refer to types of music that are considered to be of lower value and complexity than art music, and to be readily accessible to large numbers of musically uneducated listeners rather than to an élite. It is, however, one of the most difficult terms to define precisely. This is partly because its meaning (and that of equivalent words in other languages) has shifted historically and often varies in different cultures; partly because its boundaries are hazy, with individual pieces or genres moving into or out of the category, or being located either inside or outside it by different observers; and partly because the broader historical usages of the word 'popular' have given it a semantic richness that resists reduction. The question of definition is further discussed in §I, 1, below.

Even if 'popular' music is hard to define, and even if forms of popular music, in some sense of the term, can be found in most parts of the world over a lengthy historical period, in practice its most common references are to types of music characteristic of 'modern' and 'modernizing' societies – in Europe and North America from about 1800, and even more from about 1900, and in Latin America and 'Third World' countries since the 20th century, and even more strongly since World War II. The focus in this article is on these musical types; the emphasis is on the main themes, debates and historical trends, and, in particular, on the USA and Britain, since 20th-century styles and practices originating in the USA (together with styles originating in Britain since about 1960) have come to dominate popular music worldwide. The period after about 1955 is discussed in more detail in POP and in other entries on specific genres. Further information will also be found in articles on individual countries.

I. Popular music in the West. II. World popular music.

I. Popular music in the West

1. Definitions. 2. Mass media and the cultural economy of popular music: (i) The main historical shifts (ii) Issues. 3. An outline history: (i) Before Tin Pan Alley (ii) From Tin Pan Alley to rock and roll (iii) Rock and roll and after. 4. Genre, form, style: (i) Genre (ii) Form (iii) Style (iv) Popular music and the musical field. 5. Social significance: (i) Politics (ii) Social identities (iii) Aesthetics. 6. The study of popular music.

1. DEFINITIONS. A common approach to defining popular music is to link popularity with scale of activity. Usually this is measured in terms of consumption, for example by counting sales of sheet music or recordings. While it seems reasonable to expect music thought of as 'popular music' to have a large audience, there are well-known methodological difficulties standing in the way of credible measurement, and – perhaps more seriously – this approach cannot take account of qualitative as against quantitative factors: for instance, repeat hearings are not counted, depth of response does not feature, socially diverse audiences are treated as one aggregated market and there is no differentiation between musical styles. Thus sales figures, however useful, measure sales rather than popularity.

Another common approach is to link popularity with means of dissemination, and particularly with the development and role of mass media. It is true that the history of popular music is intimately connected with the technologies of mass distribution (print, recording, radio, film etc.); yet a piece that could be described as 'popular music' does not cease to be so when it is performed live in public, or even strummed in the amateur's home, and conversely it is clear that all sorts of music, from folk to avant garde, are subject to mass mediation.

A third approach is to link popularity with social group – either a mass audience or a particular class (most often, though not always, the working class). In the first case, the theory is usually 'top-down', portraying the group as undifferentiated dupes of commercial manipulation; this tends to accompany pessimistic scenarios of cultural decline. In the second case, the theory is 'bottom-up', representing the group as the creative source of authentic (as opposed to ersatz) popular music; this tends to accompany populist scenarios of leftist opposition. The distinction is between production for the people and production by the people. This catches a real tension in the concept of popular music, not to mention the fact that so often it is defined by negation, that is, in terms of what it is not (e.g. popular music is not folk music, art music, commercial music and so on). Always positioned as subordinate in the musical field as a whole, popular music seems condemned to be an 'other'. But musical categories

commonly cross social boundaries (e.g. jazz could be described as 'popular music', as could arias by Puccini when sung by Pavarotti, or the music of Jimi Hendrix when played by Nigel Kennedy, or Elton John's *Candle in the Wind* sung after works by Verdi and John Tavener at the funeral service of Diana, Princess of Wales, in 1997). Even if 'the masses' or particular classes can be given precise sociological definitions, which is doubtful, the structure of the musical field cannot be mapped straight on to the social structure, and musical categories do not walk on to the historical stage in socially or musically pure forms.

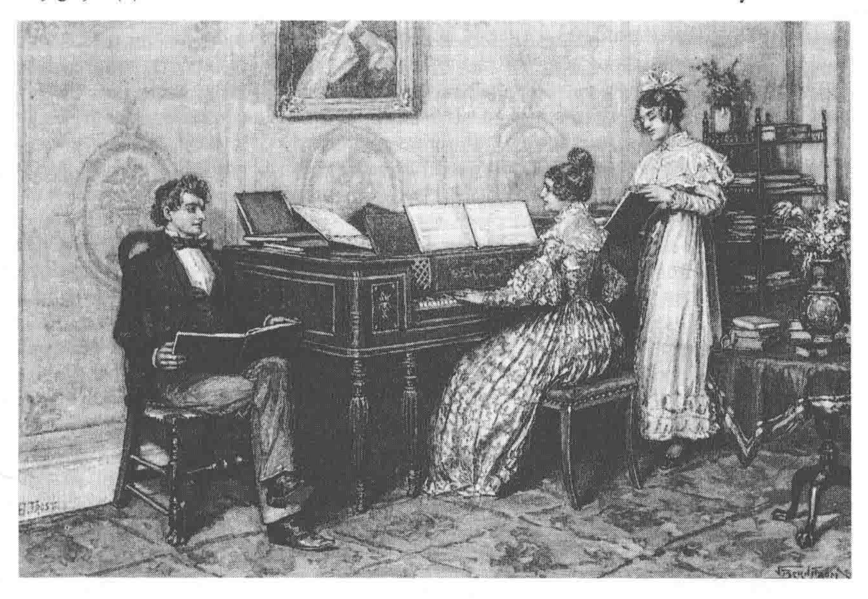
These three approaches identify important tendencies. Yet all are too partial, too static, too prone to essentialism. For most popular music scholars, it is better to accept the fluidity that seems indelibly to mark our understandings of the 'popular'. From this perspective popular music has no permanent musical characteristics or social connections; rather, the term refers to a socio-musical space always in some sense subaltern, but with contents that are contested and subject to historical mutation. Stuart Hall, drawing on the theories of Antonio Gramsci, insists that it is impossible to understand the popular in any given moment except by placing it in a broader cultural context (the other categories it is working alongside and against) and that it possesses no essential content or social affiliations; rather, 'it is the ground on which the transformations are worked' (Hall, 1981, p.228). Frith (1996), emphasizing that the discursive formation of the popular is itself marked by internal distinctions and hierarchies, adds that the criteria for these are often drawn from neighbouring musical categories (notions of aesthetic value from art discourses, for example).

It follows from this argument that understandings of popular music have changed with time. Indeed, while all but the simplest societies probably have some sort of hierarchy of musical categories (as pre-modern Europe certainly did), the resonances now attached to the term came to the fore during the late 18th century (with the beginnings of late-modern society), and sedimented themselves into general awareness during the 19th. During this period a gradual but ultimately dramatic reshaping of the socio-cultural topography brought into being, in symbiotic interrelationship, hugely increased audiences for music; publicly accessible apparatuses for musical education, criticism and propagation; an emergent canonic repertory of 'classics'; and (as an apparent mirror image of this) a sense of low-class, 'trivial' genres as being problematic. On the one hand, this constructed what is now commonly known as classical music as, in a sense, the first modern popular music, laying the foundations for what would subsequently be its installation as the core of middlebrow taste; on the other, it imposed a new, explicitly moralistic pressure on 'low' music. Research by DiMaggio (1982), Levine (1988), Broyles (1992) and others has revealed many of the ways in which, in the USA, an earlier, easy, populist mixing of tastes was replaced, through the influence of the institutions of 'good music', by a sense of hierarchy, linked to social class. In Britain Haweis arranged the whole field into a moral-aesthetic ladder, with German symphonic music at the top and street entertainers at the foot (with ballads just above them) (*Music and Morals*, 1871). In the early 20th century the split intensified, the modernists defiantly esoteric, the emergent Tin Pan Alley defiantly commercial; the macabre dance of the Modernism–mass culture couple can now be seen as ideologically self-sustaining. On a broader front, the drive by the new mass media, especially radio, to identify and supply a fully national market brought all the musical categories into the same socio-technological space and also, as a result, revealed their differences: the BBC, for example, 'undertook the standardisation, classification and placing in rank order of the *whole field of music*' (Scannell, 1981, p.259). By the 1920s the now familiar highbrow–middlebrow–lowbrow model was fully in place. This 'sandwich' structure (a bifurcation with variable middle-of-the-road or light music fillings) remains fundamentally intact, even if by the late 20th century the boundaries blurred easily, crossovers abounded, new sub-terms (pop, rock, beat etc.) appeared, and the content of particular categories became increasingly unpredictable. The 'globalization' of the cultural economy may engineer a further shift – perhaps, as all music is further commodified and deracinated, towards an erosion of category distinctions. However, so long as cultural capital remains an important tool of social positioning within capitalist society, the principles seem unlikely to change significantly.

The history of popular music, then, can be described in terms of a sequence (somewhat variably dated in different societies) of three spatial metaphors. First there is an 'each to his own' model, with different musical categories located in different social spaces, though in some circumstances mixing unselfconsciously. Then these spaces start to be connected to a ladder, which may be climbed through techniques of social mobility and moral self-improvement. Finally, this ranking is consolidated into a unitary 'virtual space'. What is striking is how late, relatively, this final stage – the one we tend to take for granted – occurred. It was established fully only in the first half of the 20th century; in Britain, the restructuring of BBC programming into highbrow, middlebrow and lowbrow channels after World War II marked its complete acceptance. In most European countries, it coincided with the first large-scale incursion of American styles, in the shape of the new products of Tin Pan Alley (in Britain this process had begun somewhat earlier); indeed, in the USA itself it is these products that often are associated most closely with the term 'popular music', the characteristic post-1955 styles being covered by 'rock' or 'rock and roll'. Significantly, during the same early 20th-century period, translations or equivalents of the English-language 'popular music' appeared, taking over wholly or in part from previous terminologies. In German, for instance, *Populärmusik* gradually replaced the older *Trivialmusik* and *Unterhaltungsmusik*. By the 1960s, throughout Europe and North America, interrelated terminologies focussed on equivalents of 'popular' and 'pop' music reflected the consolidation of a socio-musical field that was increasingly internationally unified.

2. Mass media and the cultural economy of popular music.

(i) The main historical shifts. The most significant feature of the emergent popular music industry of the late 18th and early 19th centuries was the extent of its focus on the commodity form of sheet music. During the 19th century music publishers' catalogues and output grew enormously, and the products – many of them in 'popular' genres – were disseminated increasingly widely. Demand rocketed as an expanding, ambitious middle class (joined



in due course by more affluent sectors of the working classes) bought pianos, which were falling in price and increasingly targeted at a range of social groups, and entertained themselves in the home. A variety of educational institutions and strategies promoted musical literacy. Song sheets, instrumental pieces and arrangements, cheap editions, music supplements in magazines, albums and part-works poured from the presses. New transport networks created national markets and speeded up supply, carrying the latest pieces quickly around Europe and much of America. At the same time, the provision of and access to public performances also increased. In pleasure gardens and dance halls, popular theatres and concert rooms, ordinary people – no doubt for the first time, in many cases – could enjoy music commercially provided by professionals. The first 'star' performers promoted publishers' products, for example through the British 'royalty ballad' system; one of the earliest, Jenny Lind, toured the USA in 1850–51 to great acclaim, a beneficiary of the pioneering publicity techniques of P.T. Barnum. Amateur choirs and bands mushroomed. Copyright legislation was in place or came into being in most countries, though enforcement was difficult and piracy abounded. Yet publishers profited from most of these activities, and thus, with the emergence of incipiently symbiotic music businesses, centred on the sale of compositional products and their performance to large markets, themselves marked by a variable balance between 'listening' and 'participation', consumption of musical pleasures and mastery of musical knowledge, and linked to the spread of 'leisure' as both a concept and a reality, a new kind of musical economy came into being.

In the 1880s and 90s American music publishing became centred in New York, in an area of the city later called 'Tin Pan Alley' (*see* PRINTING AND PUBLISHING OF MUSIC, §II, 4). These publishers developed a new method of production: aiming to construct a national market, they surveyed potential taste, contracted composers, established successful compositional formulae and assiduously promoted songs through 'plugging' techniques. As Charles K. Harris, one of the most successful Tin Pan Alley composers, wrote (1926, pp.39–40): 'A new song must be sung, played, hummed, and drummed into the ears of the public, not in one city alone, but in every city, town and village, before it ever becomes popular'. Within a decade or two the American model was copied in European countries. Copyright protection and royalty collection were tightened, especially in relation to performing rights (in the USA the American Society of Composers, Authors and Publishers (ASCAP), and in Britain the Performing Rights Society (PRS) were both formed in 1914: *see* COPYRIGHT §§V, 14(i); III, 16(i)).

Automatic player pianos (which, at the peak of their popularity, before succumbing to competition from radio and records, accounted for 56% of American piano production; Theberge, 1997, p.27) spread home music-making even more widely. The expansion and streamlining of sheet music production (American sales were around 30 million annually by 1910; Sanjek, 1988, iii, p.32) were linked to growing demand from vaudeville and variety theatres, to the popularization of dancing across all social classes (especially after World War I) and to the emergence of the gramophone record as a new medium of musical dissemination (*see* RECORDED SOUND, §I). After the success during the 1890s of publicly operated coin-in-the-slot machines, record players for home use took over from around the beginning of the 20th century, and the growth of production – much of it centred on 'popular' genres – was extraordinary. By 1920 there were almost 80 record companies in Britain, and almost 200 in the USA. American production reached about 27 million records in 1914, and peaked at 128 million in 1926, before the Depression devastated it (ibid., 27; Chanan, 1995, pp.54, 65–6). From the start radio transmitted music, from both recordings and live performances (*see* RADIO). In the USA radio broadcasting was organized commercially (the first station, KDKA, opened in Pittsburgh in 1920), while in Europe public monopolies were the norm (the BBC was formed in 1922). By 1927 there was a radio in about a quarter of American homes; the number increased by about 10% on average each year during the 1930s, and by 1950 virtually every household possessed at least one radio (Sanjek, 1988, iii, p.87; Ennis, 1992, pp.101, 132). Electrical recording (introduced by record companies in 1925) transformed sound quality and increased the appeal of the new media. The first sound film (*The Jazz Singer*) was released in 1927, and thereafter many films (and not only musicals) incorporated popular songs (*see* FILM MUSIC, §2–3 and FILM MUSICAL). By the mid-1930s 60 million cinema tickets were sold each week in the USA.

These inter-war developments reconstructed the economy of popular music. Radio and film were now at its centre, supported by records and music publishing, and the market was re-imagined in terms of anonymous consumers populating a space that spanned classes, regions and even nations. The same star performers appeared on film, radio and recording. Turnover of songs accelerated, as did media permeation of almost all corners of society. Record sales and radio plays became more important to revenues than sheet music, and the first 'charts' appeared, in trade magazines; so too did the first radio chart show, 'Your Hit Parade', in 1935. The interdependence of the various sectors is clear (even if their interests did not entirely coincide), and took institutional form: for instance, in Hollywood, Warners took over Tin Pan Alley publishers Witmark in 1928, and later, in Britain, EMI bought into leading music publishers Chappell. Similarly, in 1927 the Columbia record company set up CBS, and in 1929 RCA bought the record company Victor. The trend towards oligopoly drove the mergers that created EMI in 1932; by the outbreak of the war EMI and Decca between them controlled all record production in Britain, and in the USA the entire record industry was in the hands of three giant companies, RCA Victor, American Record-Brunswick and Decca. The entertainment conglomerate, with transsector and transnational interests, had arrived.

Intrinsic tensions within this symbiosis led to several conflicts in the 1940s, for example, between ASCAP and the American radio corporations, and between the American Federation of Musicians and the record companies. This led to new opportunities for publishers and composers from outside the mainstream (especially in the fields of country music and rhythm and blues), and, along with a reduction in production costs following the introduction of recording tape and cheap vinyl, also facilitated the emergence of a new wave of small, independent record companies, often aimed at new markets. At the same time, the general hegemony of the

1. Home music-making, c1830: engraving by Victor Bernstrom after Arthur Brudett Frost, late 19th century

big corporations continued, increasingly on a global stage; by the 1970s, this dominance was in the hands of five huge transnational organizations, three American-owned (WEA, RCA, CBS) and two European-owned (EMI, Polygram), who between them probably covered about two-thirds of the world market, slightly less (on average) in North America and European countries. Within a general picture of startling and continuous growth (British sales increased from 60 million units in 1955 to more than 200 million in 1977; the value of American sales increased from just over $100 million in 1945 to $3·5 billion in 1977; Harker, 1980, pp.223–6), the vicissitudes of the relationship between the large companies ('majors') and the smaller independent ones ('indies') became an important feature.

After World War II television began to take over some of radio's role, and, partly in response, radio (first in the USA, then elsewhere) cultivated new functions, notably specialized music channels (including 'chart radio'), whose presenters were increasingly prominent disc jockeys (DJs). The transistor increased radio's portability and ubiquity. The economic 'long boom' (1945–73) resulted in widespread increased leisure and spending power, disproportionately so among the young of the postwar 'baby boom' generation, at whom much of the expanded record production and its radio, television and film mediations were aimed. Musical production was now centred on the recording studio. Multi-track recording (from the late 1950s) and the development of more sophisticated equipment in the 1960s placed producers and engineers at the centre of the process, and the requirements and potential of this process increasingly affected the sounds and textures of the music. A plethora of charts on radio and television and in magazines focussed attention on record sales. The role of specialist composers was reduced as producers and performers increasingly wrote their own material, with the requirements of recording in mind. Increasingly, too, a performance was judged by its ability to reproduce the sound of the recorded version through which it was first known. As the sounds of recorded pop music permeated the soundscape, especially in cities, a further step towards the complete commodification of leisure was taken, and a new sort of virtual aural space – created through highly technical mixing together of varied sounds and musical products into inescapable media flows – started to come into being.

From the 1970s the tendency towards conglomeration and globalization intensified. The musical products of the majors continued to be dominated by American (and to a lesser extent British) performers, but although these companies were responsible for 90% of American record sales in the 1990s (Burnett, 1995, p.18), only Warner remained American-owned, the others being based in Japan (CBS-Sony, MCA) and Europe (EMI, BMG, Polygram). In 1994 total world sales of recorded music were valued at about $33 billion (ibid., 3), of which the majors took the lion's share; yet for them, both capital and markets were transnational. Moreover, all the majors were part of much larger media-entertainment conglomerates, and increasingly sought synergy between their activities (tie-ins between recording, radio, television – including terrestrial and satellite music-video channels – publishing, merchandising and advertising for other leisure products), if possible unified around a 'mega-star' performer and creating what has been called a 'total star text'. In the 1990s 'entertainment' accounted for a huge proportion of economic activity in developed societies, and its products were pushed into almost every social and geographical corner. And because music could be re-used so easily in different media contexts, recordings became not just commodities but 'bundles of rights'; back catalogue items were reissued in new formats (on cassette or compact disc or in 'greatest hits' compilations), and well-known recordings were used in television commercials, in movie soundtracks and for 'background music' in places such as supermarkets and airport lounges (*see* ADVERTISING, MUSIC IN, TELEVISION and ENVIRONMENTAL MUSIC).

At the same time, the introduction of digital equipment (mixing desks, synthesizers, samplers, sequencers) not only offered new sound worlds and new ways of creating music, accessible to people with little conventional musical training, but also drastically reduced production costs. As a result, 'do-it-yourself' home recording studios, tiny independent labels and small (often illegal) community radio stations formed the opposite extreme of the music

economy. SAMPLING technology and the ease with which records could be remixed (*see* REMIX) raised questions about the very identity of a composition and about its ownership. Similarly, the audio cassette made home taping easy, and cheap production technology prompted a huge increase in pirate compact disc and tape copies of commercial recordings. The potential threats to the existing structure of the music industry and to the hegemony of big capital and the potential for democratization of music-making were clear. Yet most 'indies' depended on the majors for manufacture and distribution, or, if successful, were bought by them or contracted as independent suppliers; alternatively, their innovations were copied and ruthlessly exploited on a bigger economic stage. The basic picture in the 1990s was of large and small, global and local, in uneasy but mutually advantageous co-existence. Thus the homogenized global pop style and the 'underground' dance club, the international multi-million seller and the niche market (catering for specific age groups, ethnic or regional tastes, or youth subcultures), seem to behave like different aspects of a single system.

These developments seem to represent a new stage in the aural compression of time and space. A constant search for novelty rubbed up against back-catalogue nostalgia; individualized consumption through the personal stereo threw into relief the global exploitation of markets and musical materials in 'world music'. Unprecedented amounts of exchange value streamed out of musical labours; yet the ease with which fans, performers and entrepreneurs could, using new technology, exchange roles offered at least the possibility of a new relationship between listening and participation.

(ii) Issues. Even if the main contours of the history of the mass media and popular music are reasonably clear, much of the detail of the developments, and their implications and effects, is less so, and has been the subject of lively debate among scholars, performers and listeners. Several arguments draw on the central idea of 'technological determinism' – that particular cultural practices owe their character to the nature of the technology they use. Marshall McLuhan's proposition (*The Gutenberg Galaxy*, Toronto, 1962; *Understanding Media*, New York, 1964) that different media, especially the broad categories delineated by oral, written and electronic modes of transmission, have intrinsic properties that condition diverse forms of consciousness and culture has been developed by John Shepherd and others in an attempt to explain distinct approaches to musical structure and process. To many, such views seem to allow too little room for other factors, including political struggle and human agency. Yet it is plausible to suggest, for example, that the 'rational' structures of many 19th-century popular-song genres and their explorations of major–minor tonal harmony are at least connected to their notated form; that this helps to differentiate them from orally transmitted folksongs (which are often monophonic, modal and more iterative in structure); and that the recording process facilitates the recontextualization of some techniques typical of oral cultures (particularly performed nuance – tiny pitch and rhythm inflections that cannot be notated – hence the success of such genres as black American blues), and at the same time introduces new approaches to sound, texture and form (e.g. montage, or repetition through computer-sequenced 'loops'). The historical model, rural (folk memory) – urban (sheet music) – cosmopolitan/global (electronic pop), makes some sense described in these terms, even if it is often too crudely drawn.

In an argument more sociologically sensitive than that of McLuhan, Walter Benjamin, writing about film in the 1930s ('The Work of Art in the Age of Mechanical Reproduction', 1936, repr. in *Illuminationen*, Frankfurt, 1961; Eng. trans., New York, 1968, pp.216–53), suggested that mechanical reproduction had drastically changed the status of the work of art, by destroying the 'aura' of the unique, authentic object, creating new processes of 'distracted' reception and thus empowering the viewer. At the same time, technically and collectively highly organized production demystified creativity, and turned passive consumers into critics. Applications of this analysis to music have become common. It is certainly clear that owners of a record, who can listen to it when, where, in whatever mental state and as often as they want, stand in a different relationship to the music from that of traditional concert-goers. Some, following Adorno, point out the ease with which new forms of 'aura' can be created – through the fetishizing of the musical commodity or the glamorizing of stars – and argue that, in actual musical practice, passive listening is still the norm. Similarly, while digital technology has the potential to democratize production and 'de-throne' the stars, it can also be used to create new stars, such as producers and DJs (*see* DJ (ii)) as well as performers. Nevertheless, Benjamin's inspiration continues to be evident in the stream of work that began in the 1970s on music subcultures, and in subsequent research on the 'active fan'.

Adorno believed that mass production is an adjunct of what he took to be the main ideological function of the 'culture industries' (including the music industry) in late capitalism, namely tying standardized products to equally standardized consumer (listener) responses; this maximizes profits (homogenized pieces can reach huge markets) and keeps people in their place. Many writers (for instance, Jacques Attali, in his concept of 'repetition') have advanced similar arguments. Given the financial rewards record companies gain from a large international 'hit', their desire to use the full array of mass media and marketing techniques to achieve the maximum possible market control is understandable. Nevertheless, research makes it clear that the market is not fully controllable (most record releases lose money); that music industry operations inhabit a field of conflicts among the various sectors, many of which mirror conflicts among musicians and fans; that new agents, new styles and new tastes can never be outlawed – indeed, the logic of the economy requires them; and that, in any case, musical values cannot be regarded as mere epiphenomena of economic exchanges: interpretation and use cannot be fully policed. In this context the most influential model for the popular music economy draws a relationship between the balance of industry concentration and diversity on the one hand and the degree of musical standardization or innovation on the other; the history is viewed in terms of cycles: periods of oligopoly and conservatism are broken up by new energies coming from independent sources, which are in turn incorporated and made safe by the major players. Some qualifications are necessary: late 20th-century technology loosened somewhat the connection

between industry structure and musical innovation; there are numerous examples of innovation in the outputs of major companies; and the model does not necessarily apply in the 1920s and 30s before the tendency to oligopoly really developed. Nevertheless, given that musical production here takes place in the context of the imperatives of a capitalist industry, the basic perspective of the model seems persuasive, suggesting that the history might be pictured as a spiral in which each stage strives to achieve an equilibrium that is nevertheless inevitably unstable.

Implicit in all these arguments are diverse views of what modern society is and what part mass-mediated music plays in it. It is a commonplace that each expansion in the scope of music markets, each increase in the speed of turnover, tends to intensify a process whereby metropolitan norms replace or absorb older, indigenous and peripheral styles and traditions. The trend is to rationalize and democratize by flattening out difference. Thus the promotional discourses around many 19th-century genres focussed on talk of fashion, the 'latest' composition, the 'talk of London' (or New York, or Paris etc.), performed 'with great success by . . .'. In the early 20th century J.B. Priestley described the appearance of ragtime as 'drumming us into another kind of life in which anything might happen' (Baxendale, 1995, p.138). Throughout Europe, American influences were associated, then and again after World War II, with modernization and the loss of old worlds. In the late 20th century the technophiliac futurism of club-dance styles seemed to threaten pop traditions and to signal the birth of a new transurban 'jungle'. But cultural geographers point out that while such processes may destroy and restructure communities, they can also create the possibility of new ones (real or imagined), for instance people coming together round a newly discovered music style accessible to them only electronically. At the same time, as the size of the geographical unit within which activity is organized expands, so in a paradoxical way norms associated with intermediate levels (the nation-state, for example) may weaken, allowing local 'scenes' to flourish; increasing compression of time and space makes plentiful musical materials available. In any case, the industry is adept at inventing traditions or adapting them for sale to consumers alienated from their own. The British case – from early 19th-century stereotypes of Irish and Scottish music, through English folk revival 'peasants' and a music-hall 'golden age', to lovable rock and rolling cockney teddy boys and assorted adherents of (black American or Afro-Caribbean) 'black roots' – is a good example. Modernity has an insatiable appetite for irrational tradition, and most European traditional musics, most American ethnic styles, not to mention world musics from further afield, have been drawn into the net. The best overall model, then, may be some sort of network of levels of activity, continuously evolving in shape and dynamics, such as the matrix of (global) 'superculture', (local) 'subculture' and (cross-cutting) 'interculture' proposed by Slobin (1993).

3. An outline history.

(i) Before Tin Pan Alley. As suggested above, it seems safe to assume that in all socially stratified cultures there is some sort of hierarchy of musical categories. While there may be a few remote regions where this seems barely to have obtained until relatively recently (the Scottish Highlands, Serbia, parts of the American frontier before the late 19th century, for example), in most of Europe and the New World distinctions between 'popular' and 'élite' types of music have a lengthy history. However, before about 1800 there is little sense of this being considered a problem. When the medieval theorist Johannes de Grocheio (*De musica*, *c*1300) wrote that the motet was not suitable for ordinary people 'since they do not grasp its subtlety or delight in hearing it . . . [it] should be performed for the learned', he seems simply to be stating an obvious fact. It was the growth of social mobility, the increasing effects of capitalist social relations and the appearance of commercialized leisure activities that led to anxiety about the culture of the people. This process can be dated to the 17th and 18th centuries: J.G. Herder's statement, late in the 18th century (cited in Burke, 1978, p.22), distinguishing an acceptable vernacular from the horrors of the contemporary *vulgus* – 'The people [*Volk*] are not the mob of the streets, who never sing or compose but shriek and mutilate' – may be taken as conveniently encapsulating the beginnings of the modern 'problem' of popular music.

The subject of popular music in medieval and early modern Europe is one of the weakest parts of its historiography. This is partly because the sources are scanty and often unreliable; partly because of insufficient research; and partly because the work that has been done often exists as an 'aside' in music-historical literature that is focussed elsewhere, or in the literature of highly specialized disciplines, notably folklore studies (*see* Folk music). Redfield's model of 'great tradition' and 'little tradition', the former accessible only to the educated élite, the latter to both the élite and the rest, but with two-way traffic in content and style, still holds good as a starting-point (see Burke, 1978, pp.23–64); but the task of placing data about the popular traditions within a picture of the development of the musical field as a whole is in its infancy (but see Maróthy, 1966; Ling, 1997). In some ways the interpretative difficulties intensify when more commercially orientated activities, often aimed at an embryonic middle class, increased during the 17th and 18th centuries. Broadside ballads (*see* Ballad, §I, 7) and the tunes to which they were sung had already been socially mobile for some time, but in the second half of the 17th century printed collections of songs and dance-tunes were published (in England, for example, John Playford's *The English Dancing Master*, 1651, *Apollo's Banquet*, 1669 and *A Choice Collection of 180 Loyal Songs*, 1685, and D'Urfey's *Wit and Mirth, or Pills to Purge Melancholy*, 1699), followed by individual songs, perhaps drawn from the theatre or, increasingly, specially composed for the growing domestic market. By the 18th century, simple instrumental pieces were being aimed at the domestic market too, and the first collections of 'folk' music (mostly 'Scotch') appeared. Popular tunes, previously used by, for example, Elizabethan composers of virginal and consort music, were used in 18th-century English ballad opera, German Singspiel and French *opéra comique*. Town bands, such as the English waits, were joined by more commercially organized groups performing in taverns and, later, in pleasure gardens and concert rooms. The new urban tunes percolated out into the countryside, for instance through the travels of itinerant fiddlers, pipers and singers, while many dances, from the saraband and country dance to the early 19th-century waltz, made the opposite social journey.

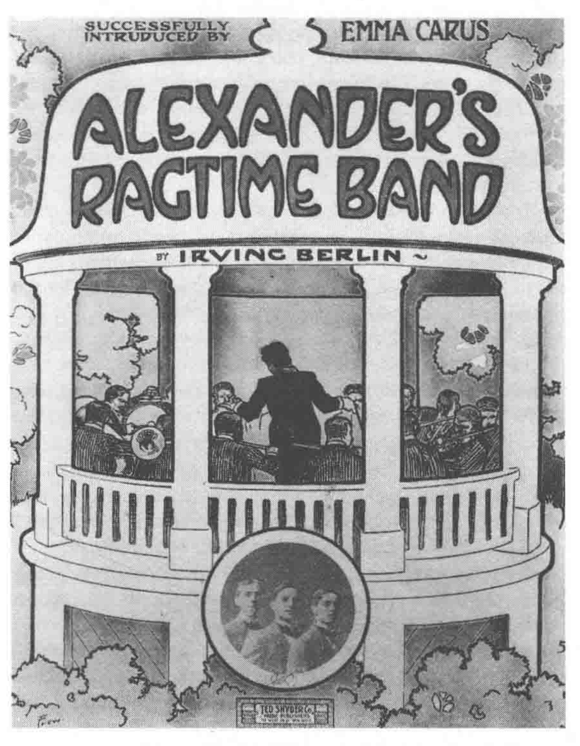
The essential background to the history of popular music in the 19th century is its industrialization. As this process gradually brought most of society within its orbit, the effect in some ways was to narrow the stream of musical practice: the range of activities was broad but, leaving aside older rural repertories, the stylistic range became less so. Much of what we think of now as art music was widely available through cheap editions, through transcriptions and arrangements (which often simplified difficult works), through the spectacular virtuoso recitals pioneered by Paganini and Liszt and through 'popular concerts'. A similar repertory was central to the activity of the mass amateur choral movements that developed in most European countries (stimulated in part by the invention of sol-fa notation systems); and art music (especially opera) also featured strongly in the repertory of the equally popular wind bands, such as the British brass bands which first appeared around the middle of the century and quickly coalesced into a unique working-class movement (*see* BAND (i), §IV, 3). Many of these activities were part of consciously pursued attempts to tie the lower classes into the norms (aesthetic and behavioural) of bourgeois society.

At the same time, it is often difficult to draw a clear dividing-line between these activities and more 'down-market' spheres. Weber (1975) shows that many early 19th-century concerts in London, Paris and Vienna cultivated a rather vulgar appeal to the *nouveaux-riches*. Similarly, in the 1820s, 30s and 40s in these cities (and later in others) a new breed of composer-conductor, with a flamboyant, 'marketable' personality, appeared: Louis Jullien in London, Philippe Musard in Paris, the two Johann Strausses in Vienna. Their promenade and outdoor concerts included not just dances (the Strausses, of course, owed their fame initially to the waltz) but also pieces for listening, and these performances (which themselves emerged from earlier pleasure-garden traditions) laid the ground for the 'popular concerts' that developed in the second half of the century. Large-scale dance halls were another new phenomenon, and dances (as well as marches) were also popular with wind and military bands. The flood of music written for domestic performance also shades stylistically from art norms into what has tendentiously been called *Trivialmusik*; the distance between Mendelssohn's *Lieder ohne Worte* and the salon pieces of, for example, Gustav Lange and Sydney Smith, or between the simpler lieder of Schubert and the songs of Adolf Jensen and F.W. Abt, is not large. Much the same point can be made about French *mélodies* and British drawing-room ballads: prevailing norms are simplified for a mass market. The relationship between the core operatic repertory – from which many overtures and arias in any case found their way into orchestral and band concerts, dance and domestic arrangements, and even barrel organ transcriptions – and new lineages of light opera and operetta (from Ferdinand Hérold and Offenbach to Gilbert and Sullivan and Lehár) is not dissimilar.

Even in the British MUSIC HALL (and equivalents elsewhere, such as the French *café chantant*; *see* CAFÉ-CONCERT) 'serious' music was sometimes included, especially extracts from operas and ballets. But the sources of these new institutions, which emerged during the mid-19th century, were socially and musically more diverse. Early audiences seem to have been predominantly working- and lower-middle-class, and the songs derived from existing folk, street and urban comic-song repertories. By the 1860s distinct song styles had been established, and the first star performers, such as 'swell' George Leybourne, had made their mark. Towards the end of the century, however, increased investment, a tendency to split the drinking from the entertainment and a broadening of the audience turned the halls into something more like variety theatres; there is still an observable difference in type of appeal and musical character between them and contemporary musical comedy (*see* MUSICAL), CABARET and Parisian vaudeville-operetta, but it is not a chasm. Further still down the socio-musical ladder lie resilient traditions of street, industrial and political song, which, as folklorists have shown, drew on and developed older tunes and styles, often using them in new contexts such as industrial disputes. Here is the place where striking musical difference (for example, in the form of modal tunes) may still be found.

The history of 19th-century popular music in the USA is similar in some ways to that in Europe, and different in others. The ideological gulf between 'popular' and 'élite' developed more hesitantly and patchily. There were exceptionally strong and active folk traditions among both rural white communities (notably in the South) and black slaves and ex-slaves; these assumed great importance in the early 20th century, since their modes of performance were far better suited to transmission by recordings than by notation. However, commercial music publishing in the USA drew at first on European (especially British) sources, initially broadside ballads and the 17th- and 18th-century collections of Playford and others, then the ballad opera and pleasure-garden and domestic song repertories. Irish songs (especially those published by Thomas Moore) and Italian opera were also popular. Many European musicians, such as the English singer and composer Henry Russell, visited the USA. Singing schools and other educational initiatives led to increased musical literacy (*see* PSALMODY (ii), §II and SHAPE-NOTE HYMNODY), and to the growth of domestic markets for vocal and instrumental music similar to those in Europe. At the same time, 'singing families' such as the Hutchinsons generated distinctive song repertories, as did the Civil War; and, much more significantly, the minstrel show – emerging as an identifiable genre in the 1830s, and soon an enormous success in Britain as well as throughout the USA – evolved in ways that were unique not only in relation to its negotiation of racial issues but also to its musical fusion of Anglo-Celtic, Italian and (to some degree and in diluted forms) black American elements (*see* MINSTRELSY, AMERICAN). The fusion is heard at its most influential in the songs, for both minstrel show and domestic parlour, of Stephen Foster.

Foster is notable for his ability to identify successful song formulae and exploit them. This tendency is seen even more clearly in the output of subsequent song composers, including H.P. Danks, Henry Tucker, Septimus Winner, Will S. Hays and David Braham, as well as in the production of drawing-room ballads in Britain from the 1870s by Arthur Sullivan, Frederic Cowen, James Molloy and others. Mass production techniques emerged at exactly the same time in the music hall: Felix McGlennon, who was self-taught, claimed to have written 4000 songs, Joseph Tabrar 17,000 (sometimes 30 in a day). McGlennon said that he would 'sacrifice everything



2. *Sheet-music cover 'Songs of the Hutchinson Family' (New York: Firth & Hall, 1843): lithograph by Endicott*

. . . to catchiness . . . . If a rowdy song takes the ear of the public, and rowdy songs set in, why, I must needs write them. [The] music hall songs of all time run in clear grooves' (Bennett, 1986, pp.9–10). The stage for Tin Pan Alley was set.

(ii) From Tin Pan Alley to rock and roll. Tin Pan Alley may have established itself in response to the growing demand for songs from the vaudeville theatres (which had replaced the minstrel show, just as variety replaced music hall in Europe, and which had their organizational centre in New York); but it quickly developed a commercial momentum of its own (*see* TIN PAN ALLEY). Many of the songs of the 1890s and early 1900s – by Paul Dresser, Charles K. Harris, George M. Cohan, Harry von Tilzer and others – are not radically different stylistically from their immediate predecessors; but the vibrant, punchy demotic manner of Irving Berlin's first hits (from 1909, and especially *Alexander's Ragtime Band*, 1911) may be taken to represent both a new phase and the multi-ethnic ferment in turn-of-the-century New York out of which the new music emerged. With the advent of records (George Gershwin's first big success, *Swanee*, 1919, sold over two million copies), then radio and films, the Tin Pan Alley composers between the wars were the hub of American popular music. The up-tempo, dance-orientated, novelty focus which was a feature of the period from 1900 to the early 1920s tended to shift subsequently to more introspective and sentimental moods, particularly in the 1930s as the Depression took hold, and compositional technique became somewhat 'denser' (involving more complex harmonies, phrase patterns, motivic relationships etc.). Nevertheless, a handful of celebrated composers – Jerome Kern, Cole Porter, Richard Rodgers and Harold Arlen, in addition to Berlin and Gershwin – dominated the entire period, even though notable songs were also written by many others, including Harry Warren, Vincent Youmans, Duke Ellington and Frank Loesser.

The connections between popular song and the theatre remained close. At the turn of the century, operetta and musical comedy composers such as Victor Herbert used a more sophisticated musical style than their Tin Pan Alley contemporaries, but, as American musical theatre left European models behind, the REVUE and the musical became important contexts for 'breaking' new songs. Many of the composers mentioned above wrote for musical shows, and their songs thus had a double life (indeed more than that, if arrangements for dance bands and performances by 'silent' cinema musicians are taken into consideration). In due course, a similar relationship developed between such composers and the Hollywood film industry. While songs for stage shows and musical films were often clearly intended for a subsequent independent, commercial life, there was also a counterbalancing tendency towards more dramatically coherent musicals, Kern's *Showboat* (1927) and *Oklahoma!* (1943) by Rodgers and Oscar Hammerstein II being the most celebrated examples. In any case, the best songs of this Tin Pan Alley–Broadway–Hollywood nexus have justifiably been considered as among the creative peaks of 20th-century popular music.

The new media disseminated a broad range of genres: novelties, old-fashioned vaudeville songs, religious music and a variety of traditional or 'ethnic' repertories (e.g. Polish, Jewish, Irish) adapting to 20th-century urban existence in the USA. Of these ethnic musics, two were to be of wider historical importance: COUNTRY MUSIC, at the time known as HILLBILLY MUSIC, and black American

3. *Sheet music of Irving Berlin's 'Alexander's Ragtime Band' (New York: Snyder, 1911)*

4. The Casa Loma Orchestra, 1930

music, put out on 'race' records. Each of these tended to have its own listing or label within record company catalogues, and eventually its own dedicated sales charts (hillbilly soon acquired its own radio programmes on certain Southern stations, too); and each was marketed primarily to its 'home' audience. However, from an early point in the century black American music was becoming more widely known and influential; indeed, this process can be traced back to the 1890s (if not, in a certain sense, to minstrelsy).

The COON SONG and CAKEWALK, deriving both their musical style and their portrayal of black stereotypes from minstrelsy, were among the most popular song types of the 1890s and early 1900s. They were followed by the astonishing commercial success of RAGTIME, which lasted until World War I, then JAZZ (the first records appearing in 1917) and, at roughly the same time, the first commercially disseminated BLUES (the earliest sheet music, by W.C. Handy among others, appeared in 1912, and the earliest recordings, by Mamie Smith, in 1920). Jazz bands enjoyed considerable popularity during the 1920s 'jazz age', and in the mid-1930s the big band jazz style known as swing (*see* SWING (ii)) achieved a national (and international) prominence that lasted until World War II. Many historians and critics have tried to draw clear boundaries around these terms, and to privilege certain strands, often associating these with the 'authentic' styles of black musicians, which they have wanted to distinguish from white 'dilutions'. It is easy to agree that the piano rags of Scott Joplin, the blues of Bessie Smith, Charley Patton, Blind Lemon Jefferson, Leroy Carr and Robert Johnson, the small group jazz of King Oliver, Louis Armstrong and Jelly Roll Morton, and the big bands of Fletcher Henderson, Duke Ellington and Count Basie were distinctive and usually superior to the music in similar styles, or styles derived from these, produced by white musicians. Moreover, much of this white music certainly offers a 'smoother', 'sweeter' alternative, in the quest for mainstream appeal. Nevertheless, the practices of black and white musicians were thoroughly intermingled. None of these categories was tightly defined at the time. 'Ragtime' encompassed not only the classic piano pieces but also songs and band music; and any music could be 'ragged'. Its origins lie in syncopated guitar, banjo and string band styles played by both black and white rural musicians, and in the march tradition represented most famously by J.P. Sousa. 'Blues' settled definitively into the structure we now associate with it only in the late 1920s (perhaps as a result of the influence of records); before that, the term seems to have applied more to an emotional character and to certain technical features, which might appear in a range of vocal and instrumental genres, including Tin Pan Alley songs; it could also denote a type of dance. 'Jazz' was used to describe novelty groups such as the Original Dixieland Jazz Band, the 'symphonic jazz' of white bandleader Paul Whiteman, 'sweet' big bands like the Casa Loma Orchestra (fig.4) and indeed any mildly syncopated dance music or 'hot' singing styles. Blues singers often included other types of song in their repertories and played rags; and white country musicians sang blues, and, in the 1930s, were influenced by jazz (in Western swing), dance-blues and BOOGIE-WOOGIE (in HONKY-TONK MUSIC). Early jazz musicians had their own repertory, but soon added Tin Pan Alley songs to it. Blacks working in the margins of the mainstream music business – 'society' dance-band

leader James Reese Europe, songwriters such as Perry Bradford, Clarence Williams, Eubie Blake and Noble Sissle, jazzmen such as Louis Armstrong and Fats Waller – drew on a range of available genres, a tendency given a particular point in the lineage of black musical shows, from Will Marion Cook's *In Dahomey* (1902–3) through Sissle and Blake's *Shuffle Along* (1921) to the various *Blackbirds* revues of the late 1920s and early 30s. Finally, melodic shapes, rhythmic patterns and blues-derived harmonies infiltrated much of mainstream popular song, most clearly in the 'jazz age', but – if often in subtle ways – permanently. Arguments that this represented no more than a veneer (e.g. Hamm, 1979, pp.358, 385), while appropriate in some cases, would seem to mistake hybridity for superficiality, and to underestimate its long-term historical significance. A somewhat parallel case – the 'Latin' influences on mainstream Euro-American popular music generated by successive fashions for TANGO, RUMBA and MAMBO – is perhaps more susceptible to Hamm's critique; but even here superficial exoticism is only a partial explanation for what, more carefully considered, may be a symptom of deep-rooted cultural ambivalence.

This is not to deny the need for distinctions, between white and black audiences and the musical styles that they typically favoured, nor that black musicians were other than heavily constrained in the activities open to them. Cultural and social relationships were no less complex than the psychology of the white reception of black music (welcomed as 'modern' and at the same time tantalizingly 'primitive'; attacked for its 'barbarity' and 'immorality'). Economic exploitation of black musicians was commonplace. Thus the biggest beneficiaries of the craze for swing music – based on musical innovations developed by blacks – were white bandleaders such as Benny Goodman, Tommy Dorsey and Glenn Miller. Similarly, a succession of dance fashions, from ragtime dances such as the bunny hug through the foxtrot and charleston to jitterbugging, all originating in black American practices, was 'cleaned up' for respectable white consumption, notably through the publications and educational projects of the dancers Vernon and Irene Castle (*see* DANCE, §7).

In a period marked by a growing cult of musical 'personality' it was white composers, singers and bandleaders who by and large enjoyed the greatest commercial success (not entirely, however: Ethel Waters, Ella Fitzgerald, Nat King Cole, Lena Horne, Duke Ellington and Louis Armstrong all achieved considerable popularity). In particular, star singers such as Al Jolson, Rudy Vallee, Ethel Merman, Ruth Etting, Bing Crosby, Frank Sinatra and Dinah Shore, with the benefit of new singing styles such as CROONING and more intensive publicity techniques, were associated with songs more than their composers were; record companies vied with each other to achieve this tie-up through multiple covers of new songs. Characteristics of voice and nuances of performance became at least as important as the notes on the page. At the same time, bandleaders, from Whiteman to Miller, could also become celebrities; songs, it was discovered, could be danced to (and tailored rhythmically for dancing), while conversely most dance bands had a vocal soloist. Social dancing was a major pastime, and could be pursued at home as well, to records or the radio. Most of the stars also benefited from film appearances. Increasingly, musical practice became multi-functional, musical success constructed through a concatenation of aural, visual and behavioural images.

In Europe, late 19th-century traditions of musical theatre, variety, dance music and domestic song survived into the next century for some time, but the vigour of the new American styles, transplanted to a context marked often by political and cultural self-doubt, led quickly to their popularity, forcing older practices to give way or adapt. Many American musicians visited Europe – Sousa, Cook, the Original Dixieland Jazz Band, Whiteman and Armstrong – and the black singer Josephine Baker settled in Paris. Ragtime revues (e.g. *Hullo Ragtime*, 1912) brought both the music and the new dances. Most major New York musical shows went to London. Dance bands on the American model sprang up across Europe (along with small nuclei of jazz aficionados); dancing – in dance halls, hotels and restaurants and at home to broadcasts – was cultivated by all social classes; bandleaders such as Jack Hylton and Ray Noble were as well known as singers following the American style, such as Al Bowlly and Vera Lynn. American films, including musicals, placed their stars before the gaze of Europeans. Native songwriters (in Britain, Horatio Nicholls, alias Lawrence Wright, Tolchard Evans, Will Grosz, Ray Noble, Jack Strachey) copied the American form and style.

Differences survived, however. Local theatre composers such as Ivor Novello, Noël Coward and Kurt Weill hybridized indigenous and transatlantic lineages; some singers resisted American models: Gracie Fields and George Formby, for example. In French *chanson* and *variété*, German *Schlager*, Italian *canzone* and some British songs in the music-hall tradition, native gestures and structures of feeling survived, intertwined with new rhythms. In more peripheral regions, old-established genres and practices changed less, and everywhere, it should be remembered, there was a less obvious network of vernacular musical activities, under-researched as yet.

5. Bing Crosby

6. Gracie Fields

In Britain, for example, these included middlebrow 'light classical' and 'palm-court' music, played in upper-class hotels and spas, accordion and banjo bands, old-fashioned ballads and 'romantic' operetta, alongside still older traditions of brass band, pub sing-song and choir singing.

However, World War II and its aftermath, which brought US troops to Europe, with their records and radio stations, and established the USA as the leading political and economic world power, laid the ground for a new phase in the rise of American popular music to global dominance.

(iii) Rock and roll and after. ROCK AND ROLL entered American public consciousness in 1955 (with the success of Bill Haley's *Rock around the Clock*, first released in 1954, when it was included in the film *Blackboard Jungle*), and threw up its first big star, Elvis Presley, in 1956 (with *Heartbreak Hotel* and *Hound Dog*). Its popularity, and the controversy that accompanied it (falling into a pattern set by the reception of ragtime and jazz), quickly spread through Europe, including (via illicit routes) communist eastern Europe. Musically, however, it was not new. It was derived from the driving, small-group rhythm and blues that had been developed by black 'jump' and city blues bands and vocal groups during the 1940s and early 50s, with an admixture of influences from the blues-influenced country music performed in the same period by such singers as Hank Williams. What was new, though, was that this music was 'crossing over', being heard and taken up by mainstream white (mostly young) audiences, and that it contrasted in style with the big band accompanied ballad singing that still dominated popular music immediately after the war. Several interacting factors were involved in this shift. In the USA huge numbers of Southern whites and blacks moved to northern cities during the war. Their musical tastes began to be catered for in larger-scale, more obvious ways, especially through a rash of new independent record companies and radio stations. New technology (described above) facilitated new modes of musical practice and dissemination. A postwar surge in births (the 'baby boom') coincided with the start of the economic 'long boom', leading to substantially increased disposable income and leisure time, disproportionately so by the mid-1950s for young people. A gradual shift in moral atmosphere revealed growing social tensions and made possible more public expression of cultural and generational differences.

All subsequent types of what became a new popular music mainstream, 'pop' or 'rock' music, can be traced back to rock and roll. Its historical significance is therefore obvious, but it is also manifold. It established black American traditions as central to popular music throughout America and Europe. It enthroned youth as the principal market for the music industry, and as the decisive arbiter of taste. It shifted the cultural politics of popular music: it was from this point on, for example, much more clearly about physical pleasures – indeed, sexuality – and about ideals and choices of life style. It was exceptionally well-suited to dissemination in recorded form (conversely, sheet music could not capture its textures, rhythmic dynamics and vocal inflections), and, as musicians realized this (Buddy Holly being, arguably, the earliest), it became the first popular music to be designed for recording.

The intricate history of pop music after rock and roll (intricate in terms of its chronology and its geographical variants) is recounted in detail elsewhere (*see* POP). The emphasis in this article is on laying out the pattern of major shifts that articulate this history and relating them to the longer-term popular music narrative. Three such shifts are apparent. The first relates to the emergence of ROCK as a self-standing stream distinct from its antecedents; this dates from the mid-1960s. The second is associated with the brief flowering of PUNK ROCK in the late 1970s, which was a symptom of a broader process of fragmentation in the popular music field. The third revolves around the appearance in the late 1980s of a new wave of highly technically mediated, club-based dance music styles, which seemed to some to threaten much of the basis on which the previous popular music apparatus operated (*see* DANCE MUSIC). It is important to note, however, that through these successive shifts existing styles rarely disappeared; on the contrary, the history shows a cumulative process and an expanding style-reservoir. Moreover, many pre-rock-and-roll styles also continued, in the margins, to be joined by a host of adaptations, hybrids and revivals associated with ethnic and indigenous traditions particular to many distinct regions of both Europe (from Irish show bands to Russian rock) and North America (from Louisiana swamp rock to Jewish *klezmer*). Indeed, there is an argument that, as media saturation brought all corners of these societies into the same electronically mediated space, the very concept of cultural centres and margins became doubtful, making the historiography of popular music a politically charged enterprise.

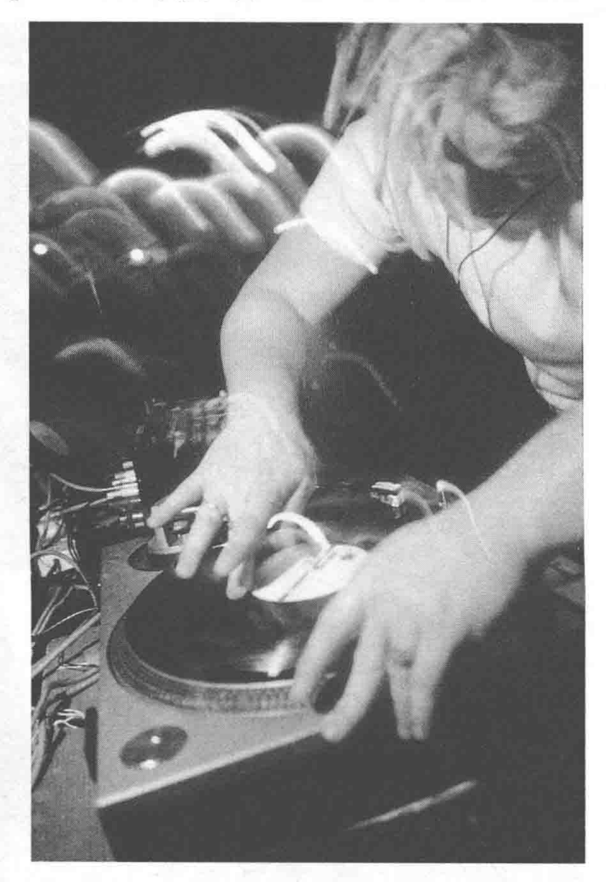
The assimilation of rock and roll by the music industry and mainstream taste in the late 1950s and early 60s (in the form of blander adaptations) was rudely upset by a constellation of new developments: from Britain, BEAT MUSIC, led by the Beatles, and a native derivative of rhythm and blues associated most influentially with the

7. Bill Haley and the Comets

Rolling Stones; from the American West Coast, new hybrids of folk, blues and rock and roll, leaving Californian 'surf music' behind and developing into PSYCHEDELIC ROCK; from New York (mainly), modernizing FOLK MUSIC REVIVAL and FOLK-ROCK styles led by Bob Dylan, and the incipient ART ROCK of Velvet Underground. In a context of rapid economic growth, an expanding college population, youthful protest (especially over the Vietnam War) and widespread changes in social values, all amounting (it has been suggested) to a crisis of legitimacy for existing political regimes, the music took on a rebellious edge and serious aesthetic aims. Rapidly changing studio technology, the growth of FM radio and the emergence of LPs (sometimes in the form of 'concept albums') as a rival to singles shifted the basis of production and enormously expanded the available musical means. By the later 1960s 'rock' was established in general discourse – with several variants, including (in addition to those mentioned above) PROGRESSIVE ROCK, HARD ROCK and COUNTRY ROCK – and was separating (in terms of audience, production and aesthetic) from more chart-orientated 'pop'. Alongside these developments, distinctive black American styles, notably MOTOWN and SOUL MUSIC, sometimes interplayed with rock currents (through such performers as Otis Redding and Aretha Franklin, for example) but by and large stayed relatively separate, in market and musical practice.

In 1976–7 the Sex Pistols, the Clash and others pioneered British punk rock. Some of its sources lay in earlier pop (for example, the Who and David Bowie in Britain, American garage bands and art-rock punks from New York such as Patti Smith and the New York Dolls), but by tying a stripped down musical revisionism to a pseudo-situationist philosophy and deliberately outrageous behaviour, British punk caught the mood of economic recession and social unrest among working-class youth and exposed the gargantuanism of progressive rock as pretentious. Perhaps most significantly, it offered an approach that was both aesthetically and organizationally democratic: anyone could make music, it was suggested; a huge number of new, often tiny, independent record companies, distributors and shops sprang up, in opposition to the established music business; and new production technology made very cheap recording possible. By laying bare the seams in their own music, behaviour and visual style, punk musicians and fans made the point that rock, for all its aesthetic claims, was really a branch of entertainment, with its own modes of artifice. Their insistence on organizational control galvanized the further fragmentation of popular music, laying the ground for

8. 'Free' pop concert in Hyde Park, London, 31 August 1974, with (from left to right) John Paul Jones (bass guitar), Steve Broughton (drums) and Roy Harper (lead guitar)



the emergence of INDIE MUSIC (the US equivalents were 'alternative' or 'college rock'), electro-pop (using synthesizers, drum-machines etc.), GRUNGE (a punk–heavy metal hybrid originating in Seattle) and WORLD MUSIC, each with its own audience and (often) organizational network. These joined chart pop, HEAVY METAL, the SINGER-SONGWRITER and various black genres (DISCO, soul, FUNK, REGGAE), as well as older styles and hybrids (rock ballads, rock musicals etc.), to make what was by this time an exceptionally broad pop field. The effects took institutional forms, bringing a diversity of performance contexts (clubs and discos, as well as concerts and festivals), of radio channels and programme formats, and of music magazines; similarly an intensification of merchandising and of star promotion occurred, but alongside an increasing acceptance of the legitimacy of serious pop journalism and critical writing. The international influence of punk, and of its effects, was enormous.

For some, these effects threatened 'the end of rock' (at least as an ideology), but arguably a more tangible threat was the rise in popularity of club dance music. With roots in disco (dance music designed for records to be played in discotheques, at the peak of its popularity in the 1970s), in funk, in dub (remixed reggae records; *see* DUB (ii)) and in HIP-HOP and RAP (originally New York street musics using intermixed rhythm tracks, drum machines, manually 'scratched' records and 'rapped' vocals), the new dance music was clearly based in black music traditions. Starting in the mid-1980s with Chicago HOUSE and Detroit TECHNO, and moving through British RAVE, a host of continually hybridizing styles had developed by the 1990s, in centres in North America, Britain and many parts of continental Europe. Dance had its own institutional networks (clubs, illegal raves, record companies, magazines, radio stations), its own production system (centred on producers, mixers and DJs, making music through techniques of sampling, sound synthesis, computer programming and live mixing, with few or even no performing musicians directly involved), its own approach to musical form and texture and its own social ambience, associated with lengthy (often all-night) dance sessions and recreational drugs. While crossover into the mainstream market became commonplace in the later 1990s (usually involving the incorporation of more conventional elements – instrumentalists, vocals, pop forms), dance music posed a clear challenge to the previous popular music paradigm.

Rock and roll is often seen as marking a radical shift in popular music practice, from literate styles clearly related in their musical techniques to broadly accepted norms of 19th-century European and Euro-American musics, to more corporeally exciting styles made for records and derived mainly from black American norms with strong orally transmitted elements. While there is a good deal of truth in this view, it is possible, that it both underplays the strength of black American influence before rock and roll (see Van der Merwe, 1989, esp. p.286; 'with the publication of the first blues the materials of the 20th-century popular composer were complete. Since then popular music . . . has striven to maintain a sense of breathless novelty. But it has come up with nothing that, fundamentally, cannot be traced back to 1900 or earlier') and overplays its triumph since (Tin Pan Alley musical forms and long-established ballad singing styles survived, for instance, and one of the best-selling albums worldwide since the 1960s is the sentimental Rodgers and Hammerstein musical *The Sound of Music*). Post-rock-and-roll pop might better be seen as the striking culmination of a lengthy process, going back at least to minstrelsy, whereby mainstream white society has come to terms with an internal cultural 'other'. But by this argument, a stronger claim to musical revolution might be made for late 20th-century dance music, which, in its most extreme forms, abandons the presentation of sung feeling, the portrayal of expressive character, in a way that rock music, any more than Tin Pan Alley songs and 19th-century ballads, does not.

It is clear, however, that the moments associated with the constellations of rock and roll on the one hand and Tin Pan Alley, ragtime and early jazz on the other do represent important historical shifts. They also map rather well onto contemporaneous and similarly important shifts in the technology and economy of musical production (which in turn are no doubt related to broader adjustments, routinely noted by historians, in the organization of Western capitalism). Whether or not technological

9. Club DJs at work

digitization and economic globalization imply an analogous status for the post-punk period, and especially for dance music, is a question perhaps best left for further historical assessment.

4. GENRE, FORM, STYLE.

(i) Genre. In a broad-brush analysis, popular music may be regarded as a single generic system. Its distinctive practices emerge from related sets of conventions organizing form, style, function, audience, meaning and appropriate discourse. It is at this level that popular music as such tends to be defined: for example, as normally comprising short pieces, accessible to large audiences, in familiar (rather than experimental) styles and requiring no great quantity of theoretical knowledge for its appreciation (or, often, for its production). Within this system, most popular music falls into one of three main functional categories: dance, entertainment or background, although there are also subsidiary categories, notably those to do with functions of drama (e.g. music theatre; film or television soundtrack). The three main categories often overlap (as, for example, with dance-songs treated as background music from a pub jukebox). This generic simplicity may be connected to the need of a commercial cultural system to maximize organizational stability, market size and stylistic flexibility. Its secular and vernacular qualities mark it as a product of modern, post-Enlightenment society, in which direct social functions tend to weaken and artistic practice strives towards a certain autonomy. Contrary to common assumptions about the nature of entertainment (the German term *U-Musik* has even stronger pejorative overtones), this function does not preclude intensive listening, a point supported by the aesthetic stance of many 19th-century listeners to domestic ballads or brass band performances of operatic arias or of many 20th-century listeners to jazz or rock singer-songwriters; indeed, certain strands in popular music have constantly implied claims to the status of art, from Scott Joplin's view of ragtime as a serious American music, to John Lennon's claim that rock and roll has 'something in it which is true, like all true art' (Wenner, 1971, pp.100–01). At the same time, older, quasi-ritualistic categories have survived to some extent, in residual or adaptive forms: hymns and carols, used in secular contexts; civic songs (e.g. national anthems); marches associated with particular military organizations; war, propaganda and political songs (from those of the British Chartists and the American Civil War to the Nazi 'Horst Wessel Song' and the Internationale); and songs and chants used by football crowds.

The big generic categories of the popular music mainstream break down into a large number of smaller ones. The pioneering Tin Pan Alley composer Charles K. Harris listed the following (Harris, 1906, p.13):

a. – The Home, or Mother Song. b. – The Descriptive, or Sensational Story Ballad. c. – The Popular Waltz Song . . . d. – The Coon Song . . . e. – The March Song . . . f. – The Comic Song. . . g. – The Production Song (for interpolation in big Musical Productions . . . h. – The Popular Love Ballad. j. – High Class Ballads. k. – Sacred Songs.

Similarly, categories in rock and pop songs include ballads (of a variety of types), up-tempo dance-songs,

10. Joan Baez in a typical folk club setting, 1960s

confessional songs (associated with singer-songwriters), character songs (dramatic or narrative presentations of a character), songs of social or political comment, songs about themselves (i.e. about pop music, 'rock 'n' rolling', dancing etc.), novelty songs and song cycles (on concept albums). 19th-century social dance may be subdivided according to differences of tempo, rhythmic gestures, typical social contexts and typical semantic associations; the same is true of late 20th-century dance music, which is particularly prone to generic splitting and hybridization. The proliferation of subgenres is probably the corollary of the large-scale systemic simplicity, the one providing a necessary stability, the other a desirable level of flux and novelty.

Elements of commonality are important at several levels. Romantic and sexual relationships provide easily the most frequent types of subject matter; indeed, this generic feature might in one way be regarded as subsuming many of the subgenres. Similarly, self-expression, taking a variety of guises, is fundamental to popular song throughout its history, marking its secular trend. The effects of commodity-form status (on dissemination, content, performance) are so general that they are only revealed when put in question, as in folk clubs or in the free rock concerts of the late 1960s. One of these effects is a tendency to multi-functionality: for example, songs appearing in the theatre, in recorded form, for dancing, on television commercials and on film soundtracks. (As classical music became more thoroughly commodified in the late 20th century it was affected by this tendency as well; by this criterion it turned into a type of popular music.) However, such recycling of material (e.g. tunes migrating from one context to another) has a much older ancestry in vernacular musical practice. Throughout the history, there is on the level of musical style and technique a sense of a generic centre, surrounded by, and from time to time refreshed by and interacting with, marginal genres (such as folk music, blues, reggae, world music etc.).

Some genres have seen significant change. Thus the popular ballad, starting in the 19th century as a narrative genre with roots in the folk ballad, came, in the Tin Pan Alley–Broadway song system, to combine narrative with (and often subordinate it to) the characteristics of a reflective romantic song; by the time of the development of the rock ballad the genre can be defined simply as a slowish pop song, with subjectively orientated and often romantic themes and a personal mode of address. At the same time, certain aspects of some genres seem to change very little. From the early British music-hall song *Bacon and Greens* to popular successes such as *Yes, we have no bananas* (1923) and *Barbie Girl* (1997, referring to a popular brand of doll), many of the features of the comic novelty song are remarkably stable.

(ii) Form. One way of writing the history of popular music forms would be in terms of an interrelationship

between iterative and additive modes on the one hand and the principle of sectionality on the other. The folk music forebears tended to privilege the first, through stanzaic song forms and repeating dance-tunes; and to a greater or lesser degree popular music in the 20th century returned to similar techniques, derived for the most part from black American influences. In between, sectionally orientated structures increased in importance, perhaps because of the closeness of much 19th-century popular music to contemporary art music norms. An additional factor to be borne in mind in the case of songs is the role of LYRICS. Through the demands imposed by setting existing words, or through mutual interaction, or sometimes through the effects of producing both together, the patterns of verbal form (rhyme scheme, line length, stanza structure etc.) and those of musical form are always interrelated.

Most 19th-century popular songs use a strophic form. The roots of such forms go back not only to folksong but also to theatre and pleasure-garden song, broadside ballad and *Gassenhauer*, *romance* and lied. Commonly (though not universally) each stanza ends with a short refrain. The phrase structure is generally made up of regular two-, four- and eight-bar units, phrases are often repeated, either immediately or after a contrasting phrase, and there is an important role for open–closed (antecedent–consequent) relationships between adjacent phrase-endings, produced melodically or harmonically, or both. Sir Henry Bishop's *Home, Sweet Home* (1823) exemplifies all these tendencies, illustrating the way in which the additive strophic principle is infiltrated by elements of a developing sectionalism. Perhaps under the influence of contemporary art song, some composers went further in this direction, especially in drawing-room ballads, into through-composed, modified strophic or other sectional forms. From the middle of the century refrains of American songs were often intended to be sung by a group (hence use of the term 'chorus') and, similarly, British music-hall songs often have a chorus in which the audience can sing along. Eight- or 16-bar sections were by now the most common, for both verse and chorus, and in both repertories a variety of phrase-structure patterns can be found, for example *AABA* and (the music-hall favourite) *ABAC*. The folding of repetition into lyrical shape through sequence and the rhyming effect produced by permutations of symmetry and contrast between phrases and by open–closed relationships between cadences create a sense of balance, of quasi-narrative movement balanced by degrees of closure, which is typical of this period.

The sectional principle was even more prominent in the instrumental dance music of the 19th century (including marches, which could be used for dancing the quickstep or galop). From quadrille, waltz, galop and polka to two-step and cakewalk, practice oscillates and permutates between two types of pattern, each based on sections of (normally) eight or 16 bars: the string or set pattern (a sequence of different themes) and the minuet-and-trio or *ABA* pattern (the trio generally being in a contrasting key, often the subdominant). Both tendencies were taken over into instrumental ragtime. Most piano rags use a two-part form, the first section having a ternary arrangement of sections (or 'strains'), the second introducing new strains and perhaps recapitulating an earlier one, but in any case being in a contrasting key, usually the subdominant (and often closing there – a peculiarity of ragtime). Common patterns are *ABA/CD*, *ABA/CA* and *ABA/CDC*, many of the strains being repeated.

In the later 19th century song choruses tended to expand and, increasingly, to become the focus of the form. This tendency continued in Tin Pan Alley song, and at the same time the verse section shrank in both size and number. By the 1920s one verse (in any case often omitted in performance) was the norm, and the chorus was generally 32 bars long, the whole approximating to a recitative-and-aria structure. Various chorus patterns were used but by far the most common is the ternary variant *AABA*, known as 'standard ballad form', with the bridge (the *B* section) providing contrast melodically, harmonically and sometimes in key. Such an expansive, well-organized structure can function as a self-standing entity (hence descriptions of the mature Tin Pan Alley–Broadway song as the lied of popular music), and would seem to mark the triumph of the sectional over the additive principle. However, on a micro-structural level many songs take over from ragtime and blues techniques of building form through repetition of short figures; from Joe Howard's coon song *Hello! ma baby* (1899) through Lewis F. Muir's *Waiting for the Robert E. Lee* (1912), Walter Donaldson's *Yes, sir, that's my baby* (1925) and George Gershwin's *I got rhythm* (1930) to Joe Garland's *In the mood* (1939), this technique points, at least incipiently, away from sectionalism, towards open-ended iteration.

12-bar blues form, which emerged during the same period, strings together a variable number of verses (often, confusingly, called choruses), each one marked internally by a good deal of phrase and smaller-scale repetition, call-and-response between voice and accompanying instrument(s) and the use of riffs (*see* RIFF). Early jazz musicians not only improvised on the 12-bar harmonic sequence (I–I–I–I–IV–IV–I–I–V–V[IV]–I–I[V]) but applied the same approach to the choruses of Tin Pan Alley songs. From this point 'chorus form' refers to pieces built on iteration (potentially open-ended and usually with variation) of a structural unit. This constitutes a principal resource for all black American genres, and also influenced the additive strophic forms typical of country music; from both traditions it entered mainstream pop music from rock and roll onwards.

Post-rock-and-roll, pop song used 12-bar blues, together with variant and equivalent chorus-form chord sequences, and drew on folk revival for simple additive strophic patterns; but it also retained elements of the standard Tin Pan Alley form, both the overall pattern itself (especially in ballads) and the verse–chorus–bridge sectional principle (more widely). By the later 1960s these lineages were thoroughly combined, and generalization is possible only to the extent of observing first that songs are usually constructed from a sequence of sections of variable length, which, depending on their function and interrelationships, may be termed 'verses', 'choruses' or 'bridges'; and second that at the same time processual links are often created across sectional divisions through the use of riffs, interrelated musical figures, harmonically open chord progressions or foregrounded rhythmic continuities. The impulse to avoid closure often results in fades at the end of recordings or performances. Riffs may be melodic (as in the guitar riff of the Rolling Stones' *Satisfaction*, 1965), but more commonly comprise a short chord sequence, a pervasive technique from the I–IV–v–IV

of Richard Berry's ubiquitous *Louie Louie* (1957) onwards, even in clearly sectional forms. The contrasting temporalities of short harmonic cycle and larger sections can intertwine in powerful ways: in REM's *Losing my religion* (1991) lyrics and musical content indicate an unorthodox sequence of verses, choruses and short bridges, but virtually all the music pivots around a two-chord riff (A minor–E minor), which, however, grows varied harmonic 'limbs' in the different sections of the song.

This pop form mainstream is broadened out by two divergent tendencies. Some progressive rock groups explored more extended forms (especially on concept albums), sometimes partly through-composed, sometimes partly improvisatory. While subsidiary, the influence of this strand can be felt in the fluidities and irregularities characteristic of the work of some indie bands and of the more experimental singer-songwriters. At the other extreme, hip hop and dance-music producers in the 1980s and 90s, using sampling, computer-sequenced rhythm-loops, collage and remixing techniques, developed a concept of form based on arbitrary cuts between a series of repetition-rich textures, each piece being potentially endless; articulation points seem to be largely local, and form is heard more like process.

Some scholars have connected the impulses towards form as process (iteration, variation) and form as organized structure (sectionalism) to non-Western (or specifically African and Afro-diasporic) and Western practices respectively. Thus Keil (*Journal of Aesthetics and Art Criticism*, 1966) distinguished between a tendency towards 'engendered feeling' in the former and 'embodied meaning' in the latter, while Chester (1970) distinguished between 'intensional' and 'extensional' forms. A dichotomy is established between pre-planned composition on the one side and moment-by-moment nuance and inflection, based on received frameworks, on the other. As ideal types, these provide useful models; however they are both better regarded as principles, variably active in all music, on both of which popular music practice draws, in continually changing proportions, manifestations and interrelationships.

Adorno (1941) connected formal moulds and frameworks in popular music to the pressures exerted by commodification, and grouped them all under the pejorative label of 'standardization'. From music-hall formula and Tin Pan Alley mass production to the 'hit-factories' of pop, it is clear that a tendency to structural predictability grows directly out of the imperatives of a capitalist industry. Yet the Adornian critique misses not only the productivity of formula (in stimulating variative invention) but also the range of formal designs and processes.

A further question is whether 'the piece' is the most appropriate unit for formal analysis. Two developments, one in cultural theory, the other in musical practice, have added extra charge to this question. Theories of intertextuality suggest that relationships between pieces or performances are of structural significance, and thus throw into relief the importance of covers, of recycling material, of 'tune families' that link songs together and of formulaic processes. Similarly, techniques of sampling and remixing raise queries about the boundaries normally placed around a singular musical event. The theory of 'Signifyin(g)' drawn by scholars from black American literary studies places the roots of Afro-diasporic formal thinking in the concept of a 'changing same', which generates intertextual relationships both historically and synchronically, through continual variation of formulae. The pervasiveness of repetition in popular music, at all structural levels, suggests that such a perspective may be at least as relevant here as European formal moulds and quasi-industrial standardization techniques.

(iii) Style. It is impossible to discuss in detail here even a few popular music styles, and the most that can be attempted is a sketch of some important trends. As with musical form, many aspects of 19th-century styles are linked or contiguous to contemporaneous art music techniques, while in the 20th century these were at least in part supplanted by, or mixed with, approaches drawn from black American (and to a lesser extent folk, country, Latin and world) musics. This shift happened in conjunction with a different one, a move from norms moulded by the demands of performance, often in intimate surroundings, to techniques designed for large-scale performance, often with the aid of amplification, or for recording, radio or film, and at the same time shot through with the effects of enormous changes in the resources and processes of sound production. This was accompanied too by a gradual transition from a relative separation of song and dance genres to a situation in which their attributes are thoroughly intertwined.

Tune-and-accompaniment textures, simple diatonic harmonies (with a variable admixture of chromatic elaboration), melodies conditioned by harmonic progression and its rhythm (often arch-shaped, with frequent use of phrase repetition and sequence, though sometimes affected too by *volkstümlich* traits) – the 'home-and-away' melodic and tonal processes of 'bourgeois song' have been described often enough, and they provide the basic attributes of many 19th-century popular song styles (though obviously with differences of detail between styles lying closer to, say, lied, Italian aria or English theatre song). Our knowledge of performing style is thin for this era before records, but many celebrated singers (in Britain, John Braham, Sims Reeves, Antoinette Sterling, Charlotte Sainton-Dolby and Adelina Patti, for instance) straddled the divide between art and popular music, and no doubt amateurs tried to imitate their pure tone, secure intonation and clear phrasing. Performance in the music halls and minstrel shows was much more theatrical, portraying character, inciting audience response and including speech-like effects and even patter. Street singers took such tendencies even further.

Similar melodic, harmonic and textural characteristics are found in much of the instrumental music, too, such as salon pieces for piano, though here typical instrumental figuration might feature. Many such pieces are in a dance genre, and, while the dance music of the period also shares the same overall stylistic framework, in this repertory rhythm, often a background feature in the songs, is of course more sharply etched. In the second half of the century especially, typical dance rhythms often invaded vocal music as well – in minstrelsy, for example, or the waltz songs so popular towards the end of the century, or in music hall, where the contours of galop, polka or waltz rhythms generate much of the sing-along impetus. So important is this influence in music hall (frequently both tempo and rhythmic character change for the chorus, introducing a more dance-like swing) that Bennett (1986) refers to the 'gestic' quality of the style – a memorable

figure, pregnant with rhythmic character, embodies the song's basic gesture (it is here, perhaps, that the device of the 'hook', so important in later popular song, was born). Throughout this 19th-century repertory textural principles differ little, whether the accompaniment is in the hands of piano, small orchestra of strings and wind, wind band or the small ad hoc groups of the music hall; but the banjos and guitars used in minstrelsy and the 'traps' (elementary drum kit) introduced in the later music hall and in vaudeville are pointers to the future.

With ragtime, blues and early jazz, rhythmic features moved more into the foreground, notably ragtime's half-beat syncopation and 'secondary rag' (three-note groups over a duple beat), the rhythmic flexibility of blues singing, the before-the-beat and after-the-beat phrasing against a strong regular beat (producing swing) that is typical of jazz, and sometimes the 3+3+2 metrical patterns characteristic of many Latin genres. Other important techniques in these styles include pentatonic and circling (rather than linear, goal-directed) melodic shapes; pitch inflection (including blue notes, i.e. variably tuned thirds, sevenths and sometimes other scale degrees); small-scale repetition, including riffs; call-and-response; a more natural type of voice production, manifesting itself often in speech-like singing styles and 'dirty' tone – techniques that, when imitated by instrumentalists, result in 'vocalized tone'; and a semi-improvisatory approach to performance.

Many of these techniques seeped, to variable extents and in variable ways, into the styles of Tin Pan Alley song, which in other respects continued to develop along lines already existing in the 19th century. Harmonically, circle-of-fifth and (from blues) I–IV^7 progressions are typical additions to the basic diatonic framework, though by the inter-war period some chromatic chords (dominant extensions, added 6ths, augmented and diminished chords) were also common, as were passing modulations (especially in bridge sections). Similarly, in the more sophisticated songs of Broadway shows a denser motivic texture developed, along with longer-breathed melodic lines. At the same time, dance band performance norms were influential: for example, there are the beginnings of a distinct rhythm section stratum in the texture; and sometimes strong bass lines suggesting top–bottom thinking; elements of call-and-response, riff, off-beat accents, parallel voicing and counter melodies owing more to jazz polyphony than to European textbook counterpoint infiltrate accompaniments. This applied across the range of performing groups, from small dance bands to large, string-dominated orchestras. Singing styles too were sometimes influenced by jazz (though bel canto norms remained important as well), and the novel intimacies, nuances and flexibility made possible by the microphone (in crooning, for instance) pointed towards the coming revolution in sound.

In rock and roll and subsequent pop styles, techniques derived from black American sources were developed further, notably shouted, 'dirty', dramatic and jazz-influenced singing, top–bottom textures with foregrounded percussion stratum, widespread use of riffs as a textural as well as a structural device and instrumental techniques organized around expressiveness and rhythmic bite. The standard performing group (guitars, drum kit, lead singer, perhaps with some group singing as well) emerged from the small-band lineages of rhythm and blues and country music, though additions (keyboards, brass, synthesizers) and larger groups were also used as the range of styles expanded. The 'standard rock beat' (kick drum on beats one and three, heavily accented backbeats on two and four, usually on snare drum, plus decorative cymbal patterns) was established, with a spectrum of variants in different genres (Moore, 1993, p.36). The harmonic language, while drawing on blues-type progressions and on Tin Pan Alley for circle-of-fifth and other diatonic progressions, is often modal, and favours short, repeating harmonic riffs; such sequences as I–♭VII–IV, I–vi and i-♭III–♭VII are common. Above all, perhaps, a new sound world was opened up by amplification (resulting, for example, in a range of electric guitar styles and in the deliberate use of feedback), by electronic effects (such as wah-wah and echo), by sound synthesis and by multi-track recording, which made available techniques of layering, balancing, blending and stereophonic spacing of voices that are impossible by any other means, thus radically changing conceptions of texture.

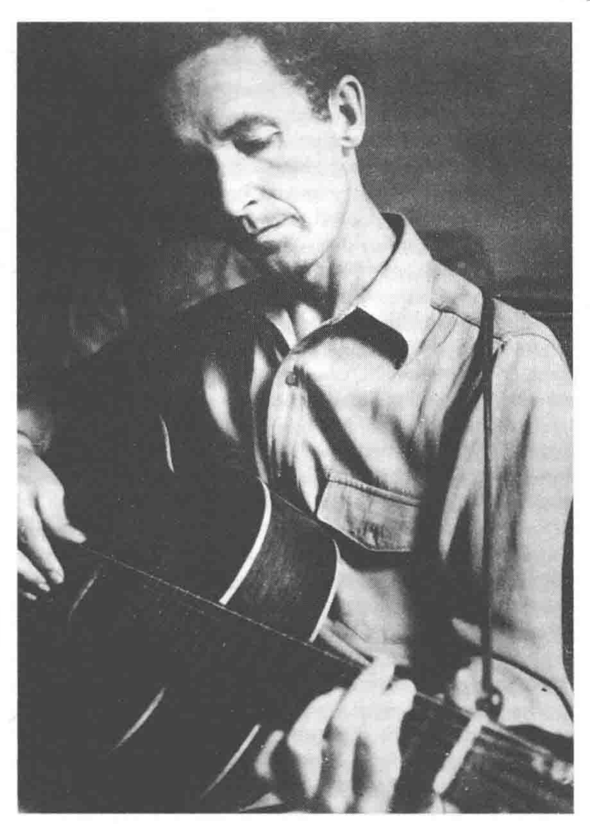
Texture and sound took on even greater importance in hip hop and subsequent pop dance styles. With the aid of digital technology, layers of sound, each one often created by looping rhythms, short figures or sampled noises, are assembled into montages. While the techniques were incipiently present in earlier black styles (disco, funk, dub), the tendency in much rave, techno, and drum and bass music virtually to abandon tune, to shrink periodicity to very short units and to constrict harmony to short, minimally directed (and often modal) sequences radically reconstructs the stylistic paradigm. A fast, metronomically regular beat supporting syncopated, short-note figures is standard, and a contrast between rapped lyrics and brief, soulful sung phrases is common. These dance music styles represent an extreme in the broad stylistic spectrum of popular music at the end of the 20th century; but their popularity, and even more their influence on more mainstream styles, points to a perhaps decisive historical significance.

(iv) Popular music and the musical field. It is easy to see that in the first half of the 19th century there were close links between a good deal of popular music and contemporary art music, in terms of genre, form and style; that in the second half of the century these links weakened, as distinctively popular genres appeared; and that, with the beginnings of Modernism, this parting of the ways turned into a clear split, which subsequent developments in the 20th century tended to deepen (Hamm, 1979, in particular, argues this view persuasively). However, the story is not quite as straightforward as it might at first seem.

One common way of seeing the popular styles of the 19th-century bourgeoisie is as dilutions of the contemporary art music; but the whole field may also be viewed in terms of divergent tendencies within broadly accepted norms. The popular styles and the immense educational and critical efforts to popularize the classical styles then appear as sociologically interconnected; we can see 'the rise of the musical masters as an early form of mass culture' (Weber, 1977, p.6), and by the 20th century it is clear that their works 'speak equally, or almost equally, to listeners in many countries because their native accents have been naturalised in an international musical idiom' (Parakilas, 1984, p.10). At the same time, it should be remembered that the favoured musics of many 19th-century Europeans and Americans – folk and folk-related styles – lie outside this idiom: it is here that clearly

articulated difference is to be located in this period. But the interplay between art and popular strands did not disappear in 1900. The popularization of classical music continued, from the work of the music appreciation movement to the commercial success of recorded compilations of classical 'greatest hits' in the 1980s and 90s. Basic 19th-century techniques and effects continue to inform the composition of cinema and television music and the repertory of light music. The ease with which classical pieces can be 'ragged', 'jazzed up' or given a rock beat is instructive. Mainstream popular music has often drawn on art music for material, from such Tin Pan Alley songs as *I'm always chasing rainbows* (1918, from Chopin) and *Avalon* (1920, from Puccini) to Procol Harum's rock recording *A Whiter Shade of Pale* (1967, based on a J.S. Bach chord sequence) and Sweetbox's 1998 hit *Everythings gonna be alright* (which makes use of Bach's Air from Suite no.3 in D, or 'Air on the G string'). Many progressive rock musicians have recorded arrangements of art music pieces or used art music techniques and textures, and some heavy metal guitarists consciously draw on Baroque virtuoso instrumental styles (*see* CLASSIC ROCK).

In the 20th century, admittedly, the relationship between art and popular strands became more complex. Early Modernists sometimes used elements of ragtime and jazz (and of folk music too), but they treated them as raw material, to be transformed and distanced. From the other side, symphonic jazz (in a variety of guises – Whiteman, Gershwin, Ellington, the Modern Jazz Quartet) is also permeated with stylistic and structural tensions. It has been suggested that more complete and less selfconscious crossovers emerged under the influence of postmodernism (from the 1960s). It is certainly often difficult to assess, on the level of style (and sometimes that of audience too), whether, within the avant garde, such musicians as LaMonte Young, Philip Glass, Brian Eno, Laurie Anderson, Frank Zappa, ambient dance group the Orb or drum 'n' bass musician Roni Size produce 'popular' or 'art' music.



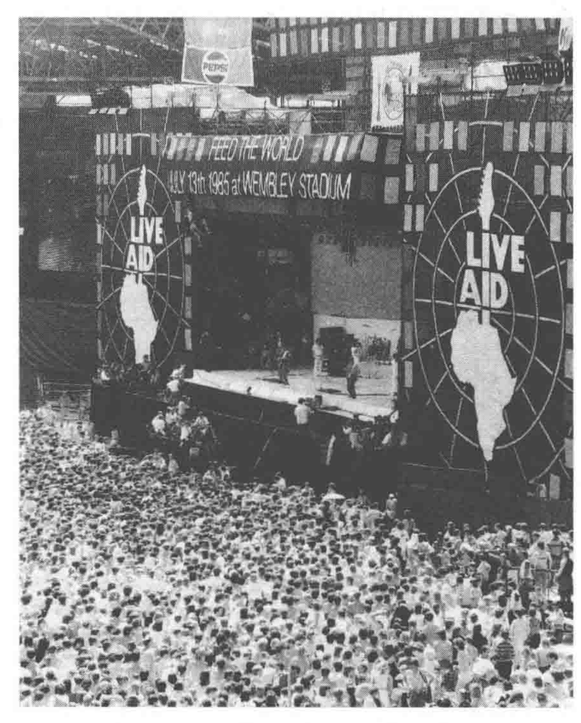
The story is so complex that generalization is extraordinarily difficult. Two points can perhaps be accepted: that attempts to discuss popular music in isolation, that is, without taking account of its variable relationships (positive and negative) with other musical categories, will inevitably be weakened in their analytic scope; and that these variable relationships are closely connected with shifts in social relationships and in associated broad cultural patterns. An example of the ground opened up by acceptance of the second point is provided by Paul Gilroy's concept of the 'black Atlantic' (Gilroy, 1993) and W.T. Lhamon's parallel history of blackface performance (Lhamon, 1998). If, as Gilroy argues, the presence of a slave and post-slave Afro-diasporic culture within late-modern bourgeois society is not marginal but significantly constitutive for that society, then the emergent role of black American music becomes important not just for popular music but for our understanding of the musical field in this society considered as a whole. If Lhamon's provocative argument is accepted, namely that blackface, for all its racist caricatures, constitutes a core site for the negotiation of a cross-race Atlantic popular identity, with a history traceable from early 19th-century New York through the performance styles of such figures as Al Jolson and Elvis Presley to that of the 1990s rapper M.C. Hammer, then the ethnic mediations of social class become central to an understanding of modernity and its musical culture. Against the background of such postcolonial critiques, the periodic incursions into mainstream popular music from outside its apparent geographical base, from tango in the early years of the 20th century through Afro-Cuban influences during the 1930s, 40s and 50s to reggae and world musics in the 1980s and 90s, suggests that the geo-cultural boundaries of 'the West' itself are as porous as its social identity is multi-faceted. The very concept of a mainstream might begin to come into question at this point, especially if, to the importance of the 'marginal' musics just mentioned, is added consideration of the historical significance of the other musical 'outsiders', for example Gypsy music (especially in 19th-century central Europe) and Jewish music (for instance, in the ethnic ferment out of which the formation of Tin Pan Alley and Broadway song styles emerged). It is not necessary to accept Constant Lambert's élitism or his unsavoury espousal of 'racial characteristics' in music to note the pertinence of his argument, in *Music Ho!* (1934), that, to many critics of musical change, 'the Jew is just as much an enemy of the British and Holy Roman Empires as the Negro' (3/1966, pp.177–8). Negotiations of difference and identity, representation and self-representation, relating to the full range of racial, ethnic, class and cultural hierarchies, have been a constant factor in the way that popular music has been located within the musical field as a whole.

5. SOCIAL SIGNIFICANCE.

(i) Politics. Art music in the West is generally portrayed as apolitical, and the contrast with popular music in this sphere is striking. Bob Dylan's protest songs of the 1960s may stand as key examples of one sort of popular music politics. Song lyrics with overt political content have not been uncommon in subsequent pop music, though in mainstream 20th-century popular music before the 1960s they are quite rare. In the 19th century there were songs about wars, campaigning songs (supporting the abolition of slavery, for instance) and songs of social comment (on such issues as the evils of alcohol), though often their aim was to affirm rather than protest, as in British music-hall songs with enthusiastically imperialist themes. Pop music protest stands more in the tradition of strike ballads and other politically motivated workers' songs, which in turn can be related to folksongs containing political comment (a trait surviving in blues and country music, and passing into pop through the influence of such American neo-folk and folk-revival singers as Woody Guthrie and Pete Seeger).

There is also a history of political movements making use of songs for campaigning purposes, and, in a linked though distinct way, some pop musicians have tied their music to political campaigns, such as Rock Against Racism in the late 1970s and in the mid-1980s the Band Aid and Live Aid movement in aid of the relief of world poverty. Similarly, the rather inchoate political demands of the 1960s counterculture were often seen as carried above all by the rock music of the time. In these cases, however, lyric content is relatively unimportant to the political effects; and arguably the politics of most popular music have generally had more to do with its sounds, contexts and uses than with its words.

Many popular music styles have been subjects of controversy. In the 19th century, theatres and pleasure



11. Woody Guthrie

gardens were often seen as morally suspect, and there were frequent attempts to clear music off the streets. New dances, starting with the waltz, had a habit (so it seemed to their critics) of infringing the canons of respectability. Music halls responded to efforts to control and censor them by becoming blander and less risqué. Ragtime, jazz, rock and roll and rap were each greeted by a chorus of condemnation which combined musical criticisms with a moral panic focussed around allegations of violence, sexual immorality and uncivilized 'jungle rhythms'. It is often difficult to disentangle musical dislike (frequently couched in terms of a discourse of 'noise') and fear of social disorder. Thus rock music was resisted by communist state authorities both because it was felt to be musically aberrant, indeed, primitive, and because it was seen as a symptom of bourgeois capitalism; conversely, to dissidents and alienated youth it represented freedom on both levels. Even claims to no more than 'fun' can be regarded as threatening by defenders of social (especially work) discipline.

For participants in popular music, it often represents 'community' at least as much as it does 'threat'. Pete Townshend of the pop group the Who wrote: 'When the music gets so good . . . everybody for a second forgets completely who they are and where they are, and they don't care. They just know they are happy' (Frith, 1983, p.80). Such a politics of community takes particularly overt form at a few specific moments (at the Woodstock rock festival in 1969, for instance, or in all-night 'raves' in the dance clubs of the late 1980s and early 90s), but forms a continuous thread in the appeal of pop music, a thread that appears to be derived ideologically from the myth of a 'folk community' constructed by folk revivalists and folklorists (and before them by the Romantics). It may manifest itself in some earlier proto-folk situations too – for example, in the relationship of brass band music or music-hall song to particular 19th-century British working-class communities. It constantly intertwines, however, with popular music's role in what Raymond Williams (1961) called a 'long revolution': the gradual extension of democratic opportunities (in this case, access to music, both its production and consumption) to more and more sectors of society. The politics of this shift are those typical of mass society, and their effects are variously construed (as, for example, alienation or empowerment; cultural flattening or cultural pluralism), depending on the observer's political point of view.

What most observers might agree on is music's power to 'place' people in society. For Adorno, this pointed to the way that popular music in mass society acts (he thought) as 'social cement', confirming consumers as passive units performing (willingly) their allotted roles in an incipiently totalitarian capitalist system. Still less tendentious critiques may refer to, for example, the escapism in Tin Pan Alley song; and similarly the historian Gareth Stedman-Jones (1974) describes late 19th-century music-hall song as a 'culture of consolation', its small convivialities (its 'fun') compensating for the seeming impossibility of real social change. For most popular music scholars, however, the ideological effects of the music are far more variable than Adorno allows, and more subject to negotiation. At the opposite extreme, subcultural theorists such as Willis and Hebdige argue for the possibility of particular music styles to act as vehicles of resistance to dominant cultural and social values, through the meanings read into them by consumers. It is nevertheless impossible to describe the politics of production as anything other than vitally important, for they

12. Live Aid concert, Wembley Stadium, London, July 1985

greatly affect what music consumers will hear. The imperatives of commodity form, of intellectual property law and of growing corporate power explain the appeal of neo-Marxist portrayals of the music industry as a monster. Theories of 'cooption' describe how musical innovations are often stripped of any power to upset, as they are incorporated into mainstream styles; one major record company enthusiastically promoted the radical musics of the 1960s counterculture under the now notorious slogan 'The revolution is on CBS'. As, through the 19th and 20th centuries, the cultural industries became more and more significant both to the economy and to social behaviour, the role of the state became increasingly important as well. Under fascist and Stalinist dictatorships it was overtly oppressive and directive, but in liberal democracies the concerns of state agencies are mostly to do with encouraging orderly consumption and profitable production, along with social tranquillity. Legal regulation of performance, broadcasting and copyright, taxation and subsidy policies, censorship and educational strategies form a network of official involvements. The systemic integrity of the whole production apparatus, especially by the later 20th century, can look impressive. Nevertheless, most popular music scholars would want to point also to the faults in this system (see §2(ii) above), to the impossibility of eradicating these and, above all perhaps, to the intense difficulties in controlling the meaning of music.

(ii) Social identities. Whatever the political context or ideological mechanisms, it is widely agreed that participation in popular music genres and styles is intimately connected with how people (listeners and producers) see themselves – that is, with their sense of social identity. A dramatic example is the way that the social category of youth has been configured since the 1950s, in large part through the images, values and behavioural possibilities made available in pop music. But social identity is an amalgam, standing at the meeting-point of various axes, including not only generation but also social class, gender, nation and ethnicity.

There is good empirical evidence to link many popular music genres with particular social classes, both working-class groups (street music, industrial song, brass bands, music hall, blues and country music up to the 1960s, hard rock styles and heavy metal) and middle-class groups (parlour and salon music, operetta and progressive and art rock styles). Such links tend to be obscured in the first half of the 20th century by discourses of mass culture, which assume an incipient universality of social positioning; and these discourses retain some importance subsequently, if only because, in societies with increasingly blurred class boundaries and in fluid mediascapes dominated by large organizations and with socially mobile audiences, theories of class ownership of and class expression through specific styles seem simplistic. Homology models, derived from anthropology, in which musical content and class position are mapped one to the other, raise difficult epistemological issues (they seem to require an analytical first cause), and, for most scholars, need to be written on a very coarse scale, to be modulated by theories of negotiation or to focus on use and consumption rather than on musical form and content. The last two are the favoured strategies of subcultural theorists, such as those who have identified resonances between particular pop styles and the values of punk, mod, teddy boy, hippie or other class-based subcultures. Even in the 19th century, when class-linked musical differences are relatively easy to spot, norms originating in bourgeois traditions gradually spread their influence through large swathes of popular music practice, so that a model based on the variable articulation of a core stock of techniques seems the most convincing one. Despite these qualifications, however, it remains important to place popular music in its class contexts. Whatever its exact definition, it is always in some sense culturally subaltern; from this point of view, all popular styles are 'people's music' (in a broad sense), positioned against whatever is defined as élite. At the same time, social distinctions have affected access and responses to musical resources, resulting in a multitude of differences in taste, practice, usage and interpretation, both within popular music and between it and other categories, but always in some sort of relationship with people's sense of their place in the social hierarchy.

Such differences are always mediated by other factors, however, notably inscriptions of gender, nation and ethnicity. Throughout its history, in both production and consumption, popular music has generally been gendered in quite clear ways. Domestic performance has been available to women, but public performance (increasingly the norm in the 20th century) has been overwhelmingly in the hands of men, a division that extends to all production roles in the music industry. On the whole, female musicians have been confined to singing, and to singing of particular sorts – in backing groups (women as support), of ballads (women as caring and naturally emotional), in erotically explicit personae (women as sex object). There have been exceptions to this pattern, however – female singers who have broken the rules, for instance, some blues, country and music-hall singers – and the 1970s saw the beginning of a more dramatic shift, with the number of female pop bands, songwriters and stylistically uncompromising singers increasing significantly. Popular music styles themselves, and their consumption, seem to have been gendered in similar ways to production. 'Softer' styles are often thought of as being disproportionately intended for women, 'harder' ones for men, and subject matter (particularly in songs about love and romance) is generally organized, narratively and in its presentation, to appeal differentially to male and female listeners. Similarly, performance styles often seem designed to facilitate predictable patterns of identification and desire on the part of fans. Yet while lyric themes, performer images and listener tastes cannot be isolated from the structure of gender relations in society at large, research (though it is as yet limited) suggests that the two spheres may not be entirely coextensive. It is possible, for instance, that for women an evening dancing or at the music hall may represent an escape from feminized domesticity; that a seemingly 'romantic' female vocal group such as the Shirelles or the Crystals may be interpreted as giving women advice about managing men; and that, conversely, men identifying with flamboyant, passionate male performers (such as Al Jolson, Elvis Presley or Freddie Mercury) may view listening to their music as an opportunity to imagine ways of acting not normally available to them. Long vernacular traditions of 'camp' performance, including cross-dressing, provide the historical context for the emergence of explicitly gay or bisexual performance imagery in pop (with artists such as

Little Richard, David Bowie, Madonna and many more; *see* GAY AND LESBIAN MUSIC), suggesting that to some extent popular music may represent an arena where gender roles and relationships can be queried, if only (for most listeners) in the imagination.

The relationship between 'black music' and 'white music' is another example of an apparently clear distinction that is in practice blurred. Historically, the extent of interplay and hybridization between styles, materials and techniques associated with black Americans (and Afro-Caribbeans) on the one hand and Euro-Americans on the other renders attempts to define a separate 'black music' problematic (as well as potentially racist). Yet many black people would defend such attempts, and with good reason (to mark their presence and defend their identity, against great pressures), and so would many whites, for reasons often connected with the appeal of the exotic – the attractions of 'black difference' as an alternative to the blandness associated with mainstream music. The complications are intensified by the facts that white investments in this relationship have often led to stereotyping (from the grotesqueries of minstrelsy to the macho posturing of some white blues-rock); that black musicians and their genres have largely been kept separate by the music industry, and their difference maintained; and that, at the same time, they have been ruthlessly exploited, their innovations taken to fuel the mainstream's need for novelty. In this context, 'white music' occupies a blank space: it represents the norm (that is, what is not defined as 'black'). Yet it has never been a monolithic category. In the USA, for example, country music has represented 'the South' in opposition to the cosmopolitanism identified with the north, while Polish, Jewish and other ethnic repertories have maintained a symbiotic but uneasy relationship with the mainstream. In Europe, American styles have been on the one hand welcomed, as symptoms of modernization or vehicles of rebellion, but on the other hand resisted, on behalf of local identity and heritage, an attitude sometimes institutionalized through broadcasting quotas or the promotion of local production, as in the San Remo song festival in Italy. Regional differences, still strong in the 19th century but declining as national music markets were consolidated, re-emerged in the second half of the 20th century, often linked to indigenous folk traditions. In Britain, for example, expressions of Irish, Scottish and Welsh difference, with their long histories, were joined by assertions of English provincial identity (the Liverpool of the Beatles; the London of the Kinks or Blur). Such strategies may draw upon local material and styles, or, often, just on characteristic patterns of diction. Some British punk rock bands cultivated an aggressively anti-American, English diction. For musicians in continental European countries, whether to sing in English or not is itself an issue, as it is for French-speakers in Quebec. In many countries such complications, both in tendencies of musical practice and in possible patterns of identity, are intensified by the presence of new or greatly expanding ethnic minorities since World War II: Hispanics and Asians, in the USA, Asians and Afro-Caribbeans in Britain, North Africans in France.

Whether considering class, gender or ethnic identity, much writing on popular music has tended to look for direct links between music and 'real life'. But, as some of the examples given above suggest, there is reason to think that music acts less as a mirror reflecting pre-existing patterns of identity than as an arena for their negotiation, or even their construction, as more recent work drawing on discourse theory and post-structuralist perspectives would indicate. In this latter approach subjectivity is seen as fluid, provisional and endlessly constructed in cultural practices, and from its application to popular music has come research into ways in which musical interests can support imaginary communities, transient subcultural taste distinctions, geographically virtual 'scenes' focussed on shared musical identifications, and searches for roots in styles originating far away, perhaps in one of the many manifestations of world music. This does not alter the fact that constructions of identity offered in music often confirm dominant positions already in existence rather than subverting them. Much depends on how listeners relate to their favoured performers, how they position themselves within lyrics (for example, which pronoun they take to represent them), which 'voice' (lead vocal, backing singers, guitar riff etc.) they identify with, what connotations they attach to the particular style, and so on.

(iii) Aesthetics. Any attempt to raise even the possibility of an aesthetics of popular music must somehow bypass the scepticism of mass culture critics (e.g. Adorno: 'The autonomy of music is replaced by a mere socio-psychological function'; 1941, p.3) and of liberal musicologists (e.g. Dahlhaus: 'it is uncertain whether . . . the surprisingly elusive qualities that determine a "hit" deserve to be called aesthetic at all'; 1989, p.312), not to mention the weight of a longer intellectual history extending back to the emergence of music aesthetics as a separate discipline in the 18th century. As Adorno's comment suggests, the underpinnings of this discipline lie in the doctrine of music's autonomy, and, while the insistence by popular music scholars on their music's social significance may seem unwittingly to support its reduction to a sociological datum, their more important achievement has been to show how popular music helps to reveal autonomy itself as a social construction. The sociological critique of aesthetics links all cultural practices, tastes and judgments to social, institutional and discursive conditions; thus the transcendent qualities attributed to autonomous music, and the disinterestedness allegedly required for its appreciation, are, by this argument, tied to specific interests of the Western bourgeoisie at a particular moment in its history. To be sure, the decidedly 'impure' production and consumption practices of popular music do not seem to suit it to the standard criteria of aesthetic worth (even though in its own way its emergence is linked to the wider spread of leisure time, which arguably also gave rise to the discourse of autonomy), but popular music scholars tend to work with theories of relative autonomy, which, while grounding taste in social conditions, insist that this rules out neither the integrity and irreducibility of that level of activity and meaning which is specifically musical nor the distinctive pleasures attaching to its appreciation.

In one of the most influential sociological critiques of aesthetics, Bourdieu (1984) made a clear distinction between the 'aesthetic disposition' (with its 'pure gaze') and the 'popular aesthetic' (which is 'realist', 'earthy', grounded in function), and linked these to taste differences between the bourgeoisie and the working class. Most popular music scholars have preferred a model with categories that are more fluid in both their contents and their interplay. Frith (1996), for example, argues for three

distinct discursive frames, each with its own values, institutions and social practices (and all arising at about the same time, around 1800): that of 'art', organized around ideas of creative truth-to-self and educated knowledge; that of 'folk', centred on ideas of authenticity and community; and that of 'the popular', focussed on ideas of commercial success (i.e. popularity), entertainment and fun. He suggests that none of these categories has any intrinsic musical content, so that 'popular music' (in fact, any music) can be, and is, placed in any category, or indeed in more than one. Of course, definitions of 'originality', 'authenticity' and 'entertainment' vary historically and socially; but this approach enables us to understand how a single piece – John Lennon's song *Imagine*, for example – can function variably, as a skilful and effective expressive statement ('art'), as a political *cri de coeur* around which a sense of community can be assembled ('folk'), or as a hit record, often transplanted to all sorts of routine situations including background music ('popular'). It also enables us to make sense of the ways in which performers and listeners talk about popular music in terms of musical skill, formal relationships, emotional truth, rhythmic power, original sounds and so on, without needing to deny that the criteria will differ historically (compare a Victorian parlour ballad performance and a rock concert), without forgetting that the criteria will often be at odds with those common for classical music (e.g. noise, incessant repetition and seemingly out-of-control vocalism are positive aesthetic qualities in much rock music), but also without wanting to erase the music's social and political significance.

This significance is vital. To think of a parlour ballad parody in a music hall, of Chuck Berry's rock and roll classic *Roll over Beethoven*, of the Sex Pistols' irreverent punk anthem *God Save the Queen* or of the rap group Public Enemy's *Fight the Power* is to see that their political charge, in specific social conditions (including, arguably, the large audiences delivered by their commercial success), is part of their aesthetic achievement. Equally, however, their political significance is dependent on the appeal of their musical qualities. While these examples are extreme, the point can be generalized for all popular music. In the end, then, the most important argument made by theorists of popular music aesthetics may be that aesthetic experience is not necessarily extraordinary but can be found in musical practices intimately enmeshed in (and indeed contributing to) the patterns of ordinary people's everyday lives in modern societies.

6. THE STUDY OF POPULAR MUSIC. A good deal of 19th-century writing about popular music consisted of reportage, reminiscence or polemic. Serious study started with the publications of antiquarians such as William Chappell and folk music collectors such as J.G. Herder, the brothers Grimm and Cecil Sharp, though they were rarely interested in contemporary musics, their preferences being often driven in fact by a pessimistic certainty of cultural decline. There is useful journalistic comment on contemporary, commercially produced popular musics from the late 19th and early 20th centuries, and a continuing stream of memoirs, biographies and popular books on the emerging music business, but scholarly work on this repertory really began (aside from the beginnings of a literature on jazz) with the mass culture critics, of whom the most important was Adorno. More empirical sociological publications started to appear shortly after World War II (Riesman, 1950), and the influence of the British mass culture critic F.R. Leavis can be seen in the 1950s and 60s in the work of Hoggart (1957) and the young Stuart Hall (Hall and Whannel, 1964).

There was as yet no 'popular music studies'. The discipline emerged in large degree as the offspring of a meeting between the impact of rock music on young scholars beginning their careers in the 1960s and 70s and their reception of a wave of new cultural theories that were beginning to transform the existing humanities and social science disciplines. From the start, though, the study of popular music was a broad (and at times uneasy) coalition. It drew on several fields: social studies (especially the sociology of youth, institutional sociology and communication studies); radical strands in musicology (notably what has sometimes been called cultural or critical musicology, but also the pluralistic approach to American music represented by the work of such musicologists as Chase, Mellers, Hitchcock and Hamm); cultural studies (in particular the movement originating in the Birmingham University Centre for Contemporary Cultural Studies from the encounter of British culturalism – the tradition of Leavis, Hoggart and Raymond Williams – with continental Marxist, structuralist and post-structuralist theory, subsequently exported to North America, Australia and elsewhere); ethnomusicology (e.g. Keil, 1966) and, to a greater extent, progressive folkloristics (e.g. the work of Oliver on blues and of Green, D.K. Wilgus and Charles Malone on country music, in a tradition going back to American collectors of the early 20th century); and pop music journalism (especially in the USA, e.g. in the work of Greil Marcus). These varied strands did not so much coalesce as ferment (though at times they ignored each other, too). By the early 1980s the new discipline had a well-regarded academic journal (*Popular Music*, published by Cambridge University Press) and scholarly society (the International Association for the Study of Popular Music), both founded in 1981; research papers were presented at conferences and in journals associated with established disciplines; and the subject was starting to be taught in some universities. During the 1980s and 90s a substantial literature accrued and new generations of scholars emerged.

A variety of issues troubles the new discipline. Among the most important are the following:

(*a*) Research resources are generally scanty or inaccessible. Good library collections and archives (of printed literature, sheet music and recordings) are rare. Much of the relevant material is ephemeral.

(*b*) The context within which popular music studies emerged has led to a strong research emphasis on Western pop and rock, the industry that produces it and its youth audiences. This bias (sometimes criticized as 'rockism') has been at the expense of the study of other popular musical tastes in Western societies, of historical developments before rock and roll and of popular musics elsewhere in the world.

(*c*) The most active, best populated and most strongly supported research strands have, on the whole, been identified with predominantly social and cultural studies interests. At its most reductive, this appears as 'sociologism', and, while there have also been excellent interpretative work and first-class studies of the industry and audiences, this focus has somewhat overshadowed the study of musical practices, structures and meanings.

(*d*) At the same time, the musicology of popular music has been troubled over methodology. It seems clear to most of the scholars concerned that, for a good deal of pop music and most genres of black American music, the technical differences between this music and mainstream Western art music (e.g. the emphasis on sound-quality, the distinctive singing styles and treatment of timbre, the relative importance and complexity of rhythm, the significance of pitch inflection, the valorization of harmonic simplicity and structural repetition) raise questions about whether conventional analytical method, designed for study of the art-music repertory, is always appropriate. Even for some other genres, such as Tin Pan Alley song or music-hall song, where congruence with art music practice is greater, the importance of performance, and disparities between performance and text, mean that the question still arises. The lack of recorded evidence for the pre-1900 repertory compounds this problem. Analysts have thus tried to develop methods that can take account of timbre, complex rhythms, pitch and rhythm effects that are impossible to notate, and textural effects that are only possible on recordings. The issue of notation is itself difficult, with some arguing that it distorts much of this music, turning subtle aural process into a reified approximation, and others supporting the use of notation (of various sorts, including transcription) for particular purposes.

This methodological debate can be pursued on deeper levels, for it seems to be rooted in the difficulties that most popular music scholars have with the formalism and immanentism that they take to permeate much of the mainstream musicological approach. Dealing with genres whose techniques, uses and effects seem to be grounded in emotional and bodily activity and response, in culturally defined meanings and in the particulars of distinctive social conditions, these scholars have tended to reject not only the privileging of score-based formal analysis and disinterested contemplative listening but also the philosophical underpinnings of this in the doctrines of autonomy, genius and 'the masterwork'. Partial resolution of this dispute may be visible in the move within mainstream musicology itself towards more interpretative and culturally contextualist approaches. Musicologists of popular music have also looked towards semiology (notably in the work of Philip Tagg and Dave Laing) and towards discourse theory (e.g. in the work of Robert Walser and David Brackett). One limitation of such perspectives may be their analytic focus on verbal connotations or discourse surrounding music or, in some cases, a tendency almost to equate music with words about it. The semiotic privileging of language over music was subjected to thorough critique by Shepherd and Wicke (1997), and, as they suggest, the other side of a resolution to the dispute may lie in the development of a method that, while maintaining the sense of music's cultural constructedness on which popular music studies has always insisted, is also able to reveal the specificity of musical processes. There are signs, on both sides, that such moves may be leading to a recognition that popular and art musics are not always so very different, or not in every way, or at least that they live in the same world.

A further issue debated in popular music studies – often prompted by attacks on the scholars by practitioners and critics, and sharpened by the impact of complex cultural theory – is the relationship between theory and practice. This was placed in even higher relief by the introduction in the 1980s of the teaching of popular music in some universities, conservatories and schools. While it can act as a catalyst to the opening up of issues concerning educational aims and relative cultural values, popular music placed in such contexts raises questions about the desirability and implications of its own legitimation. On one level the questions concern whether to teach the music's production or its understanding, and the wisdom of teaching either aspect to young people who may well be closer to the music, as consumers or as practitioners, than their teachers. It is not obvious whose terms should be used, for example, or what should be the relationship between academic and vernacular theory. But on a broader level these questions are symptoms of problems that affect the study of popular music in general. The questions are not just tactical (how to attain the best understanding): given that the situation presents itself in terms of 'ordinary' culture under the gaze of 'experts', the people interpreted by the intellectuals, they must also be epistemological (how to define what is a 'true' understanding of this music) and even ethical (who is entitled to speak about this, and in what terms). The quandaries are akin to those surrounding the interplay of etic and emic modes of interpretation, much discussed by ethnomusicologists. For the encounter of musical science with the popular musics of its own hinterland, no less than for its dialogues with musics of other cultures, they are at the heart of the matter.

II. World popular music

Several interrelated developments in global culture since 1980 have had a substantial effect on world popular music and its study. These include the phenomenal increase in the amount of recorded popular music outside the developed world, as a result of the expansion of extant modes of musical production and dissemination and the advent of new technologies such as cassettes; the effective compression of the world by intensified media networks, transport facilities, diasporas and the globalization of capital, which has increased the transnational circulation of world popular musics and their availability in the West; and an exponential growth in the 1990s in the number of scholarly and journalistic studies of world popular musics.

Some of the major conceptual approaches that have informed modern scholarly studies of world popular musics are reviewed in the following sections. The term 'popular music' is used here to connote genres whose styles have evolved in an inextricable relationship with their dissemination via the mass media and their marketing and sale on a mass-commodity basis. Distinctions between popular musics (defined thus) and other kinds of music, such as commercialized versions of folk musics, are not always airtight. The scope of the present section of this article is limited to popular music idioms that are stylistically distinct from those of the Euro-American mainstream. The significant role that Euro-American popular music styles play in many non-Western music cultures is discussed only tangentially here, and is addressed more specifically in Pop, §V.

There is at present no satisfactory label for popular musics outside the Euro-American mainstream. Terms such as 'world music', 'world popular music', 'world beat' and 'ethnopop' are too imprecise to be taxonomically useful. The term 'non-Western', if applicable to many musics, is hardly a satisfactory label for genres such as reggae or salsa, which, although peripheral to Euro-American mainstream culture, are certainly products of 'Western' societies. The increasing globalization of world culture and the proliferation of syncretic hybrid musics also blur the dichotomy of Western and non-Western world musics, and intensify the terminological challenges.

For further information see articles on individual countries and regions.

1. Growth of studies. 2. The mass media. 3. Urbanization. 4. Modern social class structures. 5. Modernity. 6. Conceptual and analytical approaches. 7. Social significance. 8. Dynamics of socio-musical interactions: (i) Local and national contexts (ii) International contexts. 9. The musical dynamics of global cultural flows. 10. Gender.

1. Growth of studies. If commercial popular music in general was long ignored by the academy, the scholarly study of popular music outside the Euro-American mainstream began even later. Notable publications from the 1970s include Bruno Nettl's *Eight Urban Musical Cultures* (1978) and the informative, if somewhat more journalistic, works of authors such as John Storm Roberts (1972, 1979). The amount of scholarly literature on world popular musics greatly increased in subsequent years, with the belated academic recognition of the sociological importance of popular culture, the spread of multiculturalism as an academic paradigm in the West and the active interest of a new generation of scholars who had been personally immersed in popular music since adolescence. The journal *Popular Music* (founded in 1981) and other subsequent journals devoted to cultural studies now provide broad forums for published research in world popular music.

Popular music literature since the early 1980s, whether scholarly or generalist, has included a number of descriptive overviews, some attempting more or less comprehensive global perspectives (e.g. Manuel, 1988; Broughton and others, 1994) and some surveying a given region,

such as Africa (e.g. Bender, 1991; Graham, 1988, 1992; Collins, 1992). Of greater detail and depth are ethnographic studies of individual genres or music cultures (e.g. Coplan, 1985; Peña, 1985; Perrone, 1988; Waterman, 1990; Erlmann, 1991; Stokes, 1992; Guilbault, 1993; Hill, 1993; Loza, 1993; Webb, 1993; Pacini, 1995; Savigliano, 1995; Austerlitz, 1996; Averill, 1997) or of specific theoretical issues in relation to individual genres or areas (e.g. Manuel, 1993; Aparicio, 1998). Of particular interest are the handful of works that incorporate cross-cultural perspectives in exploring the musical ramifications of global networks of capital, media images and diasporic communities (e.g. Wallis and Malm, 1984; Garofalo, 1992; Lipsitz, 1994).

Some of the most important scholarly literature on non-Western popular music has been written outside the Euro-American academic world, in languages other than English and for predominantly regional readerships. Prominent in this category, for example, are the numerous Spanish-language works published in Latin America (e.g. Matamoro, 1969; Rondón, 1980; Acosta, 1982, 1993; Lloréns Amico, 1983; Quintero-Rivera, 1998). Language and geographic barriers and the ephemerality and obscurity of many developing-world publications mean that much of this literature remains relatively inaccessible in the West. Even English-language works produced outside the metropoles, such as Rohlehr's magisterial study of calypso (1990), are scarcely disseminated outside their country of origin. Conversely, the Western, predominantly English-medium scholarly world, with its networks of presses, libraries, funding sources and research institutions, has perhaps inevitably constituted a scholarly mainstream, and has accordingly attracted many of the best non-Western scholars to its own institutions.

Representing a somewhat different category is the voluminous and growing body of generalist literature on popular music, including not only music journalism found in newspapers and magazines but also various accessible books on popular music which, although not academic in orientation, are often colourful and richly informative (e.g. Kanahele, 1979; Andersson, 1981; Reuter, 1981; Díaz Ayala, 1981, 1994; Davis and Simon, 1982; Malavet Vega, 1988; Calvo Ospina, 1995; Barlow and Eyre, 1995). Also worthy of mention are the increasing numbers of documentary films and videos on world popular music, such as Jeremy Marre's series *Beats of the Heart*, made in the 1970s and 80s. Taken as a whole, the growing body of world music literature and research material has immeasurably enhanced the documentation and potential understanding of global culture. At the same time, the processes of musical evolution, innovation and cross-fertilization continue to provide fresh challenges to scholars and students of popular culture.

2. THE MASS MEDIA. The evolution of modern popular musics has been closely associated with certain broader socio-historical developments, particularly urbanization, the emergence of modern social classes, the general context of late modernity as a whole and, most directly, the advent of the modern mass media. Incipient popular song genres can be said to have emerged in 19th-century Europe in connection with sheet music, player pianos and musical boxes. Similarly, in Japan during the Edo period (1603–1868), commercial publishers mass-produced cheap songbooks and pamphlets that, while serving to document pre-modern song genres already weakened by print itself, also initiated a commodification process characteristic of commercial popular music industries (Groemer, 1995–6). However, the advent of popular music *per se* is better linked to the 'Second Industrial Revolution', in which electricity and industrial techniques were applied to cultural production, primarily in connection with capitalist patterns of development. The invention of the phonograph in the 1880s and its mass marketing from around 1900 were particularly important in stimulating the emergence of modern popular music.

The effects of mass mediation on music have been varied and profound, encompassing such phenomena as the detachment of performers from their products; the introduction of new dimensions of commercial considerations into music; the emergence of new links and barriers between audiences and performers; a tendency for mass-mediated music to become detached from ritual and life-cycle performance contexts; an unprecedented emphasis on the solo 'star' performer; the emergence of the studio recording as an autonomous art form rather than a copy or rendition of a performance; and the subjection of music production in general to the same processes of commodification, rationalization and bureaucratization as other aspects of modern economic production. If in the West such musical developments proceeded largely in the wake of broader processes of social, economic and technological modernization, in much of the developing world popular music industries have emerged and flourished alongside musical genres, social practices and technological infrastructures that remain essentially pre-modern.

The core mass medium for popular music is the phonogram (shellac and subsequently vinyl discs), supplemented by cassettes from the 1970s and compact discs from the 1980s. While imported records from the West initially dominated many regions, in other areas production of records for local markets commenced early in the century, with the British-owned Gramophone Company producing over 14,000 recordings in Asia and Africa alone by 1910 (see Gronow, 1981). Records produced during this period consisted primarily of genres marketed towards élites, among whom ownership was concentrated. Public exposure to phonographs greatly increased in the 1920s and 30s, as middle-class ownership grew and less affluent listeners acquired access to records in local cafés and on jukeboxes, or, in countries like India, from itinerant entrepreneurs who carried spring-driven turntables around villages, playing requests for a small fee. In response to market demand, production came to include an eclectic variety of genres, with increasing emphasis on syncretic popular musics that evolved in connection with the new medium. The advent of magnetic tape recording and LPs in the 1950s reduced production costs and overcame the time constraints associated with 78 r.p.m. records, although most popular song genres worldwide continue to adhere to three- to five-minute formats.

The spread of phonograms in the 1920s coincided with the advent of RADIO, whose reach soon extended at least as far. As with phonographs, access was not limited to private ownership, but could include various forms of communal listening in public places. Throughout much of the developing world, as in many European metropoles, radio is under state control, operating as a public service and/or as a vehicle for propaganda. Dependence on electric power, whether external or battery supplied, continues to limit access in poorer communities, with the

spring-driven radio not being marketed, somewhat surprisingly, until 1996.

The spread of sound films in about 1930 introduced a new mass medium for music that was particularly effective in reaching consumers who were too poor to purchase radios or phonographs but could afford occasional cinema tickets. Because of cinema's accessibility, its inherent appeal and its ability to add a new visual dimension to music, several popular music genres became closely associated with cinematic musicals, including the tango, Turkish *arabesk*, Indonesian *dangdut* and mainstream Egyptian and Indian popular music (*see* INDIA, §VIII, 1). In most cases, star singers were thus obliged to act (and often dance) as well, although in the 1940s Indian films adopted the 'playback' system, in which actors would mouth words in 'lip-sync' to songs separately recorded by professional singers. Meanwhile, film-related musics were marketed independently as phonograms. In some regions, such as Latin America and the Near East, television appears largely to have replaced cinematic musicals as a medium of musical dissemination. Thus, in Egypt, popular music eventually became disassociated from melodramatic films while in other respects becoming linked to television, so that, for example, Sunday evening broadcasts of concerts by Umm Kulthum became national events throughout the 1960s and 70s.

In the 1980s the spread of video technology intensified the production and accessibility of visually contextualized music. To some extent, consumer video players served to supplement and extend cinema and television, offering users greater control over selection, storage and retrieval. Their use also tended to privatize consumption, bankrupting many cinemas and further replacing live performance attendance with atomized domestic viewing. The founding of MTV (Music Television) in 1981 inaugurated the cultivation of music video as an independent art form. As with phonographs and cinema, the developed West, and especially the USA, monopolized production at first. Satellite transmission of MTV International, and of Western television in general, provided an additional means of extending American penetration of global viewing markets. By the late 1980s, however, music videos were being produced around the world, for dissemination on local television, in independent video formats or on MTV International. Although many music videos outside the developed West are unpretentious, low-budget productions, others – for example in Indonesia – are slick and sophisticated, using picturization techniques that are distinctively local and yet characteristically modern or even postmodern in style.

In the late 20th century two contradictory trends in the financing of mass-mediated music intensified. Music production, especially as conducted by the multinational record companies, became increasingly capital-intensive, with expenditure on production and promotion of individual recordings routinely running into millions of dollars; accompanying this trend was the spread of the relatively expensive consumer format of the compact disc. Yet at the same time, with the advent of new micro-media, especially cassettes, it became increasingly possible and common for small-scale, local entrepreneurs to produce recordings for negligible sums; this development has contributed greatly to the unprecedented ability of subcultures and social minorities to represent themselves in recent decades.

The development of the international record industry has followed the general pattern of monopoly capitalism and domination of the Third World by the West. By the 1930s the world's major music companies had rationalized the industry and divided the world into distinct spheres of interest and control: RCA dominated the Americas, Philips controlled northern and central Europe, the British-owned Decca and EMI (including products marketed as 'His Master's Voice') dominated the entire British Empire while the French company Pathé-Marconi monopolized markets in France and its colonies. In the decades after World War II, the oligopoly coalesced into the dominance of the 'Big Five': WEA, CBS, RCA (all US-owned), EMI and Polygram (the Dutch-owned heir to Philips). Multinational ownership became further concentrated, if less American-controlled, in the 1990s with the purchase of CBS by Sony and of MCA by Matsushita, and by Philips's acquisition of an 80% stake in Polygram.

Regional independent recording companies, which first emerged in the 1930s, became more numerous and active from the 1960s. Such companies existed in an uneasy relationship, at once symbiotic and competitive, with the Big Five, which could draw on greater experience and better resources, technology and marketing and distribution networks (see Wallis and Malm, 1984). The multinationals were allegedly responsible for roughly two-thirds of world (non-pirate) record sales in the mid-1970s. In addition to producing local musics for local markets, the multinationals marketed Western popular musics throughout the world; in a few cases, as with the Argentine tango in the 1920s to the 1940s, developing-world genres were disseminated for cosmopolitan audiences in Europe and the USA.

The multinationals, while introducing technology and distribution systems to underdeveloped countries, have been criticized for stifling competition in their domains, extracting huge profits from developing countries and promoting standardization by superimposing Western pop or regional common-denominator genres. The tendency towards homogenization is conspicuous in some countries, such as India, where EMI was able to dominate the music industry for some 70 years by means of a single, albeit eclectic, mass genre: Bombay-based film music, produced by a small coterie of artists and music directors. In other cases, however, multinationals have been fairly active in promoting musical diversity. In the first half of the century, US-owned record companies marketed a wide variety of genres to consumers in Latin America, including the Argentine tango, the Mexican *ranchera*, the Colombian *bambuco* and the Cuban *son*, bolero and *danzón*, as well as Euro-American foxtrots, waltzes, polkas and the like. Records proferred by multinationals such as HMV in Africa covered an even richer diversity of local and regional genres.

Accordingly, patterns of music industry ownership have differed from place to place, especially in the post-colonial period. In the newly independent African countries, for example, there are several distinct forms of development (see Graham, 1988). In some countries, such as Kenya, South Africa and Côte d'Ivoire, local music industries failed to develop, allowing the continued domination of multinationals and the predominantly foreign musics (typically Western or Congolese) that they marketed. By contrast, in countries such as Ghana, Nigeria and Zaïre, resilient local producers emerged that, often in tandem

with multinationals, energetically recorded and marketed a wide variety of local musics. A few quasi-socialist countries, notably Tanzania and Guinea, kept multinationals out by nationalizing music sectors; such policies succeeded in promoting lively local music scenes, but the financially constrained national governments were unable to fund the development of dynamic state music industries. Meanwhile in other countries, such as Mozambique and Angola, persistent poverty and war served to discourage both local production and foreign investment.

The communist countries constitute a distinct category, being the only ones rigorously to restrict multinational penetration while constructing indigenous music industries. The performance of socialist popular music industries under state ownership has been generally mixed. On the one hand, popular musics under socialism avoid most of the negative features of commercialism, including the link to corporate sponsorship and consumerism, the fetishism of stars and fashions and the deforming pressures exerted on musicians by the market. At the same time, most communist countries – which were underdeveloped to begin with – have been unable to devote adequate financial resources to entertainment industries and related sectors such as consumer electronics. Bureaucratic inefficiency and authoritarian cultural policies have exacerbated problems of creative innovation and material production.

Patterns and policies of popular music production have varied in communist countries, with results ranging from the moderately successful to the disastrous. Perhaps the most egregious example of the latter is China during the Cultural Revolution (1966–76), when all types of formal music production were disrupted, and music disseminated through the mass media was limited almost exclusively to selections from the five 'model operas' and three modern ballets. Music production in communist Cuba, although equally centralized in control, has been more satisfactory, with energetic state support, the richness of the inherited popular music tradition and prevailingly pragmatic rather than dogmatic cultural policies to some extent offsetting the continued bureaucratic bungling, unresponsiveness to popular demand and a generally phlegmatic economy (see Manuel, 1987; Acosta, 1991; Robbins, 1991). A different, more idiosyncratic sort of socialist production was practised in Yugoslavia under Tito, where decentralized local production and state subsidies of less commercially marketable musics managed to sustain a fairly lively and diverse popular music culture.

A more significant revolution in control of the means of musical production came with the spread of new technologies, especially cassettes, from the early 1970s. Cassettes (like video, photocopy machines, personal computer networks and cable television) are a form of micro-media whose patterns of control, production and consumption are typically more decentralized than those of the 'old media' of cinema, television and radio. Cassettes and cassette players are inexpensive, portable, durable and have simple power requirements; most importantly, the mass production of cassettes is incomparably cheaper and simpler than that of records or compact discs. According to some estimates, cassettes make up over half of world phonogram sales; their impact has been most dramatic in the developing world, where they have almost entirely replaced vinyl records, thus extending and restructuring music industries.

The initial impact of cassettes was most obvious in the endemic spread of cassette piracy (the unauthorized duplication of commercial recordings), which effectively bankrupted legitimate music industries in countries from Ghana to Tunisia and inhibited their development in many other regions. However, as cassette players spread and several countries enacted and enforced copyright laws, piracy in those nations was brought within manageable limits, allowing legitimate cassette production to flourish. While cassette technology has served to further the dissemination of mainstream hegemonic musics, it has also encouraged the emergence of innumerable small, local cassette producers worldwide, who record and disseminate genres whose commercial markets were in many cases too localized or specialized for record companies to represent (see El-Shawan, 1984; Manuel, 1993). Several popular music genres have emerged in close association with cassettes, including Sundanese *jaipongan*, Andean *chicha*, Thai *luktoongh* and Israeli 'Oriental rock'. Cassettes have also served to disseminate musics that have been formally banned or discouraged by authoritarian governments.

Complementing the cassette revolution have been other developments involving new technologies and associated socio-musical practices or, in some cases, new and alternative usages of pre-existing technologies. In urban Japan, low-powered 'mini-FM' stations have diversified local radio programming, compensating in numbers for their limited broadcast ranges of only a few hundred metres (Koguwa, 1985). Personal computer networks, although less widespread in the developing world, offer new formats for popular music dissemination, while posing new challenges to copyright enforcement. The advent of digital multi-track recording has enhanced the ability of performers to produce songs as composites whose individual tracks are recorded separately, often in different continents. Digital recording technology has also spawned a vogue for innovative remixes, in which pre-existing recordings, or individual tracks or samples thereof, are combined with 'techno-pop' elements, such as drum machine rhythms. Popular among South Asian urban bourgeois youth, for example, are disco-orientated remixes of old Hindi film songs, which, in their new dehistoricized, pastiche-like rendering, acquire a markedly postmodern flavour. Jamaican dance-hall reggae has paralleled rap music in exploring the potential of digital sampling and the use of the record turntable as a musical instrument in its own right, in both recording and performance. Even vinyl records continue to find new uses, as in the *picó* phenomenon of Cartagena, Colombia, where a musical subculture has emerged around DJs playing imported African pop records on mobile sound systems (Pacini, 1996).

Particularly widespread is the karaoke format in which amateur solo singers, in pubs, rented parlours or private homes, croon familiar pop songs, backed by commercially marketed recordings of ensemble accompaniments, often with the song lyrics and romantic video scenes projected from a television monitor. Karaoke emerged in Japan in the early 1970s, functioning as an extension of the extant practice of informal singing, especially of *enka* songs, by men at social gatherings. It has become a widespread and even focal form of socializing and music-making throughout capitalist East and South-east Asia and among East Asian immigrant communities in the USA and elsewhere

(see Lum, 1996). In general, technological innovations such as karaoke, digital sampling, cassettes and 'mini-FM' stations have tended to diversify and democratize modes of musical production and increase consumer control.

3. URBANIZATION. The development of modern popular musics is intimately tied to the phenomenon of urbanization. Cities, with their concentrations of wealth, power, heterogeneous social groups and institutionalized forms of musical patronage, naturally constitute focal socio-musical environments. The depth and range of the effects of urbanization on culture and social structure in the 20th century have been unprecedented, owing to the intensification of urban growth and the qualitatively new and distinct processes accompanying it.

One of these processes is the development of new forms of mass entertainment, including popular musics. As well as providing the necessary technological infrastructures for commercial music industries, urban environments, with their dense populations and cash economies, present concentrated, easily accessible markets for music producers and for the mass media in general. Perhaps more significant, if less tangible, are the ways in which the urban milieu stimulates the creation of syncretic popular musics by generating new social identities and aesthetic sensibilities. City dwellers are generally exposed to diverse ideologies, music styles and media discourses. Such exposure invariably colours attitudes toward and presents new alternatives to traditional folk musics, many of which, in pre-modern and especially rural societies, flourished partly by virtue of being the only forms of music known to their patrons and practitioners. By contrast, most urban dwellers enjoy several kinds of music and develop multiple social identities. While exposure to alternative art forms may occasionally provoke a self-conscious revival of traditional musics, more often it alienates listeners from them and stimulates the development of new syncretic genres.

Popular music often plays a crucial role in the process of adaptation to the new environment. As Coplan (see Nettl, 1978; 1982) has discussed in relation to West Africa, this adaptation involves not only reactive adjustment but also the formation of new identities and their metaphorical articulation in new, syncretic forms of expressive culture. In such situations, popular musicians can become important agents of syncretism and innovation, serving as cultural brokers who articulate new metaphors of social identity and mediate traditional–modern, rural–urban and local–global dichotomies. As rapid urbanization brings together people of diverse regional, linguistic or ethnic backgrounds, popular music can serve as a vehicle for social differentiation, mediation or homogenization. In many cases, popular music becomes a focus for the maintenance or construction of discrete social subgroups, who congregate at their own music clubs, form taste cultures around certain genres or performers and celebrate favoured idioms as unique expressions of their distinct identity. In such instances music may play an important role in the maintenance of ethnic, regional, racial and generational heterogeneity.

In other cases music may serve to mediate differences between people of different backgrounds, or even to unite them, especially as commercial music industries attempt to create and exploit mass homogeneous markets. Hindi film music in North India has certainly functioned in this manner, serving as an aesthetic common denominator for urban dwellers of varied linguistic, regional and caste backgrounds. Certain social formations also intensify processes of aesthetic homogenization. The centripetal, unifying possibilities of popular music are particularly clear in situations where socially diverse communities, thrown together in neutral urban settings, develop more inclusive identities based on occupation, class or nationalism rather than on regional or ethnic origin. Such, for example, was the case to some extent in Zaïrean mining towns in the mid-20th century, where the proletarianization of migrant workers created a precondition for the emergence of the pan-Congolese pop music that evolved into SOUKOUS (wa Mukuna, 1979–80). Similarly, as Coplan (1985) has documented, South African MARABI music, performed in proletarian beer gardens, became an important vehicle for the development of a pan-ethnic urban identity. While the depth of 'detribalization' occurring in African cities varies widely and should not be exaggerated, there is no doubt that the broad, pan-regional appeal of genres such as *marabi*, *soukous* and Nigerian JÙJÚ has been both cause and effect of a new sort of link among otherwise disparate ethnic communities. Whether popular music serves to reinforce social distinctions or to negate them, many contemporary idioms, with their idiosyncratic combinations of various local and global style features, can be seen to reflect fairly explicit strategies by which artists and communities discursively position themselves in their socially heterogeneous surroundings.

4. MODERN SOCIAL CLASS STRUCTURES. The new socio-musical identities generated by urbanization are inseparable from the emergence of modern social classes, with their own distinct roles in the evolution of commercial popular musics. Of these classes, the urban bourgeoisie, although often proportionally small, in many cases plays the most conspicuous and influential role because of its affluence, its domination of the mass media and patronage institutions and the access of its professional performers to formal musical training. Popular musics cultivated by bourgeois audiences often evolve as commercialized and perhaps simplified versions of light classical genres; these intermediate forms may retain some of the prestige of their élite antecedents while at the same time becoming accessible to emerging bourgeoisies less steeped in aristocratic tastes. In North India and Pakistan, for example, a pop, cassette-based version of the light-classical Urdu *ghazal* became widely popular in the 1970s among bourgeois audiences, combining simplified diction and standardized melodies with some of the expressive mannerisms of its aristocratic antecedent (Manuel, 1993, chap.5). Elsewhere in the developing world, comprador bourgeoisies are often the first social classes to cultivate local popular musics, typically by indigenizing musics associated with colonial or post-colonial élites. Thus, for instance, West African brass band HIGHLIFE developed in part out of local renditions of foxtrots, mazurkas and marches played for Christian élites.

Nevertheless, despite the economic, ideological and aesthetic hegemony exercised by élites, it is often the lower classes that play the most important role in creating modern urban popular musics, such as rhythm and blues, Greek *laika*, Texas-Mexican *conjunto* music, Indonesian *dangdut* and Colombian *porro*. The general categorization of such diverse entities as 'people's music', however

(Keil, 1985, p.119), may not do justice to the heterogeneity of urban social formations, in which a number of distinct social classes, even within the realm of subaltern groups, can be seen to play their own qualitatively distinct roles in musical culture.

In several cases, 'people's musics' have emerged not from the working class (an assimilated, wage-earning proletariat) but from more marginal sectors of society. Particularly notable is the musical influence sometimes exercised by lumpen proletarian groups. While often including some rural migrants, lumpen subcultures are generally wholly alienated from rural society, knowing and celebrating no other home than the urban underworld, in all its bohemian perversity. Such diverse musics as Indonesian *kroncong*, Greek REBETIKA, the early TANGO, South African *marabi* and Trinidadian STEEL BAND music have emerged primarily from this otherwise most peripheral and liminal part of society (see, for example, Becker, 1975; Holst, 1975; Castro, 1984, 1986; Erlmann, 1991; Steumpfle, 1995). Some such idioms eventually percolate upwards to become accepted by middle and even upper classes, as the new genres grow in sophistication and attract the input of trained bourgeois musicians, music industries recognize the profits they potentially offer and urbanites belatedly acknowledge them as aesthetically valid expressions.

Other forms of 'people's music' distinct from those of the assimilated working class arise in association with rural migrants to cities. Such migrants and their descendants account for much of the exponential growth of modern cities in the developing world, in many cases constituting a majority of the population. While migrants may join the ranks of the assimilated, wage-earning proletariat, more often they constitute an 'underclass' working in the economy's informal sectors. Migrant underclasses often make distinctive and original contributions to urban musical culture, from Dominican *bachata* and Brazilian *música sertaneja* to Thai *luktoong* (Siriyuvasak, 1990; Carvalho, 1993; Pacini, 1995). Migrants generally bring rich traditions of rural folk music with them, whose perpetuation or reconstruction, in however stylized a form, may provide some sense of stability and identity in the otherwise disorientating urban experience. At the same time, migrants, especially of the second generation, often become at least partially alienated from traditional rural musics as a result of ambivalence toward their humble backgrounds, exposure to new musics and the general acquisition of new social identities. In response they may cultivate modernized forms of traditional rural musics, as in the case of Turkish pop *türkü*, or they may idiosyncratically rearticulate other pan-regional genres that they encounter in the cities, as in the case of Turkish *arabesk*, which draws from mainstream Egyptian pop styles, and Andean *chicha*, which constitutes a local adaptation of the internationally popular *cumbia*. As with certain genres of black American music, some traditional genres seem well-suited to mass-mediated dissemination, albeit in stylized forms, by virtue of their association with exclusively oral transmission and their aura of alienation from modernity (see, for example, Middleton, 1990, p.72). Often, as in the case of Turkish *arabesk*, migrant-based genres embrace urban modernity in their stylistic syncretism while at the same time criticizing in their lyrics the anomie it can entail (Stokes, 1992). Such musics, disseminated by the mass media and migrant networks, often circulate back to the countryside, mediating rural–urban distinctions. Although often initially deprecated by established city dwellers, like lumpenproletarian genres they may eventually be enjoyed and actively cultivated by established urban working and middle classes, as in the case of Dominican *bachata*.

Many of the most widespread popular musics do not bear exclusive class affiliations, however, especially in developed countries such as the USA where mass-media culture, middle-class values and an ideology of individual opportunity are pervasive. Similarly, in many countries, such as in most of the Caribbean, notions of class are inseparable from racial or ethnic distinctions, which may be accordingly more significant as emic constructs (that is perceived by those within such cultures). In much of Africa, ethnic and linguistic differences and urban–rural (or 'urban–bush') dichotomies may inhibit class consciousness and constitute more essential analytical categories. Even in some monolingual countries, such as Trinidad and Guyana, preferences in popular music are less likely to be determined by class than by race (East Indian or creole), illustrating how socio-economic classes are only potentially rather than inherently constituted. Furthermore, as has often been noted, social classes are porous entities, and their forms of expressive culture are invariably conditioned by processes of mutual, incessant and often contradictory interactions with other classes. Such considerations do not negate the importance of class as an analytical construct, but illustrate its inseparability from other parameters and perhaps explain the tendency of modern studies of popular music to focus on other aspects of identity, including gender and ethnicity.

5. MODERNITY. Many aspects of the development of modern popular musics are best understood as ramifications of the advent of modernity in general. Urbanization, the mass media and the rise of modern social classes (considered in §§2–4 above) are important components of modernity, along with more general processes of commodification and the emergence of modern bureaucracies and the concept of the nation-state. In most of the world these phenomena are closely associated with capitalism and westernization. Equally important to the rise of popular musics are more subjective features of modernity, including the spread of secular rationalism, a sense of individual responsibility and freedom and the diminished social and ideological realm of inherited religion, dogma and habit. The undermining of traditional identities may itself generate neo-fundamentalist revivals of sectarian identity, which, while reacting against modernity, are at the same time firmly embedded in it.

The spirit of modernity, however locally experienced, pervades most world popular music, whether in the parameters of style or in song lyrics. This spirit is most typically expressed as one of two reactions – angst or exuberance – to modernity's disruption of traditional beliefs, social relations and modes of production: as noted in §4 above, a sense of loss and dislocation is often particularly explicit in musics associated with lumpen proletariats and migrant underclasses, from *rebetika* and *arabesk* to the early tango; alternatively, modernity's erosion of tradition may be experienced as liberating and exhilarating, and is celebrated as such in various world popular musics, however modulated through local cultural configurations. Political songs denouncing social or political oppression represent a third expression of this

spirit, one that is characteristically modern in its links to concepts of nationalism, civil rights and Enlightenment values.

In most of the world, popular music's celebrations of freedom appear in the somewhat more subtle but no less profound form of songs about sentimental love. Romance and desire are hardly new phenomena or song topics, but the portrayal of a relationship indulged in for its own sake by two socially autonomous beings is a distinctly modern entity, linked to the detachment of love and marriage from kinship and economic considerations and the disassociation of sexuality from procreation. Modern sentimental love has become the single most prominent theme of popular music around the world, contrasting markedly with more traditional portrayals of heterosexual relationships as embedded in and often constrained by specific social circumstances. In South Asia, for example, the traditional Urdu *ghazal*, like medieval troubadour songs, portrays the lover pining for a woman whom he has only glimpsed, while folk genres such as *rasiya* (Manuel, 1993, chap.9) typically focus on the tensions and frustrations associated with village life and watchful relatives. By contrast, commercial film songs tend to depict the more distinctively modern form of 'pure' relationship, wherein the only factors involved are the emotions of the two individuals. In the Western world, including Eastern Europe and Latin America, the quintessential musical vehicle for depicting such relationships is the pop ballad, a transnational genre that rigorously avoids reference to any social contexts or constraints, portraying instead an amorphous, 'virtual' world of the emotions. Although neglected by ethnomusicologists, international versions of the pop ballad, from pop Java to the songs of Julio Iglesias, are increasingly pervasive features of world music cultures.

Sentimental pop songs have been criticized as being complicit with the most overtly commercial aspects of capitalist music industries. In their rigorous avoidance of social contextualization they orientate themselves toward passive fantasy (often focussed on the idolized star performer) rather than social action, and both exploit and help to create the homogeneous mass audiences sought by record industries. At the same time they may constitute expressions of hope and utopian affirmation of a private emotional sphere uncontaminated by the commodifying and dehumanizing forces of modernity (see Giddens, 1992, p.44).

The message of emotional and sexual freedom, whether conveyed in pop ballads or disco-type dance-songs, may be experienced as especially liberating by women in rigidly patriarchal societies. Popular musics embodying such themes have been perceived and even repressed as threatening and subversive by conservatives in such societies; for example, militant fundamentalist Muslims have banned the music of pop singers such as Gougoush in Iran, and have even assassinated Algerian *rai* artists. A different sort of backlash against the female liberation implicit in the sentimental love song is represented by numerous songs in male-dominated genres such as Jamaican dance-hall that objectify women in the most explicit terms, deny any sense of male vulnerability or commitment and cynically reduce human relationships to sex and money.

6. Conceptual and analytical approaches. Although the amount of scholarly literature on world popular culture has increased exponentially in recent decades, there have been relatively few studies of the formal aspects of popular musics, whether Western or non-Western. The inherent difficulties of analysing popular musics are compounded by the specialized and consequently esoteric nature of analytical studies of remote societies. Thus, for example, the relation of linguistic tones to melody in a tonal language such as Ga may be an important factor in Ga music, but a technical English-language article exploring that subject is unlikely to have an interested readership exceeding a few dozen people.

Perhaps the most important impediment to formal analysis of popular musics is the fact that many such musical styles tend to rely on expressive features that are resistant to staff notation – or, in some cases, to any sort of extant or even imaginable notation. For instance, conventional notation would be of little use in analysing a performance by the Jamaican vocalist Buju Banton of a dance-hall piece, much of whose affective power may derive not from its two-note 'melody' or even from the semantic meaning of its lyrics, but rather from Banton's micro-rhythmic nuances, ingressive vocalizations, guttural growls, dramatic timbral and dynamic variations and other untranscribable and verbally indescribable effects. It remains difficult to conceive what sorts of graphic notation could do justice to such expressive techniques and be intelligible at the same time.

Among scholars of Western popular music, Middleton (1990) has led the way in stressing the need to develop new terminologies and notational approaches and in exploring innovative approaches to transcription and analysis. In ethnomusicology Keil (1966, 1987, 1995), recapitulating Jairazbhoy's interest in notating micro-rhythmic variations (1983), has emphasized the importance of processual, often spontaneous interpretive nuances, which he calls 'participatory discrepancies'; Washburne (1998) has explored the role of these nuances in performances of salsa. Opinions differ as to whether such features correspond to what Meyer (1956) terms 'syntax', understandable in terms of formal tensions, resolutions and 'simultaneous deviations', or whether they, like ostinato-based dance-orientated musics in general, call for a qualitatively different form of analysis (see Keil, 1995, and responses).

The description of such nuances, although essential, remains but a first step towards a more holistic understanding of their meaning to listeners. For example, the difficulties in ascertaining how people in diverse non-Western cultures perceive phenomena such as chordal harmonies are formidable. Similarly, ethnomusicological attempts to find homologies between sound structures and social stuctures may be fruitful in the case of isolated, classless societies (e.g. Feld, 1988–9) but are less so in the case of complex cultures. In general, the difficulty of conducting and contextualizing formal analysis should not continue to cause a scholarly 'retreat into sociology' (Middleton, 1990, p.117); technical analyses of popular music must, however, be integrated with broader socio-musical questions.

7. Social significance. The tendency for scholarly literature on world popular music to focus on sociological rather than formal musicological aspects derives both from the difficulties of technical analysis (discussed in §6 above) and, more importantly, from the recognition of

popular music's undeniable social significance. Whether or not popular music is seen as aesthetically worthy, its pervasivenesss and popularity indicate the importance of its role in contemporary culture. Much scholarly interpretation has focussed on the nature of this role, and especially on its relation to interrelated questions of hegemony, manipulation, alienation, resistance and agency.

The socio-political significance of popular music is most overt in the case of explicitly political musics, such as Latin American *nueva canción* ('new song'), Turkish *özgün* music, Zimbabwean CHIMURENGA songs, Thai *pleng pua chiwit* and the songs of artists such as FELAANIKULAPO-KUTI (Nigeria) and Baris Manca (Turkey, *d* 1999). Such musics are typically associated with disaffected members of cultural élites who seek to create musical idioms that are sophisticated, non-commercial and yet accessible to dominated groups with whom solidarity is sought. Despite the tendency to oppose American imperialism, musicians often reflect their westernized education and sensibilities by basing styles on American models, whether rock music or that of the 'Dylanesque' singer-songwriter.

Popular music may also assume particular political significance under repressive governments. Dictatorships of both left and right have often found reason to attempt to regulate, co-opt, exile or otherwise silence outspoken popular musicians, generating complex dialectics of accommodation and resistance in music cultures. In many cases, shadow wars occur as dissident artists voice their critiques in increasingly oblique metaphors, leading to state censorship of all but the most bland and trivial texts. In several cases strict censorship of open political discourse has led subaltern opposition to be expressed, however ambiguously, in other forms, for example in the use of lower-class argot and frank sexuality in Thai *luktoong* (Siriyuvasak, 1990) and of visual symbols such as Cui Jian's celebrated red blindfold (Jones, 1992; Lee, 1995).

The socio-political significance of popular music in open societies is generally more ambiguous and open to interpretation. Scholarly treatments of these questions are often informed by neo-Marxist conceptions of hegemony, while extending Marxism's traditional emphasis on class to include concerns of race, gender, ethnicity, generation and community identity in general. Some of the more pessimistic assessments of popular music, elaborating the concept of mass culture outlined by Adorno (1962), focus on the ways in which music allegedly serves as a vehicle for the manipulation and stupefaction of dominated peoples, legitimizing unequal social orders and promoting mindless consumerism, socio-political passivity and creative atrophy. Indian film music is one genre that has been criticized in such terms, partly because of its stylistic standardization, oligopolistic modes of production and ties to escapist and arguably alienating cinematic melodramas (see, for example, Manuel, 1993, chap.3). The partnership of big business and popular music is even more explicit in the case of Japanese 'image songs', which function simultaneously as 'hit' songs and corporate advertisements (Kimura, 1991, pp.318–19).

Most late 20th-century scholars have tended to adopt more sanguine perspectives on popular music culture, however, exploring ways in which it can be seen as empowering, enriching and 'subversive' in the sense of being counter-hegemonic and progressive. The influence of cultural studies has been particularly notable in the conception of popular culture as neither pure domination nor resistance but as a site of contestation where contradictory tendencies are symbolically negotiated and mediated. These processes may be seen not only in overtly political types of music but also in genres orientated toward diversion, personal relationships or identity formation in general. In contrast to Adorno's concept of passive consumption, contemporary theorists stress the importance of studying reception, noting that the meanings of a text or song, rather than being immanent and pre-given, can be co-produced by listeners and idiosyncratically authenticated by distinctive social practices. Attention has been focussed particularly on the way in which subcultures and individuals construct distinctive identities by selective consumption and resignification of mass-culture artefacts, for example with reference to REGGAE (Hebdige, 1979), Indo-British BHANGRA (Baumann, 1990) and Philippine-American rap (Wong, 1994). There is no simple dichotomy between creative activity and passive consumption (Middleton, 1990, pp.139–40), but rather a spectrum of social practices, often involving idiosyncratic usages, resignifications and new technologies, that blur distinctions between production, reproduction and consumption. In world music such practices include karaoke, the use of digital sampling by Jamaican DJs and the widespread recycling of stock melodies (parody) in Indian folk and popular music. The emergence of 'democratic-participant' micro-media (see §2) has further decentralized music industries worldwide, rendering the Orwellian vision of media totalitarianism a vision of the past rather than the future. Moreover, as Lipsitz (1994, p.28) and others have shown, cultural opposition can consist not only of headlong, utopian confrontation but also, increasingly, of immanent critique from within a given ideological and stylistic culture. Such considerations both enrich and complicate the interpretation of modern culture, illustrating the limitations of 'Frankfurt school' critiques and suggesting some of the contradictions and complexities that must be explored.

This re-evaluation of popular music and culture has inspired newly envigorated celebrations of the allegedly progressive character of musics such as Jamaican dancehall, despite its often overt glorification of machismo and violence (see, for example, Cooper, 1993, p.141; Scott, 1990). Some have questioned this sort of contemporary critical theory, with its tendency to romanticize resistance, its celebration of discursive subversion that lacks any material counterpart, and its equation of consumption with agency and of nihilistic subaltern anger with revolutionary fervour. It could be argued, for example, that while the aggressive, often sexist and homophobic posturing of some popular musicians does indeed foreground and valorize proletarian discourse, it may represent less a subversion of established mainstream values than a hyperconformity to them. In many cases, a subaltern popular music may be less a pure 'resistance transcript' than a contradictory mixture of progressive and reactionary elements. It may be difficult, as Lipsitz (1994, p.25) observes, to distinguish these oblique, contradictory 'immanent' critiques from collaboration and co-optation. Limón (1983, p.241), writing of Texas-Mexican proletarian popular music, reiterates the view that working-class musical expression is invariably

fraught with contradiction because it does not own the means of its musical production. Clearly, a vast amount of research must be undertaken into the reception of popular music and its associated social practices before generalizations can be made. The work of Middleton, Erlmann, Frith, Garofalo, Lipsitz and others has been exemplary in showing how dynamics of hegemony and resistance generally operate not in crude dichotomies, but in complex social fields replete with contradictions, ambiguities and paradoxes.

8. Dynamics of socio-musical interactions.

(i) Local and national contexts. Certain styles of popular music have evolved in close association with particular subaltern groups, whether social classes or ethnic communities. Such genres rarely develop in isolation, however, but are rather the products of mutual and ongoing interaction with dominant groups. Processes of hegemony and resistance are invariably conditioned by the complex and contradictory dialectics of the social configurations involved. Such interactions often involve a 'stereotyping and reappropriating' dynamic (Keil, 1985), wherein dominant groups co-opt and stylize subaltern groups' music, often in ways that trivialize and exoticize it. Such appropriations by élites may involve complex mixtures of homage and parody and of patronage and exploitation. More subtly, as same have argued, élite appropriations may serve as strategies by which dominant groups reformulate hegemony and preserve core values by regulating and incorporating elements of subaltern expressive culture. For their part, subaltern performers, conditioned by the 'doubleness' of minority identities, may participate in this process in order to gain access to markets. In some cases, however, they are eventually able to transcend such house-of-mirrors deformations and to popularize more vital versions of their music. The emergence of Cuban dance music in the early 20th century, for example, involved complex dynamics of white Cuban racism, bourgeois cultural nationalism, the influence of foreign interest in Afro-Cuban music and the successive white acceptance of Afro-Cuban music in parodic, diluted and eventually dynamic forms (Moore, 1997). Similarly complex social dynamics in a popular music's development may obtain in relation to horizontal dialectics between groups in different geographic regions within a country. Yampolsky (1989), for instance, shows how the trajectory of a single song (*Hati Yang Luka*) and its stylistically and linguistically diverse spin-offs reflected the ambivalent relationships of regional Indonesian cultures to the dominant, Jakarta-based mainstream.

(ii) International contexts. The ethical, ideological and aesthetic ramifications of regional interactions between popular musics are particularly complex in the international realm, where they involve interrelated themes of homogenization and diversity, cultural imperialism, the roles of diasporas, the significance of 'world beat', and other issues pertaining to the contemporary globalization of culture.

Global interactions have led ethnologists and others to voice fears about the homogenization, and especially the westernization, of world music. Lomax (1968, p.4), for example, raised the spectre of a 'cultural grey-out', with centuries-old expressive traditions 'being swept off the board', leaving whole cultures both alienated and rootless. It is clear that by the end of the 20th century Western pop music's global penetration has indeed been vast. Throughout the world, it has been abetted by the quest of powerful multinationals for mass markets, the extension of Western-dominated mass media to all regions and peoples and the widespread association of Western popular culture with modernity and fashion. In many countries, from Indonesia to South Africa, Western-style pop has provided an imported solution to the problem of finding a musical idiom with pan-regional, pan-ethnic appeal. Influenced by these and other factors, entire cultures have forsaken indigenous music traditions in favour of Western-style idioms. By far the most popular musics throughout much of East and South-east Asia, for example, are varieties of the Western pop ballad and soft rock (e.g. 'pop Indonesia', Thai *sakon*, Chinese Cantopop and *gangtai-yue*) in which distinctively Asian stylistic features are generally minimal. Such rearticulations of Western 'light music' may be skilful, and may even be seen as forming the bases for authentic music cultures. Nevertheless, it remains significant that, for whatever complex historical reasons, musical energies in these vast societies are increasingly devoted less to the cultivation of distinctive, original styles than to Western-style pop – especially to what would be seen in the West as the most bland and commercial-sounding 'easy-listening' music.

Such tendencies towards homogenization and westernization are substantially counterbalanced by trends toward diversification and creative hybridity, however. The advent of cassettes (described in §2) promoted the emergence of a wide variety of regional popular genres, a few of which, such as Sundanese *jaipongan*, do not exhibit any Western stylistic influence. As global communications networks spread, cross-fertilizations between genres (e.g. Korean rap, Indo-Caribbean chutney-soca) enrich and diversify the world music scene, and the sheer amount of commercial popular music available in the late 20th century shows simultaneous trends toward homogenization and diversification. The ethnic and nationalistic revivals flourishing around the world, in some cases promoted by national cultural policies, also promote local musics, both traditional and syncretic.

In some cases, Western-derived instruments, stylistic features and social practices may be subject to indigenization, as in the use of electric guitar to imitate *mbira* patterns by Zimbabwean artists such as Thomas Mapfumo. Innovative musicians have not hesitated to modify Western instruments to suit indigenous styles, as in the Near Eastern technique of altering electric organs to accommodate neutral intervals, or the Vietnamese practice of carving concavities in the guitar fretboard to facilitate fast vibrato in *cai luong* music. Similarly the American-derived big band format informed the creation of the Mambo by Cuban musicians in the 1940s and 50s, and the emergence of similar big-band renditions of the Haitian *méringue*, Dominican Merengue and Puerto Rican Plena. Western-derived music genres may themselves develop stylistically into distinctively local forms, as in the evolution of West African *adaha* from colonial military-orientated brass band music. In places as diverse as Sumatra and Brazil brass bands were important transitional media for the development of syncretic local musics. Some transformations follow a process of 'saturation and maturation', in which a foreign (often Western) music, after an initial period of domination, is eventually absorbed and either stylistically indigenized or abandoned

in favour of syncretic local genres. For example, the hegemony of Cuban dance music in much of urban Africa declined after the 1960s as performers such as YOUSSOU N'DOUR (Senegal) and FRANCO MAKIADI (Zaïre) gradually shifted to popular music styles (MBALAX and *soukous* respectively) that were more indigenous (if often more rock influenced). Much of the evolution of modern African popular music can be seen less as a westernization of extant indigenous genres than as an Africanization of transplanted Western idioms.

A purely textual, stylistic focus on cross-cultural musical borrowings may obscure the ultimately more important ways in which communities are able effectively to adopt a given music, regardless of its stylistic origin, by making it express and resonate with their own experiences and aesthetic predispositions. Puerto Ricans in New York, for example, resignified and rearticulated 1950s-style Cuban dance music as an expression of their own world view in the 1960s and 70s, in such a way that the music, despite being a largely inherited style, well merited a new name, SALSA (see Manuel, 1994). Where societies have become alienated from their traditional musics, they may appropriate foreign music genres as dynamic vehicles for the construction of a new self-identity, becoming, in some cases, 'more themselves' in the process. The popularity of Bob Marley's music among dominated peoples of colour around the world is one remarkable example, with reggae being actively cultivated and effectively indigenized by Hawaiians (under the moniker 'Jawaiian'), Australian aborigines and African performers such as ALPHA BLONDY (see Lipsitz, 1994). Such resignifications illustrate how the history of music, and of culture in general, consists not merely of the evolution of overtly new genres and styles but also of the rearticulation of extant idioms, whether local or borrowed, to respond to new social circumstances. Thus theorists such as Wallerstein (1984), Hannerz (1988–9) and Hall (1991) describe the advent of a new global culture characterized less by relentless homogenization than by the integration, interpenetration and rationalization of local and diverse media discourses into a set of interconnected, if internally diverse, music cultures.

9. THE MUSICAL DYNAMICS OF GLOBAL CULTURAL FLOWS. The cultural interactions outlined above typically involve power asymmetries that condition the nature of musical exchanges. Many commentators since the 1960s have seen as particularly significant world popular music's domination by Western stylistic influences and Western-based music industries and its relation to Euro-American global economic hegemony, whether in the form of direct colonial control or of neo-colonial power arrangements. Some (e.g. Linares, 1984; Laing, 1986; Goodwin and Gore, 1990) link these forms of domination in a discourse of cultural imperialism, implying a process by which political, economic, military and cultural power combine to exploit a society economically and to exalt and spread the values and practices of a foreign culture, particularly that of the developed West, at the expense of local cultures.

Cultural imperialism and its musical manifestations have several dimensions. One is the largely uncompensated appropriation of foreign music (and even musicians) by the Western music industry, according to contemporary fads and fashions; another is the apparent deformation and marginalization of music in the developing world, and of cultural identity in general, by the inundation of commercial Western pop superimposed by powerful Euro-American multinational record companies and radio networks. In some cases, the musical ramifications of cultural imperialism may be painfully overt, as in the aftermath of the CIA-supported military coup in Chile in 1973, when *nueva canción* and even neo-folkloric renditions of Andean music were effectively banned, American pop came to dominate the mass media as never before and leading progressive musicians were exiled or even, in the case of VICTOR JARA, killed. Indeed, throughout Latin America military dictatorships supported by the USA have consistently censored, exiled and imprisoned outspoken local musicians while tolerating or encouraging domination of local media by North American music.

However self-evident American political imperialism and cultural influence may be, some scholars (e.g. Tomlinson, 1991; Garofalo, 1992, pp.1–7) have argued that the cultural imperialism thesis is of little empirical or analytical value. Accusations of cultural imperialism often invoke romanticized visions of a prior authentic, autonomous and 'pure' local culture, uncorrupted by foreign influences; but such notions have difficulty accommodating processes of creative syncretism and transculturation. Other aspects of the thesis's imprecision may derive from the confusion of cultural imperialism with the spread of capitalism and modernity in general. Listeners are also able creatively to resignify imported media images in accordance with the aesthetics and values of their own interpretative communities. In Argentina, for example, local rock music became a vehicle for the protest of progressive young people against the military dictatorship of the 1970s and 80s (Vila, 1987). Local appropriations of black American musics, from ragtime to rap, by Africans, Maoris and others, could also constitute meaningful vehicles of self-assertion rather than simple capitulation to hegemonic cultural industries (Lipsitz, 1994, chap.3; Collins, in Garofalo, 1992). Negus (1996, chap.6) argues, therefore, that the cultural imperialism thesis is better understood as relating to processes through which dominant power is exerted rather than to quantifiable effects.

Whatever the merit of the thesis in the Cold War years, by the late 1980s the intensification of various interrelated tendencies of late modernity had led to a new situation. Developments such as the new mobility of capital, the enhancement of travel and media networks, the prominence of diaspora subcultures and the rise of reactive, ethnic or religious neo-fundamentalisms have made world culture both more fragmented and more interconnected than ever before. The globalization of world culture, with its social, political, economic and cultural ramifications, has necessitated the formulation of new analytical approaches to understanding cultural interactions and flows. The applicability of the cultural imperialism thesis to music has become increasingly problematic at a time when only one of the 'Big Five' multinational recording companies is US-owned, and when direct, palpable American (or even distinctively Western) economic domination has been replaced by a virtual, amorphous world of rootless multinationals and global networks of capital, technologies, people, images and cultures (Appadurai, 1989–90; García Canclini, 1990, chap.7). The 'core–periphery' model of cultural relations, with its crude

Manichean dichotomization of the world in terms of 'the West and the rest', is particularly obsolete. Most importantly, the conventional conception of musical cultures as closed, organic, geographically bounded entities must be discarded in favour of an approach that recognizes each society as a crossroads on a matrix of intersecting, interacting local and global cultural flows (see, for example, Wallerstein, 1984; Robertson, 1992). The new global economy calls for a new ethnography of the circuits of global music interactions (Erlmann, 1993). Particularly noteworthy in this regard is Slobin's replacement of the core–periphery model with a more fluid web of 'supercultures' and 'intercultures' (*Subcultural Sounds*, 1993), whose shifting interactions involve not only hegemonic, pan-regional music genres but also myriad 'micromusics' representing specific taste cultures.

Many of the most vital and innovative of the new micromusics are associated not with established cultural hinterlands but with the dynamic and fluid borders, margins and, especially, diasporas. Diaspora subcultures are of unprecedented importance in popular music production in the late 20th century, because of their increased size, their access to mass media, their selfconsciousness as a group and their proclivities toward multiple identities and cultural syncretism (see Clifford, 1994). Migrant communities are thus increasingly recognized as dynamic and distinctive subcultures in their own right, rather than as mere transplanted homeland fragments. Studies have explored the popular music cultures of such various groups, including North Africans in Paris (Gross, McMurray and Swedenburg, 1994), Puerto Ricans in New York (Flores, 1993; Glasser, 1995), Sephardi/Oriental Jews in Israel (Shiloah and Cohen, 1983; Halper, Seroussi and Squires-Kidron, 1989; Perelson, 1998), Haitians in Montreal (Juste-Constant, 1990), Arab-Americans (Rasmussen, 1992), Filipino Americans (Trimillos, 1986) and South Asians in Great Britain (Baumann, 1990), in South Africa (Jackson, 1991) and in the Caribbean (Manuel, *Popular Music*, 1998). Certain modern cities have emerged as unique crucibles of world popular music: Paris has been for many decades a centre for African music, for example, as has New York for Caribbean music (Allen, 1998). Immigrant musics flourish in such places because of the presence of concentrated ethnic enclaves, media and technological infrastructures, political openness and the exposure of musicians and audiences to new ideas and influences.

Popular music has been an active agent rather than merely a reflection of the dynamics of cultural globalization. As Erlmann (1993) notes, translocal taste cultures have both compensated for and contributed to the decline of communities based on locality. Overtly postmodern musical hybrids celebrating fusion and pastiche both express and reinforce consumers' sense of cultural dislocation and split identities, while more selfconsciously essentialist forms of popular music are used as vehicles for nostalgic revivals of exclusivist ethnic identity, as in parts of the former Yugoslavia (Broughton and others, 1994, pp.90–91). In some cases, subcultural popular musics can be seen to use postmodern techniques of pastiche and blank irony in the service of more essentially Modernist projects of identity construction and psychic adaptation (Manuel, 1995). In general, the emerging global culture presents both new obstacles and new opportunities for progressive uses of popular music (Garofalo, 1992, pp.1–13). As Lipsitz (1994) argues, the global ecumene offers new possibilities for empowerment and mobilization. In an era characterized by ethnic and sectarian fragmentation, hybrid popular musics can offer visions of transnational alliances and expressive strategies of adaptation, opposition and immanent critique, even if these new sensibilities may have no impact on material realities of deprivation and exploitation.

The complexities, contradictions and asymmetries of global cultural interactions are particularly clear in the set of phenomena grouped in the category of 'world beat'. While this ambiguous term is often used to imply syncretic popular music with non-Western elements (whether created by Westerners or by others), a more relevant connotation would include world music that is commercially marketed to Western consumers with eclectic tastes. Reggae is generally regarded as being the original world beat music, being the first music of the Third World to reach Western markets and the first to have been subsequently exploited by Euro-American pop musicians (such as Sting and Eric Clapton). In its wake many Third World musicians, from the Senegalese bandleader Youssou N'Dour to the Pakistani singer Nusrat Fateh Ali Khan, have orientated much of their output towards the Western market – often, in doing so, finding themselves juxtaposing different strategies in an attempt to appeal to their diverse local and international audiences.

The imbalances of power and wealth that condition such interactions are particularly evident in Euro-American artists' selfconscious incorporations of elements of non-Western music, especially of African and Afro-Latin musics. Despite the honourable intentions of many such innovatory performers, these musical excursions raise thorny questions about the power asymmetries involved. Critics allege that some Western appropriations of Third World musics exoticize or trivialize such musics, or are disproportionately profitable to Westerners (see Feld, 1988–9; Lipsitz, 1994, pp.60–61; Taylor, 1997). The ethical and ideological considerations involved in Paul Simon's album *Graceland* (1986), a collaboration with black South African musicians, generated a substantial body of critical literature (e.g. Feld, 1988–9; Hamm, 1989; Meintjes, 1990; Garofalo, 1992, pp.1–7; Lipsitz, 1994, pp.56–61).

10. Gender. Since the growth of academic feminism in the 1970s, considerable research has been published on issues of gender in Euro-American popular music and, more recently, Latin American and Caribbean popular music (e.g. Rohlehr, 1990; Pacini, 1995; Aparicio, 1998). However, although published studies relating to Asia, Africa and other regions remain relatively scarce. As a result, the following discussion of gender and world popular music is necessarily tentative and incomplete.

The effects of popular music on the extent to which women play an active role in musical culture are varied. Women's musical activities, especially in traditional societies, are often relegated primarily to private, domestic spheres, with public performance being reserved either for men or for 'professional' women of dubious respectability. In some traditional societies the emergence of a popular music industry has reinforced this form of discrimination by creating a new and expanded sphere of public discourse from which respectable women are largely barred. Thus, for example, although women have been active carriers of genres such as Bedouin music and

North Indian regional folk *rasiya*, modest women have been precluded from contributing to the cassette-based revivals of these musics, since it would be unacceptable for them to enter urban recording studios or for their songs to be heard by strange men (see Abu-Lughod, 1989, p.10; Manuel, 1993, pp.175–6). Instead, most female popular music performers in the Arab world and other conservative societies are assumed to be 'public' women in one way or another; in some cases they come from the ranks of traditional courtesan-performer castes, such as the Javanese *ronggeng* or North Indian *nautanki* theatre songstresses.

However, there has been a marked trend for popular music cultures to accord increasing space to female performers of 'respectable' (if often colourful) backgrounds. One celebrated example is the Egyptian singer UMM KULTHUM, whose humble but honourable social background and rigorous training in Qur'anic chant enhanced her unique status and differentiated her from the women who sang only light, commercial songs (Danielson, 1997). Increasingly, female popular music singers come from urban middle classes, among whom female public performance is no longer regarded as improper. As a result, female singers of Indonesian popular music, Indian film music and other genres are no longer assumed to be disreputable. (Female instrumentalists remain rarities in world popular music.)

In general, most popular musics tend to have predominantly male performers, to be orientated primarily towards young adult males and to be dominated by commercial music industries whose personnels are overwhelmingly male. Many genres were products of distinctively male subcultures, including the macho, urban underworlds of *rebetika* and the early tango, the competitive, rowdy calypso tents, the street-gang hangouts of Trinidadian steel bands and the lower-class Dominican taverns in which urban migrant men would gather to listen to *bachata*. Popular musics emerging from such contexts typically focus on extravagant male boasting and its counterpart, indulgent self-pity, while either idealizing women as unattainable objects of longing or disparaging them as sex objects or as corrupted by modernity. Representing a somewhat different category of male discourse are the innumerable Dominican *merengues*, Cuban *guarachas*, Colombian *porros*, Trinidadian calypsoes, Indian regional folk-pop songs and other genres that foreground whimsical erotic puns and *double entendres*.

However palpable the sexual politics of some song texts may seem, scholars increasingly recognize the caution that must be exercised in interpreting them and attempting to generalize about their meanings to consumers and their relations to social attitudes and practices. Many song texts are polysemic enough to allow listeners of either sex (or sexual orientation) to identify with the first-person narrator, regardless of the specific gendering suggested by the grammar or by the identity of the singer or composer. Thus women around the world are often able to enjoy sentimental male-gendered songs, even those denouncing treacherous women, by relating to the abstract emotions of longing, desire and loss expressed in the lyrics, and overlooking the gendered aspects of the song (Manuel, *Popular Music in Society*, 1998). Attempts to 'read off' meanings from song texts are further complicated by the need to contextualize popular musics in their social milieu. Thus, for example, while some West Indian popular song texts may seem openly sexist, their musical cultures as a whole may be relatively progressive in the social space they offer to women, who can exuberantly celebrate their independence and sensuality on the dance floor (see Cooper, 1993, chap.8; Miller, 1994, pp.113–25). It must also be remembered that lyrics do not indicate social relations *per se* but rather attitudes about them, especially male attitudes. Therefore it may be in some cases that expressions of misogyny in song lyrics reflect less the actual subjugation of women than male resentment of or backlash against genuine female autonomy.

Such considerations aside, there is no doubt that the increasing presence of female performers and perspectives enriches popular music's potential to constitute a democratic *vox populi*. Performers such as MERCEDES SOSA, VIOLETA PARRA, CARMEN MIRANDA, CELIA CRUZ and Umm Kulthum have constituted inspiring role models and spokeswomen for their female audiences. In the late 20th century more women have entered the field of popular music around the world, and the trend towards greater representation of women seems inevitable, however challenged by neo-fundamentalist reaction in places such as Algeria and Iran. Particularly remarkable is the emergence, especially in the Americas, of a set of flamboyantly sexual and transgressive female performers, such as the Cuban singer La Lupe and the Mexican vocalist Gloria Trevi. While seen as embarrassments by some women, to others these performers represent a new breed of emancipated women who, rather than being passive sex objects, are fully in control of their exuberant sensuality.

In general, world popular music seems destined to reflect the greater presence of female performers, the increasing purchasing power of women and the modern trend toward greater sexual openness and awareness. Popular genres such as calypso and Congolese *soukous* are often vehicles for spirited gender polemics, in which male and female artists trade ripostes in successive recordings. In such animated and often humorous exchanges, popular music seems to live up to its potential as a dynamic expression of grassroots sentiment in all its earthy richness and diversity.

RICHARD MIDDLETON (I), PETER MANUEL (II)

Poquelin, Jean-Baptiste. *See* MOLIÈRE.

Porcelijn, David (*b* Achtkarspelen, 7 Jan 1947). Dutch conductor and composer. He studied the flute with Vester and composition with Van Baaren and Van Vlijmen at the conservatory in The Hague. In 1972 he moved to Geneva to pursue his studies with Tabachnik, whose assistant he was until 1976. Porcelijn has occupied several important conducting posts in the Netherlands: with Ensemble M (from 1972), the Radio Wind Ensemble (1973–7), the Gewestelijk Orkest (1977–82), the Nederlandse Danstheater (1977–86) and the North Netherlands PO (1996–8). In 1993 he was appointed chief conductor of the Adelaide SO, a post he holds concurrently with that of principal conductor of the Tasmanian SO. Porcelijn also appears as guest conductor with major symphony orchestras and opera companies throughout the world, and has built a special reputation as an interpreter of contemporary music. His recordings include Messiaen's *Eclairs sur l'au delà*, Willem Pijper's *Merlijn* and works by Richard Meale and Graeme Koehne. Most of his own compositions date from the 1970s. Notable among them are *Requiem* for percussion (1970), *Pulverization II* for alto saxophone and orchestra (1973) and *Terrible Power* for orchestra (1977). His later works have moved towards a more traditional lyrical idiom.

LEO SAMAMA

Porcile, Giuseppe. *See* PORSILE, GIUSEPPE.

Pordenon, Marc'Antonio da [Forlano, Marc'Antonio; Dal Violin, Marc'Antonio; Dalla Viola, Marc'Antonio] (*b* Pordenone, *c*1535; *d* ?Padua, after Sept 1586). Italian composer. Son of *ser* Salvatore *muraro* (mason) of Pordenone, he probably received his training in the circle of Francesco Portinaro at Padua, where he passed a good part of his life. Together with Portinaro he was, in June 1555, among the members of a *societas musicorum*, and during the years 1559–60 he was in the service of the Accademia degli Elevati of Padua. In 1568 he was the guest of the Accademia Filarmonica of Verona a number of times; before 1571 he was *maestro di cappella* of the 'most illustrious and most Reverend Strozzi' (perhaps Cardinal Lorenzo Strozzi). In December 1573 he entered the service of the Accademici Rinascenti of Padua (again together with Portinaro). From 18 July 1575 to 27 May 1578 he was *maestro di cappella* of S Marco, Pordenone. In November 1580 he applied without success for the position of *maestro di cappella* at Padua Cathedral. In March 1585, on the occasion of the inauguration of the

Teatro Olimpico, he was the honoured guest of the Accademia Olimpica of Vicenza, to whom he had dedicated a book of madrigals in October 1580. Around 1585 he may have been in Venice as musician of the Grand Prior of England, Sir Richard Shelley. Pordenon wrote mostly secular vocal music, having worked above all for academies and for the students of the University of Padua. His compositions show a good technical knowledge of harmony and a notable freedom of polyphonic dialogue.

FRANCO COLUSSI

Porena, Boris (*b* Rome, 27 Sept 1927). Italian composer. He studied in Rome under Petrassi and others, receiving diplomas in the piano (1948) and composition (1953) at the conservatory and graduating in literature at the university (1957). In 1957–60 he attended the Darmstadt summer courses and in 1965 he won the Città di Milano award with *Über aller dieser deiner Trauer*. He has contributed to RAI and specialist publications (e.g. the *Enciclopedia dello spettacolo*), and in 1972 he was appointed to hold an experimental course in composition at the Rome Conservatory, increasingly turning towards musical-pedagogic experiments. In 1974 he succeeded Petrassi as president of the Sindacato Musicisti Italiani.

Unlike other Italian composers of his generation who are generally termed 'independent', Porena's independence was constantly conditioned by the newest developments in music. He began to break out of the backwater of his early works (the Concerto with trombone obbligato still clumsily derives from pre-war Italian neo-classicism) in *Der Gott und die Bajadere*, a cantata setting Goethe's verse in the original and stylistically referring to middle-period Stravinsky. Immediately thereafter his attendances at Darmstadt, together with Nono's example, promoted the cautious serial apprenticeship shown in *Vor einer Kerze*, thus enabling Porena to achieve, in the succeeding *Vier Lieder aus dem Barock*, an outstanding concision. Already hostile to the 'rationalistic frenzy' he saw in post-Webernism, he subsequently developed a humanistic opposition to the capsizal of serialism into irrationality, proceeding – between the Gryphius Cantata (1959–61) and the *Musica per quartetto* (1967) – to the elaboration of a technique assuming a prototype of tonality. Not that this solitary effort prevents references to both the main compositional tendencies of the period: formal indeterminacy and social commitment. Quite consistently, however, the model of the rhythmically aleatory writing adopted in *Neumi* (a work involving perhaps Porena's most adventurous use of sound) goes back to plainsong, and the texts concerning the Nazi persecution of Jews, which he set in the Nelly Sachs Cantata and *Über aller dieser deiner Trauer*, focus on the archetypal features of such a historical tragedy.

In 1968 Porena ended his neo-tonal experiments with *La mort de Pierrot*, a 'melodrama' whose unpretentious Italian text strikingly contrasts with the German high literature employed in his preceding vocal works, and significantly supports a stylistic regression to pre-war modernism. This highlights that turning from his creative if polemic participation in the problems of contemporary music which eventually led to the recovery of a pure pleasure of music-making balanced by stoical surrender to the present. Hence his use – in the context of private or collective recreation – of radical techniques previously rejected, which the *Inquisizioni musicali* even introduce into a thought-provoking exhumation of Schubertian style, and which the educational collection *Kinder-Musik* fully exploits according to its cheerful 'musikantisch' purpose, recalling the youthful *Blockflöten-Album*.

CLAUDIO ANNIBALDI

Porfirii [Porfiri], **Pietro** (*b* Mondolfo, *c*1640; *d* after 1714). Italian composer. He was a member of the clergy and in 1692 was *maestro di cappella* of the collegiate church of S Nicolò at Fabriano. According to Radiciotti (1893) he lived for many years in the vicinity of Senigallia and was *maestro di cappella* at Ostra, Iesi, Arcevia and Pesaro. He was a canon at Urbino in 1709 (according to *RicordiE*); this information probably derives from the libretto to *La Leucippe*.

□

Porges, Heinrich (*b* Prague, 25 Nov 1837; *d* Munich, 17 Nov 1900). German editor and writer on music. In 1863 he became co-editor with K.F. Brendel of the *Neue Zeitschrift für Musik*, and in 1867 he assumed responsibility, with the editor, Julius Fröbel, for the arts pages of the *Süddeutsche Presse*. He remained in Munich as music critic of the *Neueste Nachrichten* (from 1880). He came to the attention of Wagner in Vienna in 1863, and although he declined to accept Wagner's summons the following year to join him in Munich, he did later act as his assistant, most notably at the rehearsals for the first *Ring* at Bayreuth, which, at Wagner's request, he recorded in detail in *Die Bühnenproben zu den Bayreuther Festspielen des Jahres 1876* (Leipzig, 1881–96; Eng. trans., 1983). His daughter, Else Bernstein-Porges (*b* Vienna, 28 Oct 1866; *d* Hamburg, 1949), was a dramatist who published under the pseudonym Ernst Rosmer. Her fairy tale play *Königskinder* (1893) was adapted by Humperdinck originally as a melodrama, subsequently as a full-scale opera.

BARRY MILLINGTON

Porphyry [Porphyrios, Porphyrius] (*b* Tyre or Bashan [Batanea], *c*232/3; *d* Rome, *c*305). Greco-Syrian Neoplatonic philosopher and scholar. His original name was Malchos ('king'). He was a pupil of Longinus at Athens and of Plotinus at Rome, and spent much time in Sicily. Eunapius, in his *Lives of the Sophists* (late 4th century), praised Porphyry for having presented the doctrines of Plotinus in a clearly comprehensible manner. Whereas Plotinus denied the Aristotelian categories, however, Porphyry wrote a commentary on them and added an introduction, which strongly influenced medieval logic through Boethius and others; his ideas became authoritative for the Latin Neoplatonists, including Augustine. Porphyry's central doctrine was the idea of submerging the soul in the Deity through an ecstasy that can be induced by means of magic (*theourgia*) and asceticism.

Porphyry's treatise *Against the Christians* (*Kata Christianōn*), in 15 books, was destroyed under Theodosius II in 448. However, fragments of it quoted by the Church Fathers reveal certain points of agreement with Christianity, especially concerning music. Porphyry may have been the first author to attack secular music for its sensual attraction; his treatise *De abstinentia* contains a polemic against dance and drama, and the music associated with them, for they deflect man from his true goal. Even though inferior deities (good and evil demons) could be influenced by orgiastic music, the highest deity should be approached only 'with pure silence and pure thoughts' (*On Abstinence*, ii.34).

In his commentary on Ptolemy's *Harmonics* (*Eis ta Harmonika Ptolemaiou hypomnēma*), Porphyry shows a greater technical knowledge of music (*see* PTOLEMY). The work survives in 70 manuscripts and is quoted in numerous Byzantine scholia in manuscripts of Ptolemy's treatise. (Pappus is no longer considered to be the author of part of this commentary.) It extends only as far as the seventh chapter of the second book of Ptolemy and is uneven in content: there is little on Ptolemy's doctrines of intervals, genera and modes (i.4–15; ii.1–7) but much on the introductory chapters setting out the structure of the work. Porphyry discusses in detail basic principles of harmonic theory (i.1–2), and, above all, acoustics (i.3); he compares sense perception and reason, the criteria by which former theorists had judged consonance. Porphyry assigned Ptolemy to an intermediate position between the Pythagorean and Aristoxenian schools of music theory, since Ptolemy had conceived of reason according to the former and sense perception according to the latter.

According to his Pythagorean point of view, Porphyry adopted the same numerical proportions as the foundation of both rhythm and melody (i.e. successions of pitches). Quantitative differences in the speed of vibrations determine whether a note is high or low; but Porphyry, unlike Ptolemy, went on to claim that these differences of pitch are qualitative (Düring, 1932/*R*, esp. p.58).

One of the most valuable aspects of Porphyry's commentary derives from his extensive use of earlier specialist treatises on music, some otherwise unknown. He quoted from the *Pythagorean Primer of Music* of Ptolemaïs of Cyrene, *Concerning the Difference between the Pythagorean and Aristoxenian Theories of Music* of Didymus, the *Compendium of Music* of Heraclides, an

Interpretation of the Timaeus by Aelian, the *Likenesses* of Dionysius 'ho mousikos', the *Mathematics* of Archytas, the *Music* of Theophrastus, and a *Sounds* (*Peri akoustōn*) of the school of Aristotle.

LUKAS RICHTER

Porpora, Nicola (Antonio) (*b* Naples, 17 Aug 1686; *d* Naples, 3 March 1768). Italian musician. He was internationally famous during his lifetime both as a composer (particularly of vocal music and opera) and as a singing teacher.

1. LIFE. He was the son of Caterina and Carlo Porpora, the latter a Neapolitan bookseller. On 29 September 1696 he was enrolled at the Conservatorio dei Poveri di Gesù Cristo, where Greco is assumed to have been his composition teacher. His fees were waived after the first three years; presumably by 1699 he was earning his keep as a student teacher. His first commission was for an opera, *L'Agrippina* (1708), which was successful, although it was several years before he obtained another commission. The libretto of his second opera *Flavio Anicio Olibrio*, performed during Carnival 1711, describes him as *maestro di cappella* to Prince Philipp of Hesse-Darmstadt, the general of the Austrian army in Naples. By the time of the prince's departure from Naples in June 1713, Porpora had obtained a new patron; the libretto of *Basilio re d'oriente* designates him as *maestro di cappella* to the Portuguese ambassador in Rome. In 1716 he apparently obtained an honorary title from Prince Philipp, who had become Imperial Governor of Mantua.

The first dozen years of Porpora's career as an opera composer were rather lean, which was probably partly owing to Alessandro Scarlatti's dominance of the Neapolitan scene. Moreover, the death of Porpora's father and eldest brother in 1717 left him as head of the family. At this time he began his other career, as a music teacher, being appointed as *maestro* at the Conservatorio di S Onofrio in 1715; he also gave private lessons.

With Scarlatti's return to Rome in 1719, new opportunities emerged. By the end of the year Porpora's opera *Faramondo* was given its première in honour of the Empress Elizabeth's nameday. For her birthday celebrations in 1720 and 1721, he composed the serenatas *Angelica* and *Gli orti esperidi*, both with texts by the young Metastasio, *Angelica* being his first libretto. One of his singing pupils, the castrato Farinelli, also made his début in the latter work. Porpora began to make his mark as a teacher; from his private singing classes there emerged both Farinelli and, several years later, Caffarelli. The anecdote about Caffarelli singing the same page of vocal exercises for five years suggests that Porpora put a great deal of emphasis on pure technique. Not only were his teaching methods continued by several of his pupils, most notably Domenico Corri, but also the *solfeggi* attributed to him and published in various 19th-century editions were used by generations of singers, creating a living pedagogical tradition rather like that of Liszt for the piano. The basic principle was the development of absolute control of the voice, particularly with regard to agility, dynamics and colouring, through the use of regular and rigorous exercises.

It was also during these years that Porpora established a reputation as an opera composer in Rome. *Eumene*, performed at the Teatro Alibert (1721), was particularly successful and was judged 'superior' to Scarlatti's *La Griselda*, performed during the same season. He was invited back to the Teatro Alibert for the 1722 and 1723 seasons, both of which featured Farinelli. During summer 1722 he resigned from his position at the Conservatorio di S Onofrio. After fulfilling two commissions in 1723–4, he set out to try his fortunes in Germany and Austria. With the exception of *Damiro e Pitia*, produced in Munich in 1724, little came of this journey; in Vienna the emperor apparently found his music too florid and ornate.

Returning to Italy in early 1725, he collaborated with Metastasio in a new setting of *Didone abbandonata* for Reggio nell'Emilia. The libretto of *Siface*, one of his most successful works, lists Porpora's new appointment as 'maestro del pio Ospitale degli'Incurabili'. He settled down in Venice and for several years his operas featured prominently at the Teatro S Giovanni Grisostomo. Foremost among these were his settings of Metastasio's *Ezio* and *Semiramide riconosciuta*. During this period a rivalry developed between Porpora and his younger colleague Leonardo Vinci. This rivalry, which according to Burney went back to their studies at the conservatory, was renewed during the 1726 and 1727 carnival seasons, when they were both producing operas in the same theatres in Venice and Rome. According to Friedrich

Marpurg (*Kritische Briefe über die Tonkunst*, Berlin, 1760, vol. i, pp. 225–7), it came to a climax during Carnival 1730, when Vinci and Porpora produced operas at the two competing Roman theatres, the Delle Dame and Capranica. After Vinci's death later that year, Porpora appears to have shifted his attention to J.A. Hasse. During the 1730 season, while Porpora was in Rome, Hasse scored a major success in Venice, which led to his appointment as Kapellmeister to the Elector of Saxony, a position for which Porpora was being considered. From this point on, their careers criss-cross, giving substance to Burney's statement that Porpora was Hasse's 'old and constant rival'.

In 1733 Porpora resigned from the Incurabili and travelled to London, having received an invitation from a group of nobles intent on setting up an opera company to compete with the existing one under Handel. The new company, the so-called Opera of the Nobility, opened its first season in December 1733 with the première of his *Arianna in Naxo*. Over the next two and a half years he composed four more operas, an oratorio and a serenata; none of them, however, matched the success of *Arianna*, not even *Polifemo*, with which Farinelli made his London début. In spite of a superb team of singers, Porpora and the Opera of the Nobility did not establish superiority over Handel. While in England he published his op.1 cantatas, which came to be regarded as his 'masterpieces', and his *Sinfonie da camera* op.2. His last work written in London was the serenata *La festa d'Imeneo*, produced in May 1736 to celebrate the marriage of the Prince of Wales. He left England later that summer, less than a year before both companies collapsed owing to lack of public support.

Nicola Porpora: engraving by Hasler, 1825

He returned to Venice, resuming his old position at the Incurabili while the current *maestro*, Hasse, was on extended leave in Dresden. With a commission from the new Teatro S Carlo, he moved back home to Naples in October 1738 after a dozen years absence. A revised version of *Semiramide riconosciuta* was produced for the king's birthday in January 1739. By the summer he was appointed *maestro di cappella* at the Conservatorio di S Maria di Loreto, and additional commissions were obtained from both the S Carlo and the comic theatres. In 1741, however, Porpora's regular output of one or two operas a year came to an end; like Handel, he was having problems in holding the operatic stage. The apparent dearth of commissions may have been a factor in his subsequent movements. In October 1741 he obtained leave to go to Venice to fulfil an opera commission. By the time *Statira* was produced, he had already accepted the position of *maestro di coro* at the Venetian Ospedale della Pietà. Payments at the Pietà came to an end in November 1742, when he may have taken leave to go to London for the première of his *Temistocle*.

Shortly after his appointment at the Pietà, he began giving singing lessons to pupils at one of the other Venetian conservatories, the Ospedaletto, where he was formally appointed *maestro del coro* on 20 January 1744. By the end of the year, however, he was applying for the post of *maestro di cappella* at the Neapolitan court. He not only submitted the required test pieces, but also wrote a supplication to improve his situation at the Ospedea
letto. This double-dealing backfired. He was greeted with hostility by the governors of the Ospedaletto and was informed by the court in Naples that he had to appear in person to complete his application, which his current position in Venice would not allow. Things were apparently resolved between Porpora and the Ospedaletto governors, since he remained there without incident until January 1747, when he resigned on account of an unspecified family emergency.

Later that year he was in Dresden as singing teacher to the Electoral Princess of Saxony, Maria Antonia Walpurgis, for whose birthday he composed the comic opera, *Filandro*, introducing his latest protégée Regina Mingotti. Unfortunately the old rivalry between Hasse and Porpora was augmented by a new rivalry between Hasse's wife Faustina Bordoni and Mingotti. Although Hasse scornfully referred to Mingotti as 'Porpora's last stake; the only twig he had to catch at', in April 1748 Porpora was appointed Kapellmeister. There was, however, something hollow about this victory; the appointment carried with it the caveat 'until further notice', and in January 1750 Hasse was appointed as Ober-Kapellmeister. Porpora was pensioned off in January 1752 and left for Vienna.

Although he and Metastasio had had a serious falling out over the première of *Issipile* in Rome, Carnival 1733, they apparently reconciled, and during winter 1753 Metastasio considered asking him to set his new libretto, *L'isola disabitata*. Unfortunately an illness on the part of the composer prevented this old partnership from being revived. During his years in Vienna Porpora gave singing lessons to various pupils, including Metastasio's protégée, Marianne von Martínez. Metastasio was probably responsible for introducing the young Joseph Haydn to Porpora. Haydn became Porpora's valet, pupil and his

keyboard accompanist; he claimed to have learnt 'the true fundamentals of composition from the celebrated Herr Porpora'.

Porpora's Dresden pension ended with the invasion of Saxony during the Seven Years War. In March 1759 Metastasio wrote to Farinelli describing the misfortunes of their former master, asking him to excuse 'Porpora's irregularities' and remember him as a man 'of eminence, and a friend'. Porpora overcame his misfortunes by turning again to the Conservatorio di S Maria di Loreto, Naples. Although he had abandoned this institution about 20 years before, in spring 1760 the governors elected him as 'another *maestro di cappella*', in addition to the two they had already employed. He also accepted a commission for an opera at the Teatro S Carlo, and in the autumn he obtained a second position at the Conservatorio di S Onofrio. These honours, however, were somewhat ephemeral. The opera, a new version of *Il trionfo di Camilla*, was a failure, and by September 1761 he had resigned from both teaching appointments. His final years of retirement were spent in considerable poverty. Among his last pupils were Giuseppe Gazzaniga and Domenico Corri. The latter reported that 'Porpora kept so miserable a table, that he was frequently driven out of the house, by hunger to seek a dinner elsewhere'. After his death, the musicians of Naples banded together to perform gratis at his funeral in their church of Ecce Homo, where he was buried.

2. WORKS. Though Porpora wrote several instrumental works, his output in this field was small by comparison with that of his vocal works. In any assessment of the composer the secular operas have to be stressed as they comprise the largest and most important category. Though he wrote his first opera as early as 1708, he only gradually acquired sufficient fame to be constantly in demand as an opera composer. His great period of operatic composition occurred between 1718 and 1741, after which his popularity among theatre audiences declined.

Musical taste in Italy changed considerably during the first years that he was active as a composer. Styles emphasizing melody with a simple homophonic accompaniment (usually for full strings and continuo) came into fashion, and vocal melody acquired both more lyrical, lilting qualities and, at times, more decorative ornament. The development of Porpora's own style ran parallel with this general trend, and it may be argued that he was one of the composers chiefly responsible for the trend towards more embellishment in vocal melody. Being a great singing teacher, he understood as well as anyone the capabilities of the voice, and he exploited its range and flexibility in passages that were unusually florid and sustained. The vocal phrases tend to elide into one another, often creating a seamless periodic melody that appears continually to push the limits of the singer's breath control, one of the techniques he emphasized. This deep understanding of the art of singing had its drawbacks, for there are signs in his operas of the 1720s and early 30s that he sometimes came to rely too heavily on the ability of singers to sustain the musical interest through virtuoso display. He made little attempt at this stage of his career to strive for variety in his arias (the da capo structure was the norm), and he rarely applied unusual procedures for the sake of dramatic impact. To some extent this attitude changed when he arrived in London in 1733. Faced with competition from Handel, who had an uncommon flair for making opera theatrically effective, Porpora sharpened his powers of characterization: he aimed for more attractive melody, became more willing to vary the da capo formula of the arias, and made much more extensive use of accompanied recitative than hitherto. This stimulant to his ingenuity was no longer present, however, once he returned to Italy in 1736, and his last operas show somewhat of a slow decline in his compositional powers and a return to conventionality, as he turned his attention more to church music.

Intricate embellished vocal writing was a characteristic of many of his sacred compositions too. Most of his surviving religious music represents his contribution to the concerts and other musical functions of the three Venetian hospitals he served. The vocal parts in his music for the Incurabili and Ospedaletto are for sopranos and contraltos only, but his works for the Pietà (1742) contain chorus parts in the bass clef and sometimes also in the tenor. All these Venetian compositions are accompanied by strings and continuo. The pieces concerned vary from the very simple *In exitu Israel* of February 1745, with homophonic, antiphonal writing for two SAA choirs in one tempo, to the very elaborate *Magnificat* in G minor of 1742 for SSATB and SSAB choirs (with additional solo parts for soprano and contralto) in nine movements, some for the choruses, some for soloists, and some for a mixture of both, written in a variety of homophonic and contrapuntal idioms. In addition to his other pieces, Porpora wrote some solo Latin motets for favourite female pupils at the Incurabili and Ospedaletto. Few of these survive, though many of their texts are extant. Four (*GB-Lbl*) have solo parts as virtuoso as any the composer wrote for leading stars on the operatic stage. The admiration for the musical performances of the hospitals so often expressed by visitors to Venice in the mid-18th century is perfectly understandable on the evidence of these pieces.

KURT MARKSTROM (1, work-list), MICHAEL F. ROBINSON (2)

Porrectus [flexa resupina] (Lat.: 'stretched out'). In Western chant notations a neume signifying three notes, the second lower than the others. It is sometimes called *flexa resupina* because it is a *flexa* (two notes in descending order) that turns upwards again (is made *resupina*; *see* RESUPINUS; for illustration *see* NOTATION, Table 1; see also M. Huglo: 'Les noms des neumes et leur origine', *EG*, i, 1954, pp.53–67).

Porrino, Ennio (*b* Cagliari, 20 Jan 1910; *d* Rome, 25 Sept 1959). Italian composer and conductor. He studied composition at the Rome Conservatory with Cesare Dobici and Mulè, and after his diploma in 1932 spent three years on the postgraduate course taught by Respighi. He taught harmony and counterpoint at the Rome Conservatory (1936–45) and subsequently composition at the conservatories in Naples and Rome. In 1956 he was appointed director of the Cagliari Conservatory. He was active as a conductor, and wrote music criticism sporadically, putting his lively polemical vein to the service of musical nationalism, upheld by the fascist regime and the detractors of modernism. Nationalist rhetoric also affected his compositions which, with its Respighian taste for pictorial effects and colouristic approach to timbre, took up elements of *verismo* in particular, for example in *Gli orazi*. On occasion his work was based on Sardinian folk materials, as in the dazzlingly orchestrated symphonic poem *Sardegna*, and in the opera *I Shardana*, where the folk element is not, however, completely assimilated. In his later music, Porrino incorporated some of the innovations of 20th-century vocabulary, though the 12-note procedures, found in the middle movement of the *Concerto dell'Argentarola* and in *Sonar per musici*, remain isolated instances.

WORKS
(*selective list*)

ROBERTA COSTA

Porro, Giovanni [Gian] **Giacomo** [Borro, Johann Jacob] (*b* Lugano [then in Italy], *c*1590; *d* Munich, Sept 1656). Italian composer and organist, later active in Germany. He was appointed organist to the Duke of Savoy at the court in Turin on 10 June 1618. In autumn 1623 he moved to Rome, where he soon became *maestro di cappella* of S Lorenzo in Damaso. From 1626 he deputized as organist at S Pietro and after the death of Guidi became Frescobaldi's substitute there from 26 August 1630. Although Frescobaldi did not return from Florence until 1 May 1634 Porro seems to have left S Pietro at the end of November 1633 and later left Rome. He was in Vienna when in September 1635 he was appointed, retrospectively from 15 August, vice-Kapellmeister of the court

of the Elector Maximilian I of Bavaria in Munich, and he soon became Kapellmeister. During Maximilian's rule the music of the court centred on the chapel. This is reflected in Porro's output for Munich – now lost – as listed by Sandberger. It comprised 32 masses, 60 propers, a requiem, 64 settings of the *Magnificat*, two of the *Te Deum* and seven of the *Stabat mater*, 60 'cantiones', 187 psalms, 208 antiphons, 20 litanies and 274 other motets; he is also said to have written 200 madrigals and ten ballettos. When the Elector Ferdinand Maria succeeded in 1651, there was a new interest in secular art, and Porro was involved in the introduction of opera to Munich (G.B. Maccioni's *L'arpa festante*, 1653); he may have composed *La ninfa ritrosa* (given on 2 February 1654). He was well looked after at Munich, enjoying frequent increases in salary as well as gifts in cash and kind. In summer 1636 and in 1653 he was able to visit Italy to recruit musicians. He appears to have been an outstanding and meticulous administrator. In spite of illnesses after 1650, he opposed the appointment of an assistant until J.K. Kerll, his eventual successor, took the post in spring 1656. Only four pieces by Porro survive: a secular solo song (RISM 1622²), two small-scale sacred pieces (1628⁵) and a vesper psalm (1663²).

JOHN HARPER

Porro [Porre, Porrot], **Pierre Jean** (*b* Bagnols, 7 Dec 1750; *d* Montmorency, 31 May 1831). French music publisher. Son of a businessman named Porre, he italianized his name as was the custom among musicians in the late 18th century. In 1781, according to the subscription list for J.-J. Rousseau's *Consolations*, he was music master at the 'Ecole royale et militaire Deffiat'. In 1784 he became involved with Joseph Baillon, and later with his widow (1786–7), in publishing periodic musical works, such as the popular *Journal de guitarre* (1784–1811), *Etrennes de guitarre* (1784–6) and *Recueil d'airs nouveaux français et étrangers* (1784–). After briefly setting himself up as sole proprietor of a Parisian music shop (1787–8), and launching his *Répertoire italien ou choix d'airs* (1787–97), he evidently joined with Bornet, taking control of the latter's stock in July 1789, and continuing to publish Bornet's *Journal de violon*. During the revolutionary period, 'Citoyen' Porro expanded his publishing scope to include a great variety of instrumental and vocal music, including religious music. His *Collection de musique sacrée* lasted from 1807 to 1817, and included the first French edition of Haydn's 'Nelson' Mass (1811). Porro relocated his business several times in Paris, and issued successive catalogues as inserts in his publications between about 1807 and 1817, the approximate year of his retirement from publishing. His remaining years were spent in music composition and literary activities.

WORKS

all published in Paris

Edition: *Pierre-Jean Porro: Oeuvres choisies* (Florence, 1982) [facs.]

Hymne à la liberté, 3vv (1794); Hymne religieux et patriotique, 3vv (1794); Panis angelicus, 4vv, org/pf ad lib (*c*1815); Hymne à Ste Cécile, collab. Riegel; other vocal works

2 concs., gui, orch; duos, 2 gui (opp.18, 28, 32); duos, gui, kbd (opp.33, 35); numerous pieces and arrs. for gui, vn/fl, incl. opp.11 (after 1788/*R*), 17, 19, 20, 30, 36 and ov. to C.W. Gluck: Iphigénie en Aulide (after 1790/*R*); trios, gui, vn, va (opp.26, 38); numerous pieces and arrs. for solo gui; other inst music

Numerous airs and romances, 1–2vv, gui/lyra-gui/hp/kbd, pubd singly and in collections, esp. Cent mélodies anciennes et modernes (*c*1810)

Methods for gui (incl. op.31), lyre-gui, flageolet

THOMAS F. HECK

Porsile [Persile, Porcile, Porsille], **Giuseppe** (*b* Naples, 5 May 1680; *d* Vienna, 29 May 1750). Italian composer and singing master. He was the son of the musician Carlo Porsile, whose opera *Nerone* was produced, according to Burney, at Naples in 1686. Giuseppe was a pupil of Ursino, Giordano and Greco at the Conservatorio dei Poveri di Gesù Cristo in Naples. At first he held an appointment as *vicemaestro di cappella* at the Spanish chapel in Naples, but in 1695 he was called to Spain by Charles II (who died in 1700) to organize the music chapel at Barcelona. He remained there under Charles III, the Austrian contender to the Spanish throne, and served as singing-master to Charles's wife Elisabetta Cristina. To what extent he was also active as a teacher and composer in Naples before 1713 remains unclear, but his early opera *Il ritorno di Ulisse* was produced there in 1707.

At the end of 1711, Charles III returned to Vienna, becoming Charles VI, Holy Roman Emperor. According to Biba, Porsile arrived in Vienna in the same year and began to give singing lessons to the dowager Empress Wilhelmina Amalia, for whose birthday and nameday he wrote at least three dramatic works. The elaborate birthday cantata of 1717 was sung for the imperial family by the dowager empress's daughters, the Archduchesses Maria Josepha and Maria Amalia. His initial annual salary of 200 ducats was not confirmed until 1717, and while being promised a more substantial appointment he served as *attuario di camera*. In a letter to the emperor dated 27 November 1720 (printed in La Mara), he complained of financial hardship, reminded the emperor of his long service and asked for a permanent position. On 17 December 1720 he succeeded Gregorio Genuesi as court composer with a salary of 1440 florins.

Between 1717 and 1737 Porsile produced at least 21 secular dramatic works and 13 oratorios for the Habsburg court. Only a few works received performances outside Austria, in cities such as Venice and Prague. *Il giorno felice* was composed for the coronation of Charles VI and Elisabetta as King and Queen of Bohemia and performed at Prague in 1723. In 1726 Porsile composed an elaborate cantata, *Il giorno natalizio di Giove*, which was performed

at the palace of the French ambassador in honour of the birthday of Louis XV of France. In the same year another imperial court composer, Francesco Conti, wrote a similar cantata for the nameday of Louis XV, also performed at the French Ambassador's palace. The Emperor's unusual decision to permit his court composers to provide music for occasions honouring French royalty may have been part of a general plan to improve diplomatic relations with France, or simply a polite gesture during a year of celebration following the marriage of Louis XV to the Polish Princess Maria Leszczynska on 5 September 1725.

During 1725–7 Porsile was active as a member of the Viennese Caecilien-Bruderschaft, whose deans were Fux and Caldara. In 1729 he became marginally involved in a lawsuit by Matteo Luchini against the soprano Margherita Gualandi, who had left Prague at the end of the operatic season without paying Luchini for 12 'baggage arias'. Porsile was one of four prominent composers who wrote to the legal authorities in Prague on behalf of Luchini; in his letter of 29 June (transcr. Freeman, *The Opera Theater*, p.292) he indicated that it was not difficult to produce 12 arias, but that they were certainly worth the 12 ducats Luchini requested. After the death of Charles VI in 1740 he continued to receive an honorary stipend, which was lowered to 1200 florins in 1741. He was awarded a final pension on 1 April 1749.

Porsile belongs to the first group of late Baroque Neapolitan composers. He was probably the only composer from Naples to receive a prominent post at Vienna during the Baroque era; the Habsburg court was largely dominated by the more conservative north Italian school. His melodic, harmonic and cadential patterns contain numerous examples of the formulae typical of his generation, but his arias also include some expressive cantabile writing and an avoidance of excessive coloratura. His ability to write in a strict contrapuntal style probably accounts in part for his acceptance at the Habsburg court. In his arias he included frequent imitative passages, and in his oratorios he produced some outstanding choruses at a time when choral music was generally in a state of decay. His adoption of the musical techniques preferred at Vienna is reflected by his use of the French overture. Subtle instrumental colouring is not characteristic of his serious dramatic works, but there are occasional unusual effects, such as the use of trombone solos in the oratorio *Il trionfo di Giuditta* and the concerto-like writing for two flutes in the cantata *Le sofferte amare*. Elsewhere there are frequent cello obbligatos. Although Porsile's music is overshadowed by that of his Viennese contemporaries, Fux and Caldara, its fusion of Neapolitan and north Italian elements was an important ingredient in the development of pre-Classical style in Vienna.

WORKS

DRAMATIC

first performed in Vienna unless otherwise stated

Il ritorno di Ulisse alla patria (3, G.A. Moniglia), Naples, Fiorentini, 1707, *I-Rn*, 40 arias and duets, *Nc*

Il giorno natalizio dell'imperatrice Amalia Wilhelmina (cant, P. Pariati), 21 April 1717, *A-Wgm*, *D-Dl*

La Virtù festeggiata (Pariati), 10 July 1717, *A-Wgm*

Alceste (festa teatrale, Pariati), 19 Nov 1718, *Wgm*, *Wn*

Meride e Selinunte (dramma per musica, 5, A. Zeno), Neue Favorita, 28 Aug 1721, *Wgm*, *Wn*, *D-Dl*

Il tempo fermato (componimento da camera), 15 Oct 1721, *A-Wn*

La Virtù e la Bellezza in lega (serenata), Grosses Hof, 15 Oct 1722, *Wn*

Il giorno felice (componimento da camera, Pariati), Prague, 28 Aug 1723, *Wgm*, *Wn*

Componimento a due voci, Neue Favorita, 28 Aug 1725, ?*Wgm*

Il giorno natalizio di Giove (cant, G.C. Pasquini), Palace of the French Ambassador, Duke di Richelieu, 15 Feb 1726, music lost, *D-DO*

Spartaco (dramma per musica, 3, Pasquini), Kleines Hof, 21 Feb 1726, *Wgm*, *Wn*/*R*1979: IOB, xxviii, 1 aria *F-Pn*; lib *US-Wc*/*R*1978: IOB, ix

Il tempio di Giano, chiuso da Cesare Augusto (componimento per musica, Pasquini), Neue Favorita, 1 Oct 1726, *A-Wgm*, *Wn*

La clemenza di Cesare (servizio di camera, Pasquini), Neue Favorita, 1 Oct 1727, *A-Wgm*, *Wn*

Telesilla (festa teatrale, Pasquini), 19 Nov 1729, *Wgm*, *Wn*

Scipione Africano, il maggiore (festa di camera, Pasquini), Neue Favorita, 1 Oct 1730, *Wgm*, *Wn*

Dialogo tra il Decoro e la Placidezza (festa di camera, Pasquini), 26 July 1732, *Wgm*, *Wn*

Dialogo pastorale a cinque voci, Neue Favorita, 28 Aug 1732, *Wn*

Dialogo tra la Prudenza e la Vivacità (festa di camera, Pasquini), 15 Oct 1732, *Wgm*, *Wn*

La Fama accresciuta dalla Virtù (festa di camera, Pasquini), 15 Oct 1735, *Wgm*, *Wn*

Sesostri, re d'Egitto, ovvero Le feste d'Iside (dramma per musica, 5), carn. 1737, *Wn*

Il giudizio rivocato (festa di camera, Pasquini), 15 Oct 1737, *Wgm*, *Wn*

Psiche (dramma per musica, 3), *D-Dl*, *US-Wc*

Doubtful: Osmeno e Fileno (dialoghetto), after 1712, *A-Wn*, attrib. Porsile or Caldara

ORATORIOS

performed at the Hofkapelle, Vienna, unless otherwise stated; MSS in A-Wgm, Wn

Sisara (Zeno), 23 March 1719

Tobia (Zeno), 14 March 1720

Il zelo di Nathan (G. Velardi), 1721

L'anima immortale creata e redenta per il cielo (B. Maddali), 26 Feb 1722

Il trionfo di Giuditta (Maddali), 18 Feb 1723

Il sacrifizio di Gefte (G. Salio), 9 March 1724; Brno, 1725

Mosè liberato dal Nilo, 1 March 1725

Assalone nemico del padre amante, 14 March 1726

L'esaltazione de Salomone (Maddali), 6 March 1727

L'ubbidienza a Dio (A.M. Lucchini), 9 March 1730

Due re, Roboamo e Geroboamo (F. Fozio), 23 Feb 1731

Giuseppe riconosciuto (Metastasio), 12 March 1733; Rome, 1754

La madre de' Maccabei (F. Manzoni-Giusti), 14 March 1737

Port (Scots Gael.; pronounced 'porsht'; pl. *puirt*). A term for a short harp prelude of a particular character, composed and played in Scotland in the 16th and 17th centuries. It is a grave, formal genre not suggestive of either singing or dancing. Ports were mainly composed for aristocratic patrons, sometimes in honour of famous harpists. No notated Scottish harp music survives from the period, but ports were often transcribed at a slightly later date for lute and other instruments (e.g. Lady Margaret Wemyss's Lutebook of *c*1645 contains *Port Robart*, believed to have been composed about 70 years earlier for Robert Stewart, Earl of Lennox). After 1700, 'port' lost its precise designation and came to mean simply an instrumental piece. A notable 18th-century example is *Rory Dall's Port*, probably composed about 1755 by James Oswald, for violin and continuo.

The term *puirt-a-beul* means 'tunes with the mouth', and refers to a type of singing used in Scotland to accompany dancing when instruments are not available (*see* SCOTLAND, §II, 5(ii)).

DAVID JOHNSON

Porta, Bernardo (*b* Rome, 1758; *d* Paris, 11 June 1829). Italian composer and conductor, active in France. A pupil of Magrini, he was at first *maestro di cappella* and director of the orchestra at Tivoli, and then moved into the service of the Prince of Salm, the prelate for Rome. In Italy he wrote masses, motets, two oratorios and an opera *La principessa d'Amalfi*, which was produced with little success in Rome (1780). He must have been active in Paris by 1788 (when the cantata for the Baron de Bagge was performed on 24 March). In spite of being entrusted with three librettos by Sedaine, only *Le diable à quatre* had any success (11 performances). He remained in Paris for the rest of his career. Among his many stage works performed there were *Les Horaces* (1800) and *Le connétable de Clisson* (1804); the latter had little success and earned its composer a satirical vengeful song. He taught harmony in various private establishments until 1822. Much of his instrumental music was intended for beginners.

WORKS

printed works published in Paris unless otherwise stated

STAGE

first performed in Paris unless otherwise stated

La principessa d'Amalfi (op), Rome, Argentina, 1780
Le diable à quatre, ou La double métamorphose (oc, 3, M.-J. Sedaine), OC (Favart), 14 Feb 1790

PAULETTE LETAILLEUR/DAVID CHARLTON

Porta, Costanzo (*b* Cremona, 1528–9; *d* Padua, 19 May 1601). Italian composer and teacher. He was praised as an exceptionally skilful composer by fellow musicians and theorists alike. Artusi extolled his mastery of contrapuntal complexity, while Zacconi named him first among the four most outstanding contrapuntists known to him. The extent and the consistently excellent quality of his music, sacred and secular, and his widespread influence as a teacher of many younger composers make him one of the major figures in Italian Renaissance music.

1. LIFE. The approximate date of his birth derives from a letter dated 1 April 1592, in which he stated that he was 63 years old. The Franciscan Minorite Conventuals, of which he eventually became a member, demanded a thorough training in classics, philosophy and theology. It may be assumed that he received his first schooling at their convent of Porta S Luca, Cremona. Somewhat later he moved to Casalmaggiore, perhaps to enter his novitiate; the year of his ordination is not recorded. In about 1549

1. Costanzo Porta: portrait by an unknown artist (Museo Civico, Padua)

he was transferred to S Maria Gloriosa dei Frari, Venice. He became a pupil of Willaert, *maestro di cappella* of S Marco; among his fellow pupils were Claudio Merulo and Zarlino. With Merulo he formed a lifelong friendship, which is documented in terms of great affection in Merulo's edition of Porta's five-part introits of 1566.

Porta took up his first professional position in 1552 as *maestro di cappella* of Osimo Cathedral, and he held the post for 13 years. This period brought him the patronage of the Della Rovere family, the ducal house of Urbino. Several of his publications, which began to appear in 1555, were dedicated to members of the family; Cardinal Giulio della Rovere, who was to be specially helpful in advancing his career, was twice honoured in this way.

On 9 January 1565 Porta was offered the position of *maestro di cappella* of S Antonio in Padua (Il Santo). After some bargaining – he requested that his appointment be approved by the entire monastic community – he was ready on 14 April 1565 to assume his duties. On 12 May 1565 the minister-general of the Franciscan order requested his services at the Pentecostal celebrations of the Franciscan General Chapter in Florence, where he met, among others, Duke Cosimo I de' Medici and his son Francesco and the cardinals Carlo Borromeo and Felice Peretti (later Pope Sixtus V). His 13-part *Missa Ducalis*, in which the 13th voice intones a cantus firmus throughout to the words 'protege Cosmum ducem principemque Franciscum', celebrates the event: it was placed in the Medici library on 8 June 1565.

Porta did not remain long at Padua. On 13 January 1567 Giulio della Rovere, as Archbishop of Ravenna, requested his transfer to that city. The development of the music at the basilica there, enthusiastically supported by Della Rovere, occupied Porta for the next seven years. His removal on 5 September 1574 to the Santa Casa at Loreto was again instigated by Della Rovere, who at the same time commissioned him to write masses in honour of the coming jubilee year 1575, 'short and in a manner which would make the text easily comprehensible'. The resulting first book of masses was published in 1578, only a few weeks before the cardinal's death. Thereupon Cardinal Borromeo unsuccessfully attempted to win Porta's services for Milan Cathedral. Instead, on 30 June 1580 he returned to Ravenna, dedicating his important *Liber quinquaginta duorum motectorum* to the governor of Loreto as a parting gift.

During the following years Porta visited at least two important centres of musical activity: the Este court at Ferrara, where he was much taken with the famous 'concerto di donne' and where he met Luzzaschi, and the Gonzaga court at Mantua where he met Wert. In both places he was acclaimed for his madrigals. In 1585 he commemorated the election of his former protector Felice Peretti to the papacy as Sixtus V by dedicating to him his third book of six-part motets. By this time his fame was spreading far: in 1587 he was elected to membership in the Congregazione dei Signori Musici di Roma, a group that included such illustrious figures as Palestrina and Lassus.

Porta was also an important teacher of north Italian composers of the transitional period around 1600. The solid craftsmanship and control of contrapuntal writing exhibited in his students' works surely bear witness to Porta's gifts as a teacher. In addition to a number of lesser-known figures, he may have taught Diruta and Viadana.

In 1589 disunity arose in the chapel of Padua Cathedral, then under the direction of Giovanni Battista Mosto, and Porta was chosen on 1 May 1589 to replace him. In 1592 he was ordered peremptorily to move from his lodgings nearby to the Convento del Santo some distance away. His appeal against the order was rejected, and he moved to the monastery. In 1595 he once more became director of music at Il Santo. For his many years of devoted service to his order he was honoured on 10 June 1596 by having the title of 'magister musicae' conferred upon him. In contrast to his previous term at the Cappella, when he had been actively protected by Cardinal della Rovere, his life now became increasingly difficult through lack of support. Several letters from him bewail the fact that he was not assigned enough musicians to fill all the existing vacancies. He spent his last years in a dwindling chapel, beset by failing health and by jealousy and intrigue on the part of his assistant and eventual successor, Bartolomeo Ratti. He died on 19 May 1601.

2. WORKS. Porta's lifelong service to the Franciscans is reflected in his music, the larger part of which consists of sacred works. Seven books of motets (a gap in the numbering indicates that one other is lost) appeared at regular intervals throughout his career, and it is possible to trace through them the development of his great skills as a contrapuntist in the tradition of Gombert and Willaert. With few exceptions, the motets are relentlessly polyphonic. They are flexible structures unfolding through a succession of richly varied imitative points, normally resulting in entirely through-composed works. His responsories include writing in double, and occasionally triple, invertible counterpoint in the repeated sections. A noteworthy feature of the earlier motet publications is the frequency of paired imitation; the later books show an

increasingly intense polyphonic complexity. The famous book of 1580 includes the often cited *Diffusa est gratia*, in which four of the seven voices are derived by various canonic means (fig.2), as well as the six-part *Vidi speciosam*, with its mensuration canon. Even more consistently severe in their polyphony are the six-part motets of 1585, fully two-thirds of which involve the use of canon in three voices. Yet in the same motets descriptive passages in the texts are often mirrored in appropriate rhythmic flexibility and melodic movement. Another feature, apparent in the later motets for a large number of voices, is the inclination towards polychoral treatment, in which vocal colours are managed with considerable brilliance. The Marian litanies written for Loreto, the vesper psalms and *Magnificat* settings are other examples of his polychoral writing.

Porta wrote 15 masses, 12 of which were published in 1578. The print opens with six four-part masses named after the first six modes. The *Missa secundi toni* and *Missa tertii toni* are parodies based on Palestrina's madrigal *Vestiva i colli* and Rore's madrigal *Come havran fin* respectively. Stylistic features of the other four suggest that they too are parodies. Three other masses in the print are confirmed by their titles as parodies: the five-part *Missa 'Descendit angelus'* is based on a motet by Hilaire Penet and the six-part *Missa 'Audi filia'* on one by Gombert; the model for the six-part *Missa 'Quemadmodum'* is as yet unidentified. The remaining masses, both printed and manuscript, are cantus-firmus works, some using plainchant, some original melodies. The *Missa Ducalis* (whose 13 parts are disposed as three four-part choirs and a tenor cantus firmus) and the eight-part *Missa 'Da pacem'* have several features in common: both have cantus firmi that retain their separate texts throughout; both introduce quite unusual textual troping in their final movements (the latter work includes similar troping at the beginning as well); and both were written for special purposes, rather than for general liturgical use – the one, as has been mentioned, pleading for Duke Cosimo I de' Medici and his son, the other commemorating the Battle of Lepanto (1571). Cantus-firmus technique is also the basis of the five-part introits and the posthumously published *Hymnodia sacra*. The latter, with its 46 hymns, is among the largest vesper hymn cycles originating in the 16th century. Porta generally set the even-numbered stanzas of the hymn texts in an astounding variety of polyphonic treatments, leaving the odd-numbered stanzas to be chanted. As regards general stylistic features of the sacred music of the period – the nature of the melodic movement, highly regulated treatment of dissonance, modal usage, restraint in the use of chromaticism, rhythmic precision of the word-setting – he fully equalled the disciplined style of Palestrina; in polyphonic severity he exceeded it. Similarly, his treatise on counterpoint is traditional but assured: he uses some of the same cantus firmi as in Zarlino's *Istitutioni harmoniche*.

2. *Opening of the cantus part of the motet 'Diffusa est gratia', for 7 voices, from Porta's 'Liber motectorum' (Venice: Angelo Gardano, 1580)*

In his secular works Porta followed the general trends of Italian madrigal composition during the second half of the 16th century. Most of his settings are for five voices (the single four-part book reflects the personal taste of the dedicatee); the texts are partly by classic poets, including Petrarch, Ariosto and Tasso, partly lightly amorous and frequently occasional. The occasional pieces highlight Porta's close ties with the house of Della Rovere, many of them celebrating weddings, births, departures and returns and other festivities in the family, as well as commemorating occasions on which Porta received some favour or bounty from them. His madrigals are much less contrapuntal than his church music, with some harmonically adventurous text expression, as in the five-part *Mentre nel tristo petto* in the 1569 book. Such a piece suggests that the high regard in which Guglielmo Gonzaga and Alfonso d'Este held Porta's madrigals was not misplaced.

LILIAN P. PRUETT

Porta, Ercole [Hercole] (*b* Bologna, 10 Sept 1585; *d* Carpi, 30 April 1630). Italian composer and organist. In 1609 he was organist at the collegiate church of S Giovanni, Persiceto, near Bologna, and directed the music there from 1612 until 1620. He was *maestro di cappella* of Carpi Cathedral from January 1622 until 1625 and again from no later than 1628; in the interim he was organist at nearby Rubiera.

Apart from the *Hore di recreatione*, which is tentative in its adoption of the new monodic style, Porta's output consists of sacred music in the up-to-date concertato style for a few voices and continuo popular in the north Italian provinces where resources were limited. Thus much of the music in his 1609 and 1613 collections is for fewer than four voices. The 1613 book also contains a sonata for cornett, violin and two trombones in the same style. The presence of instruments is a particular feature of the *Sacro convito*, which includes a mass and two motets accompanied by a five-part church orchestra of two violins and three trombones, a scoring that became fairly common in larger-scale ceremonial music. This mass may be the first to include such an orchestra in a complete setting: it was probably intended for a major feast. Porta's music shows a good understanding of sonority, textural context and idiomatic vocal writing; distant modulations and striking progressions are used to enhance word-setting. Sometimes the voices have more ornate lines than the accompanying instruments, which here provide a sustained background; at other times they are doubled exactly – even the violins do not have independent parts. While this mass belongs to the long line of Venetian orchestral masses, Porta possibly learnt ways of combining voices and instruments from a Bolognese composer, Girolamo Giacobbi. The *Sacro convito* also contains a motet, *Corda Deo dabimus*, for soprano, alto and three trombones, the latter providing a richly sonorous accompaniment: such a combination is reminiscent of Giovanni Gabrieli, though it was not often specified by his successors. Porta also offered interesting advice to the organist in this publication: he should use his ear, since not all the dissonances are figured, and adopt a sparse texture when accompanying few voices, thickening it (without adding stops) in the fuller passages.

Porta, Francesco della. *See* DELLA PORTA, FRANCESCO.

Porta, Gasparo della. *See* DELLA PORTA, GASPARO.

Porta, Giovanni (*b* Venice or the Veneto, *c*1675; *d* Munich, 21 June 1755). Italian composer. He was a pupil in Venice of Francesco Gasparini, and is thought to have been from

1706 to 1710 at Cardinal Ottoboni's court in Rome, where he would have worked with Corelli. He held the post of *maestro di cappella* at Vicenza Cathedral in 1710–11 and at Verona Cathedral in 1714–16. In 1716 he returned to Venice and began a busy period of opera composition. Porta is known today mainly for his *Numitore*, commissioned to open the first season of the Royal Academy in London on 2 April 1720. He afterwards continued to compose operas for Italian theatres. From 1726 to 1737 he was *maestro di coro* at the Ospedale della Pietà in Venice, where, as a colleague of Vivaldi, he wrote a wealth of sacred music for the renowned female chorus and orchestra and where he was paid an annual salary of 200 ducats, with extra payments for occasional works. From 1726 he was also on the roster of the Accademia Filarmonica in Verona. In 1733 he applied for the post of *maestro di composizione* at the Ospedale dei Derelitti (the Ospedaletto), but his obligation to the Pietà preventing his accepting a second position. In 1736 he entered the competition for the post of *maestro di cappella* at San Marco, but he again withdrew; Antonio Lotti was elected. The following year Porta left Venice to accept a position as *Hofkapellmeister* at the Bavarian court of the Elector Karl Albrecht in Munich, where he remained until his death.

Porta's operas are representative of the general Venetian trends of the 1720s and 30s, when the close relationship between genres affected the drama and virtuosity of the music. The composer shared the penchant for fast running scales, arpeggios, wide melodic leaps, extended sequences and especially the popular Venetian sonority of the tutti unison texture. In the sacred music he composed for the Pietà the basic medium is the four-part string orchestra with continuo and a choir of sopranos and altos. Many works call for double choir and frequently employ ritornello form. They use a wide range of textures, from the tutti unison to four-part writing, in ways that reinforce the musical structure. The solo movements are clearly virtuoso, with trills, passage-work, wide leaps and long melismas. The influence of opera and the concerto helps to produce a repertory of distinctive sonority and lively character.

FAUN TANENBAUM TIEDGE

Porta, Giovanni Battista (*b* Monza; *fl* 1616). Italian composer and organist. He was a pupil of G.C. Gabussi

and seems to have remained at Monza all his life. His only known music is *Madrigali a cinque in laude di S Carlo* (Venice, 1616). He was probably one of an artistic group who met in the house of Gabrio Recalcati (to whom the collection is dedicated); their admiration for Carlo Borromeo may well have inspired the collection, the texts of which were written by G.P. Giussani.

Portaleone, Abraham ben David (*b* 1542; *d* Mantua, 1612). Italian Jewish physician and writer on Hebrew antiquities. He discussed music, at great length, in his final work *Shilṭei ha-gibborim* ('Shields of Heroes'; Mantua, 1612), in which he glorified the ancient Temple, its architecture, its liturgy and its music. Ten of the 90 chapters are devoted to music. Portaleone conceived the music of the Levites after Italian Renaissance practices and humanist music theory: thus the discussion turns on polyphony, lute tablatures, contemporary instruments (in analogy to ancient ones, which are described in considerable detail), modes, the doctrine of ethos, simple and compound intervals and the differentiation between consonance and dissonance. He maintained that music in the Temple was a learned art, acquired after a rigorous course of training; it was notated, thus meant to be preserved; its performance was based on written sources. Portaleone acknowledged Judah Moscato as his teacher, although he noted that they conceived music differently: whereas Moscato spoke, generally, of number, harmony and 'science', treating music for its cosmological and spiritual connotations, his pupil was concerned with *musica practica*. Nevertheless, they concurred on several themes: the glorification of music in the ancient Temple; the differentiation of art music from other forms of Jewish music-making, particularly synagogal song; that music is a form of rejoicing; and that the return to Israel will reveal the true nature of music.

DON HARRÁN

Portamento (i) (It.). In vocal terminology, the connection of two notes by passing audibly through the intervening pitches. The term 'portamento della voce' means 'carriage of the voice' and defines an important vocal technique for legato singing already established at the beginning of the 17th century although without a consistent terminology. G.B. Doni (*Trattato primo sopra il genere enarmonico*, 1635) speaks of 'dragging ['strascinare'] the voice little by little, almost imperceptibly, from the low to the high, or the reverse . . . which is a sort of *portamento di voce*'. In 1620, Francesco Rognoni (*Selva de varii passaggi*) uses the phrase 'portar della voce' to describe the smooth connection of two notes a step apart ascending, an effect referred to by Christoph Bernhard (*Von der Singe-Kunst, oder Maniera*, *c*1649) as CERCAR DELLA NOTA. In French treatises of the same period, this practice is defined as a type of ornament, the PORT DE VOIX, where the 'voice passes flowingly from *re* to *mi* as if it pulled the *re* along while continuing to fill the space of the whole interval' (*MersenneHU*).

At the end of the 18th century the term 'cercar della nota' (which had primarily referred to the ornamental approach to a note from below by an interval of as large as a 4th) was sometimes used interchangeably with portamento, and beginning in the 19th century the term 'port de voix', largely disassociated from its earlier definition as a lower appoggiatura or mordent, became the French equivalent of portamento. In discussing a specific aria, J.C.F. Rellstab (*Versuch über die Vereinigung der musikalischen und oratorischen Declamation*, 1786) wrote that 'any good singer' would employ the 'cercar della nota' on its first interval (a rising minor 3rd). This practice of connecting the written notes was to be understood and improvised without notation. J.F. Schubert (*Neue Singe-Schule*, 1804) noted that 'we have no sign in music for this melting of tones into one another', which he too called 'cercar della nota', and proposed a simple line between notes. Manuel García (*Traité complet de l'art du chant*, 1840–44/*R*) suggested the slur as a sign for the *port de voix* (or portamento). The written indication 'con portamento' also occurs, as in specific passages for the title character in Wagner's *Der fliegende Holländer* (1843).

Lacking a clear notation, it is difficult to judge where or how often the portamento was used in singing of earlier periods. In about 1824, Richard Mackenzie Bacon wrote that use of portamento, 'or the lessening the abrupt effects of distant intervals, or smoothing the passage between those less remote, by an inarticulate gliding of the voice from one to the other, whether ascending or descending . . . is in constant use amongst Italian singers, and sometimes with beautiful effect'. Domenico Corri (*The Singer's Preceptor*, 1810) wrote that 'the *portamento della voce* is the perfection of vocal music', allowing for the 'sliding and blending of one note into another with delicacy and expression'. However, J.F. Schubert considered portamento 'disgusting and unbearable' when done in the wrong place, and García warned that 'in overdoing it, one risks making the execution weak and languid'.

Underlying the issue of appropriate use, and the search for a clear notation, is the question of whether the portamento is an ornament or a continual aspect of good singing. It would seem that what in the 17th century began as an ornament became by the beginning of the 19th a continual effect that was warned against by a growing number of singing masters. By the mid-20th century, the portamento was beginning to be described in derogatory terms as 'swooping' or 'scooping' (W.J. Henderson, *The Art of Singing*, 1938), but it is clear from the evidence of early recordings that the tradition of portamento was still strong. Over the course of the 20th century its use has declined radically. Now most often associated with the popular style of singing called 'crooning', which has increased the pejorative associations for some, portamento is largely rejected in classical vocal music and opera. This so-called 'pure' style of singing, however, has no basis in vocal practice of the 17th, 18th or 19th centuries.

ELLEN T. HARRIS

Portamento (ii) (It.). In instrumental music the term portamento generally denotes an expressive effect – 'the emotional connection of two notes' (Flesch) – produced by members of the violin family and certain wind instruments in emulation of the voice, with the exception of Tessarini's in *Grammatica per i principianti di violino* (*c*1745) unusual use of the term to designate violin positions. It gradually gained regular acceptance as an expressive colouring in string playing during the late 18th century and was executed most commonly in solo contexts during upward shifts in slurred bowing, the relevant finger sliding rapidly between the appropriate notes. It became a hallmark of the playing styles of Kreutzer, Rode and Baillot, while Lolli and Mestrino used it in exaggerated fashion (e.g. the 'couler à Mestrino', illustrated in Woldemar: *Grande méthode ou étude élémentaire pour le violon*, Paris, 1798–9). Mestrino's presence at Esterháza (1780–85) may have encouraged Haydn to introduce fingerings suggestive of portamento in some of his string quartets.

The use of portamento increased during the 19th century. Baillot (1834) and Habeneck (*c*1835) recommended its tasteful introduction, either ascending (with crescendo) or descending (with diminuendo), particularly in slow movements and sustained melodies. Spohr's instructions (1832), supplemented by copious examples, stipulate a rapid finger-slide with the cue-sized note inaudible (ex.1). His approach was shared by most

Ex.1 Spohr: *Violinschule* (1832)

important 19th-century schools of string playing and was closely related to the vocal practice of García (1856). Some later writers interlinked the speed of the slide with considerations of character or mood. Bériot (1858) distinguished three types of *port de voix*: *vif* (lively), *doux* (sweet) and *traîné* (drawn out). The incidence and the more protracted execution of portamenti in both solo and orchestral contexts increased as a result.

Flesch, among others, reacted strongly against this trend, deploring the overuse of portamento, its slow execution, its introduction for convenient shifting rather than for expressive ends, and the false accents it created. He recommended that portamento usage should coincide as far as possible with the climax of a phrase and stressed the importance of sensitive dynamic shading, considering 'offensive' Joachim's frequent, generally slow portamenti with crescendo. Flesch, like Becker and Rynar, advocated three kinds of portamento: a straightforward slide on one finger (ex.2*a*); 'B-portamento', in which the beginning finger slides to an intermediary note (ex.2*b*); 'L-portamento', in which the last finger slides from an intermediate note (ex.2*c*). The 'L-portamento' was rarely practised until the 1930s, when Heifetz used it frequently.

Ex.2 Flesch: *Die Kunst des Violinspiels* (1923–8)

(a)

(b) the 'B-portamento'

(c) the 'L-portamento'

Portamento underwent a process of gradual refinement in the 20th century, the consensus favouring its selective use and rapid execution with minimum bow pressure. The move by, for example, Flesch, Galamian and Casals to reduce the incidence of formal shifts and cultivate cleaner articulation by introducing novel extensions and contractions, also assisted this process. The onus of adding portamenti gradually passed from performer to composer.

String portamento was emulated by some late 18th- and 19th-century flautists, notably Tromlitz (1791; 'das Durchziehen') and Nicholson (*c*1816; 'the glide'). Equivalent effects were also adopted on the clarinet by Berr (1836), and by C. Almenraeder (*Fagottschule*, Mainz, 1843) and J.-B.-J. Willent-Bordogni (*Méthode complète pour le basson*, Paris, *c*1844) on the bassoon.

ROBIN STOWELL

Portar la voce (It.). *See* ORNAMENTS, §4.

Portative. Strictly the same as *organetto*, *organino*, i.e. in 14th- and 15th-century usage the name given to the little organ of treble flue pipes carried (Lat. *portare*) by a strap over the player's shoulder. It was played by the right hand (fingering 2-3-2-3 is implied in many paintings), and its bellows were blown by the left hand. It contained one, two or more octaves of pipes in single or multiple ranks, sometimes with one or two larger bass pipes like the Bourdons of larger POSITIVE organs. The keys are earlier shaped like buttons or typewriter keys. The sound was like a set of flutes played by a keyboard. Some composers, such as Landini and Dufay, are represented playing small organs, and the instrument was useful in the many 15th-century Italian paintings (especially Venetian ones) of angel choirs at the Virgin's Coronation, etc. French sources give the impression of not knowing the term (a bill from St Maclou, Rouen, in 1519, refers to 'portaige d'une petites orgues'), while *portiff* was used in Germany (Frankfurt, 1434) and also *organi portatili* in Italy (Barcotto, MS *c*1650) and England (Roger North, MS *c*1715). Since in England 'positive organ' is a term very

Portative organ with chromatic keys: detail from the 'Mystic Marriage of St Catherine' by Hans Memling, completed 1479 (Memlingmuseum, Bruges)

rarely used, such references as 'portatives' (poem of Gawin Douglas), 'payre of portatives' (1522 will), 'portatyffes' (St Andrew, Canterbury, *c*1520) are as likely to mean a small, movable organ as a portative proper, especially since some such organs evidently contained a regal stop (1536 contract). Often, as in Henry VIII's inventory of 1547, such a 'payre of portatives' in a privy chamber is contrasted with the larger 'organes' in the chapel.

For further illustration *see* PERFORMING PRACTICE, fig.5.

Portato (It.). A type of bowstroke. *See* BOW, §II, 3.

Port de voix (i) (Fr.: 'carrying of the voice'). In Baroque vocal and instrumental music, an appoggiatura, particularly one that resolves upwards by a tone or semitone. Deriving from late 16th-century Italian improvisatory practice – Bovicelli's *Regole, passaggi di musica, madrigali et motetti passeggiati* (1594/*R*) contains written-out examples – it became one of the most important graces of French Baroque music. In France it was rarely printed before the late 17th century, but was left to the performer to add extempore. Bacilly explained in his *Remarques curieuses sur l'art de bien chanter* (1668/*R*, 4/1681; Eng. trans., 1968) that the accessory note anticipated the beat and took value from the preceding note. Perfection, he continued, lay in its also taking 'some of the value' of the note of resolution, as this enabled one to linger on the accessory note.

In his *Méthode claire, certaine et facile pour apprendre à chanter la musique* (1678, 6/1707/*R*) Jean Rousseau acknowledged that the accessory note could be sounded either before the beat, or on the beat, and from the end of the 17th century this second option prevailed. In the late Baroque period, under the influence of instrumental practices, the note of resolution was usually decorated with a mordent.

GREER GARDEN

Port de voix (ii) (Fr.). In modern French usage the term means the same as PORTAMENTO (i).

Portée (Fr.). *See* STAFF.

Portenaro, Francesco. *See* PORTLNARO, FRANCESCO.

Porter, Andrew (*b* Cape Town, 26 Aug 1928). British writer on music. While at school in Rondebosch he accompanied Albert Coates's rehearsals and played continuo at his performances. From 1947 to 1950 he was organ scholar at University College, Oxford, where he read English. He then embarked on a career in music criticism in London, contributing to *The Times*, the *Daily Telegraph*, the *Daily Express* and other newspapers, before joining the *Financial Times* in 1952. There he built up a distinctive tradition of criticism, with longer notices than were customary in British daily papers, based on his elegant, spacious literary style and always informed by a knowledge of music history and the findings of textual scholarship as well as an exceptionally wide range of sympathies, with 19th-century opera and its interpretation as their focal point.

Porter also established a reputation during the 1950s and 1960s as a sensitive critic of ballet and as a broadcaster. He wrote regularly for *Opera* (of which he was associate editor, 1953–6, and thereafter a member of the editorial board) and *Gramophone*. In 1960 he was appointed editor of the *Musical Times*; during his seven years in that position he substantially modernized the journal and widened its scope, particularly in the direction of new music and opera. In 1972–3 he spent a concert season in New York as critic of the *New Yorker*, where his extended and well-informed notices attracted considerable attention; after a year with a fellowship at All Souls College, Oxford, he returned for a longer-term appointment in 1974.

In the USA Porter undertook some teaching (notably at the CUNY and the University of California at Berkeley, where he was Ernest Bloch professor, 1980–81) and broadcasting; he also became editor of the newsletter of the American Institute for Verdi Studies, founded in 1976, and a member of the editorial board of *19th Century Music*, founded in 1977. In 1992 he returned to London as music critic for *The Observer* and in 1997 moved to the *Times Literary Supplement*.

Porter has prepared singing translations of many operas, including works by Handel, Haydn, Mozart, Rossini, Verdi, Wagner (the *Ring*, *Tristan* and *Parsifal*) and Strauss (*Intermezzo*); his English texts are distinguished by the clarity of their language and their close

attention to the line and rhythm of the music. As a scholar his work has centred on Verdi, and particularly *Don Carlos*, whose full original version he was principally responsible for rediscovering in the Paris Opéra library. He has directed opera productions in New York, Seattle and Bloomington and has written several librettos including one on *The Tempest* for John Eaton (1985).

STANLEY SADIE

Porter, Cole (Albert) (*b* Peru, IN, 9 June 1891; *d* Santa Monica, CA, 15 Oct 1964). American songwriter. His parents were wealthy and his mother, Kate, an accomplished amateur pianist, arranged for him to learn violin from the age of six and piano from the age of eight at the Marion Conservatory, Indiana. Porter began writing melodies – *The Bobolink Waltz* (1902) for piano was his first published work – and contributed words and music for amateur shows at the Worcester (Massachusetts) Academy (1905–9) and for the Dramatic Club at Yale University (1909–13). He sang with and conducted the university glee club and wrote two songs, *Bingo Eli Yale* and *Bulldog*, which remained popular as Yale football songs. For a time he studied law, but in 1915–16 studied harmony and counterpoint at Harvard University. In 1915 two of his songs were performed on Broadway ('Esmerelda' in *Hands Up* and 'Two Big Eyes' in *Miss Information*) and in 1916 he had his first Broadway show, *See America First*, a 'patriotic comic opera' modelled on Gilbert and Sullivan; all these shows were failures.

Porter moved to Paris in 1917, distributing relief supplies for three months, but his own frequently cited claims to military service in Paris during the rest of World War I are unsubstantiated. In 1919 he remained in Paris, married a socialite, and gained a reputation for giving fashionable parties in Paris, Venice, and on the Riviera, attended by the young, wealthy social élite. Meanwhile in 1919 he briefly studied counterpoint, composition, orchestration and harmony with Vincent d'Indy at the Schola Cantorum. He frequently performed his own songs at his parties; they matched the chic, esoteric mood of his social circle, but were slow to find acceptance in the theatre despite performances of *Hitchy-Koo of 1919*, *Greenwich Village Follies of 1924* and *Paris* (1928). In 1923 he wrote music for a ballet, *Within the Quota*, which was introduced in Paris and New York by the Swedish Ballet (revised as *Times Past*, 1970) and is one of the earliest examples of symphonic jazz. Porter first achieved popular success in 1929 with *Wake Up and Dream* in London, and *Fifty Million Frenchmen* in New York. There followed *Gay Divorce* (1932) with Fred Astaire, for whom he wrote 'Night and Day', and *Anything Goes* (1934) and *Panama Hattie* (1940) with Ethel Merman; for these and other song-and-dance musicals (some of which were later filmed) he wrote songs combining witty, often cynical words with what were to become some of his best-known melodies, for example 'Let's do it', 'Night and Day', 'I get a kick out of you', 'Begin the Beguine', 'Just one of those things', 'You're the Top' and 'It's De-lovely'. He also wrote songs for several films, notably *Born to Dance* (1936) and *Rosalie* (1937), and for revues.

In 1937 Porter was injured in a riding accident on Long Island, which cost him the use of his legs and required the eventual amputation of one, and caused him constant pain for the rest of his life. The demoralizing effect of this and the lack of any success with his songs for the next ten years gave rise to self-doubts and public speculation about his abilities as a songwriter. In 1948, however, he produced his masterpiece, *Kiss Me, Kate*; this musical play, based on Shakespeare's *The Taming of the Shrew*, was a departure from the song-and-dance musical comedies he had written, but it included some eight songs that became immensely popular. Of his later musicals only *Can-Can* (1953) was successful. He also wrote songs for films in Hollywood, notably *High Society* (1956), in which Bing Crosby and Grace Kelly sang 'True Love'; a film biography with 14 of his songs, called *Night and Day*, was made in 1946. Porter's wife died in 1954 and

Cole Porter

he became a semi-recluse in New York for the last years of his life. Several of his shows were revived in the 1960s, and there have been revues based on his life and work.

Porter was musically one of the most thoroughly trained popular songwriters of the 20th century, though he was perhaps better known as a lyricist; his texts were in the height of fashion, seldom sentimental, and filled with *doubles entendres* and witty rhymes, even referring directly to sex and drugs. At first his songs were too shocking for the theatre (he never wrote for Tin Pan Alley) and they retain much of their freshness. Many of his melodies have chromatic descending lines (e.g. 'Let's do it'), or are slow with long lines spun from repetitions, sequences and variations of single motifs (e.g. 'What is this thing called love?'). Many have sections of repeated notes, chromatic figures, or narrow ranges suggesting monotony (e.g. 'Ev'ry Time we say Goodbye'). His ability to move between major and minor modes within a single melody, often within a single phrase, was remarkable. He experimented with harmony, used triplet figures within duple metres, and wrote in extended forms unusual in popular song ('Begin the Beguine' is 108 bars long and also displays Porter's typical penchant for Latin rhythms). Wilder (1972) observed that after the mid-1950s the quality of Porter's songs deteriorated, but that until then he had created perhaps the most theatrically elegant, sophisticated, and musically complex songs of American 20th-century popular music.

STAGE

unless otherwise stated, all are musicals and dates those of first New York performances; book authors shown in parentheses; lyrics mostly by Porter

See America First (T.L. Riggs and Porter), 28 March 1916 [incl. I've a shooting box in Scotland]
Hitchy-koo of 1919 (revue, G.V. Hobart), 6 Oct 1919 [incl. Old-Fashioned Garden]
Hitchy-koo of 1922 (revue, H. Atteridge), Philadelphia, 19 Oct 1922
Within the Quota (ballet), Paris, 25 Oct 1923
Greenwich Village Follies of 1924 (revue), 16 Sept 1924 [incl. I'm in love again]
La revue des ambassadeurs, Paris, 10 May 1928
Paris (M. Brown), 8 Oct 1928 [incl. Let's do it]
Wake up and Dream (revue, J.H. Turner), London, 27 March 1929 [incl. What is this thing called love?]
Fifty Million Frenchmen (H. Fields), 27 Nov 1929 [incl. You do something to me, You've got that thing]
The New Yorkers (Fields, after E.R. Goetz and P. Arno), orchd H. Spialek, 8 Dec 1930 [incl. Love for Sale]
Gay Divorce (D. Taylor), orchd Spialek and R.R. Bennett, 29 Nov 1932 [incl. Night and Day]; film as The Gay Divorcee, 1934
Nymph Errant (R. Brent, after J. Laver), orchd Bennett, London, 6 Oct 1933
Anything Goes (G. Bolton, Wodehouse, H. Lindsay and R. Crouse), orchd Bennett and Spialek, 21 Nov 1934 [incl. All Through the Night; Anything goes; Blow, Gabriel, blow; I get a kick out of you; You're the top]; film, 1936
Jubilee (M. Hart), orchd Bennett, 12 Oct 1935 [incl. Begin the Beguine, Just One of those Things]
Red, Hot and Blue (Lindsay and Crouse), orchd Bennett, 29 Oct 1936 [incl. Down in the Depths, It's De-Lovely, Ridin' High]; film, 1949
You Never Know (R. Leigh), orchd Spialek, 21 Sept 1938 [incl. At Long Last Love]
Leave it to Me (B. and S. Spewack), orchd D. Walker, 9 Nov 1938 [incl. My heart belongs to daddy]
Du Barry was a Lady (Fields and B. DeSylva), orchd Spialek, Bennett and T. Royal, 6 Dec 1939 [incl. Do I love you?, Friendship]; film, 1943
Panama Hattie (Fields and DeSylva), orchd Bennett, Spialek and Walker, 30 Oct 1940 [incl. Let's be buddies, Make it another old fashioned, please]; film, 1942
Let's Face it (H. and D. Fields), orchd Spialek, Walker and Royal, 29 Oct 1941; film, 1944
Something for the Boys (H. and D. Fields), orchd Spialek, Walker, Bennett and Royal, 7 Jan 1943; film, 1944
Mexican Hayride (H. and D. Fields), orchd Bennett and Royal, 28 Jan 1944 [incl. I love you]; film, 1948
Seven Lively Arts (revue), orchd Bennett, Royal and Spialek, 7 Dec 1944 [incl. Ev'ry Time we say Goodbye]
Around the World in Eighty Days (O. Welles, after J. Verne), orchd Bennett and Royal, 31 May 1946
Kiss Me, Kate (B. and S. Spewack, after Shakespeare: *The Taming of the Shrew*), orchd Bennett, 30 Dec 1948 [incl. Another Op'nin', Another Show; So in Love; Wunderbar]; film, 1953
Out of this World (Taylor, R. Lawrence), orchd Bennett, 21 Dec 1950 [incl. Use your imagination]
Can-Can (A. Burrows), orchd P.J. Lang and R. Noeltner, 7 May 1953 [incl. Allezvous-en, Can-Can, C'est magnifique, I love Paris, It's all right with me]; film, 1960
Silk Stockings (G.S. Kaufman, L. McGrath and Burrows), orchd Walker, 24 Feb 1955 [incl. All of You]; film, 1957
Contribs. to: Hands Up, 1915; Miss Information, 1915; Telling the Tale, London, 1915; Very Good Eddie, London, 1918; Buddies, 1919; The Eclipse, London, 1919; As You Were, 1920; A Night Out, London, 1920; Mayfair and Montmartre, London, 1922; Phi-Phi, London, 1922; The Sun never Sets, London, 1938

FILMS

The Battle of Paris, 1929; Born to Dance, 1936 [incl. I've got you under my skin]; Rosalie, 1937 [incl. In the Still of the Night]; Break the News, 1938; Broadway Melody of 1940, 1940 [incl. I concentrate on you]; You'll Never Get Rich, 1941; Something to Shout About, 1942 [incl. You'd be so nice to come home to]; Hollywood Canteen, 1944 [incl. Don't fence me in]; Night and Day, 1946; The Pirate, 1948 [incl. Be a clown]; Adam's Rib, 1949; High Society, 1956 [incl. True Love]; Les Girls, 1957; Aladdin (for television), 1958

OTHER SONGS

Bingo Eli Yale, 1910; Bridget, 1910; Bulldog, 1911; Esmerelda, 1915; Two Big Eyes, 1915; Let's misbehave, *c*1925; The Laziest Gal in Town, 1927; Miss Otis Regrets, 1934; Thank you so much, Mrs. Lowsborough-Goodby, *c*1935; From this Moment On, 1950

DEANE L. ROOT/GERALD BORDMAN/R

Porter, (William) Quincy (*b* New Haven, CT, 7 Feb 1897; *d* Bethany, CT, 12 Nov 1966). American composer, viola player and educationist. He studied the violin as a child and began to compose at an early age. At Yale University (BA 1919, BMus 1921) he studied composition with

Parker and David Stanley Smith. In 1920 he took lessons in composition with d'Indy and the violin with Lucien Capet in Paris. On returning to the USA in 1921, he studied with Bloch in New York and later in Cleveland, where he joined the De Ribaupierre Quartet as viola player in 1922 and the staff of the Cleveland Institute of Music as a teacher of theory in 1923. With the aid of a fellowship from the Guggenheim Foundation, Porter returned to Paris in 1928 for a three-year stay, this time not to study but to compose. During these years in Paris, Porter developed his personal style and produced the works which first established his reputation – in particular, the Violin Sonata no.2 and the String Quartet no.3, both of which won awards of the Society for the Publication of American Music. In 1932 Porter was appointed professor of music at Vassar College, where he remained until called in 1938 to become dean of the faculty of the New England Conservatory, assuming the position of director in 1942. In 1946 he returned to Yale as professor of music, a post he held until his retirement in 1965.

During Porter's Yale period, his major works included the Concerto concertante, which was awarded a Pulitzer Prize in 1954, and the Viola Concerto, which was first performed and recorded by Paul Doktor and taken up by other soloists, including Harry Danks and William Primrose. The latter described the work as 'one of the most engaging of all viola concertos' (*Violin and Viola*, London, 1976/*R*, 186).

Porter's string quartets contain the essence of his style: smooth scalic melodic lines in a sometimes chromatic context, always rhythically lively and characteristically idiomatic for the string player. Together, Porter's quartets form one of the most substantial contributions to the literature by any American composer; several of them were in the repertory of major ensembles but have fallen into undeserved neglect in later years.

HOWARD BOATWRIGHT

Porter, Samuel (*b* Norwich, 1733; *d* Canterbury, 11 Dec 1810). English cathedral musician. He was a pupil of Maurice Greene and his deputy organist at St Paul's Cathedral, London during the 1750s. From 1757 to 1803 he was organist of Canterbury Cathedral, for which he wrote the services in D and B♭ and anthems published posthumously as *Cathedral Music* (London, *c*1815) by his son, W.J. Porter (1765–1865), himself the composer of *Two Anthems a Sanctus, Two Single & Two Double Chants* (London, *c*1798) and one-time owner of two sets of partbooks in the hand of John Gostling (now in *GB-Ob* Tenbury 797–803 and 1176–82). Apart from the widely used *Cathedral Music*, a few chant tunes and two manuscript catches in the collection of the Canterbury Catch Club, the extant music attributed to Samuel Porter appears to be by his son Samuel (1767–1823), who was organist of St Mary of Charity, Faversham, and a member of the King's Band. The elder Samuel was responsible for important manuscript copies of music by Greene, William Boyce and others at Canterbury and in *GB-Lbl*, *Lsp* and *Ob*. His compositions are competent but ordinary.

ROBERT FORD

Porter, Walter (*b* *c*1587/*c*1595; *d* London, bur. 30 Nov 1659). English composer, lutenist and tenor. Anthony Wood stated that he was the son of Henry Porter (BMus of Christ Church, Oxford), though it is uncertain if this is the Henry Porter listed among 'Lutes and others' at the funeral of Queen Elizabeth I and among King James I's sackbuts and hautboys (1603–17). The doubt about his date of birth arises from two conflicting pieces of evidence. In a petition to the governors of Westminster School dating from the last years of his life (probably 1658) he describes himself as 'being 70:tie and odd yeeres of age his strength and faculties decayed', whereas in a marriage licence dated 1630 – which, indeed, may not refer to this Walter Porter – his age is given as 35. His voice must have broken between 1603, when he was a Westminster Abbey chorister at Elizabeth I's funeral, and 1612, when, on 15 February, he sang tenor in George Chapman's Middle Temple and Lincoln's Inn masque. It is perhaps more likely that these two events occurred when he was 16 and 25 years old respectively than when he was 8 and 17.

On 5 January 1616 Porter was promised the next tenor vacancy among the Gentlemen of the Chapel Royal, and on 1 February 1617 he was sworn in. Shortly before this he must have written the madrigal *Wake, sorrow, wake*, an elegy on the death of Lady Arabella Stuart, who died on 25 September 1615; it is more likely to be the work of a composer of 28 who had already come into contact with Italian music than of one aged 20. If his period of study with Monteverdi occurred at this stage in his life, the years between 1612 and 1615 seem the likeliest time, though documentary evidence is lacking. He was, however, granted a licence to travel abroad for three years on 12 March 1622, but this was probably in connection with the Earl of Bristol's embassy to Madrid to arrange the 'Spanish match'. Porter later dedicated his *Madrigales and Ayres* (London, 1632) to the earl 'to express my true gratitude, for all your rare goodnesse in my attendance in Spaine'. In 1633 Porter went with the Chapel Royal to Edinburgh for Charles I's coronation and in 1634 took part in Shirley's masque *The Triumph of Peace*, as both singer and theorbo player. He became Master of the Choristers of Westminster Abbey in 1639.

Following the outbreak of the Civil War, Porter lived for a time (1644–56) in the household of Sir Edward Spencer, though as a former member of the Chapel Royal sporadic payments were received up to 1649. Looking around, perhaps, for a new patron, he published his *Mottets of Two Voyces* in London in 1657 with a dedication to Edward Laurence. But he was living in poverty about 1658, when he petitioned the Westminster Abbey authorities several times for a pension, never having officially enjoyed a 'singing-man's' place and the tenure that went with it. He added that 'the petitonr likewise intends (Being put into a Capacitie) to sett up a meeting for Musick once a fortnight and to traine up two or three boyes in the Art of Musick ... out of Westmr Schoole'.

The only specific indication that Porter was a pupil of Monteverdi is the insertion by hand of the name 'Monteverde' after the words 'my good Friend and Maestro' in the preface to the *Mottets* in copies at Christ Church, Oxford. But the style of the madrigals supports Porter's claim, for they are virtually the only English madrigals in concertato style. They include solo, duet and dialogue writing within the five-part texture, occasional recitative, virtuoso solo passages and the use of the *trillo*. A continuo ('Harpesechord, Lutes, Theorbos') is obligatory, the bass is copiously figured, and there are introductory three-part 'toccatos, sinfonias and ritornellos' for two violins and bass, which also play with the voices in 'full' sections. Other pieces, consisting of two imitative upper parts over a bass, are in the style of chamber duets or trios, and there are also tuneful ayres or partsongs with verse and chorus sections. One of them, *Farewell*, is a solo madrigal constructed over what seems to be a strophic bass related to the folia or *passamezzo antico*. The *Mottets* are comparatively uninteresting. They are settings 'for treble or tenor and bass, with the continued base or score' in a quasi-declamatory style, intended for domestic devotions. Five full anthems and five verse anthems by Porter were in the repertory of the Chapel Royal about 1635, but the music of only one of them, *O praise the Lord*, survives, published in *Madrigales and Ayres* (ed. P. le Huray, *The Treasury of English Church Music* (London, 1965), ii, 232). Its solos are extremely florid and show strong Italian influence grafted on to the English verse anthem.

IAN SPINK

Porte vente (Fr.). *See* WIND-TRUNK.

Porthaux, Dominique (*b* Antony, 27 Feb 1775; *d* Paris, 3 Feb 1839). French maker of woodwind instruments. On 10 November 1777 he married Elizabeth Thieriot, sister of Prudent Thieriot. In 1782 he established his own workshop, being listed three years later as 'facteur ordinaire de la musique du roi et des musiques militaires', and in 1786, on Prudent's death, he purchased the latter's instrument-making business in Paris for 7022 livres from the widow. With Porthaux as master maker, the workshop at no.45 rue Dauphine maintained its high standing and continued to supply important musical institutions and musicians. After the Revolution Porthaux provided instruments for professors at the Conservatoire. A bill listed in the 1790 inventory of François Devienne's wife shows that Porthaux was owed 200 livres for instruments he had supplied. He was also active as a music publisher from 1793 to 1802, specializing in editions of works by leading woodwind players such as the flautists Devienne and Antoine Hugot, and the bassoonist Etienne Ozi. He advertised himself as a 'publisher, music merchant and manufacturer of woodwind instruments'. The *Tablettes de renommée* of 1791 noted that he was active in all aspects of military music, as were his predecessors C.J. Bizey and Prudent Thieriot.

Porthaux's son Dominique Prudent Porthaux (*fl* 1806–12) also made woodwind instruments. His marriage to Mlle Ettingshaussen on 24 April 1806 was attended by the renowned bassoonists Ozi and Thomas Joseph Delcambre and the clarinettist Jacques Charles Duvernoy. He joined his father's workshop, which was moved to 24 rue de Grenelle St Honoré. In 1812 he disappeared, and by the time of his son's marriage in 1857 he was presumed to have died.

Extant instruments by Porthaux, stamped PORTHAUX/A PARIS and surmounted by a crown or star, include 22 bassoons with between five and seven keys, and several oboes having two to nine keys. Two of his bassoon related inventions have unfortunately left no trace. A model he named 'tènore' and a bassoon crook made of wood rather than brass are both documented in a press notice of 1808 accusing Jean N. Savary of claiming the latter as his own invention. A bassoon in the Bate Collection at Oxford with bifurcated C♯ holes drilled into each bore shows him to have anticipated Carl Almenraeder in this respect.

TULA GIANNINI, WILLIAM WATERHOUSE

Portinaro [Portenaro, Portenari, Portinari, Portinario, Portinarius], **Francesco** (*b* Padua, *c*1520; *d* ?Padua, after 1577). Italian composer. The son of a Paduan town constable, much his career was spent in contributing to the musical activities of the numerous cultural and ecclesiastical institutions in and around Padua. During the 1550s Francesco and his wife Laura da Este lived in Padua in the *Podestà's* palace. In 1555 he failed to obtain the post of *maestro di cappella* at the city's Cathedral, then on 21 June he became a founder of a short-lived Paduan *societas musicorum* whose members united to facilitate their musical employment.

From 1556 to 1562 Portinaro served humanist academies in Vicenza, Padua, and Verona. He worked for the Accademia dei Costanti of Vicenza in 1556–7, and his madrigal collection of 1557 is dedicated to the Costanti. On 3 March 1557 Portinaro became *maestro di musica* for the Accademia degli Elevati of Padua. The Elevati survived until 1560, the year in which Portinaro dedicated his fourth book of madrigals to them. Both the 1557 and the 1560 collections contain many occasional pieces: academy members were responsible for a number of the texts and a few of the musical settings. On 21 April 1561 Portinaro was elected music master for the Accademia Filarmonica of Verona for a one-year period.

In 1564 Portinaro placed his business affairs in the hands of agents and departed for Rome. Between January 1565 and 30 December 1566 he was *maestro di cappella* for Cardinal Ippolito II d'Este, in charge of 15 singers, an organist and three instrumentalists in return for 100 *scudi d'oro* per year. Radiciotti believed that Portinaro remained in Rome after 1566 in the service of Cardinal Luigi d'Este, perhaps because Portinaro's second motet collection (1568) was dedicated to him. However, Portinaro's name does not appear in Luigi's account books, and in the dedication to the motets Portinaro says that he wrote them while in the service of Cardinal Ippolito II. By 1 March 1568 Portinaro was back in Padua; however, he made immediate preparations to travel to Vienna, perhaps to seek the vacant post of *maestro di cappella* at the court of Emperor Maximilian II (his *Le vergini* collection of 1568, which includes a six-voice setting of Petrarch's cycle of poems in praise of the Virgin Mary, was dedicated to the Emperor). By March 1569, when he had failed to obtain the Viennese post, he had returned to Padua, scene of the remaining known events in his career.

In August 1571 Portinaro was appointed interim *maestro di cappella* at Padua Cathedral, but he did not retain the post, probably because he was a layman and primarily a composer of secular music. On 25 July 1573 he was appointed *maestro di musica* for the Accademia degli Rinascenti, work which probably ended with the dissolution of the academy in 1575. On 13 December 1576 Portinaro was appointed permanent *maestro di cappella* at Padua Cathedral. His salary was seventy ducats for the year from 13 December 1576; he was also reimbursed on 9 August 1577 for psalms and Masses which he had purchased in Venice. The last extant document concerning his activities in Padua is a notarial *atto* of August 1577 which records that he named a procurator who was to make a receipt of all debts owed him. Portinaro's name disappears from cathedral records until January 1579, when he is mentioned as deceased within an account of the search for his successor. The chapter had appointed Ippolito Camaterò *maestro di cappella* on 31 December 1578.

Portinaro's clearly constructed, fluid and reserved polyphonic style was praised during his lifetime. His compositions show the influence of Willaert and the Venetian school. He set many texts of high literary quality, including a considerable number by Petrarch. His setting of *Mentre m'havesti caro* (Veniero's translation of Horace's *Donec gratus eram tibi*) marks an important stage in the development of the dramatic dialogue.

MARIA ARCHETTO

Portman, Rachel (Mary Berkeley) (*b* Haslemere, 11 Dec 1960). English composer. She read music at Worcester College, Oxford, and studied composition with Roger

Steptoe; she also composed for productions at the Oxford Playhouse and scored a student film, *Privileged*, which was sold to the BBC. Her first professional film scoring commission came from David Puttnam in 1982 with *Experience Preferred ... But Not Essential*. Her early television scores included *The Storyteller* (1986–8 and 1990), a series by Jim Henson, for which she was awarded the British Film Institute's Young Composer of the Year Award in 1988. In 1991 she composed for Mike Leigh's *Life is Sweet* (1990), her first feature film score, followed by Beeban Kidron's *Antonia and Jane* and Charles Sturridge's *Where Angels Fear to Tread* (1991). She has collaborated with the English director Kidron on several productions including the BBC television drama *Oranges are not the Only Fruit* (1990), and the films *Used People* (1992) and *To Wong Foo – Thanks for Everything! Julie Newmar* (1995). Since 1992 she has been in demand for Hollywood productions, and remains one of the few female composers to have achieved significant success at his level. Her film scores include *The Joy Luck Club*, *Benny and Joon* and *Friends* (1993), *Sirens*, *Only You* and *War of the Buttons* (1994), *A Pyromaniac's Love Story* and *Smoke* (1995), *The Adventures of Pinocchio* and *Marvin's Room* (1996) and *Addicted to Love* (1997). She has become identified with lush string-based orchestrations in a succession of romantic comedies produced by both independent and major studios. With *Emma* (1996) she became the first female composer to receive an Academy Award.

DAVID KERSHAW

Portman, Richard (*d* ?London, before 29 Feb 1656). English organist and composer. He succeeded Orlando Gibbons as organist of Westminster Abbey in 1625, having earlier been a chorister there under Gibbons. At Michaelmas 1638 he was sworn an epistoler of the Chapel Royal, and within a month or so he succeeded John Tomkins, who had been an organist of the chapel. He retained his position at the abbey, and in a petition to parliament dated January 1654 he is still numbered among the former musicians of the church. A petition dated 29 February 1656, however, refers to Portman as 'deceased'. According to Anthony Wood, he spent some time in France during the Commonwealth with Dr John Williams, Dean of Westminster and Portman's patron. He heads the list of London music teachers 'for Organ or Virginal' in John Playford's *Musicall Banquet* (London, 1652). His extant works include a book of meditations, *The Soules Life, Exercising itself in the Sweet Fields of Divine Meditation, Collected for the Comfort thereof, in these Sad Days of Distraction* (London, 1645, rev. 2/1660). His compositions are almost exclusively liturgical and reflect the current trend away from polyphony towards a simpler and more obviously harmonic idiom.

WORKS

Short [Whole] Service (Ven, TeD, Bs, Ky, Cr, Mag, Nunc), full, *GB-Cfm, Cp, EL, LF, Lbl, Llp, Ob, Och, Y*

PETER LE HURAY/JOHN MOREHEN

Portmann, Johann Gottlieb (*b* Oberlichtenau, nr Dresden, 4 Dec 1739; *d* Darmstadt, 27/28 Sept 1798). German music theorist. He attended the Kreuzschule in Dresden (1751–9), where he sang under Hasse in opera performances. In 1766 he went to Darmstadt and became a court singer, then in 1768 or 1769 became Kantor and a teacher at the Pädagogium. He was also music teacher to Grand Duke Ludwig I. His compositions include *Musik auf das Pfingstfest* (Darmstadt, *c*1793), three sonatas for fortepiano and violin (Darmstadt, n.d.), lieder, a *Magnificat* (1790) and keyboard pieces; he also made a piano arrangement of C.H. Graun's *Der Tod Jesu* and edited the *Neues Hessendarmstädtisches Choralbuch* (Darmstadt, 1786).

Portmann's *Leichtes Lehrbuch* (1789) contains several ideas of interest. The first part proposes a harmonic theory based on superimposed 3rds; tonality is defined as the range of six such 3rds (a 13th chord). He presents a unique list of harmonic functions: tonic, dominant, *Wechseldominant* (the dominant of V), *Sextenharmonie* (essentially a VI^{13} chord) and double dominant (combining elements of V and its dominant). The second part, the most well known today, treats form. Portmann uses the terms 'fragende' and 'antwortende' for phrases ending in V and I respectively and describes larger forms (including sonata form) in harmonic terms. The third part of the treatise proposes a new figured bass notation using chord roots with symbols denoting harmonic function. In Die *neuesten ... Entdeckungen*, Portmann presents a synthetic approach to 9th, 11th and 13th chords, combining the ideas of delayed suspensions and added fundamentals.

JANNA SASLAW

Porto, Allegro (*b* ?Trieste or Venice, ?end of 16th century; *fl* early 1620s). Italian composer. Trieste is the more likely place of birth: various members of his family, originally from Germany, resided there, and the dedication of his 1622 madrigal book was dated there. Pitoni said that he was a Jew 'di età giovine', which may mean that he died young. His first three publications, including his first book of *musiche*, are lost, and none of his surviving three works is complete. The first extant collection (1619) is dedicated to Alonso Sforza, Count of Porcia and first

chamberlain of Bavaria. The second (1622), whose title-page is missing (but given by Pitoni), is dedicated to Giovanni Sforza, perhaps Alonso's son and author of three of the four poems set in the collection. The third book (1625) is dedicated to Emperor Ferdinand II. It would appear, then, that Porto spent time in Munich and at the Habsburg court in Vienna. Unlike Salamone Rossi, his leading Jewish contemporary, Porto composed to Italian texts only. A *dialogo* included in the 1622 collection is unusual in that the text, by Giovanni Sforza, can be read as an exemplification of both Christian and Jewish ideas, to be understood in the light of syncretistic traditions in Renaissance thought and culture. The 1625 book includes a madrigal for three voices and two cornetti (and contrino).

Portugal, Republic of (Port. República Portuguesa). Country in Europe. Occupying a total area of 91,905 km² on a strip of land in the western Iberian peninsula (and including the Atlantic islands of Madeira and the Azores), Portugal is bordered to the north and east of the mainland by Spain and to the south and west by the Atlantic Ocean. The population is 9·79 million (2000 estimate) with *c*1 million in the capital and largest city, LISBON.

I. Historical and cultural background. II. Art music. III. Traditional music. IV. Popular music.

I. Historical and cultural background

Portuguese musical traditions and contemporary popular musics reflect multifarious historical, cultural and political processes, to which they also contributed. Some traditional song and dance genres, musical styles and instruments are pan-Hispanic and pan-European. Other music traditions resulted from Portugal's direct and prolonged contact with non-European cultures from North and sub-Saharan Africa as well as in Brazil. Portuguese maritime exploration and overseas colonization, which started in the 15th century and ended with the independence of its former African colonies in 1975, also took Portuguese musical influences overseas. In many of these areas, there are musics that display Portuguese influence, as well as musical genres and instruments that originated in Portugal.

The beginning of the 20th century saw the rise of nationalism and the establishment of the first parliamentary republic (1910–26), a development that resulted in the creation of imported new musical and also stimulated an interest in the documentation and preservation of rural traditions. A military coup in 1926 paved the way for the formation of the *estado novo*, the dictatorship which lasted for 48 years and which advocated a national political ideology based on traditional values, reinforced through cultural policy and action. Music and other forms of expressive behaviour were used symbolically to represent the regime's politically convenient conception of Portuguese culture.

The 1960s marked the beginning of a period of profound change in Portuguese society, which acted as a catalyst for new musical ideas, processes and sounds. Music making was affected by emigration, rural–urban migration, industrialization, colonial war, immigration from the former colonies, tourism and the wide dissemination of mass media (radio, television and commercial recordings). The revolution of 25th April 1974 established freedom and democracy, ended colonial rule and accelerated the transformations that had been taking place and introduced new ones as well. Political song was central to the revolutionary process, heralding the revolution and disseminating its ideology. The latter part of the 1980s and 90s heralded the advent of new changes, with Portugal entering the EU in 1985.

II. Art music

1. The Middle Ages. 2. The 16th and 17th centuries. 3. The 18th century. 4. The 19th century. 5. The 20th century.

1. THE MIDDLE AGES. Information on music in Portugal during the Early Christian era is scarce. In 959 Countess Mumadona Dias bequeathed to the monastery of S Salvador and S Maria in Guimarães several liturgical books, among them 'antiphonarios tres, organum, comitum, manuale, ordinum, psalterios duos, passionum et precum'. Although vestiges of the Hispanic or Mozarabic liturgy are rare in Portugal, the only complete manuscript of this liturgy, the Antiphoner of León (now lost), may have come from Beja, in the south of the country. Many of the extant chant sources are preserved at Alcobaça, the most important Cistercian abbey in Portugal, and at the convent of Lorvão, but the oldest collection of manuscripts with musical notation is at the Cistercian convent of Arouca. The first cathedral school to be established was that of Braga (1072), followed by Coimbra (1086), Lisbon (1150), Oporto (1186) and Évora (1200). In 1323 King Dinis granted an annual salary to the music professor at Coimbra University.

The highpoint of troubadour song in Portugal occurred in the reign of Afonso III (1248–79); two other kings, Sancho I (1154–1211) and Dinis (1261–1325), were also troubadours. King Dinis, in particular, wrote a considerable number of songs, some fragments of which have recently been discovered. The Cancioneiro da Ajuda, a collection of 310 Portuguese song texts copied in the late 13th century or early 14th with blank music staves, is preserved in the Ajuda Library in Lisbon. No polyphonic music has survived from the 14th and 15th centuries, but the regulations of the royal chapel drawn up by King Duarte between 1433 and 1438 stipulate that it should have between four and six boy singers, who also performed court music. The fact that King Duarte and his brothers were grandsons of John of Gaunt explains the use of the Sarum rite in their chapels. In 1454 Afonso V sent his *mestre de capela* Álvaro Afonso to England, to obtain a copy of the music used in Henry VI's chapel.

2. THE 16TH AND 17TH CENTURIES. The first attributable polyphonic works to have survived are those by the Coimbra composers Vasco Pires (*fl* 1481–1509) and Fernão Gomes Correia (*d* after 1532); the most important composer of the early 16th century, however, was Pedro do Porto (known in Spain as Pedro de Escobar) who served as singer at the court of Queen Isabella of Spain and was *maestro de capilla* at Seville Cathedral from 1507 to 1514 and later *mestre de capela* to Cardinal Archbishop Afonso of Évora, a son of King Manuel I. The chapel of Évora Cathedral and its adjoining music school rapidly rose to pre-eminence among Portuguese musical institutions, not only employing many distinguished *mestres de capela* and composers, among them Manuel Mendes, Filipe de Magalhães (*c*1571–1652) and Diogo Dias Melgaz, but also training composers who became *mestres de capela* of other important institutions in the country. These composers include Manuel Cardoso (1566–1650) at the Carmelite convent in Lisbon; Duarte Lobo (*c*1564/9–1646) at Lisbon Cathedral; the Spaniard Estêvão Lopes Morago (*b c*1575; *d* after 1630) at Viseu Cathedral; and Francisco Martins (*b c*1620 or *c*1625; *d* 1680) at Elvas Cathedral. Another important cathedral chapel was that of Braga, whose first known *mestre de capela* was Miguel da Fonseca (from *c*1530 to 1544). Another major musical centre during the 16th and 17th centuries was the Augustinian monastery of Santa Cruz at Coimbra, which extended its influence to the monastery of S Vicente de Fora in Lisbon. Among composers at Santa Cruz Heliodoro de Paiva (*c*1500–1552) and, in particular, Pedro de Cristo (*c*1550–1618) should be mentioned.

The only private musical chapel of true significance is that of the dukes of Braganza at Vila Viçosa, which, along with its adjoining music school, gained particular importance during the days of the future King João IV, who assembled the largest music libraries of his day. A partial catalogue of this library was published in 1649, when it was transferred to the royal chapel in Lisbon, but the library itself was lost in the earthquake and fire of 1 November 1755. There is every indication that much of the library's non-Iberian repertory, particularly of secular music, was never actually studied or performed. Among the few Portuguese composers who had access to the library was João IV's schoolfriend João Lourenço Rebelo (1610–61), whose published sacred works reveal the influence of contemporary European styles, in contrast with the generally more conservative idiom of his Portuguese colleagues.

The political union of Portugal and Spain between 1580 and 1640 created new career opportunities for Portuguese composers both in Spain and in the Spanish New World. Prominent among them were two pupils of Magalhães, Estêvão de Brito (*c*1575–1641), *maestro de capilla* of Badajoz and Málaga cathedrals, and Manuel Correia (*d* 1653), *maestro de capilla* of the Carmelite convent in Madrid and of Sigüenza and Zaragoza cathedrals; Manuel Machado (*c*1590–1646), a disciple of Duarte Lobo and a member of the Spanish royal chapel; Manuel de Tavares, *maestro de capilla* of Baeza, Murcia, Las Palmas de Gran Canaria and Cuenca cathedrals; Gonçalo Mendes Saldanha, organist at Málaga Cathedral; Francisco de Santiago (*c*1578–1644), *mastro de capilla* of the convent of the Calced Carmelites in Madrid and of Plasencia and Seville cathedrals; Manuel Correia do Campo (1593–1645), his successor at Seville Cathedral; Filipe da Madre de Deus, master of the royal chamber music to Afonso VI of Portugal and later *maestro de capilla* of the monastery of the Discalced Mercedarians in Madrid; and Gaspar Fernandes (*b c*1570; *d* before 18 Sept 1629), who went out to Central America and became *maestro de capilla* of Puebla Cathedral in Mexico (in what is now Antigua) and Guatemala Cathedral. Portuguese musicians who lived outside the Iberian peninsula during the 16th century also included the humanist and amateur composer Damião de Góis (1502–74), a friend of Erasmus whose motet *Ne laeteris* was included by Glarean in his *Dodechacordon*, and Vicente Lusitano, who conducted a famous debate on modes with Nicola Vicentino in Rome.

The true flowering of Portuguese sacred polyphony began with the publication in Lisbon of a volume of *Magnificat* settings (1613), followed by three books of masses (several based on Palestrina motets) and a miscellany for Holy Week by Cardoso, and a book of masses (1631) and a cycle of *Magnificat* settings (1636) by Magalhães. The Renaissance secular forms of the villancico, cantiga and *romance* flourished in Portugal as in Spain; substantial collections are preserved in the Cancioneiros at Elvas, the Bibliothèque de l'Ecole Supérieure des Beaux-Arts in Paris, and the Biblioteca Nacional and the Museu Nacional de Arqueologia e Etnologia de Belém, both in Lisbon. Only about a quarter of these pieces have Portuguese texts, the rest being in Spanish. As in Spain, too, sacred villancicos became extremely popular during the 17th century; a large collection, originating from the monastery of Santa Cruz, is kept at the library of Coimbra University. Another collection at Évora public library contains works by, among others, António Marques Lésbio (1639–1709), Francisco Martins and Pedro Vaz Rego (1673–1736).

The first book of keyboard music printed in the Iberian peninsula was the *Arte nouamente inuentada per a aprender a tanger* (Lisbon, 1540) by the Spanish organist of the royal chapel, Gonzalo de Baena, a rare copy of which was discovered in the Biblioteca de Palacio in Madrid. Other organ composers of the 16th and 17th centuries include António Carreira (*d* 1589), Manuel Rodrigues Coelho, author of the collection *Flores de musica pera o instrumento de tecla & harpa* (Lisbon, 1620), and Pedro de Araújo.

3. THE 18TH CENTURY. During the long reign of João V (1707–50) Portugal experienced a new affluence with the discovery of gold in the colony of Brazil. In music, manifestations of this affluence included the augmentation of the royal chapel, raised to a patriarchal chapel in 1716, and the founding of an adjoining music school, the Seminário da Patriarcal, in 1713. Pre-eminent among the many Italian musicians who were hired for the chapel and the court was Domenico Scarlatti, who arrived in Portugal in 1719 and remained there until 1728. His sacred music for the chapel is thoroughly Roman in style. Similarly, the sacred works of three Portuguese composers who studied in Rome as royal scholars, António Teixeira (1707–?after 1769), João Rodrigues Esteves and Francisco António de Almeida, reflect both the Roman Baroque polychoral tradition and the new Neapolitan operatic style. Almeida's oratorio *La Giuditta*, one of the masterpieces of Portuguese 18th-century music, was performed in Rome in 1726.

In 1735 the court violinist Alessandro Paghetti opened a theatre in Lisbon for Italian opera, the Academia da Trindade, which was replaced in 1738 by the Teatro da Rua dos Condes. Italian opera composers who were in Lisbon in this period include Giovanni Bononcini, Gaetano Maria Schiassi and Rinaldo di Capua. Of the half-dozen comic operas performed at court during the same period, three were by Almeida. Meanwhile the Teatro do Bairro Alto presented puppet operas with Portuguese texts by António José da Silva and music in the prevailing Neapolitan style by Teixeira. From 1752 King José I hired the composer David Perez and the architect Giovanni Carlo Galli-Bibiena, together with some of the best Italian singers then available, and had three new opera houses built. The largest and most splendid of these, near the Lisbon royal palace, lasted only seven months before being destroyed by the earthquake of 1755. The court then moved to the suburbs of Ajuda, where opera performances were resumed some years later on a much smaller scale, as well as in the Salvaterra theatre and the summer palace of Queluz.

Many of the singers in the royal chapel and the court theatres (including several castratos, as the court never employed female singers) continued to be recruited from Italy, along with ballet dancers and orchestral players. The steady purchase of scores resulted in the formation of a large opera collection, which still exists at the Ajuda Library. A favourite composer of the Portuguese court was Jommelli (1714–74), who during the last years of his life composed operas and sacred works for Lisbon in exchange for a pension. During the reigns of José I and his daughter Maria I, Italian operas and serenatas by such composers as João Cordeiro da Silva, Pedro António Avondano (1714–82), João de Sousa Carvalho (1745–99/1800) and Jerónimo Francisco de Lima (1743–1822), the last two of whom studied in Naples, were also performed at court. A large quantity of sacred music by these and other composers connected with the Seminário da Patriarcal and the royal chapel, among them Luciano Xavier Santos (1734–1808), António Leal Moreira (1758–1819) and António da Silva Gomes e Oliveira, also reflects the prevailing Italianate style of the period. After the earthquake, Italian opera, alternating with plays in Portuguese, was performed at the Rua dos Condes and the Bairro Alto theatres, where one of the great mezzo-sopranos of the second half of the century, Luísa Todi, began her career. From 1760 onwards the Teatro do Corpo da Guarda in Oporto also presented seasons of Italian opera.

Leading composers in the field of instrumental music included Carlos de Seixas (1704–42), composer of, among other works, over 100 surviving keyboard sonatas, and Avondano. Prominent among Portuguese musicians abroad were the guitar player and composer António da Costa, who settled in Vienna and was praised by Burney, and João Pedro de Almeida Mota, who worked at the Madrid court and elsewhere in Spain. In the last decades of the 18th century the *modinha*, a type of sentimental song of Brazilian origin with piano or guitar accompaniment, became very popular as salon music. Composers of *modinhas* included Marcos António Portugal (1762–1830), who was the first musical director of the Teatro de S Carlos, Moreira, the guitar player Manuel José Vidigal and the *mestre de capela* of Oporto Cathedral, António da Silva Leite (1759–1833), composer of works for the Portuguese guitar and author of the first guitar handbook. Keyboard instruments built during the second half of the 18th century include the clavichords, harpsichords and fortepianos of Manuel and Joaquim José Antunes, Matias Bostem, Henrique van Casteel and Manuel do Carmo, as well as the many organs made by, among others, António Machado e Cerveira, which still survive in churches throughout the country.

4. The 19th century. From the final decade of the 18th century to the first decades of the 20th, Portuguese musical life was dominated by the two Italian opera houses, the Teatro de S Carlos in Lisbon (1793) and the Teatro de S João in Oporto (1798), where works by Portuguese composers were only rarely performed. One important exception to this was Marcos António Portugal, who presented several of his own operas at the S Carlos during his tenure as musical director (1800–11). Other 19th-century opera composers included João Evangelista Pereira da Costa (*c*1798–1832), Manuel Inocêncio Liberato dos Santos (1805–87), Francisco Xavier Migoni (1811–61), Francisco de Sá Noronha (1820–81), Miguel Ângelo Pereira (1843–1901), Francisco de Freitas Gazul (1842–1925), Augusto Machado (1845–1924) and the amateur composers José Augusto Ferreira Veiga, Viscount of Arneiro (1838–1903), Alfredo Keil (1850–1907) and João Marcelino Arroio (1861–1930). Several of these wrote Italian operas based on Portuguese history and literary sources. Machado's *Lauriane* was first performed in Marseilles in 1883, Keil's *Irene* was sung at the Teatro Regio in Turin in 1893 and Arroio's *Amore e perdizione* was performed in Hamburg in 1910.

Well-known Italian composers, such as Carlo Coccia, Saverio Mercadante and Pietro Coppola, also worked at the S Carlos. The Teatro de S João always remained a poor relative of the S Carlos and was destroyed by fire in 1908. Throughout the century several smaller theatres in Lisbon and Oporto presented a varied repertory of farces, operettas, vaudevilles and zarzuelas, in several cases with music written by local composers. Sacred music, strongly influenced by Italian operatic style, was cultivated by, among others, Joaquim Casimiro Júnior (1808–62), Francisco Xavier Migoni (1811–61) and João Guilherme Daddi (1813–87).

During the first half of the 19th century the leading Portuguese composer of instrumental music was João Domingos Bomtempo (1775–1842), who pursued a career as a virtuoso pianist in Paris and London before returning to Lisbon, where he founded the Sociedade Filarmónica in 1822; this performed works by Haydn, Mozart and Beethoven until it was closed for political reasons in 1828. After the civil war of 1828–34, Bomtempo was appointed director of the newly created Conservatório Nacional (1835), which remained the country's only official music school throughout the 19th century.

Later concert societies included the Academia Filarmónica (1838), the Assembleia Filarmónica (1839), the Academia Melpomenense (1845–61), the Sociedade de Concertos Populares (1860), the Orquestra 24 de Junho (1870), conducted by Francisco Asenjo Barbieri, Colonne and Ruddorf, among others, the Sociedade de Concertos de Lisboa (1875) and the Real Academia dos Amadores de Música (1884), whose music school offered an alternative to the conservatory. Nevertheless, most concert series were short-lived. In 1845 Liszt gave several concerts in Lisbon, as did Thalberg in 1856. Portuguese

instrumentalists who had notable careers abroad included the clarinettist José Avelino Canongia (1784–1842), the pianist Artur Napoleão (1843–1925) and the singers Francisco de Andrade (1859–1921), António de Andrade (1854–1942) and Maurício Bensaúde (1863–1912).

Music published in Portugal remained at a modest level and generally in the hands of foreigners and their descendants, such as João Baptista Sassetti or Eduardo Neuparth, whose firm later passed into the hands of Valentim de Carvalho. Instrument makers, most of whom were also of foreign origin, were increasingly unable to compete with imported instruments.

5. The 20th century. Cultural changes from the 1870s onwards favoured the development of music criticism and musicology, as exemplified in journals such as *A arte musical* (1873–5; 1899–1915) and *Amphion* (1884–98), and the activity of scholars such as Joaquim de Vasconcelos, Francisco Marques de Sousa Viterbo and Ernesto Vieira. In the two main cities, Lisbon and Oporto, Portuguese musicians were increasingly drawn towards German instrumental music. Influential performers and teachers who studied in Germany included the violinist, pedagogue and writer Bernardo Valentim Moreira de Sá (1853–1924), who in 1917 founded the Oporto Conservatory, the cellist Guilhermina Suggia (1888–1950), the conductor Raimundo de Macedo (1889–1931), the pianist Alexandre Rey Colaço (1854–1928) and the pianist and composer José Vianna da Motta (1868–1948). A pupil of Liszt and Bülow, Vianna da Motta toured extensively in Europe and the Americas before returning to Lisbon in 1917 to become director of the Conservatório Nacional. His works reveal Portuguese nationalist traits within a fundamentally Germanic idiom. Another performer with a distinguished international career was the conductor Francisco de Lacerda (1869–1934), a pupil of d'Indy at the Schola Cantorum and of Nikisch and Hans Richter in Berlin.

The music of Luís de Freitas Branco (1890–1955), a colleague of Vianna da Motta at the Conservatório Nacional, was influenced by French Impressionism and atonal tendancies before moving towards neo-romantic nationalism in an attempt to create a Portuguese symphonic tradition. Impressionism also influenced one of the most promising composers of the the beginning of the century, António Fragoso, who died in 1918 at the age of 21. In Oporto the leading composer in the first half of the 20th century was Cláudio Carneiro (1895–1963), a pupil of Widor and Dukas. Frederico de Freitas (1902–80), who became the conductor of the newly founded Orquestra Sinfónica da Emissora Nacional in 1935, produced an eclectic output embracing instrumental and vocal works, as well as film, ballet and revue music. Two teachers at the Conservatório Nacional, Armando José Fernandes (1906–83) and Jorge Croner de Vasconcelos (1910–74), studied in Paris with Cortot, Nadia Boulanger, Dukas and Stravinsky, and composed music in a neo-classical vein.

The most distinguished pupil of Freitas Branco, Joly Braga Santos (1924–88), developed the symphonic tradition inherited from his teacher, evolving from modality to a free chromaticism verging on atonality. Another central figure of Portuguese 20th-century music, Fernando Lopes Graça (1906–94), a militant opponent of the Salazar dictatorship, incorporated folk material into his music, along the lines of Bartók and Kodály, working with Michel Giacometti on an important collection of recordings of folk music (*see* §III, 4(ii) below) and arranging many songs for performance by the choir of the Academia de Amadores de Música.

If a number of composers, such as Victor Macedo Pinto (1917–64) or Maria de Lourdes Martins (*b* 1926), represent a transition between neo-classical and more progressive tendencies, the renewal of Portuguese music in the 1960s was mainly the work of a new generation of composers who studied in Darmstadt. These included Filipe Pires (*b* 1934), Alvaro Cassuto (*b* 1938), Alvaro Salazar (*b* 1938), founder of the Oporto-based group Oficina Musical, Constança Capdeville (1937–92) and, above all, Jorge Peixinho (1940–95), who in 1970 founded the Grupo de Música Contemporânea de Lisboa. Another composer who attended the Darmstadt summer courses, Emanuel Nunes (*b* 1941), has worked mainly in Paris and in Germany. Prominent among the younger generation of Portuguese composers are such figures as João Pedro Oliveira, António Pinho Vargas and Alexandre Delgado.

While the *estado novo* (the name by which Salazar's regime was known) created or restored a number of important musical institutions, such as the Orquestra Sinfónica da Emissora Nacional (National Radio Orchestra, often known as the Orquestra Sinfónica Nacional) in 1934, the Orquestra Sinfónica do Conservatório de Música do Porto in 1947 and the Teatro de S Carlos, the management of these institutions and the generally conservative public they catered for were for the most part unsympathetic to avant-garde tendencies in European music. Nevertheless, during its early years the Orquestra Sinfónica da Emissora Nacional under Pedro de Freitas Branco (1896–1963), brother of Luís de Freitas Branco, gave the Portuguese premières of works by Stravinsky, Prokofiev, Hindemith and Bartók. Among concert societies active in the first half of the century, the Círculo de Cultura Musical, founded in 1934, introduced composers such as Prokofiev, Casella, Poulenc, Honegger and Hindemith to Lisbon. The Gabinete de Estudos Musicais, created in 1942 under the auspices of the Emissora Nacional, promoted national music by commissioning works from Portuguese composers, as did the folk ballet group Verde Gaio.

In 1963 the Fundação Nacional para a Alegria no Trabalho created an opera company based at the Teatro da Trindade, which offered young Portuguese singers an opportunity to pursue an opera career, although it was unable to establish a national operatic tradition. The company ceased to exist in 1975, and most of its singers were integrated in the Teatro de S Carlos.

Notable Portuguese performers active in the first half of the 20th century included the tenor Tomás Alcaide, the pianists Helena Sá e Costa, José Carlos Sequeira Costa, Marie Antoinette Levêque de Freitas Branco and Nella Maissa, and the conductor Joaquim da Silva Pereira. From the 1930s onwards musicology developed in Portugal with the work of Manuel Joaquim, Mario Luis de Sampayo Ribeiro and, in particular, Macario Santiago Kastner; they have been succeeded by a new generation of musicologists, most of whom teach at the musicology department of the Universidade Nova de Lisboa, created in 1980.

The most significant factor in Portuguese musical life in the second half of the 20th century was the creation of the Calouste Gulbenkian Foundation in 1956 (*see*

GULBENKIAN FOUNDATION). Between 1957 and 1970 the Gulbenkian music festivals presented leading international performers. In 1962 the Gulbenkian Chamber Orchestra was established (renamed the Gulbenkian Orchestra in 1971); the Gulbenkian Choir, the first permanent semi-professional choir in the country, was created in 1964, followed in 1965 by the Ballet Gulbenkian. The Gulbenkian Foundation also promotes the publication and performance of early Portuguese music, publishing the Portugaliae Musica series (50 volumes by 1995), as well as monographs and catalogues of musical holdings in Portuguese libraries. Since 1977 it has organized the annual Encontros Gulbenkian de Música Contemporánea, and since 1980 the annual Jornadas de Música Antiga. It also continues to promote regular concerts in Lisbon and elsewhere in Portugal.

Since the 1970s several summer festivals have been established, including those in the regions of the Costa do Estoril, Sintra, Capuchos, the Algarve, Viana do Castelo, the Azores and Madeira. New orchestras have also been created (Nova Filarmonia, Orquestra Metropolitana de Lisboa), while others have been reorganized and renamed (Orquestra Sinfónica Portuguesa, Orquestra Clássica do Porto). In the early 1980s the Teatro de S Carlos acquired its own permanent orchestra and created the nucleus of a resident opera company, but by the mid-1990s all that survived of the company was an excellent chorus. In spite of the various reforms of the curriculum at the Conservatório Nacional and the spread of new music schools, there remained a dearth of both qualified teachers and capable performers in Portugal. In an attempt to remedy this, two music high schools were established in Lisbon and Oporto in 1983, and more recently music departments were created at Aveiro and Évora universities.

III. Traditional music

1. Introduction. 2. Rural traditions: (i) Vocal musical styles (ii) Dances (iii) The *romanceiro* (traditional balladry). 3. Instruments. 4. Ensembles. 5. Traditional music and religious ritual. 6. Revival movements: (i) *Ranchas folclóricos* (ii) Urban revival groups. 7. Documentation and research.

1. INTRODUCTION. Until the 1970s, music collectors and researchers regarded rural Portugal as one of the last havens for western European archaic musical traditions, which they attempted to salvage through documentation and by founding revival groups. Our understanding of music in traditional rural life up to the 1970s has been largely mediated by the selective documentation that they produced, and by the memories of tradition bearers, who were themselves often influenced by investigators' conceptions. These as well as the configurations of revival groups were frequently conditioned by political ideologies.

Documentation and research focussed on practices regarded as archaic, primarily the singing, instrumental performance and dance that accompanied agricultural and domestic work, marked life-cycle events, entertained families and communities, and was a basic ingredient in sacred and secular rituals. Transcriptions and recordings were made of ploughing songs (*aboio*), threshing songs (*canções de malha*), harvest songs (*cantiga de cegada* or

canções de ceifa) and grape and olive gathering songs (*canções de vindima* and *canções da apanha da azeitona*). Some vocal genres documented, such as ballads (*romances*) in Trás-os-Montes and polyphonic songs (*modas*) in southern Alentejo, were performed during agricultural work and for entertainment. Songs marking life-cycle events were collected throughout rural Portugal, including lullabies, courting, wedding and mourning songs. Up until the 1950s, in a few relatively isolated rural areas, older tradition bearers tended to preserve selected musical practices, genres and style that had been documented at the beginning of the 20th century. However, the profound changes that have taken place in Portugal since the 1960s influenced those musical practices. Emigration and migration to large urban centres reduced the rural population to 10% of the country's total. Mechanization of agriculture contributed to the cessation of agricultural labour as one of the contexts of music making. Radio, television and sound recordings changed traditional patterns of music production and consumption, introducing urban music to the remotest village and altering traditional patterns of sociability, which often included singing. The development of the tourist industry in the 1960s and 70s affected music making in areas that are economically dependent on tourism such as the Algarve and Madeira.

Within this scenario of profound change, some traditional contexts, genres and styles were radically changed, ceased to exist or were readapted to perform new functions in new contexts. Songs associated with agricultural work and traditional forms of domestic sociability fell out of use or were adapted for performance by revival groups. Selected repertories and musical practices documented in the early 20th century continue to play a central role in hundreds of religious and secular festivities celebrated annually; in addition new forms of expressive behaviour have been introduced.

Throughout the country, regular music making is essentially in the hands of formally structured performance groups of various kinds. These are named groups that perform regularly, are usually legally constituted as recreational associations and have a fixed membership, as well as artistic and administrative directorships. In 1998 close to 4000 groups were counted, among which the most widespread are folklore groups (*ranchos folclóricos*), civil windbands (*bandas filarmónicas*), choral groups (*grupos corais* or *grupos de cantares*) and groups of traditional string instruments (*tunas*).

These groups, which often represent their region, village or locale in religious and secular festivities, folklore festivals and other events, have been the main repositories of local repertories. In addition, they play an important role in constructing, maintaining and projecting local and regional identities, which have been challenged by demographic, socio-economic and cultural changes.

2. Rural traditions.

(i) Vocal musical styles. Portugal's rural musical traditions are predominantly vocal, with texts that are central to the performance. Metric strophic songs are widespread, the quatrain is a common poetic structure for songs and different texts are often set to the same melodies. Creativity with words is particularly valued in song duels between two or more singers (*cantares ao desafio*). A few instrumental genres accompany dances or are used in religious rituals.

Lyrical songs with homophonic instrumental accompaniment are common. However, vocal polyphony in two, three or four voices is also found in the districts of Aveiro, Beja, Braga, Castelo-Branco and Viana do Castelo. Except for Beja, where vocal polyphony is primarily practised by men in public contexts, vocal polyphony is performed by women. In much of the country, pitch is organized according to major and minor modes, and harmonic accompaniment centres on the alternation of tonic/dominant chords. Church modes and modal structures that do not correspond to common European practice occur in districts that have preserved older styles, such as Beja and Castelo-Branco. Duple and triple metres are most common in vocal music and dance songs. Song texts deal with all aspects of life, past and present: love, nature, the local village or town, agricultural work, emigration, religious themes and historical and current political events.

(ii) Dances. A wide variety of dances continues to thrive, especially within folklore groups, and ranges from medieval sword dances to adaptations of 18th- and 19th-century central European salon dances. Traditional dances, which are either local or widespread, are distinguished by their metre choreography and musical repertory. Dances in duple or triple metre accompanied by strophic dance songs are the most common. *Vira*, *chula* and *malhão* are three of the most widespread dances, each with numerous local variants. More localized dances include the *corridinho* (Algarve), *saias* (district of Évora and Portalegre), *fandango* (district of Santarem), *bailinho* (Madeira) and *dança dos pauliteiros* (district of Bragança).

(iii) The romanceiro (traditional balladry). The ballad (*romance*) is one of the oldest and most important genres of Portuguese sung poetry. It consists of a vast repertory of orally transmitted narrative songs and epic poems, of which there are often several variants that are sung or recited by members of a rural community, in most cases without instrumental accompaniment. The Portuguese *romanceiro* has been regarded as one of the richest and most innovative in Europe. Peripheral regions, such as the north-eastern district of Bragança and the islands of the Azores and Madeira, have been principal repositories for ballads, which have also been collected throughout Portugal, as well as from Portuguese communities in Brazil and North America.

Romances have had different uses and functions. In the Azores they were recited or sung to the accompaniment of the traditional guitar (*viola de arame*) during moments of pause from work. They were also sung by women to accompany daily chores, such as the preparation of bread and washing clothes, or during the Holy Spirit festivities. In the north-eastern district of Bragança, they were sung without instrumental accompaniment during family gatherings around the fire place, during religious festivities and during agricultural work, such as threshing and harvesting, where they were sung by two individuals or groups in alternation at fixed intervals corresponding to the canonical hours. In principle there was a specific *romance* for each canonical hour.

Romance texts focus on Carolingian, historical, religious and social themes. In general, there is no fixed relationship between melody and text. Most ballads are in strophic form and are set to fluid rhythms and simple melodies, which vary from one region to the next, but generally remain within the range of a 5th or a 6th. In

Trás-os-Montes the melodic organization of the *romance* largely depends on its function: *romances* that are sung during agricultural work tend to be melismatic, while those that are sung for entertainment are usually syllabic.

3. INSTRUMENTS. Most traditional Portuguese musical instruments are used to accompany singing and dancing. Chordophones constitute the richest and most varied category.

Guitars, designated by the generic term *viola*, usually have five double courses of metal strings. In his study of Portuguese musical instruments, Veiga de Oliveira (1982) distinguishes two types of guitars. The western type has a gently waisted body and comes in three variants: the *braguesa* (from Braga) with an oval or round soundhole, which is prevalent in the north-west; the *amarantina* (from Amarante) with two heart-shaped soundholes, found in the area of Amarante; the *toeira*, with an oval soundhole, three double and two triple courses of strings, popular in Coimbra in the early 20th century. The western type of guitar with heart-shaped soundholes, two triple and three double courses of strings is also found in the Azores, where it is called *viola de arame* or *viola da terra*. The eastern type of guitar has a sharply waisted body and comes in two variants: the *bandurra*, characterized by its round soundhole, profuse ornamentation and a pair of additional sympathetic strings, was popular in the district of Castelo-Branco; the *viola campaniça*, the largest of all Portuguese guitars, has two double and three triple courses of strings and is used to accompany the song duels called *baldão* in the district of Beja. The *cavaquinho*, a small guitar (about 50 cms long) with four courses of strings, is widespread throughout the north-west and was diffused by Portuguese settlers and emigrants to many areas where it was renamed, including Madeira (*braguinha* or *machete*), Brazil (*machete*), Hawaii (*ukelele*) and Indonesia (*kroncong*).

The *guitarra*, also called *guitarra portuguesa*, is a local adaptation of the 'English guitar', which was introduced to Portugal in the second half of the 18th century by the British colony in Oporto. It is the main instrument for the accompaniment of Lisbon's *fado* and the song of Coimbra. It is also used in selected traditional instrumental ensembles and accompanies vocal music in selected areas of the north, in Alentejo and the Azores. A type of cittern with a pear-shaped soundboard, it has six double courses of metal strings and seventeen frets corresponding to three-and-a-half octaves. The neck terminates in a flat, fan-shaped tuning device with machine screws.

The *viola*, an acoustic guitar with six metal strings, was adopted as an accompaniment for *fado* and also in instrumental ensembles in rural areas. The *viola baixo* is larger than the *viola*, has four courses of metal strings and is used in the accompaniment of *fado* as well as in traditional string ensembles known as *tunas*.

The *gaita-de-foles* (bagpipe) has been documented in Portugal since the 14th century. It has a conical chanter with nine fingerholds, a drone pipe and a bag made of goatskin. It is used on ceremonial occasions, especially in the north-east, where it is usually accompanied by a snare and bass drum.

Two kinds of flutes are found in Portugal. An end-blown flute with two front holes and one back hole is accompanied by the *tamboril* drum. Played by the same person, this flute and drum ensemble, known as *tamborileiro*, is now found only in the north-eastern area bordering Spain. A transverse cane flute with six holes, a shepherd's instrument, is found in the central eastern area.

Both the chromatic accordion and the diatonic accordion (the latter locally designated *concertina*) were introduced to Portugal during the first quarter of the 20th century and were quickly adopted for the performance of a wide range of musics in both rural and urban areas, accompanying singing and integrating instrumental ensembles, often replacing traditional string instruments.

The snare drum (*caixa*) has two skins with one or two sympathetic strings. It is suspended horizontally from the player's waist and is struck on the upper skin with two wooden drumsticks. The bass drum (*bombo*), played with a large padded drumstick, has two skins and is suspended vertically from the player's neck (fig.1). Usually played as a pair, both drums have variable sizes and are used for ceremonial purposes.

Two kinds of framedrum are used. The *adufe* is square, has two skins and interior metal jingles (fig.2). Each of the sides of the frame is approximately 45 cm. This instrument, introduced by the Arabs between the 8th and 12th centuries, is mainly found in central eastern Portugal. It is played exclusively by women, who hold it with the thumbs of both hands and the index finger of the left hand, thereby freeing the remaining fingers for playing. The *pandeiro* is a round framedrum, about 20 cm in diameter, with a single skin and metal jingles. It is found mainly in the district of Évora close to the Spanish border. The *pandeireta* is a small *pandeiro* that is used throughout the country, especially in *tunas* (ensembles of string instruments). The *sarronca* is a friction drum made of a clay pot with a narrow opening covered with a skin, which vibrates through the movement of a friction stick.

1. Bombos at the annual festa at the pilgrimage church of Nossa Senhora da Agonia, Viana do Castelo, August 1998

2. Maria Amélia Fonseca and other members of the Adufeiras de Monsanto group accompanying their singing on the adufe, village of Monsanto (district of Castelo Branco), May 1997

It is found in the north-west and in the central eastern area.

Several idiophones are used, including various kinds of castanets in the north-west and north-east; the *reque reque*, a wooden scraper found in the north-west and the Tagus river valley; and the *ferrinhos* (triangle), common in folklore groups, especially in the north-west and south. The *cântaro com abano* is a large clay pot that the player holds below his left arm while hitting the opening with a straw or leather fan; and the *cana* is a cane tube about 60 cm in length, cut vertically through the middle, creating two parts that are struck together. Both instruments are primarily used in the Tagus river valley.

4. ENSEMBLES. *Ranchos folclóricos* ('folklore groups') are the most widespread ensembles for the performance of revivals of traditional music and generally include one or several accordions, as well as string, wind and percussion instruments, which vary from one region to the next. Civil windbands (*bandas filarmónicas*) are also widespread. Traditionally two types of ensembles accompanied dance and song in the north-west. The *rusga* (fig.3) included a *braguesa*, a *cavaquinho*, a *viola*, a *reque reque* and *ferrinhos*. To these instruments a *concertina* or an accordion were also added. The *chula*, a term that also designates a dance, is similar to the *rusga*. However, the *amarantina* substitutes the *braguesa*, and a *rabeca chuleira*, a short-necked fiddle that has fallen out of use, was added. *Tunas*, ensembles primarily formed of string instruments, including guitars of different sizes, mandolins and *cavaquinhos*, are found primarily in the north and in Madeira. Their repertory consists of instrumental compositions written for this kind of ensemble and arrangements of vocal music. Smaller kinds of ensembles are also found. A bagpipe accompanied by a bass and snare drum is found on the west coast from the north down to the centre.

5. TRADITIONAL MUSIC AND RELIGIOUS RITUAL. Religious rituals provide one of the most important contexts for traditional music making throughout Portugal. There are rituals and their associated repertories that are central to the official religious calendar. For example, during the Christmas season in many villages and towns, January songs (*janeiras*) and kings' songs (*reis*) are performed by groups of children and adults at villagers' doorsteps, wishing the members of the household happy holidays and requesting food donations. Specific repertories and rituals also mark Carnival, Lent and Easter.

Hundreds of religious festivities (*festas*) and pilgrimages (*romarias*) honouring the Virgin Mary or saints are celebrated annually in villages, towns and cities throughout Portugal. These are complex ritual events, lasting from one to several days, in which religious devotion, social interaction and economic transaction intersect. Music, dance and other forms of expressive behaviour structure these festivities ritually, sonically, spatially and temporally. *Festas* are highly dynamic arenas for constructing cultural place, for shaping and negotiating local and regional identities, and for enacting power relations. Some are local events drawing participants from their communities and nearby parishes, as well as visiting emigrants. Others attract visitors and pilgrims from a wider region, from other parts of the country or from

3. Rusga (accordion, caixa and cavaquinho) at the Feast of St Bartholomew, Ponte da Barca, 24 August 1998

4. Rancho das Lavradeiras de Carreço, Viana do Castelo, August 1998

Spain, and have been developed and promoted by municipal governments as tourist attractions.

In the past few decades *festas* have undergone profound transformations, which have affected expressive behaviour. Performances of civil windbands (*bandas filarmónicas*) are central to most *festas*. However, singing and dancing by participants, including repertories that are specific to the *festa*, have declined or disappeared and have been replaced by performances by a variety of formally structured ensembles, such as folklore groups and urban popular music groups, as well as by recorded music broadcast through loudspeakers.

Although *festas* vary in their scope and ritual detail, a basic sequence of ritual events, in which expressive behaviour plays a central role, can be established for the main day of festivities in many rural *festas* throughout central and northern Portugal. The *alvorada* is an announcement of the beginning of the *festa* in the early morning through the performances of a civil windband (*banda filarmónica*) or bagpipe and drum ensemble that marches through the streets of the village or town. *Arruada, peditório* or *recolha de andores* are requests for donations by the *festa* organizers who also march through the village or town streets, accompanied by a civil windband, and who stop in front of donors' houses to collect money and goods that are sold for the benefit of the *festa* and local parish. This is followed by a sung mass, the only liturgical event without which the *festa* cannot take place, and the *procissão*, a procession parading the icons of the Virgin Mary and/or saint(s) through a fixed itinerary, moving solemnly to the rhythm of the marches performed by the civil windband. Finally, the *arraial*, a secular celebration, takes place, following the procession and ending in the late evening. Donations are sold and an array of performances takes place, which often includes: windbands, folklore groups, popular music artists and groups, and a dance for local youth. Expressive behaviour, including music and dance, also plays an important role in a variety of secular celebrations such as municipal holidays.

6. Revival movements. A movement for the revival of traditional music and dance from rural areas emerged in the early decades of the 20th century and was configured by political ideologies, cultural policies, local interests and aesthetic preferences. Undergirding this movement was the conceptualization of 'tradition' (also designated *folclore*, *cultura popular* or *património*) as an 'objective repository' of music sounds, dances, texts and costumes constituting essential ingredients in the construction of cultural identity. Throughout the 20th century many scholars, collectors and selected tradition bearers claimed that 'tradition' was endangered by modernizing processes, and they attempted to 'salvage' it by collecting traditional poetry, songs, dances and objects, as well as by publishing song anthologies and ethnographies. Some also founded formally organized groups of dancers, singers and instrumentalists to perform selected representations of local music and dance as they were supposedly practised in the late 19th century and the early 20th, within contexts that were different from their original settings, causing them to take on new functions and meanings. They thus (re)created a mythologized past, geographically circumscribed and culturally defined, embodying it as staged performance. Through songs, poetry, dance, costumes and artefacts, revival groups evoke traditional rural landscapes, agricultural labour, social life and values that have vanished. They thus (re)construct or symbolically reinvent the past, visually and sonically embodying local identities and shaping the present, as well as mapping trajectories for the future.

(i) Ranchos folclóricos. The most widespread 'revival groups' are *ranchos folclóricos* ('folklore groups'), over two thousand of which represent the music, dances and costumes of local communities (fig.4). These are ensembles of 30–50 dancers, singers and instrumentalists that perform staged revivals of traditional dance, song and costumes of their villages, regions or otherwise circumscribed areas, ideally representing practices that go back to the beginning of the 20th century.

During the 1930s and the following decades *ranchos folclóricos* were formed at the initiative of the *estado novo*. An ideologically charged concept of *folclore* provided the basis for the development of the *rancho folclórico* model. *Folclore* was associated with the picturesque image of rural Portugal projected by the regime's political propaganda. *Ranchos folclóricos* were required

to affiliate with the Fundação Nacional para Alegria no Trabalho (FNAT), founded in 1935 and inspired by the German Fascist organization Kraft durch Freude. The FNAT sponsored, promoted and oriented *ranchos folclóricos* throughout the country.

Following the 1974 revolution, *ranchos folclóricos* continued to mushroom but were transformed into grassroots organizations, founded and maintained through local initiative and largely sustained by subsidies from municipal governments, regional tourist offices and, in some areas, by restaurants and hotels.

The activities of *ranchos folclóricos* are centred on the preparation of staged performances of dances. Performances of vocal or instrumental music without dance are rare. *Ranchos* perform in folklore festivals, religious and secular festivities and, in some cases, in tourist establishments. A *rancho folclórico* ideally performs a cross-section of the dance and song repertory of the area it represents. In practice, the choice of repertory is conditioned by its potential attractiveness to the audience. Dances that are considered emblematic of their regions tend to predominate.

(ii) Urban revival groups. Following the 1974 revolution, a movement for the revival and dissemination of traditional music from rural areas emerged among university students and young professionals, especially in Lisbon, Coimbra and Oporto. Many of the students who formed urban revival groups participated in alphabetization campaigns and other civic service programmes in rural areas following 1974 and collected music and local artefacts as part of their mission. They were largely inspired by the ideals and approach of Fernando Lopes Graça and Michel Giacometti, who emphasized the historical and aesthetic value of traditional music, called for its preservation and documented selected traditions through recordings and writings.

Over a dozen revival groups were formed between the mid-1970s and the mid-1980s. Typically they had ten or more members who performed traditional repertories from various parts of the country, which they had learnt from tradition bearers through recordings and transcriptions, using both traditional and non-traditional instruments. Some groups attempted to reproduce the traditional model as closely as possible, while others performed stylized re-creations of what they and other researchers had collected, generally preserving the main melodic line and text, while introducing new harmonic, rhythmic and melodic elements.

7. Documentation and research. Interest in rural musical tradition goes back to the 1870s and was initially inspired by Portuguese literary romanticism, as well as by philological and ethnological research. The first musical transcriptions were published by Neves e Melo in 1872 and marked the beginning of a phase that lasted up to the 1920s in which traditional music was documented through musical transcriptions. Three landmark volumes of harmonized transcriptions by César das Neves and Gualdino Campos followed; these included both rural and urban songs (1893, 1895 and 1898). In 1902 the Musical Arts Council for the Royal Conservatory of Music solicited musical transcriptions of local traditions from subscribers to its journal and provided guidelines for collecting. Over a decade later, prominent critic António Arroyo discussed the limitations of notation and urged collectors to use the gramophone. No evidence is thus far available as to the use of sound recording for the systematic documentation of traditional music prior to 1940.

The 1920s marked the beginning of a new phase in the investigation of traditional music that lasted up to the 1980s. There was a substantial increase in the quantity and quality of documentation and research that focussed on regional repertories, their origins and distinctive traits. Surveys of traditional musical style, genres and instruments throughout mainland Portugal were also published.

In 1932–3 Kurt Schindler made a few recordings and musical transcriptions of traditional music during his brief passage through Trás-os-Montes. However, the first systematic recorded survey of rural traditions from continental Portugal was carried out in 1940 by the composer and musicologist Armando Leça (1891–1977), who was sponsored by Portuguese National Radio (Emissora Nacional, presently Radio Difusão Portuguesa), where this unpublished collection is deposited. Since the 1950s, over one hundred ethnographic recordings have been published in Portugal and abroad, documenting music primarily from areas that preserved archaic traditions. Noteworthy are the published collections of the composer and ethnomusicologist Artur Santos (1914–87) from his research in the Azores (1956–65), and the researcher Michel Giacometti in collaboration with the composer Fernando Lopes Graça from Trás-os-Montes, Algarve, Minho, the Beiras and Alentejo (1959–81). See also §IV, 3 below.

IV. Popular music

The major cities of Portugal have been important centres for the production and dissemination of a rich array of urban popular musics. In these cities, musical genres and styles developed, rural traditions were reinterpreted and foreign traditions were adopted.

1. Before 1974: (i) *Fado* and *canção de Coimbra* (ii) Political song. 2. Since 1974. 3. Research.

1. Before 1974. The 1960s marked the beginning of a period of expansion and innovation in popular music that has continued up to the present. Rock and jazz were introduced, political song developed, the 19th-century tradition of Lisbon's *fado* and Coimbra's song were revitalized, Portuguese styles of pop and rock evolved, musics from the former African colonies and Brazil occupied an increasingly important place in Lisbon's musical life and local styles of rap and hip hop emerged.

(i) Fado and canção de Coimbra. Fado is the best known genre of Portuguese music outside Portugal. It has two distinct traditions. The most widely known is from Lisbon and involves a solo vocalist, instrumental accompanists and audiences in a communicative process using verbal musical, facial and bodily expression. A separate though related tradition, also named *fado* or *canção de Coimbra* ('Coimbra song'), is a lyrical performance tradition that thrives in the central city of Coimbra, where it is integrated into the academic life of the medieval university. Lisbon's *fado* emerged in the second quarter of the 19th century and has remained essentially an oral tradition. While some of its characteristics can be traced back to its initial phase of development, several aspects of *fado* have changed considerably, including its social context, performance practice and repertory.

(ii) Political song. Political song (*canção de intervenção*) played an important role in protesting against the

totalitarian regime of the *estado novo*. José Afonso (1929–87) was one of its main protagonists, but other musicians, several of whom had been exiled in France, also contributed to its development and include Adriano Correia de Oliveira, José Mário Branco, Luís Cília, Francisco Fanhais, José Jorge Letria, José Barata Moura and Sérgio Godinho. These musicians traced a new course for urban popular music and influenced a generation of musicians, some of whom also participated in this movement and are still active, including Fausto, Vitorino, Janita Salomé and Júlio Periera.

The texts of political song, often written by the composer-singer, are politically and socially engaged. Melodies, in conjunction with the accompaniment, reinforce textual content. The musical style reflects influences from traditional music, French urban popular song of the 1960s, African music and Brazilian popular music. By the late 1970s the revolutionary climate had subsided and the need for expressing political militancy through song was no longer felt by poets, composers and singers, who redefined their role and creative contribution.

2. Since 1974. The 1980s and 90s were marked by the search for a new musical discourse for urban popular music, the increase, commodification and industrialization of musical production, the growth of music consumption through recording and broadcast media and the globalization of the production and dissemination of urban popular music. The recording industry, essentially in the hands of multinational companies (EMI, BMG, Polygram, Sony Music and Warner) and over two dozen local independent producers, has played a central role in producing, shaping and disseminating urban popular music. The increase in production by recording companies was paralleled by a significant increase in the purchase of record, cassette and CD players, a 70% increase between 1985 and 1997 according to a recent study.

The boom in musical production during the 1980s and 90s was accompanied by the diversification of the musical domains and styles produced and consumed in Portugal, and the emergence of new styles that, although intended primarily for Portuguese audiences, increasingly took into account the global market.

In the late 1970s and 80s there was a boom in the number of Portuguese rock groups and a local style of rock developed. Jazz saw a substantial increase in the involvement of musicians and audiences. Several transplanted musical traditions, especially from the former African colonies, thrived in Lisbon, and foreign styles such as rap and hip hop were adapted locally. In all, two stylistic tendencies can be observed in the popular musics of the 1980s and 90s: a musical discourse created by Portuguese musicians that is integrated within the major international developments of commercial popular music, and a new musical style that vindicates its Portugueseness by drawing upon various musical elements identified by musicians and audiences as Portuguese and by emphasizing the Portuguese language.

3. Research. Up to the 1980s, researchers neglected urban musical phenomena or deemed them unworthy of study. Lisbon's *fado*, however, has been the subject of historical research and ideological debate, as well as recent anthropological and ethnomusicological investigation. It was also documented from an early date. Foreign record companies recorded *fado* from the first decade of the 20th century onwards. The Portuguese company Valentim de Carvalho started issuing recordings of *fado* in 1926, when it became the sole agent of Columbia in Portugal and Portuguese West Africa. Useful information on other urban music domains, genres, artists, groups, song texts and recordings is provided in selected journalistic publications.

The 1980s marked the beginning of a new phase of ethnomusicological research in Portugal. Ethnomusicology was introduced as an academic discipline within the Musicology Department at the Universidade Nova de Lisboa (founded in 1980), where an ethnomusicology graduate programme and a research institute (Instituto de Ethnomusicologia, INET) were launched in 1990 and 1995 respectively. Recent research by academically trained ethnomusicologists focusses on the array of current research problems, including the use of music in the construction of identity among immigrants from the former Portuguese colonies and among Portuguese emigrants in other countries; the history of the recording industry and its role in shaping urban musical practices; cultural policy and its impact on music making; urban musical genres such as *fado*, rap and political song; the role of civil windbands in religious festivities; and the revival and re-creation of expressive behaviour during the 20th century.

SALWA EL-SHAWAN CASTELO-BRANCO (I, III–IV), MANUEL CARLOS DE BRITO (II)

Portugal [Portogallo], **Marcos António (da Fonseca)** (*b* Lisbon, 24 March 1762; *d* Rio de Janeiro, 7 Feb 1830). Portuguese composer. Baptized simply Marcos, son of Manuel António da Ascenção and Joaquina Teresa Rosa, he was known in childhood and youth as Marcos António; he adopted the surname Fonseca Portugal in the mid-1780s from Captain José Correia da Fonseca Portugal, who had been *padrinho* ('godfather') at his parents' wedding. On 6 August 1771 he was admitted to the Seminário da Patriarcal of Lisbon, where he studied composition with João de Sousa Carvalho, as well as

singing and the organ. According to Fétis, he had teachers by the names of Borselli and Orao, acted as accompanist at the Madrid Opera at the age of 20 and was sponsored by the Portuguese ambassador there to go to Italy in 1787, but there is no evidence for these assertions. On 23 July 1783 he was admitted to the music guild, the Irmandade de S Cecília, as singer and organist of the Patriarcal.

Portugal's involvement with the theatre began with his appointment as *maestro* at the Teatro do Salitre, Lisbon, in 1785. Between then and 1792 he composed a series of *farsas* and *entremezes* for the Salitre, including Portuguese versions of Goldonian librettos. None of these is extant. During this period he also composed a number of one-act *elogios* (dramatic odes) for performance there on royal birthdays, of which two have survived: *Licença pastoril* and *Pequeno drama*. Under royal patronage he went to Naples in 1792, ostensibly to complete his musical studies, but he quickly became active as an opera composer. He gained instant success with *La confusione della somiglianza* (1793, Florence), one of several *opere buffe* and *farse* he wrote over the next seven years which were subsequently performed throughout Italy and much of Europe. Although Portugal wrote a number of *opere serie* during this period, they were less well received, only *Fernando nel Messico* (1798, Venice) being repeated outside Italy – in London (1803) thanks to Elizabeth Billington, for whom he had written the opera, and in Lisbon (1805), where he revised it for Angelica Catalani.

Portugal returned to Lisbon in 1800, and was appointed *mestre de capela* of the royal chapel and *maestro* of the Teatro de S Carlos, taking over the post from the violinist and composer Francesco Federici. From summer 1803 the theatre's musical direction was divided between Portugal, conductor of the *seria* company, and Valentino Fioravanti, of the *buffa*, each heading a troupe of the highest calibre. This state of affairs continued until Carnival 1807 and explains why Portugal wrote or revised 12 *opere serie* during the period but only one *opera buffa* (*L'oro non compra amore*, 1804). Only this last subsequently gained widespread popularity in Italy and elsewhere. When Napoleon's troops entered Lisbon in November 1807, Marcos Portugal, in spite of his court position, did not flee to Brazil with the royal family. During the ten-month French occupation he revised *Demofoonte* for Napoleon's birthday in 1808. About this time, and until 1834, the finale of his cantata *La speranza* was adopted as the national anthem. He was intermittently conductor at the S Carlos until January 1811, after which he sailed with his brother Simão Portugal, a church composer, for Rio de Janeiro. Here he was immediately reappointed *mestre* of the royal chapel and, upon its opening in 1813, *maestro* of the new Teatro S João. The only significant stage work he composed in Brazil was *A saloia namorada* (1812), for performance at court; he also revived four of his Lisbon operas. In 1817 he composed a hymn of acclamation for John VI, and his *Hino da independência*, celebrating Brazilian independence in 1822, was first performed on 12 October that year.

As well as theatre works, Portugal composed a substantial amount of church music, except during his period in Italy. Some of this music exploits the six organs at the Basilica of Mafra. He also contributed a number of *modinhas* to the *Jornal de modinhas*, published in Lisbon in the 1790s. But his fame rests above all on his comic works, especially *La confusione della somiglianza*, *Lo spazzacamino principe*, *La donna di genio volubile*, *Le donne cambiate*, *Non irritar le donne* and *L'oro non compra amore*, and on the showpiece arias he wrote or revised for Catalani, most notably 'Son regina' (from *La morte di Semiramide*, revised in *La Sofonisba*).

Stylistically Portugal's music is firmly within the Neapolitan tradition of Cimarosa, though as the 1994 Lisbon and London revivals of *Le donne cambiate* (in a contemporary Portuguese version as *As damas trocadas*) revealed, he was both more melodious and more forward-looking in his use of devices such as a 'stupefaction ensemble' and certain turns of phrase more familiar to modern audiences from the music of Rossini. In his Lisbon *opere serie* he was generally more conservative, often re-using material composed in Italy and allowing Catalani's virtuosity to override musical considerations.

DAVID CRANMER

Portugal, Simão Victorino (*b* 1774; *d* Rio de Janeiro, ?1842). Portuguese organist and composer, brother of MARCOS ANTÔNIO PORTUGAL. He became a student at the Patriarchal Seminary in 1782 and was later the church organist there. He was principally a teacher of singing and the piano. By 1811 he had emigrated with his elder brother to Brazil, where he was appointed organist of the royal chapel; in 1842 Francisco Manoel was named *mestre de capela* in place of 'Simeao Portugal', who may have died about that time. Some of Simão Portugal's sacred compositions are in the cathedral archives in Lisbon and Évora; one psalm is catalogued in the Ajuda library.

ELEANOR RUSSELL

Portunal [Portunalflöte] (Ger.). *See under* ORGAN STOP.

Porumbescu, Ciprian (*b* Şipote [now Şipotele-Sucevei], nr Suceava, 14 Oct 1853; *d* Stupca, nr Suceava, 6 June 1883). Romanian composer, choirmaster and teacher. He began his musical education in his family circle, his father being a folksong collector and a friend of Carol Miculi, who visited them during the summer holidays. After some instruction in the violin he became a pupil of Vorobchievici in Chernovtsy, and at the Vienna Conservatory he was a pupil of Franz Krenn and Bruckner. Porumbescu was an ènthusiastic organizer of musical life, conducting choirs and orchestras, writing songs, founding festivals and even acting on the stage. He became the president of Arboroasa ('Wooded Land', the ancient name of Bukovina), a student cultural society, in his own district, where he was confined for political reasons. Subsequently he became conductor of the România Jună ('Young Romania'), a Viennese student society. In 1878 he wrote *Elementele musicei vocale pentru şcoalele poporale şi normale* ('Elements of vocal music for grammar and normal schools'). In Vienna his tunes were taken up as freedom songs by young Romanians, and his waltzes were played by the popular orchestras of the capital. He settled in Braşov as a music teacher and choirmaster of the Romanian Society and the church of St Nicholas in Schei, and was more active as a composer in his last years. His *Crai nou* ('New Moon'), written in 1882, had become one of the most popular Romanian operettas by 1900. As he declared after its première, the model of his style was popular music. He also based many of his choruses on folk music, with its modes and free rhythms. Porumbescu was one of the founders of the Romanian school of instrumental and vocal music with his *Balada* for violin and piano, his *Rapsodia română*, folkdances and salon pieces for piano, and his songs on Romanian or German texts.

WORKS

Edition: *Opere alese de Ciprian Porumbescu*, ed. V. Cosma, i–ii (Bucharest, 1954–8) [C]

STAGE

Candidatul Linte sau Rigorosul teologic [The Candidate Linte, or The Theological Rigorist] (vaudeville, 2, Porumbescu), 1877, C ii

Crai nou [New Moon] (operetta, 2, V. Alecsandri), 1882; excerpts in C i

SACRED CHORAL

Altarul Mânăstirii Putna [The Altar of the Monastery of Putna], cant. (Alecsandri), solo vv, male chorus, pf, 1877 (Leipzig, 1913)

Hymns and liturgical songs, most for male vv

SECULAR VOCAL

Tabăra română [Romanian Camp] (Alecsandri), solo vv, male chorus, 1876

La malurile Prutului [On the Banks of the Prut], waltz (Porumbescu), solo vv, male chorus, pf, 1877 (Leipzig, 1911)

Colecţiuni de [21] cîntece sociale pentru studenţii români [Social Songs for Romanian Students], unison vv, 1879 (Vienna, 1880)

Cît îi ţara românească [All through the Romanian Countryside] (Porumbescu), chorus, pf, 1882 (Leipzig, 1911); Ger. and Rom. texts

Serenada (Dormi uşor) [Sleep gently], S, chorus (Leipzig, 1911)

Other choral works (most for male vv) on texts of Porumbescu, Alecsandri etc.

Solo songs on Rom. and Ger. texts

INSTRUMENTAL

Paraphrase sur un thème roumain, orch, 1882

Qnt, fl, str, 1875; Str Qnt, 1875; Arie română, fl, 2 vn, pf, 1877

Balada, vn, pf, op.29, 1880 (Bucharest, *c*1880); Rêverie, vn, pf, 1880 (Cluj, *c*1880); Rapsodia română, pf, 1882, C i; numerous other folkdances and salon pieces for vn, pf and pf solo

Posaune (ii) (Ger.). *See under* ORGAN STOP.

Posch, Isaac (*b* Krems an der Donau, ?1591; *d* in Carinthia or Carniola, late 1622 or early 1623). Austrian composer, organist and organ builder. From 1597 until the autumn of 1606 or the spring of 1607 he studied at the Protestant Gymnasium Poeticum in Regensburg, where as a foreign boarding pupil he was entitled to extra music tuition from the Kantors Raselius and Homberger. From 1614 at the latest he worked as organist of the Provincial Estates in Carinthia and as such was probably active among the Protestant nobility. By 1617–18 he appears to have settled in the neighbouring province of Carniola (now part of Slovenia); he repaired a number of musical instruments at Oberburg (now Gornji Grad), the residence of the prince-bishops of Laibach (now Ljubljana), and signed the dedication of his 1618 volume from Laibach, the Carniolan capital. His *Musicalische Tafelfreudt* (1621) is dedicated to the Provincial Estates of Carniola. In 1621 he built an organ for the Franciscan church at Laibach and in 1622 he restored an organ in the cathedral.

Like the publications of his contemporaries Thesselius (1609), Peuerl (1611) and Schein (1617), Posch's *Musicalische Ehrenfreudt* (1618) made an important contribution to the development of the early Baroque 'variation' suite. The four *balletas* which open the collection were intended expressly to accompany aristocratic meals, while the remaining compositions – 15 suites – could be used for the same purpose or to accompany the dancing that followed. The three dances in each suite, a *gagliarda* (or *couranta*), a *tanz* and its *proportio*, are related by the appearance of melodic material from the *tanz* in a modified form in the other two movements. The ordering and character of the movements of the *Musicalische Tafelfreudt* are equally individual; in the preface Posch refers to the serious nature of the pavans and galliards, which contain Italian stylistic innovations including dynamic markings ('p' and 'f' for *piano* and *forte*) and dense chromaticism. Most of the small-scale Latin sacred concertos of the *Harmonia concertans* (1623) are settings of words from the *Psalms* or the *Song of Songs*; they were probably intended mainly for private Protestant devotion. Posch makes overt reference to Italian models, mentioning Viadana in the preface; he goes some way beyond his model, however, in both the structure and expressive qualities of his music. The inclusion of 12 solo motets in the collection, with relatively richly figured continuos parts, place Posch as one of the first Protestant composers of early Baroque monody.

WORKS

Musicalische Ehrenfreudt, das ist Allerley neuer Balleten, Gagliarden, Couranten und Täntzen teutscher Arth, 49 pieces a 4 (Regensburg, 1618); excerpts ed. in DTÖ, lxx, Jg.xxxvi/2 (1929/*R*); ed. in MAMS, xxx–xxxi (1996)

Posen (Ger.). *See* POZNAŃ.

Poser, Hans (*b* Tannenbergsthal, Vogtland, 8 Oct 1917; *d* Hamburg, 1 Oct 1970). German composer and teacher. As a prisoner of war in Canada, he was helped by the Red Cross from 1940 to pursue his musical studies at a distance, his teachers being Hindemith and Grabner. After the war he moved to Hamburg and took lessons with E.G. Klussmann. In 1947 he was appointed to teach harmony and aural training at the institution which later became the Hamburg Hochschule für Musik, becoming professor in 1962. He was made an ordinary member of the Hamburg Free Academy of Arts in 1953. His most widespread success was with his television chamber opera *Die Auszeichnung* and the cantata *Till Eulenspiegel*, but in the German-speaking world he had most influence through his educational music.

WORKS
(*selective list*)

2 television chbr ops, incl. Die Auszeichnung (Poser, after G. de Maupassant), 1959
Many choral works, incl. Till Eulenspiegel, op.35, 3 solo vv, chorus, orch, 1956
Inst pieces, songs, educational music

Principal publisher: Möseler

KLAUS L. NEUMANN

Posford, (Benjamin) George (Ashwell) (*b* Folkestone, 23 March 1906; *d* Worplesdon, nr Guildford, 24 April 1976). English composer, lyricist and pianist. He studied law at Cambridge then attended the RAM, and in 1929 became a professional composer, also writing his own song lyrics. He contributed to radio revues, particularly in collaboration with the lyricist Eric Maschwitz (editor of the *Radio Times* and later director of Variety at the BBC), both achieving success with their radio operetta *Good-Night Vienna* (1931, broadcast 7 January 1932). Through its subsequent association with Jack Buchanan, who starred in the film of the show (1932), the title song remains one of Posford's few lasting works. A further planned radio operetta with the author Herbert Farjeon, *One Day in Summer*, was abandoned in May 1934. Posford also appeared on radio as a guest pianist between 1930 and 1945, playing his own works in programmes such as 'Vaudeville' and 'Keyboard Cavalcade'.

Although Posford composed orchestral music, including the rhapsody *Broadcasting House* (1933, broadcast 20 January 1934) and the wartime hit song *Room Five-Hundred-and-Four* (1941), he is primarily remembered for his stage shows of the 1930s, which drew upon the local colour of romanticized Hungarian and Russian settings: on-stage Gypsy bands were prominent, and spectacle provided the central focus. At first Posford developed existing musical material by Bernard Grün for *Balalaika* (1936) with few original numbers of his own; in subsequent shows, however, he increasingly contributed more to the scores, revealing a talent for a Viennese style, indebted to Johann Strauss (ii) in such waltzes as the 'Valse Sentimentale' (*Balalaika*) or 'My heart belongs to Budapest' (*Magyar Melody*, 1938). His numbers in more contemporary popular dance and song idioms tend to be formular but with an instant appeal, as with the insistent rhythms of 'Just like a Gypsy Band' and the lyricism of 'Café on Top of the Hill' (both *Magyar Melody*). Of his later shows, *Zip Goes a Million* (1951) is notable for a series of light-hearted and catchy songs for its star, George Formby ('Saving Up for Sally' and 'Pleasure Cruise'), and for one of Posford's best ballads, 'It takes no time to fall in love'.

WORKS
(*selective list*)

dates are those of first London performance or radio broadcast, unless otherwise stated

Stage musicals: The Gay Hussar, 1933, collab. B. Grün, rev. as Balalaika, 1936 [film, 1939]; Good-Night Vienna, 1936 [after radio musical and film, 1932]; Paprika, 1938, collab. Grün, rev. as Magyar Melody, 1938, rev. 1950; Full Swing, 1942, collab. H.P. Davies, Evangeline, 1946, collab. H. Jacobson; Masquerade, vs (1949); Zip Goes a Million, 1951; Happy Holiday, 1954; contribs. to Lavender, Manchester, 1930 [principal composer G.H. Clutsam]
Contribs. to stage revues, incl. More New Faces, 1941; New Ambassadors Revue, 1943
Radio musicals: Good-Night Vienna, 7 Jan 1932 [film 1932]; The World is Mine, 9 Nov 1934; Invitation to the Waltz, 14 Nov 1934 [film 1935]
Song contribs. to radio revues and series, incl. The World We Listen In, 10 Aug 1929 and 4 Oct 1929; Red Pepper, 7 May 1930; Give Me New York, 12 Nov 1930
Songs associated with films: Oh! Mister Moon (in Born Lucky, 1932); Let me give my happiness to you, Lucky for Me, Three Wishes (The Good Companions, 1933); Invitation to the Waltz, Let the world go by, Venetian Moon (Invitation to the Waltz, 1935; after radio 1934); The world is mine to-night (The Gay Desperado, 1936); What have you done to my heart? (Café Colette, 1937)
Many individual popular songs, incl. Awake my heart; Can you ever forget; Just Heaven; Lazy Day; The London I Love; Marching for the King; Rolling in the Hay; Room Five-Hundred-and-Four; Tomorrow will be Sunday; Too Soon; When a Woman Wears a Ring; Who'll buy an old gold ring; The Wind and the Rain; The world is mine; You're my decline and fall
Orch works, incl. Broadcasting House, rhapsody, orchd H. Geehl, pf, orch, 1933, broadcast 1934; Transatlantic Rhapsody, 1936; Song of the Clyde, 1941

JOHN SNELSON

Position. A term applied to playing positions on string instruments and on the trombone. (For its application to harmony, *see* SPACING.) On a string instrument it indicates the placement of the left hand on the fingerboard . On the trombone it refers to the degree of extension of the slide: first position is the 'home' position, and each successive position down to the seventh lowers the pitch by a semitone. (For a fuller discussion *see* TROMBONE.)

Position changes on instruments of the violin family are usually indicated by composers and theorists by fingerings, with the roman numerals I, II, III, IV designating the four strings (from highest to lowest). In the 17th- and 18th-century French virtuoso viol tradition, exemplified by J.-B. Forqueray and Marin Marais, the number of dots over a note or group of notes designated the desired string, one dot being the highest (*see* VIOL, §6, Table 7). Unless some special effect is desired, however, composers usually leave the choice of positions to players.

On the violin the 1st position covers *a* to *d′* on the *g* string, *e′* to *a′* on the *d′* string, and so on. Thus the violin can be played in a range from (open) *g* to *b″* (on the *e″* string) without leaving 1st position. The 2nd position is achieved by moving a semitone or tone up, so that the first finger on the *g* string plays *b*♭ or *b* and the fourth finger on the *e″* string plays *c‴* or *c*♯‴ and so on (*see* SHIFT). 'Half' position lies between the nut and first position. Leopold Mozart called the 2nd, 4th and 6th positions collectively 'halb Applicatur', the 3rd, 5th and 7th 'ganz Applicatur'; the French 18th-century word was 'ordre'; the English called 2nd position the 'half' shift, 3rd position the 'whole' or 'full' shift, 6th position the 'double' shift and 7th position the 'last' shift.

On the cello only the 1st position permits a diatonic scale of two octaves without shifts, by using the open strings; two complete octaves of C major, D major, D melodic minor and C melodic minor (ascending) can be played, the last three using the 'extended' position (a whole tone between first and second fingers). All others

in two octaves require shifts or the use of the thumb. Corrette's cello *Méthode* (1741) described the 4th position as 'thumb position', although the *Méthode* (1772) of Jean-Baptiste Cupis *le jeune* made no mention of this. Tillière's *Méthode* (1764) followed Corrette's in calling the 4th a 'thumb' position and also indicated the use of the fourth finger in thumb-position arpeggios. In modern terminology all positions on the cello above 4th are called thumb position.

Because of its size the double bass has been the subject of many different fingering systems. Nearly all advocate the use of only the first, second and fourth fingers in the low positions; the third finger serves as a support to the fourth, a tone lying comfortably between 1 and 4. Some players prefer the use of all fingers in all positions, although the stretch of a semitone – the double bass's 'extended' fingering – between each finger is frequently impossible. French schools of playing use the term 'first degree' to signify the position of the left hand when the first finger is placed a semitone above the nut; the next position, a semitone higher, is called 'second degree' and so on (according to the methods of Nanny and Cruft). The Austrian and German schools call first degree the 'half position', second degree is called 'first position', the positions being denoted by Roman numerals. Confusion arises higher up the instrument when sixth degree is equivalent to III/IV (Simandl, Montag) and to II MP, second 'medium position' (Lotter). On the double bass thumb positions are generally used from exactly halfway up the string, when the third finger, being longer, replaces the fourth. In passages of great rapidity or technical difficulty, the thumb may be used to advantage in any part of the instrument.

Before 1600 evidence of playing above 1st position is slight. Some viol treatises (particularly Ganassi's *Regola rubertina*, 1542–3) mention the possibility, and higher positions are shown in some paintings. In the early 17th century, Monteverdi's music implies shifts to 3rd and 4th positions, and in 1636 Mersenne wrote that the best violin players could reach an octave above the open strings, that is, 4th position. Music by the virtuoso violinist-composers of the late 17th century, such as Uccellini, Biber and J.J. Walther, requires the player to reach as high as the 7th position.

Gradually the use of high positions, even on the lower strings, became normal. Both Leopold Mozart and Geminiani expected good violinists to be able to play up to the 7th position on all strings. Cello sonatas by Dall'Abaco, Lanzetti and Porpora and Haydn's concertos explore the upper positions of the instrument; the sonatas and concertos of Boccherini exploit fully this extended compass.

SONYA MONOSOFF

Positive. In current organ usage, strongly influenced by German terminology, a positive is (1) a movable organ as distinct from a PORTATIVE or portable organ, and (2) that manual of a larger organ that resembles (and perhaps historically originated in) such a smaller organ. The English CHAMBER ORGAN is a positive; so are the tall, shallow gothic instruments of two to three octaves (often beginning at *B*) and one to three ranks of flue pipes which are sometimes accompanied by Bourdons in the bass, frequently represented in the 15th century as being played by one angel and blown by another (altar paintings of Van Eyck, Van der Goes). Henri Arnaut de Zwolle (MS, *c*1450) distinguished carefully between the small *portivus*, the larger *organum* or *opus* (cf *Werk*) and the *positivo*, especially the *positivo tergali* or *Rückpositiv*; the distinction was kept by Virdung (1511) and his plagiarizers. In England the term does not seem to have been used, while Schlick (1511) applied it to any small chest within a larger organ, such as the positive *zu Rück* or that *forn an die Brust* – as did some builders of the time (Van der Distelen at Antwerp Cathedral, 1505). In France, *le positif* usually means the CHAIR ORGAN in any source after *c*1520; previous to that it is unknown how many of the *petites orgues* were Chair organs or independent positive organs. Only from other sources is it clear that the *Posityff* at Zwolle (1447) and the *positif de la grande* at Angers (1513) were Chair organs. Later independent positives vary immensely, some with more than one manual, some with pedal stops, some blown by the player with a foot lever, some placed (Lat. *ponere*, *positum*) on tables, others too large to be easily movable, but most based on a Principal rank smaller than 8′.

Positive organ: engraving of an organist and his wife by Israhel van Meckenem (ii), late 15th century

PETER WILLIAMS, NICHOLAS THISTLETHWAITE

Pospíšil, Juraj (*b* Olomouc, 14 Jan 1931). Slovak composer of Czech birth. He studied composition with Petrželka at the Janáček Academy, Brno (1950–52), and with Moyzes and Cikker at the Bratislava Academy of Music and Dramatic Art (1952–5). In 1955 he was appointed to teach theory at the Bratislava Conservatory; he has also lectured at the Academy.

His early compositions resemble late Romanticism, Impressionism and the music of Janáček. The influence of the latter manifests itself in Pospíšil's use of Moravian folksong; ostinato rhythms; the development of short, fragmentary motifs, as in the Sonata for Strings (1961); and in the phenomenon of structural fragmentation as found in the Trombone Concerto of 1962. In the 1960s he absorbed elements of serialism, applied at first in combination with Romantic cantilena and Janáček influences, for example in the Second Symphony, and later within a technically and stylistically consequential form involving polylinear structure, in *Glosy* ('Glosses') and *Protirečenia* ('Contradictions'), or emphasizing spatial-timbral effects as in the Third Symphony. In the 1970s and 80s he restricted his use of new music techniques, developing instead an individual neo-romantic style, for example in the symphonic frescos and *Krajinou detstva* ('Through the Landscape of Youth'), and drawing further on the music of Janáček, especially in the chamber works. An intimate atmosphere and stylistic concentration dominate the latter, particularly the second and third quartets.

VLADIMÍR ZVARA

Poss, Georg (*b* Franconia, *c*1570; *d* Rothwaltersdorf [now Czerwienczyce, Poland], after 1633). German composer, trumpeter and cornettist. He spent his life serving the Habsburgs, probably starting as a chorister. In 1594 he is recorded as a trumpeter in the employment of Archduke Maximilian who, as Master of the Catholic Teutonic Knights at Mergentheim, Franconia, maintained a Kapelle under Aegidius Bassengius, and sent Poss to Venice to study music for three years. Poss then went to the court of Archduke Ferdinand at Graz, through the influence of the Hofkapellmeister, P.A. Bianco, and for 21 years pursued an exemplary career there as cornettist, first court trumpeter, composer and teacher. In 1618 he became Kapellmeister to Archduke Karl, Bishop of Brixen and Breslau and a brother of Archduke Ferdinand, at his court at Neisse, Silesia. He held the post for only four years, for Stefano Bernardi succeeded him in 1622. He was well rewarded for his services and was still mentioned in the archives of the court at Vienna in 1629 and 1633 as 'former Kapellmeister to Archduke Karl'. Poss was one of the composers – Annibale Perini, Francesco Stivori and Alessandro Tadei were others – who imported the style of Giovanni Gabrieli and other Venetians into Austria. His surviving music is all sacred and mostly polychoral. His parody masses, nine of which appeared in the *Liber primus missarum* in 1607, are based on works by Annibale Padovano, Giovanni Ferretti, Marenzio, P.A. Bianco, G.B. Boschetti, Ruggiero Giovannelli, Orazio Vecchi, Costanzo Porta and Giovanni Gabrieli – a choice determined by the repertory of the Graz Hofkapelle. His parody technique is reminiscent of Palestrina's in allowing for plentiful use of assonance and alliteration between the texts of the model and the mass. Two settings of Psalm 1 for soloists, chorus and instruments in particular display parallels to the pieces with instrumental accompaniment in Gabrieli's second set of *Symphoniae sacrae* (1615). The two motets published in 1615 are not modern in style but demonstrate solid compositional technique, harmonic logic and convincing formal structures.

WORKS

Liber primus missarum, 6, 8vv (Graz, 1607)
Orpheus mixtus, liber primus, 8–16vv (Graz, 1607) [motets]; 3 ed. in MAM, xv (1962)
2 motets, 2, 4vv, bc, 1615[13]
2 masses, 13, 16vv; Missa 'Hoc tegitur', 17vv; Missa 'In ecco', 26vv; Crux fidelis, 4vv; 2 Mag, 12, 18vv: *A-Wn*; 2 Miserere, 6, 8vv, *KR*
Lamentationes, 12vv; Miserere, 20vv, lost

HELLMUT FEDERHOFER

Posse (Ger.: 'farce', 'broad comedy'). The noun *Bosse* (from the French *bosse*) or *Posse* denoted in 15th-century usage a decorative figure, especially a grotesque one, or ornamental masonry or sculpture such as a wellhead or fountain. By the 16th century the term usually denoted a prank or trick, and by the middle of the 17th the term *Possenspil* (or *Possenspiel*) was in use to denote a type of broad comedy, sometimes specifically including music. *Possenspiel* was commonly used until the beginning of the 19th century (e.g. by Goethe and Schiller), but thereafter the shortened form *Posse* was normal, especially in Vienna, for popular comic entertainments. Apart from the non-theatrical *Possenreisser* (a joker, buffoon), various compound nouns specify types of farce, for example *Charakterposse* (a farce which lays emphasis on the characterization), *Lokalposse* (a farce rich in local allusions and dialect), *Situationsposse* (farce of situation) and *Zauberposse* (a farce in which magic and machinery play an important part; *see* ZAUBEROPER).

In Vienna the term *Posse mit Gesang* became the normal appellation for a farce with songs; much the same phenomenon had earlier been known under a variety of names: *Haupt- und Staats-Aktion, Musica bernesca, Maschinen-Comödie, Opera comique* and so on. The borderline between *Posse* and other kinds of comedy, with and without music, cannot be clearly drawn. In the 19th century, however, the term *Posse mit Gesang* was the most widely used to describe a comic play that, while it contained fewer and shorter musical numbers than would have justified the subtitle Singspiel, nevertheless made extensive use of solo songs, with occasional rather rudimentary ensembles, incidental music and (roughly until the early 1840s) a number of short choruses. The leading authors of *Possen*, whether or not they preferred to use more pretentious subtitles, were Joseph Alois Gleich (1772–1841), Karl Meisl (1775–1853), Adolf Bäuerle (1786–1859), FERDINAND RAIMUND and JOHANN NEPOMUK NESTROY. The most important musicians who furnished them with scores were Wenzel Müller, Ferdinand Kauer, Adolf Müller and Franz Suppé.

PETER BRANSCOMBE

Posse, Wilhelm (*b* Bromberg, 15 Oct 1852; *d* Berlin, 20 June 1925). German harpist and composer. He received his early training from his father, a flautist and military musician, but taught himself the harp and appeared in 1860 in Berlin accompanying Adelina Patti. After a concert tour in southern Russia (1863–4) with his father, he studied at the Neue Akademie der Tonkunst in Berlin (1864–72) under Ludwig Grimm. He was solo harpist of the Berlin PO and Opera from 1872 to 1903 and taught at the Berlin Hochschule für Musik from 1890 to 1923, becoming professor in 1910. He was one of the first to adopt the Lyon & Healy harp, demonstrating it in Brunswick in 1895 (it had been seen only once before in Europe, in Amsterdam the previous year).

Liszt considered Posse the greatest harpist after Parish Alvars, consulted him on the harp parts of his later orchestral works and suggested several of his own piano pieces for transcription. The *Angelus* from *Années de pèlerinage*, *Drei Notturnos* (the *Liebesträume*) and *Consolations*, as well as three Chopin studies (op.10 nos.5 and 11, op.25 no.1), the *Fantaisie-impromptu* op.66 and the Mazurka op.24 no.1 were all published in transcriptions for the harp by Posse. Strauss also consulted Posse's *Acht grosse Konzert-Etüden* (Leipzig, n.d.) and the work was adopted by the Paris Conservatoire. Posse's other pedagogical works include *Sechs kleine Stücke*, *Drei Etüden* and *Sechs kleine Etüden*, all published in Leipzig. Posse composed some solo works for harp, but his greatest renown was as a teacher who stressed a full tone and well-grounded technique; his performance style has been carried on by Alexander Sleypuskin, Maria Korchinska and Vera Dulova.

ALICE LAWSON ABER-COUNT

Posselt, Ruth (*b* Medford, MA, 6 Sept 1914). American violinist. She studied with Emanuel Ondříček (1922–9) and made her first appearances at Carnegie Hall and in Boston's Symphony Hall at the age of ten; she continued to play frequently in Boston and made an appearance with Walter Damrosch and the New York PO when she was 14. She made her European début in Paris in 1929, then spent two summers there working through the French repertory with Jacques Thibaud. In 1935 she became the first female American violinist to tour the USSR. She first appeared with the Boston SO in 1935, in a performance of Tchaikovsky's Concerto under Koussevitzky. For the next 25 years Posselt was a regular soloist with the orchestra, with which she played the world premières of concertos by Piston, Barber, Vladimir Dukelsky (Vernon Duke) and Edward Burlingame Hill; she also gave the first American performances of works by Hindemith, Bloch, Khachaturian and Dallapiccola (*Tartiniana*, which she recorded with Bernstein and the Columbia SO), as well as the world premières of Copland's Violin Sonata and Martinů's Duo. She continued to tour nationally and internationally as a soloist and chamber music player, founding the Bell'Arte Trio (with Joseph di Pasquale and Samuel Mayes) and participating in the revival of early music that began in Boston in the early 1950s. In 1962 she took up a teaching appointment at Florida State University, where she was also artist-in-residence and a member of the Florestan Quartet. Nearly 30 recordings document her powerful tone, solid technique, authoritative style and ability to realize demanding new works.

RICHARD DYER/R

Possenti, Pellegrino (*b* 9 July 1597; *d* 20 April 1649). Italian composer. His ecclesiastical career in the Order of S Salvatore kept him moving around Italy; at various times in his life he was stationed in Candiana, Ferrara, Mirandola, Naples, Ravenna, Reggio nell'Emilia, Rome and Treviso, but he spent most of his career in Bologna. It is clear from the dedication of his *Accenti pietosi* that before 1625 he also stayed for a short while in Venice (perhaps during 1623 when he was stationed in Treviso).

His two vocal collections reveal a strong Venetian influence, particularly from the work of Monteverdi and G.P. Berti. Possenti proclaimed his fervent admiration of Monteverdi in the dedication of his *Canora sampogna*; some of the melodic details of his setting of Marino's *Lamento d'Ariana* (facs. in ISS, vii, 1986) reveal his study of Monteverdi's famous lament on Rinuccini's treatment of the same subject. Likewise, details of the form, harmonic structure and melodic shape of the canzonetta *Da grave incendio oppresso* (1625) are modelled on Berti's earlier setting of the same text. The recitative and arioso of the two laments from *Canora sampogna* and the two extended ottava settings of the *Accenti pietosi* are pliable and expressive, imaginative in word-setting and in the handling of dissonance and varied enough to sustain interest over a long span. Several of the 22 duets and four trios that comprise the rest of the 1623 volume display equal resource, and the same is true of the eight strophic songs of the 1625 book. *Ecco Filli o Pastori* (in *FortuneISS*, appx iv, 34ff), labelled a canzonetta in the 1625 collection, is in fact a strophic bass cantata in the tradition of Alessandro Grandi (i) and other Venetian composers; the piece is particularly noteworthy in that the fourth of the six variations is in triple time and thus shows the influence of the variation suite. This is an influence that recurs in Possenti's volume of instrumental music, which consists of 18 one-movement sonatas. They include tremolos and a very early use of the directions 'da capo' and 'sino al fine'.

WORKS

Canora sampogna composta di sette canne musicali, prima canna, dalla quale escono madrigali, 2–3vv, canzonette, 2vv, Li sospiri d'Ergasto e Il lamento d'Ariana del Cavalier Marino, 1–3vv, [bc] (Venice, 1623, inc.; 2/1628)
Accenti pietosi d'Armillo, canzonette & arie, 1v, [bc] (Venice, 1625)
Concentus armonici, a 2–4 (Venice, 1628)
2 madrigals, 2vv, 4vv, both with bc, 1624[11]

NIGEL FORTUNE/ROARK MILLER

Post, Joseph (Mozart) (*b* Sydney, 10 April 1906; *d* Broadbeach, Queensland, 27 Dec 1972). Australian conductor and administrator. He was among the first students at the NSW Conservatorium, where he graduated with teaching and performing diplomas for both the piano and the oboe; at the age of 21 he joined the teaching staff. In 1933 he became conductor at the ABC and remained with the organization (with two intermissions) until 1965, when he was appointed assistant director of music. In that year he became director of his former school, the NSW Conservatorium. In 1966 he received the OBE for services to music.

Post was the first Australian-born conductor to make a career in opera. He was associated with visiting Italian opera companies (1932–4) and was musical director of the National Theatre Movement opera company in Melbourne (1947–54) and of the Elizabethan Trust (now Australian) Opera (1956–7). He conducted a concert version of *Der Rosenkavalier* (1956) and during the 1964 Adelaide Festival a stage performance of Walton's *Troilus and Cressida* highly praised by the composer for its command of structure. He was also an excellent conductor of operas specially produced for television.

WERNER GALLUSSER/R

Pošta, František (*b* Lány, 22 Aug 1919; *d* Prague, 18 July 1991). Czech double bass player and teacher. He studied with Oldrich Sorejs, one of a direct line of Czech bass players that included Wenzel Hause, Josef Hrabě and Franz Černý. An inspired teacher himself, Pošta taught at the Prague Conservatory from 1953, imparting a wealth of experience gained as a member of the Czech PO which he joined in 1939 while still a student, and of which he was principal bass from 1945 until his death. Many works were written for him, and he also edited and performed compositions by Dittersdorf, Pichl, Anton Zimmerman and Vanhal that he discovered in little-explored libraries in eastern Europe. He made a number of solo recordings and was a fine chamber music player; he also pioneered the use of traditional Viennese tunings. In 1965 he was created Artist of Merit by the Czech government.

RODNEY SLATFORD

Postel, Christian Heinrich (*b* Freiburg, nr Stade, 11 Oct 1658; *d* Hamburg, 22 March 1705). German poet, librettist and lawyer. His father was a Protestant minister and writer who left Freiburg with his family in 1676 to become pastor at the Heilige Geist-Kirche, Hamburg. His friendship with Gerhard Schott, founder and first director of the Hamburg Opera, undoubtedly led to Postel's later association with the Opera. He received his early education from his father and later attended the Johanneum Lateinschule, Hamburg. In 1680 he went to Leipzig University to study law but was forced by an outbreak of the plague to move to Rostock University, from which he received a licentiate in law in 1683. Following a number of extended educational tours, which enabled him to cultivate a lifelong interest in languages and literature, he returned to Hamburg in about 1688 and began an illustrious career as a lawyer. In 1700 he spent the summer in Switzerland and Italy, where he became acquainted with the Arcadian movement and met L.A. Muratori, an exponent of Italian neo-classicism.

Postel was the most important and prolific writer of librettos for the Hamburg Opera towards the end of the 17th century. He wrote texts for the major composers there, including Conradi, Förtsch, Keiser and Kusser, but after Schott's death in 1702 he apparently severed his association with the Opera. His librettos are fine examples of dramatic poetry, generally patterned on conventional Italian models and full of somewhat complex German Baroque imagery. He naturally based his operatic dramas on the standard Baroque concept of alternating affective states. However, many of them, such as *Die schöne und getreue Ariadne* (set by Conradi), do not present simply a pastiche of contrasting emotional statements; rather, within the limitations of a fairly stereotyped plot, the characters are permitted distinctive, dramatic development as personalities. He was frequently criticized in the 19th century for being a typical representative of the Second Silesian School which was overfond of Marinism, but this view is not substantiated by his texts. He was a transitional figure in German libretto writing, standing between such writers as Lucas von Bostel and Friedrich Christian Bressand on the one hand and Barthold Feind

on the other. As such he strove for a simpler poetic language, abandoned the previously favoured alexandrine metre for the simpler, more effective iambic in recitatives, and successfully varied his metres in the arias for affective purposes. His poetry is highly expressive and colourful in the Baroque sense but without excessive bombast. His intensely dramatic works were the perfect vehicles for the music of composers such as Conradi, Förtsch and Keiser. All his librettos survive in Weimar (*D-WRtl*).

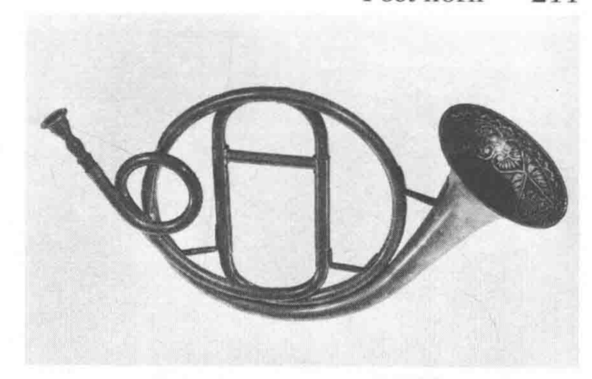
GEORGE J. BUELOW

Posthinus, Gregor. *See* PESCHIN, GREGOR.



Posthius, Johannes (*b* Germersheim, 1537; *d* Mosbach, Baden, 24 June 1597). German poet and physician. In 1554 he matriculated at the University of Heidelberg, where he was a pupil of the Latin poet Petrus Lotichius. He took his bachelor's degree in 1556 and became Master of Philosophy in 1557. He continued his medical studies from 1563 to 1568 in Bologna, Rome, Montpellier, Paris and Valence, where he gained the degree of Doctor of Medicine in 1567; in 1570 Erasmus Neustetter, dean of Würzburg Cathedral, brought him to Würzburg as his personal physician. He became city physician in 1582. In 1585 Posthius obeyed a summons to Heidelberg from Count Palatine Johann Kasimir, where he was in friendly contact with Paul Schede (Melissus), the poet laureate. He died in Mosbach, where the court had fled the plague.

His literary importance derives from the *Sonntags-Evangelia gesangsweise componirt, samt etlichen Psalmen und Kirchengesängen von D. Martin Luther und anderen Gottseligen Männern* (Amberg, 1608, lost), for which he wrote the words. It was reprinted as *Psalmen und geistliche Lieder . . . auff vier Stimmen* (Neustadt an der Haardt, 1619). The work, which became widely known in southern Germany, belongs to the genre, established by Martin Agricola and Nicolaus Herman, of lied-form translations of the Sunday Gospel texts. Posthius apparently used the Genevan metrical psalm as a model.

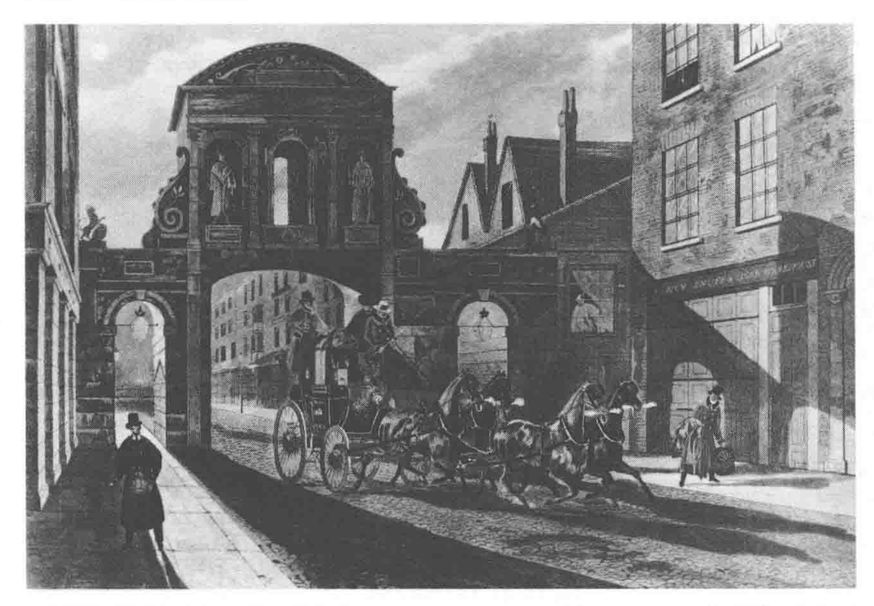
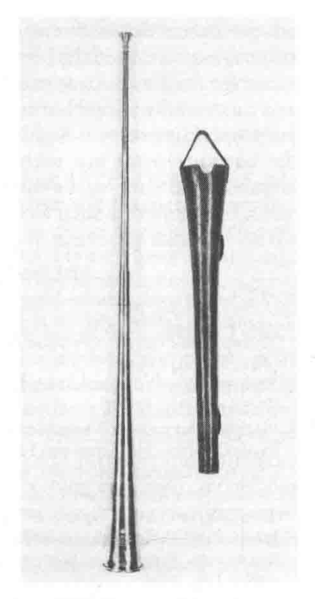
WALTER BLANKENBURG/CLYTUS GOTTWALD

1. Post horn by Courtois frères, Paris, c1820 (Musée de la Musique, Paris)



Post horn (Fr. *cornet de poste*; Ger. *Posthorn*; It. *cornetta di postiglione*). A small brass instrument used in the past by postillions and guards on mail coaches to announce the arrivals and departures and to call attention en route. Small arcuate horns were so used in France, England and Germany up to the early 17th century when instruments began to be constructed in one very small coil barely 7 cm across with a fundamental about *b♭'*. In Johann Beer's *Concerto à 4* (manuscript, *D-SWl*) it plays brisk figures on this note and its octave, similar to the references of Bach (*Capriccio sopra la lontananza*, 1704) and Telemann ('Postillons', *Musique de table*, 1733; borrowed by Handel in *Belshazzar*). Later in the 18th century German post



2. Post horn (keyed), German, c1830 (Leslie Lindsey Mason Collection, Museum of Fine Arts, Boston)

3. Post horn (valved), German, second half of the 19th century (Leslie Lindsey Mason Collection, Museum of Fine Arts, Boston)

4. (a) 'The Mail Arriving at Temple Bar': engraving, 1834; (b) coach horn (with case) by Köhler & Son, London, c1870 (Spencer Collection, Brighton Museum and Art Gallery)

horns were made with three turns and calls rose to the 6th or 8th harmonic, still including the octave leap, now at a slower tempo. The character of these calls is perhaps best known through those works of Mozart which require a horn player to take up the post horn: the Serenade K320, and the *Deutsche Tanz* K605 no.3, which calls for a post horn in B♭ and a second, lower instrument in F. In *Werkstäte der heutigen Künste* (Leipzig, 1764), J. Samuel Halle mentioned three-coil post horns built in different keys: C and A (equivalent to modern cornet pitches) in Saxony, but higher in Prussia.

By 1820 such post horns were procurable with crooks and tuning-slide for band music solos, and their use had spread to France (fig.1). The pitch most used in Germany was F, but C was employed by Beethoven in *Deutsche Tanz* WoO8 no.12, and E♭ was quoted by Schubert in *Winterreise*. Posthorns in E♭ are also cited in Hiller. The post horn is allotted a short solo (in F) in Spohr's *Notturno* op.34 for military band. Although some models were shaped like a trumpet (*see* POST TRUMPET), circular form remained the favourite; its continued appearance today as a post office emblem in so many European countries testifies to the breadth of its former use. From about 1825 post horns were also made with keys (fig.2) to increase their ability to play tunes, and by the mid-19th century in both France and Germany with valves, as required in Mahler's Third Symphony (fig.3). In Germany they might instead have a finger-hole ('transposing hole') placed three-quarters of the way along the tube from the mouthpiece and uncovered to raise the harmonic series from F to B♭. A diatonic 6th or more is available by opening and closing the hole; the horn held in one hand can be sounded only in the old manner.

In England a straight-built post horn came into use during the early 19th century and was adopted as the regulation horn for Royal Mail coaches (even if the guard liked to enliven the journey with tunes on the keyed bugle). This straight horn is of brass, 70 to 80 cm long, in A or A♭, an octave above the German post horn in A, and sounded only up to the 4th or 5th harmonic. It is still made, and is used in performances of Koenig's famous *Post Horn Galop* (1844); it has a sliding joint midway along the tube for tuning. Koenig, Jullien's star cornettist, had come from Paris and preferred the longer continental instrument pitched an octave lower for its larger compass; such instruments played from the 3rd to the 12th harmonic. He also recommended cornet beginners to practise on this 'proper' post horn.

Another characteristic English instrument is the coach horn, used exclusively with four-in-hand teams. It is also straight but is made of copper and differs from the post horn in having a conical bore and a narrow funnel-shaped bell which recalls the medieval buisine (fig.4). It is also longer; the standard length was 90 cm, but it tended to become longer still, and John Augustus Köhler's 'heavy mail horn' measured 115 cm. The coach horn sounds the same series of notes as an army bugle, the actual pitch depending upon its length (a 107 cm horn is in D). The coach horn was still in use up to 1914 on the London to Oxford mail, which was conveyed by road on Sundays. Today only imitation coach horns are made as hotel decorations or souvenirs. A number of tutors remain which give the calls sounded on the post horn and the coach horn, such as (John A.) *Turner's Complete Tutor for the Coach Horn, Post or Tandem Horn, Bugle and Cavalry Trumpet* (London, 1898), which is perhaps the best known though it is erratic and unsatisfactory over the matter of the post horn calls. Many post horn signals and melodies are transcribed in Hiller and Becheri.

ANTHONY C. BAINES/DAVID K. RYCROFT

Postlude (Lat. *postludium*; Ger. *Nachspiel*). A movement or section of a movement concluding a composition (especially for organ), hence the equivalent of a coda, conclusion or epilogue. Hindemith's *Ludus tonalis* for piano (1943) ends with a postludium which is an exact reversion and inversion of the opening praeludium. Specifically the term is sometimes given to the organ piece, frequently improvised, which is played at the end of a service during the exit of the congregation, i.e. the concluding voluntary.

MICHAEL TILMOUTH

Postmodernism. A term, American in origin, widely used from the late 1970s onwards, with a broad range of meanings. Some come from multiple associations with 'modern' and 'modernist' (*see* MODERNISM), others from disagreement over what the prefix 'post' implies about the 'modern' – contestation or extension, difference or dependence – and whether postmodernism is a regressive or progressive force.

1. History, definitions. 2. Reception, performance. 3. Scholarship.

1. HISTORY, DEFINITIONS. As a historical period, postmodernism can denote that which postdates the period 1450–1950, reflecting a crisis of cultural authority and world view, especially that vested in Western culture and its institutions (Jameson, 1991). A growing ecological sensitivity encouraged a broad critique of modernity and modernization (Huyssen, 1986). In music, Cage appears postmodernist because he threw into question both the concept of artistic genius that developed during the Renaissance (Hamm, 1997) and the notion of music as organized sound. Postmodernism can also signal a change from developments that began around the beginning of the 20th century. Some see this as a shift from imperialist centralization, nation states and utopian philosophies to a decentralized world economy, supranational entities and relativism. What is postmodernist in this sense depends on one's definition of Modernism.

The concept may also refer to a socio-economic condition, a reaction to the 'modern condition' that began with the Enlightment (Habermas, 1981). Some have used it to describe the penetration of capitalism and mass media into all aspects of life, undermining faith in various religious and historical metanarratives. Others understand the postmodern condition as 'marked by a plurality of voices vying for the right to reality – to be accepted as legimitate expressions of the true and the good' (Gergen, 1991), or as a 'time when no orthodoxy can be adopted without selfconsciousness and irony because all traditions seem to have some validity' (Jencks, 1986). Similarly, in philosophy and the arts, it is often used to denote a way of thinking or operating (Eco, 1984) that sees the world as the product of multiple perspectives all of which have some truth. This has led to a breakdown in boundaries between élite and popular culture and to receptivity to those on the margins of power.

Postmodernism is also used to describe a style that throws into question certain assumptions about Modernism, its social basis and its objectives. These include faith in progress, absolute truth, emphasis on form and genre and the renunciation of or alienation from an explicit social function for art. Many use the term to describe a style that posits discontinuity over continuity, difference over similarity and indeterminacy over rational logic (Harvey, 1989). From this perspective, some aspects of postmodernism have Modernist antecedents (Dada, the futurists) or long traditions in music (collage, juxtaposition, appropriation, quotation). Questioning the modern aesthetics of the sublime which 'allows the unpresentable to be put forward only as the missing contents' and leaves the 'recognizable consistency' of the form to ensure 'solace and pleasure' for the reader or viewer, Lyotard (1979) idealizes a postmodernism that 'puts forward the unpresentable in the presentation itself'. Those who see it as an attitude that disdains analytic or perceptual unity and embraces other forms of order (J. Kramer, 1995) argue that postmodernism is an attitude recurring throughout history. From this perspective, the modern/postmodern dialectic is an alternating aesthetic cycle, like classic/romantic. Those who support this conclusion point in music to Alkan as a precursor because he wrote in an old style without seeking novelty (Shono, 1989), Reger for his 'double coding' and restorationist tendencies (La Motte-Haber, 1995), or Ives and Mahler because of apparent disorder in their music (J. Kramer, 1995).

Certain trends have determined the change from a Modernist to a postmodernist sensibility in music. First is the reaction to the internationalism of Modernism, to the centrality of Europe in that tradition and to abstraction as a universal language, particularly that which developed in Darmstadt after World War II. The Modernist drive for progress produced not only anxiety over influence but also exclusivity, an art increasingly limited to those who had the resources to support experimentation and technological innovation. In music, the institutional power of those composing in modernist styles fuelled this reaction; so did the ambitions of those using computers to increase their control over musical materials.

Cultural politics and critical theory of the last quarter of the 20th century focussed on the role that differences have played in society and culture, specifically those of race, class and gender. With the growing complexity of global interconnectedness and an increasing awareness of the need to respect rather than attempt to dominate non-Western cultures, attention turned to individuals and groups 'whose histories have prepared them to make productive use of contradictions, to embrace the dynamism of difference and diversity' (Lipsitz, 1994). The music of post-colonialist and other subaltern voices throughout the world and of immigrants struggling against power, poverty and discrimination within Europe and North America became recognized as a major form of subcultural as well as national expression (Slobin, 1993). In place of universalizing metanarratives, this music often addresses issues of personal or local relevance. Whereas some traditions communicate a sense of place, others express dislocation and privilege movement over stasis.

Since the 1960s and especially with the perceived end of the avant garde by the 1980s, some composers working within Western art traditions also re-evaluated music's expressive potential. Rejecting the need for constant change and originality and the increasingly difficult and often intellectual approach to music espoused by Modernists, they returned to more traditionally accessible notions of music. Some sought to renew a connection to the past by re-embracing harmonic and temporal strategies characteristic of 18th- and 19th-century composition. Sometimes, as with George Rochberg, traditional forms and syntax serve as a foil to Modernist ideas within one work; other times, as in the music of David Del Tredici and

Ellen Zwilich, they signal a wholehearted return to tonality and conventional narrative. With William Bolcom among others, they enable integration of popular idioms. Such concerns forced reconsideration of the concept of consonance (H. Halbreich in Kolleritsch, 1993) and new concepts of tonality, as in the music of L. Ferrero (T. Hirsbrunner in Gruhn, 1989): this trend has been called a 'postmodernism of reaction' (Foster, 1987). In Britain and the USA, it was associated with 1980s neo-conservatism. Music critics, especially in Germany, called it neo-romanticism, especially in works that appeal to the emotions such as those of Wolfgang Rihm. In Arvo Pärt's music, it mirrors a return to spirituality and mysticism in the contemporary world.

Works embodying a second approach, 'postmodernism of resistance' (Foster, Huyssen, 1986) or radical postmodernism (Kramer), question rather than exploit cultural codes and explore rather than conceal any associated social or political affiliations. This music often addresses the 'master narratives' of tonality, narrative structure, Western hegemony and male dominance. In his music, John Adams makes puns or ironic commentary on these narratives while others deconstruct their inherently contradictory meanings. Composers such as Philip Glass, Steve Reich, Michael Nyman and Louis Andriessen, for example, use continuous repetition to create non-narrative works that subvert the role of longterm memory in the perception of a work's structure. Huyssen points out that resistance of this sort 'will always have to be specific and contingent upon the cultural field within which it operates'; he argues that its point 'is not to eliminate the productive tension between the political and the aesthetic, between history and the text, between engagement and the mission of art. It is to heighten that tension'.

A third postmodernism, one of connection or interpenetration, results when a work's juxtapositions involve an eclectic inclusion of material from disparate discourses, sometimes elements that are not musical *per se* (Pasler, 1993). Whereas quotation in a Modernist sense often implies a desire to overcome and surpass one's predecessors, sometimes by distorting or satirizing the borrowed element, postmodernist appropriation functions without any desire to assert the dominance of one element over another. Works such as Luciano Berio's Sinfonia (1968) and Alfred Schnittke's Third String Quartet (1983) quote predecessors' and contemporaries' music to comment on the history of musical traditions. They construct a sense of time as embodying many times, a self made of many memories. Stylistically what is important, from a postmodernist perspective, is not what is preserved from the past but the radical nature of what is included. And whether colliding new with old, original with borrowed, serious with popular, aesthetic with non-aesthetic, politically central with marginal, the ethics of postmodernism implies an acceptance of difference and sometimes a playfulness. Such works express a 'longing for a both/and situation rather than one of either/or' (Perloff, 1989).

The purpose of such collages can vary. In his *Musicircus* (1967), Cage shifted to the listener the burden of making sense of what he called the 'play of intelligent anarchy'. Similarly, in some of John Zorn's recordings, the effect of juxtaposing jazz, swing, pop, reggae, film and TV soundtracks and a recurrent Japanese voice is anarchic coexistence. This music's noisiness is meant to challenge traditional expectations of music and transform the listening experience (McNeilly, 1995). In the work of Laurie Anderson and other female performance artists of the 1970s, these juxtapositions come from the use of autobiography, story-telling, self-referentiality and a collage of myriad personal tastes; these help return the composer's 'shadow' to the music. In their pop-inflected music of the 1990s, Lang, Wolf, Torke and Daugherty incorporate commercial popular music not only to express their generational interests but also to challenge the troubling contradictions in American culture. In the popular music of migrants worldwide, music both expresses their exile identity and connects them to the real and imagined traditions of their homeland. This has resulted in works meant to help listeners reconcile profoundly different experiences. Postmodernism can thus be seen as 'an aesthetic vehicle for this struggle' (Manuel, 1995).

2. Reception, performance. Related to these new forms of collage is another shift that gave rise to postmodernism: a preoccupation with reception. In an era of political image construction celebrating meaning as well as meaninglessness, play as well as nostalgia (Harvey, 1989), the idea that anything could reflect one coherent, consistent voice gave way to thinking about subjectivity as multi-layered, contradictory and performative. Taste too was found to be socially determined in a complex world of contradictory forces (Bourdieu, 1979). In 1968, Roland Barthes pointed to 'the death of the author' in terms of who was responsible for meaning in a work. Conceptual artists and the Fluxus group re-evaluated the idea of art. Jameson later argued that in the postmodern age there could be no more 'works', only 'texts', or pretexts for what the reader or listener may bring. Cage's attention to silence, use of chance procedures and works like *4′33″* gave audiences an indeterminate space to find or negotiate their own concept of music. Focussing on the human organism, Pauline Oliveros created works that depend on the listener's participation for their shape and articulation. They aim to affect listeners' breathing and place them in a meditative state of 'deep listening'. New Age music often has a similar aim.

Performance has played its own role in the development of this aesthetic, and not only in the work of composers such as Vinko Globokar who blur the boundaries between composition and performance. With its inclusion of jazz and world music in its concert repertory, commissions and recordings, the Kronos Quartet has attracted new listeners to art music and transformed audience expectations of the genre (Porter, 1995). Reaching a wide range of listeners of different races and social classes, popular groups too, such as hip-hop artists and British anarchists, have resisted expectations, especially the commodification of cultural forms under late capitalism. They have used music to promote postmodern narratives of political and cultural change (McKay, 1994; Potter, 1995). The music industry has used the concept to promote its own new category, postmodern rock (Veselinovic-Hofman, 1995).

Such perspectives have drawn attention to pleasure and desire as musical modes, the need to acknowledge more than the rational and cerebral in the musical experience, and recognition of the shared roles of composer, performer and listener in the creation of musical meaning. Whether postmodern music depends for its effect on an increasingly 'competent' audience (Thorn, 1992), able to understand

its multiple referents, irony and pastiche, or whether it can speak to a much broader public, varies widely from composer to composer and work to work. With its focus on multiple, fragmented identities, postmodernism has flourished in the USA, Canada, Australia and Eastern Europe, in part as a function of the identity politics of their heterogeneous populations.

3. SCHOLARSHIP. The idea of musical experience as cooperative, collaborative and contingent has had a profound impact on musical scholarship. Suspicious of any narrative that aspires to closure, challenging all basic assumptions, seeing language as a play of signifiers, looking for systems of power at work in the narrowest as well as the broadest domains, postmodern scholars question not only positivist methods but also Marxist ones. They shift attention to the truths embedded in the local, everyday, variable and contingent aspects of music and music-making. They seek to break down hierarchies and show the multiple meanings any music can have. Like feminists, those engaged in this work see truth as relative and subjectivity as influenced by the body as well as the mind. They are often concerned with the physical impact of sound on the listener, and sometimes the spirituality that underlies it. Their goals include not only increasing knowledge of music, but also restructuring the experience of it. For example, the concept of structural listening has been deconstructed to suggest that responses to music are not just governed by a 'quasi-Kantian structure of reason' but are 'as diverse, unstable, and open-ended as the multitude of contexts in which music defines itself' (Subotnik, 1996).

Postmodernists seek alternatives to the formalism that has dominated music scholarship (G. Tomlinson in Kompridis, 1993, pp.18–24). Some explore how a variety of cultural codes inform the subjectivity expressed by music. Others suggest that the contextual analysis of history, politics and socio-cultural circumstances should not be viewed as distinct from formal analysis (Miller, 1993). Those inspired by Barthes's 'The Grain of the Voice' (such as Abbate, 1991), concentrate on the relationship between the performer and listener in determining the experience of music: they analyse what is specific to individual performances and study how listeners understand meaning regardless of composers' intentions often as part of a dialectic of desire. They are interested in how the listening process in turn shapes personal, social and cultural identity. Postmodernism has encouraged scholars to value a wide range of listeners, to explore their own experience of music and the role they play in producing meaning for their readers, and to use this knowledge in generating research questions. Such concerns underlie much of the work in gay and lesbian musicology and have motivated interest in psychoanalytic methodologies.

Postmodernist work challenges the longstanding bias towards studying art music as distinct from other traditions and its listeners as belonging in segregated markets. Scholars now study musical hybrids and 'cross-overs' resulting from the cultural exchange between Eastern and Western countries, Africa and the Caribbean, North and South America. Some use post-colonial theory to investigate the processes of appropriation and resistance. More and more scholars are crossing borders and reconsidering the boundaries of their research, not only that which has separated classical from popular music, written from oral traditions, but also historical musicology from other disciplines including ethnomusicology and theory.

JANN PASLER

Postnikova, Viktoriya (Valentinova) (*b* Moscow, 12 Jan 1944). Russian pianist. A child prodigy, she entered the Moscow Central Music School at the age of six, making her public début a year later in a Mozart concerto. At the Moscow Conservatory she studied with Yakov Fliyer. While still a student she won prizes at the Warsaw, Lisbon, Leeds and Tchaikovsky competitions, attracting the highest praise for her maturity and technical command. She made an acclaimed London début in 1967,

playing Chopin's E minor Concerto at the Proms. Her large repertory extends from Bach to Schnittke, but she is most widely admired as a player in the Romantic tradition, a fact reflected in her many recordings, which embrace the complete piano works of Tchaikovsky, Janáček and Glinka, the piano concertos of Chopin, Brahms and Prokofiev, and numerous solo and chamber works. She has frequently appeared as soloist and duettist with her husband Gennady Rozhdestvensky. Possessed of a fiery temperament and a powerful virtuoso technique, she is also capable of the greatest subtlety and delicacy.

JEREMY SIEPMANN

Poštolka, Milan (*b* Prague, 29 Sept 1932; *d* Prague, 14 Dec 1993). Czech musicologist. While attending the Prague English Grammar School he studied the piano with Ilona Štěpánová-Kurzová and music theory with František Spilka. At Prague University he studied musicology with Očadlík and Sychra (1951–6), passing the state examination in musicology in 1956. After working for the Encyclopedic Institute of the Czechoslovak Academy of Sciences in Prague, he joined the music department of the Prague National Museum, as a research assistant (1958), rising to deputy director of the department, where he was also curator of the collection of musicians' letters and other writings.

Poštolka's career was pursued in the face of ideological difficulties. The relaxation of political requirements in the mid-1960s allowed him to take the CSc (1966) and the doctorate (1967), with a dissertation of the life and work of Kozeluch. Promotion to research fellow at the library followed (1966), together with his appointment as external lecturer at Prague University (1966). Conversely, post-Dubček 'normalization' resulted in suspensions from his university post (1971–4, 1980–89) and premature retirement from his library post in 1988. Despite this, he was known, both inside and outside the country, as the leading expert of his day on Czech 18th-century music, directing a research team on Czech 17th- and 18th-century music history at the Czechoslovak Academy of Sciences (1972) and writing many 18th-century Czech entries for major foreign reference works (*Grove6*, *GroveO*, *MGG1*, *RISM*), where his contribution was greatly valued for its precise and comprehensive knowledge of sources. Apart from his book on Kozeluch, he wrote two books on Haydn, the first dealing with the interrelationship between Haydn and the Czech music of the period, the second (completed in 1980 but published only in 1988) a study of Haydn and the development of the Classical style.

JOHN TYRRELL

Postolsky, Shalom (*b* Siedlce, Poland, July 1893; *d* Beit-Isaac Kibbutz, Israel, 1 Oct 1949). Israeli composer of Polish birth. He was born into a ḥasidic family; his father, a music lover, entertained many Jewish musicians. Postolsky enrolled as an opera student at the Warsaw Conservatory. He joined the Zionist movement in 1920 and subsequently emigrated to Palestine, where he was a founding member of the 'Ein Ḥarod Kibbutz in the Jezreel (or Yizrael) Valley (1921). The first composer of the kibbutzim movement and among the first to write original Hebrew 'village songs', he is considered one of the first Israeli composers. His output is comprised primarily of folksongs, festive songs and children's songs. The most renowned of these include the *Massekhet ha-'omer* ('Harvest Festival') and the *Hagadat Pesaḥ* ('Passover Legend'), which continues to be sung during Passover. A collection of his songs entitled *Qoveṣ shirim* ('Song anthology') was published in 1953.

NATAN SHAHAR

Poston, Elizabeth (*b* Highfield, Herts., 24 Oct 1905; *d* Stevenage, Herts., 18 March 1987). English composer, writer and pianist. She studied the piano with Harold Samuel, followed by formal music education at the RAM. During this time she met Warlock – a major influence in her personal and musical life – and Vaughan Williams who encouraged her to compose. She emerged in 1925, when seven of her songs were published (her popular early setting of *Sweet Suffolk Owl* was one of these). Her first work to be broadcast, from the BBC at Savoy Hill, was an RAM prize-winning violin sonata. In 1928 she

published five songs in a more personal style. From 1930 to 1939 most of her time was spent abroad where, among other studies including art and architecture, she collected folksongs. On returning to England she joined the BBC's music staff, and her war service was thus a period of intensive broadcasting which included the direction of music in the European Service. She resigned in 1945, but after a period in the USA and Canada returned to the BBC in 1947 at Douglas Cleverdon's invitation to broadcast and advise for a year at the inception of the Third Programme. She was elected president of the Society of Women Musicians (1955–61).

Poston distinguished herself in a wide field of musical activity. In addition to writing articles and programme notes for the Arts Council, she appeared as a pianist at the National Gallery Concerts (1940–45) and gave the first public performance of Walter Leigh's Concertino for piano and strings (1946). She composed over 40 scores for radio productions including collaborations with David Jones, Terence Tiller, Dylan Thomas and C.S. Lewis. In her score for the first complete broadcast of Milton's *Comus* (1947), she incorporated several of Henry Lawes's songs from the original, revealing an interest in music of the 16th and 17th centuries. Outstanding among her TV film scores is that for *Howard's End* (1970); she lived in Rooks Nest House which was the setting of E.M. Forster's novel. Her extended choral works include *The Nativity* (1951) for soloists, mixed voices and string orchestra, and two pieces commissioned by the Farnham Festival, *An English Kalendar* (1967) for female voices and harp and *An English Day Book* (1971) for mixed voices and piano. The *Concertino da camera on a Theme of Martin Peerson* (1950) and a Trio (1958) for flute, clarinet (or viola) and harp (or piano) are her most significant chamber works.

Poston was a meticulous scholar greatly respected by her peers for her musical contributions as well as her charming and witty personality. She evolved a personal style which derived from the neo-classical and laid great emphasis on clean craftsmanship and melodic fluency. She won particular respect as the editor of folksong, carol and hymn collections. Her close association with Warlock made her a unique authority on his life and works; in 1947 she created a 5-part BBC lecture series devoted to him.

WORKS

CHORAL

Salve Jesus, Little lad, 2 female vv, pf, 1925; Balulalow, 2 female vv, pf, 1928; A Carol in Captivity, 1946; The Princesses' Carol, unison, pf, opt. inst. descant, 1948; The Holy Child, mixed vv, strings, perc, org, 1950; The Nativity, S, Mez, C, T, B, chorus, str, 1951; Carol of the Crown, unison vv, pf, 1953; Antiphon and Psalm: Laudate Dominum, mixed vv, org, 1955; The Dormouse's Carol, unison vv, pf, 1955; The Magi, spkrs, chorus, pf, org, 1955; Song of Wisdom, 1956; 2 Carols in Memory of Peter Warlock, 1956; The Negroes' Carol, B, mixed vv, pf, 1957; Happy are thy Men, 1958; In Bethlehem Town, opt. inst. descant, 1958; Sing unto the Lord, 1959; The Boar's Head Carol, SATB divisi, 1960

The Briery Bush (operetta), soloists, chorus, opt. violin, rec, drum, 1961; Magnificat, 2vv, org, 1961; An English Kalendar, female vv, hp, 1967; Jesus Christ the Apple Tree, SATB, 1967; The Queen's Hymn, mixed vv, opt. brass, 1967; Welcome, Child of Mary, soloists, mixed vv, chbr ens, 1967; 3 Scottish Carols, mixed vv, strings, 1969; Benediction for the Arts, 1970; An English Day Book, 1971; A Settled Rest, 1987

MICHAEL HURD/JAMIE BARTLETT

Post trumpet (Fr. *trompette de poste*; Ger. *Posttrompete*; It. *tromba di posta*). A trumpet-shaped (or rather, bugle-shaped) POST HORN. It was officially adopted for use on mail coaches in northern Germany in 1828 in preference to the traditional circular model, although the latter was again in favour from 1866. The post trumpet was pitched in E♭, as is the Prussian cavalry trumpet, but had a cornet-type mouthpiece. The tubing was usually coiled four times, making the instrument more compact than a

Post trumpet of brass, triple-coil, with silver-plated mouthpiece and bell garland from Prussia, c1840 (Bundespostmuseum, Frankfurt)

cavalry trumpet; in the region between Lübeck and Hamburg it was slightly more elongated, being coiled three times, and had a cup-shaped (trumpet-type) mouthpiece. The illustration shows a specimen from Prussia, dating from 1840, in this instance an *Ehrentrompete* ('trumpet of honour' or 'presentation trumpet') awarded to distinguished performers. In Prussia a new set of call signals was issued for the post trumpet when it was introduced in 1828, and these were also adopted in Saxony and elsewhere (Rycroft).

DAVID K. RYCROFT

Potenzierung (Ger.). A term used by Alfred Lorenz to denote the building up of larger-scale structures hierarchically out of smaller-scale structural units. *See* ANALYSIS, §II, 4.

Pothier, Joseph (*b* Bouzemont, Vosges, 7 Dec 1835; *d* Conques, Aveyron, 8 Dec 1923). French scholar and editor of plainchant. He was ordained priest on 18 December 1858 and took his vows as a Benedictine monk at Solesmes on 1 November 1860. He became prior of Ligugé in 1893 and abbot at Saint-Wandrille in 1898. In 1860 Guéranger assigned him as an assistant to Jausions to help him prepare a new edition of liturgical chant books for use in the monastic community. After Jausions's death Pothier completed and published the whole work himself, bringing out the first part, *Mélodies grégoriennes d'après la tradition* in 1880. This publication was very well received at the Gregorian Congress of Arezzo (1882) and contributed greatly to the success of the teaching of the Solesmes school. In 1883 the second part, the Liber Gradualis, gave rise to a long controversy with the supporters of the 'Medicean' edition (Pustet, Regensburg), at that time enjoying a special privilege given by the Holy See. When in 1904 Pope Pius X decided to publish a new official Vatican edition, Pothier headed the editorial commission. From 1905 he was in complete charge up to 1913. His previous chant editions, produced at Solesmes between 1883 and 1895, served as a basis for the following official books: *Kyriale* and *Missa pro defunctis* (1905); *Cantus missae* – those contained in the *Missale romanum* – (1907); *Graduale* (1908); *Officium pro defunctis* (1909); *Cantorinus seu toni communes* (1911–12); *Antiphonale* (1912, 2/1919).

Pothier is justly considered to have initiated the revival of Gregorian chant. His editions were so much better than earlier ones that many considered them definitive. Although their musical notation, based on that of 14th-century manuscripts and designed by Pothier himself, allows one to respect most of the traditional groupings of neumes, the square and awkward shape of the notes fails to convey the suppleness of the chant and the differentiation in rhythmic values: bars and 'white spaces' are inadequate to represent such variety. The melodic line is presented more successfully, though the choice between tone and semitone steps sometimes needs modification. On the other hand the principles put forward in *Mélodies grégoriennes* based on Latin word accentuation well suits the practice of chant, which Guéranger had instituted on the founding of the Solesmes monastery. These principles, together with careful study of the neumes themselves, were able to provide an adequate basis for the understanding of authentic plainchant performance.

EUGÈNE CARDINE/DAVID HILEY

Potholt, Jacob (bap. Amsterdam, 4 Aug 1720; *d* Amsterdam, 11 Oct 1782). Dutch composer, organist and carillonneur. Burney devoted several pages in the account of his second European trip to Potholt (consistently referred to by Burney as Pothoff). Apparently smallpox left him blind at the age of seven. Subsequently he became a pupil of the Amsterdam organists G.F. Witvogel and Johannes Ulhoorn (1697–1742) (Oude Kerk, the main Calvinist church), and of P.A. Locatelli, whose concerts he attended. In 1741 he became organist of the St Jacobskerk in The Hague, returning to Amsterdam in

1743 to become organist of the Westerkerk and carillonneur of the City Hall (now the Royal Palace on the Dam). In 1766 he left the Westerkerk post in order to succeed Hurlebusch as organist of the Oude Kerk, effecting a rise in income and prestige.

Burney applauded Potholt's playing of both the organ and the carillon. He noted two themes that he had dictated to Potholt and on which Potholt had played improvised fugues. Potholt's only known compositions are his settings of organ accompaniments for all the Genevan psalms as sung by the congregation in the Dutch Reformed Church, *De muzyk van de CL psalmen benevens de lofzangen* (Amsterdam, 1777). These settings were prompted by the 'new way of singing the psalms', introduced to the Netherlands after the appearance of a new version of the rhymed metrical psalms in 1773. Each verse is preceded by a short prelude, and there is a short interlude after each line; the initial and final notes of each line are semibreves and the remainder are minims. Potholt transposed the melodies, ornamented them and provided a figured bass. Except for the preludes, this way of executing organ accompaniments to psalms became the norm during the 19th century. In 1748 Potholt presented some manuscript symphonies, some of which he may have written, to the collegium musicum of Utrecht, where they survive in the Letteren-Bibliotheek.

Potier [Potiers], **Matthias.** *See* POTTIER, MATTHIAS.

Potiron, Henri (*b* Rezé-lès-Nantes, Loire-Atlantique, 13 Sept 1882; *d* Roye, Somme, 12 April 1972). French composer and musicologist. For more than 50 years he was music director at Sacré-Coeur de Montmartre and taught Gregorian modal theory and accompaniment at the Institut Grégorien in Paris from its foundation in 1923. He wrote nine polyphonic masses (some based on Gregorian modes), numerous motets, pieces for organ, and organ accompaniments for parish use to all the plainsong repertory. In 1954 he took the doctorate at the Sorbonne with a thesis on Boethius.

EUGÈNE CARDINE/DAVID HILEY

Potpourri (Fr.). From its original application to a jar, literally a 'rotten pot', in which were kept miscellaneous spices, vegetables and so on, the term came to be applied to a musical composition which was a similar hotch potch of tunes from a pre-existing source or sources. During the 18th century the term was used in France for collections of songs which, with a thematic link, were sometimes given stage presentation. Later the term was used for instrumental collections, such as the *Potpourry français*, which was a collection of originally unconnected dance pieces issued by the publisher Bouïn. Still in the 18th century, the term was used by the publisher Breitkopf for a collection of new compositions by various composers, and around the end of the century it came to be applied to a string of melodies from an opera or operas, as in the *Potpourri tiré des airs de 'Zauberflöte', 'Domjuan' et 'Figaro'* for piano by Josef Gelinek.

Others to produce potpourris were Daniel Steibelt, Czerny (e.g. *Potpourri brillant sur les motifs les plus favoris de l'opéra 'Faust' de Spohr* op.218) and Diabelli (*Potpourri tiré des oeuvres de Beethoven*). Often a potpourri included a set of variations on a selected theme. However, the term is extended only in a somewhat derogatory sense to the technically more ambitious and artistically more meritorious fantasies exemplified by many works of Czerny, the opera transcriptions and fantasies of Liszt, or the *Carmen* fantasy of Busoni. In just such a sense Chopin himself described his Fantasy on Polish Airs op.13 as a 'potpourri' in one of his letters. In England the term was apparently first used by J.B. Cramer, but subsequently the expressions 'selection' or 'fantasia' were more commonly used – the latter term, misleadingly, even for straightforward selections from operas or operettas. The term 'potpourri' is often used to indicate that a piece in a more precisely defined form is based on themes which are not original, for example an overture based on themes from the work it precedes (*see* MEDLEY).

During the 19th century selections from popular stage works were always in demand, and the task of producing them was often hack-work for the amateur or impoverished musician. The potpourri became a standard constituent of 19th-century orchestral and military band concerts of light music and often denoted more than a straightforward selection. By using themes familiar to their audiences the bandmasters were able to retain their attention for as much as 30 to 45 minutes and to exploit the allusions of particular pieces for programmatic purposes and for orchestral display. Such works are the elder Johann Strauss's *Der unzusammenhängende Zusammenhang* ('The Incohesive Cohesion', 1829) and most notably his *Ein Strauss von Strauss* ('A Bouquet of Strauss', 1832). The latter work, introduced to Britain (as *Le Bouquet des dames*) during Queen Victoria's coronation season, performed by Jullien at his promenade concerts and revived in Vienna as late as 1873, used music by Beethoven, Auber, Hérold, Bellini, Haydn and others, and included such effects as 'Chinese chimes, sledge party, post horn, cracking of whips, description of an earthquake, coronation procession, firing of cannon, ringing of bells, and shouts of thousands of spectators'. In Germany the term 'potpourri' is used for popular selections to the present day. *See also* QUODLIBET.

ANDREW LAMB

Pott, August Friedrich (*b* Nordheim, 7 Nov 1806; *d* Graz, 27 Aug 1883). German violinist and composer. He studied the violin with Karl Kiesewetter in Hanover and joined

the court orchestra in February 1822. His patron, the Duke of Cambridge, then sent him to Kassel for a year to study the violin with Spohr and composition with Hauptmann; in January 1827 he was made *Kammermusicus* at Hanover. His first tour (1829) took him to western and southern Germany, and possibly to Paris, but it was his Scandinavian tour, in 1831, which established him as a virtuoso; he dedicated his concerto *Les adieux de Copenhague* to King Frederick VI of Denmark, who named him professor of music at the University of Copenhagen. In February 1832 he gave a concert at Oldenburg, which won him the position of Hofkapellmeister there. He performed in Dresden, Berlin and Vienna (where a critic praised both his playing and his instrument, a Stradivari) in 1834, and two years later in Vienna and Salzburg, where he gave the first of his concerts to raise funds for a Mozart memorial. In London he played Lipinski's Concerto in B minor at the Philharmonic Society (21 May 1838); a critic for the *Musical World* wrote enthusiastically of the extraordinary power of his tone, his grandiose execution and the purity of his style.

The highpoint of Pott's career was the unveiling ceremony for the Mozart memorial in Salzburg in September 1842, the result of six years of tireless efforts to raise money for the project, through benefit concerts of his own and by other artists and from the proceeds of a Mozart album which he had edited. In later years his concert appearances were infrequent. Difficulties with orchestral and administrative personnel during the political unrest of 1848 resulted in a two-year suspension of concerts at Oldenburg. After a reconciliation he resumed his duties until pensioned in 1861.

Pott's wife, born Aloyse Winkler von Foracest, was a gifted musician who studied the piano with Czerny and composition with Gyrowetz. (G. Linnemann: 'A. Pott', *Musikgeschichte der Stadt Oldenburg* (Oldenburg, 1956), 189–227 [with complete list of works])

ALBERT MELL

Potter. English family of musical instrument makers and musicians.

(1) **Richard Potter** (*b* Mitcham, Surrey, bap. 21 April 1726; *d* London, bur. Mitcham, 3 Dec 1806). Flute maker. He first set up shop about 1745 at Green Dragon Court, Foster Lane, Cheapside, subsequently moving to 5 Pemberton Row (then New Street) near Fleet Street about 1764. The latter address was kept as the family home and the business was transferred nearby to 5 Johnson's Court some time before 1786.

In 1785 Potter applied for a patent on an improved flute, a high-quality instrument with the latest features. The enrolled drawing shows four keys: D♯, F♮, G♯ and B♮, all in general use at the time. Potter's improvement lay not in the addition of these keys but in their construction, the closing being effected by rounded valves of soft metal instead of the usual leather. The holes were lined with silver tubes and the keys closed on the countersunk outer ends. Another innovation was the use of a metal tuning-slide with an attractive outer tube of wood, a slide or 'register' at the extreme end of the foot joint, and a screw-cork in the head joint with a projecting, graduating ivory pin. When these were made to correspond the instrument was in tune. Another advance often found on the Potter flutes was the addition of about 5 cm to the length to produce *c*♯′ and *c*♮′ at the lower end of the range with one or two foot keys. The earliest extant flute with a foot key is by Richard Potter; it dates from 1776 and is in the Chicago Historical Society collection, having once belonged to a bandsman in Cornwallis's army at Yorktown.

(2) **Richard Huddleston Potter** (*b* London, 10 Dec 1755; *d* London, bur. 3 June 1821). Flautist, violist and teacher, the eldest son of (1) Richard Potter. Though he was apprenticed to his father, there is no evidence that he worked in the flute-making business. He taught the piano and was organist of St Bride's, Fleet Street, from 1785. He played the flute in the Handel festivals in Westminster Abbey and also at Crosdale's and other private concerts, and he was listed in Doane's directory as an oboist. He was among the elder professors that formed the 30 original members of the Philharmonic Society in 1813, and played the viola in its orchestra; he often audited the society's accounts and was its treasurer in 1818 and 1819. On 28 January 1783 he married Charlotte Baumgarten, daughter of the bassoonist Samuel Christian Baumgarten.

(3) **William Henry Potter** (*b* London, 7 Aug 1760; *d* Bromley, 19 March 1848). Flute maker, son of (1) Richard Potter. After completing his apprenticeship under his father he joined the firm which was first listed as Potter & Son about 1801. After his father's death he continued the business, giving up the 5 Johnson's Court address after 1817 and working from the family home until he retired to Bromley some time in the 1830s. In 1808 he was granted a patent for a device for the flute keys which produced an effect called the 'glide' which enjoyed only temporary popularity. He continued in the style of manufacture begun by his father, though he sometimes omitted the inset into the tone holes. Generally, the Potters were esteemed for their craftsmanship. Their instruments were considered expensive and, like those of other high-quality builders, were often faked ('bastard Potters').

(4) **(Philip) Cipriani (Hambly)** [Hambley] **Potter** (*b* London, 3 Oct 1792; *d* London, 26 Sept 1871). Composer, pianist and teacher, son of (2) Richard Huddleston Potter and the most celebrated member of the family. Cipriani was the family name of his godmother, who was said to have been a sister of the painter Giovanni Baptista Cipriani, himself an intimate member of musical circles through his friendship with J.C. Bach and C.F. Abel. The name Philip was taken from a son of the painter, Edward Robert Philip Cipriani, a clerk in the Treasury through the support of Lord Lansdowne. 'Cip' or 'Little Chip', as he was known throughout his life because of his small size, was widely read, was a mathematician and spoke four languages. After musical instruction from his father, he was given over to a series of distinguished masters, and first studied counterpoint with Thomas Attwood. He worked with Crotch in 1808–9 and may have had lessons with John Wall Callcott. Potter, however, attributed his greatest advances to a five-year period of lessons from May 1805 with Joseph Woelfl, under whom he perfected his technique, memorized Bach's *Das wohltemperirte Clavier*, and learnt the principles of form in instrumental music which were then little known in England. On attaining his majority he was named an associate of the Philharmonic Society, and he became a member on 29 May 1815. In 1816 he was honoured with the commission

of two works by the society, noteworthy since so few works by English composers were played at those concerts. Potter made his début as a pianist at the Philharmonic Concerts at the performance of his Sextet for piano, flute and strings op.11 on 29 April 1816.

Despite acclaim as a pianist, the lack of success of the commissioned works caused Potter to go to the Continent to study composition. He left England towards the end of 1817 and was drawn to Vienna by the presence of Beethoven, whose music he had admired despite discouragement from it by his elders. Although he carried letters of introduction, warnings that Beethoven was mad caused Potter to delay approaching him until urged to do so by the piano maker Streicher. Potter was well received at what was an especially troubled time for Beethoven, and he made a good impression which Beethoven conveyed to Ries in a letter of 5 May 1818: 'Botter [sic] has visited me a few times, he seems to be a good fellow and has talent for composition'. At Beethoven's suggestion Potter studied counterpoint with Aloys Förster, and Beethoven advised Potter on his scores. After about eight months in Vienna and other Austrian and German cities and a sojourn of similar length in Italy, Potter returned to England in the spring of 1819. From that time until 1836 he appeared often as a soloist, giving the English premières of many Mozart concertos, in which he embellished the printed solo part, and of the First, Third and Fourth Concertos by Beethoven. His piano playing was much admired for its brilliance. He appeared as a conductor of the Philharmonic Concerts until 1844 and won considerable acclaim, always conducting standing, and without a baton. He served as a director of the society a number of times, though it was said that his opinions were often passed over in favour of those of less knowledgeable men.

In 1822 Potter was made the first piano teacher for the male division of the newly founded Academy of Music and he continued to teach the piano during his long association with the school. When Bochsa was dismissed in 1827 he was made the director of orchestra practice; it was his custom to insist that all male students play in the orchestra even if they could manage only a few notes. In 1832, on the dismissal of Crotch, Potter became the principal, a position he held until 1859 during a trying period of domination by the president, Lord Burghersh. Potter's influence as a teacher was great; a man of ready wit and generosity, he was much admired and loved.

Potter's own concerts, given almost yearly between 1828 and 1846, were among the finest of the season because of his insistence on a 'full band' when others would skimp, and the substantial music played. In the later concerts Potter included only a single work of his own, perhaps evidence of a lessening interest in his own music. He was elected to the Royal Society of Musicians in 1817, and served several times as an officer and as accompanist or conductor. He was also a member of the Society of British Musicians from its founding in 1834, and its concerts included performances of his compositions. He was a member of the Bach Society from its inception in 1849 and served as musical director of the Madrigal Society from July 1854 until his death.

Potter was said to have begun composing in his 14th year, though nothing exists before the two commissioned scores and several published works of 1816. After 1837 he almost ceased composing, though he revised a number of works including the E minor Overture and the Symphony no.8 in E♭ (for which he wrote a new slow movement). It is to be regretted that he gave up composition so early since at least half a dozen of the symphonies, the G major String Quartet, the Sextet for flute, clarinet, viola, cello, double bass and piano and the three overtures to plays by Shakespeare are masterly. Duties at the academy, the lack of a ready outlet for performances, and his too great admiration for the music of others (he was among the first to admire warmly the music of Schumann and, in his last years, Brahms) caused him to give up writing; he turned instead to the preparation of editions of the music of others, including the complete piano music of Mozart which Coventry began to publish in 1836 and which was reissued by Novello in 1851.

With the exception of a few negligible songs and one substantial cantata *Medora e Corrado*, for the libretto of which he paid his impoverished friend Gabriele Rossetti a generous sum, Potter confined himself to instrumental music. His greatest achievement lies in the nine extant symphonies (the numbering implies that there may missing works, but his pupil G.A. Macfarren gave the total as nine). All except the three-movement symphony in B♭ are in four substantial movements, and those in major modes have slow introductions. They employ an orchestra with full woodwind and horns, trumpets, trombones and timpani. While the strings take a leading role in thematic work, there are passages for the woodwind group alone, and many woodwind solos. The melody is sometimes in the horns, and the slow movement of symphony no.10 is begun by the violas; this movement also uses solo violin and cello. Potter's music exhibits considerable rhythmic drive and contrapuntal ingenuity, both in combining themes and in passages of imitation. His harmonic palette includes enharmonic modulation and an occasional bold dissonance; these works may have been testing for contemporary London orchestras and audiences, but they obtained considerable critical approval. Wagner, who conducted the later of the two symphonies in G minor (no.10) in 1855, referred to the composer as an 'amiable elderly contrapuntist', and urged a slower tempo on him for the Andante. There are eight concerted works, the five earliest being showpieces, the last three piano concertos. Potter's numbering, and a comment of Macfarren, suggest that Potter wrote four concertos. The Concerto in E♭ begins unusually with a movement in 6/4 metre. Other substantial works are the Piano Sonata in D op.3; the 'Enigma' Variations op.5, a preposterous satiric composition 'in the style of five eminent artists'; the Three Grand Trios op.12, the last of which is dedicated to Beethoven; the Horn Sonata op.13; and the Studies in All the Major and Minor Keys op.19, which include expressive as well as virtuoso pieces.

PHILIP H. PETER/JULIAN RUSHTON

Potter, A(rchibald) J(ames) (*b* Belfast, 22 Sept 1918; *d* Greystones, Co. Wicklow, 5 July 1980). Irish composer. At the choir school of All Saints, Margaret Street, London, he studied with W.S. Vale (1929–33). Between 1933 and 1936 he studied at Clifton College, Bristol, with D.G.A. Fox, and his studies were completed at the RCM, where he was a pupil of Vaughan Williams from 1936 to 1938. He received his DMus from Dublin University in 1953. Awarded Carolan Prizes by Radio Éireann in 1951 and 1952, in 1968 he received the Jacobs Award for his outstanding contribution to Irish radio. He was professor of composition at the Royal Irish Academy of Music, Dublin (1955–72), and was also active as a music journalist and broadcaster.

Potter was one of the most prolific of modern Irish composers; apart from his original music, he made many Irish folksong arrangements for broadcasting. All of his music is characterized by an effective, if conventional, use of instruments, designed to give clear expression to the melodic content. His uncomplicated style recalls Vaughan Williams in its use of block harmonies. The music is often broadly romantic, as, for example, in the sweeping melodic line of parts of the *Variations on a Popular Tune*, the idealistic ending of *Patrick* (the first Irish television opera) and the dramatic conflict of the *Sinfonia de profundis*.

The character themes of the ballet *Careless Love* exemplify Potter's facility in producing simple, but striking, melodic ideas ranging from modal motifs to 12-note themes in some of the ballet scores. These 12-note themes are not used serially, but as an overlay to music that is harmonically conventional. Of his many concertante works, the Elegy is one of the most moving. His *Concerto da chiesa* shows quite a different approach: the material grows largely from a chorale melody, and a Baroque-like style is used. The result is a work of much excitement and spontaneity. Most striking of his later works is the *Sinfonia de profundis*, first performed in 1969 in Dublin. Its conventional style and great emotional impact have made it one of the most popular of Irish orchestral works.

SEÓIRSE BODLEY

Potter, John (*b c*1734; *d* after 1813). English writer and composer. Potter studied classics and, subsequently, mathematics and 'physic' with his father. In 1759 he continued his medical studies in Devonshire and at Exeter founded a weekly paper entitled *The Devonshire Inspector*. In 1762 he returned to London, where he acted as a deputy to Charles Gardner, Gresham Professor of Music. His lectures, which were read during Easter and Trinity terms, were published in the same year with an annexed scheme for an academy of music, the only portion given qualified approval in the *Critical Review* (xiv, 1762, pp.211–16). Sometime afterwards, Potter was involved as a journalist and corrector to the press. Through the patronage of David Garrick, he also wrote texts and composed music for the theatre.

Garrick introduced him to Jonathan Tyers, the proprietor of Vauxhall Gardens, for whom he produced annual collections of Vauxhall songs from 1765 to 1774. In 1766 Garrick withdrew his patronage, when he discovered that Potter was the author of anonymous reviews in the *Public Ledger* critical of the management of Drury Lane Theatre. Potter then published a 'state of the case' in a verse satire, at the same time continuing his anonymous criticism. In 1772 his reviews were collected and reprinted 'by a society of gentlemen, independent of managerial influence' (i.e. Potter himself).

Although Potter remained as an employee at Vauxhall after Tyers's death in 1767, a dispute with the family ended the connection in 1777. In the same year J.A. Fisher used the oratorio, *Providence*, as his exercise for the Oxford DMus, thereby offending his collaborator, Potter, with whom the work had been written in 1776 for the benefit of Middlesex Hospital. In reply, Potter then wrote a second verse satire, directed at Fisher, and this was published in 1780.

On 4 August 1771 Potter signed the membership book of the Royal Society of Musicians but, failing to pay his annual subscription, he was expelled about 1779. In 1780 he left England for the Continent, where he procured intelligence for the government and resumed his medical studies. In 1785 he styled himself 'M.B.' and, sometime later, 'M.D.' (hence, not the John Potter who graduated M.D. from Edinburgh in 1785). From this period he devoted himself to the practice of medicine and to writing novels, some of which contain information about music and musicians.

WORKS

The Rites of Hecate, or Harlequin from the Moon (pantomime, J. Love), London, Drury Lane, 26 Dec 1763 (London, *c*1765); collab. J. Battishill
Hymen (occasional interlude, Allen), Drury Lane, 20 Jan 1764, words pubd in *Gentleman's Magazine*, xxxiv (1764), 38–9; collab. M. Arne
Polyhymnia, or The Complete Song Book (London, 1769)
Many other songs, mostly for Vauxhall Gardens, in song collections and pubd separately

LIBRETTOS

The Choice of Apollo (serenata), London, Little Haymarket, 11 March 1765, lib pubd (London, 1765); set to music by W. Yates, *GB-Lcm*
Providence (orat), London 1776; set to music by J.A. Fisher

JAMIE C. KASSLER

Pottgiesser, Heinrich Wilhelm Theodor (*b* Voerde, nr Schwelm, 21 Aug 1766; *d* Elberfeld, 9 May 1829). German physician and flute designer. He studied at Dortmund, Halle and Berlin, and in 1787 qualified as a physician and surgeon in Duisburg. In addition to practising as a physician in Lünen (1788), Mülheim (1790) and Elberfeld (1795) he was interested in astronomical and musical matters and devised some important improvements for the flute.

KARL VENTZKE

Pottier [Pollier, Potier, Potiers, Pottiers], **Matthias** [Mathieu] (*b c*1553; *d* Bruges, 4 Dec 1629). Flemish composer and priest. After being a chorister in St Donatian, Bruges, he entered the Bruges seminary on 23 June 1571 and was ordained priest on 16 June 1576. On 12 January 1577 he became *kapelmeester* of St Saviour, where only four months later (22 May 1577) he was appointed a prebendary canon. From 1584 to 1586 he stayed at Saint Omer and later became *kapelmeester* at Dunkirk. Early in January 1592 he succeeded Pevernage as *kapelmeester* at the Cathedral of Our Lady, Antwerp. He resigned from this post on 17 May 1615 on being made canon at St Donatian, Bruges (an appointment he took up on 2 September 1615); he was buried there.

Two collections edited by him were published by Phalèse: *Selectissimarum missarum flores* (RISM 1599[1]), containing a five-part mass by Pottier himself, and *Missae septem ex praestantissimis Italiae musicis octonis vocibus* (Antwerp, 1611).

GODELIEVE SPIESSENS

Potúček, Juraj (*b* Bratislava, 20 June 1923). Slovak music bibliographer. After graduating from business school in Bratislava (1941) he worked in business (1941–53) and concurrently studied in the church music department of the Bratislava Conservatory (1947–9). Later he studied librarianship at Bratislava University (1959–64) while working as a librarian and bibliographer at the Musicology Institute of the Slovak Academy of Sciences (1954–74). In 1975 he became director of the music archive of the Slovak Music Foundation. His main areas of study have been music bibliography, lexicography and documentation (of which he is the leading Slovak exponent), and Slovak musical life and foreign musical contacts. Of his two standard bibliographies, the first (1952) lists Slovak printed music and literature about musicians active in Slovakia to 1949; the second (1955), its continuation, lists literary and theoretical writings on Slovak music. He has contributed the Slovak sections to the *Annual Bibliography of European Ethnomusicology* (Bratislava, 1967–) and wrote some 400 articles for the *Československý hudební slovník* (Prague, 1963–6); his major publication, the product of 25 years' work, was a biblical concordance (1970).

□

Poturlyan, Artin (Bedros) (*b* Kharmanli, 4 May 1943). Bulgarian composer of Armenian descent. In 1967 he graduated from the Sofia State Music Academy, having studied music pedagogy and then composition with Vladigerov. From 1969 to 1974 he attended the Yerevan Conservatory under the supervision of Lazar Sarian. At first a music editor for Bulgarian television (1967–9) and subsequently a teacher at the Pipkov Music School in Sofia (1974–7), in 1990 Porturlyan was appointed teacher of polyphony at the State Academy. He was awarded the prize of the Union of Bulgarian Composers in both 1983 and 1989 (for *Arabeski* and the Violin Concerto, respectively), and in 1985 he took first prize at the Pazardzhik competition.

The Piano Quintet (1989) and the piano pieces *Izpovedi* ('Confessions') and *Svetove* ('Worlds') are generally considered his greatest achievement. His musical style reveals an ability to write a distinctive mixture of free dodecaphonic and aleatory music, new tonalities, modalities and sonorities and metrorhythmic techniques, all in an intellectual and poetic fashion.

WORKS
(selective list)

Stage: Plachat na zhenata [The Cry of a Woman] (op, 1, R. Bradbury), 1979

Vocal: 2 Sonnets (P. Neruda), mixed chorus (1985); 2 pesni [2 Songs] (V. Nezval), S, pf, 1969; 3 pesni [3 Songs] (D. Varuzhan, V. Davtyan), S, pf, 1987; Shepot nasame [Whispering Alone] (P. Yavorov), S, pf, 1994; Bezkyrat (zinfonito, G. Leopardi), Mez, Bar, mixed chorus, orch, 1998; Dazhd, [Rain] (A. Delchev), mixed chorus, 1999

Orch: Sym. no.1, 1973; Sym. no.2, 1977; Music for 3 Fl, 2 Pf, Tam-tam and Str, 1977–8; Poem, org, orch, 1980; Chbr Conc., pf, str, 1981; Vn Conc., 1983; Music in Memory of Evariste Galois, 1984; Mozayki [Mosaics], 1988; Fantasia, pf, orch, 1990

Chbr (inst): Sonata, vn, pf, 1972; Pf Qnt, 1989; Improvisations, cl, pf, 1992; Str Qt, 1993; Divertimento, wind qnt, hp, hpd, perc, 1994; Pf Trio, 1995

Kbd: 4 miniatyuri, 1965; 3 piyesi [3 Pieces], 1966; Sonatina, 1970; Segmenti, 1979; Spirali, 1980; Arabeski, 1982; Strannikat [The Stranger], 2 pf, 1983; Izpovedi [Confessions], 1985; Svetove [Worlds], 2 pf, 1986; Chetiri dukhovni pesno peniya [4 Spiritual Songs], org, 1988; Anagram-Labirint, 1996; The Temple of Kaissa, 1998

TOMI KURKLISIJSKY

Pougin [Paroisse-Pougin], **(François-Auguste-)Arthur** (*b* Châteauroux, 6 Aug 1834; *d* Paris, 8 Aug 1921). French writer on music and violinist. As the son of itinerant actors he had few educational advantages, and his literary attainments were mainly due to his own efforts. He was educated in music at the Paris Conservatoire, where he studied the violin with Alard and harmony with Reber. A violinist in theatres from the age of 13, he became conductor at the Théâtre Beaumarchais in 1855, and played in the Musard orchestra and at the Opéra-Comique (1860–63). From 1856 to 1859 he was assistant conductor and répétiteur at the Folies-Nouvelles.

Pougin began as a writer on music with biographical articles in the *Revue et gazette musicale*. Early in his career he gave up teaching and playing at the Opéra-Comique in order to carry out his literary projects. Besides his frequent contributions to *Le ménestrel*, *France musicale*, *Art musical*, *Le théâtre*, *Chronique musicale* and other music periodicals, he edited the music articles in the Larousse *Dictionnaire universel* and was successively musical feuilletonist to *Le soir*, *La tribune*, *L'événement* and, from 1878, the *Journal officiel*, where he succeeded Eugène Gautier. In 1885 he became chief editor of *Le ménestrel*.

With his early series of six biographies of French musicians of the second half of the 18th century (1861–4), Pougin was, with Ernest Thoinan, one of the pioneers of French musicology, although he was unable to make use of the unpublished documents now accessible. His main interest was the musical theatre and his most important single work, on the life of Verdi, was published in Italian (1881) with additions by Folchetto (Jacopo Caponi) and illustrations by A. Formis. He later produced a revision in French of his own and Folchetto's versions (1886) but, having been written some 20 years before Verdi's death, it is incomplete. His *Dictionnaire historique et pittoresque du théâtre* (1885) contains valuable information on contemporary French operatic life. He also edited the supplement to Fétis's *Biographie universelle* (1878–80) and a revision of Clément and Larousse's *Dictionnaire lyrique* (as *Dictionnaire des opéras*, suppl. 1904, 3/1905). He wrote a comic opera *Le cabaret de Ramponneau* and an operetta *Perrina*, both unpublished. In 1905 he was accorded the order of the Crown of Italy.

NORBERT DUFOURCQ/KAREN HENSON

Poul, Anthony. *See* POOLE, ANTHONY.

Poulenard, Isabelle (*b* Paris, 5 July 1961). French soprano. She studied at the Ecole Nationale d'Art Lyrique of the Paris Opéra. Her début came in 1981 at Tourcoing, as Lisette in Paisiello's *Il Re Teodoro in Venezia* – a performance which, like many of her early appearances, was conducted by Jean-Claude Malgoire. Since then she has taken a wide variety of roles, including Despina, the Queen of Night, Gluck's Iphigenia (*Iphigénie en Aulide*) and the title role in Rameau's *Zéphyre*. Her recordings include Cesti's *Orontea*, Lully's *Armide*, Cavalli's *Serse*, Vivaldi's *L'incoronazione di Dario*, Rameau's *Le temple de la gloire*, *Platée* and *Les indes galantes*, Handel's *Alessandro* and *Tamerlano* and Telemann's *Orpheus*. Her performances are not confined to the Baroque and Classical periods; she has sung in Poulenc's *Dialogues des Carmélites* and in French sacred choral repertory of the 19th and 20th centuries. Poulenard's agile technique, tonal purity and light-textured voice, however, are

especially well suited to 17th- and 18th-century music, in which she reveals an informed sense of style.

NICHOLAS ANDERSON

Poulenc, Francis (*b* Paris, 7 Jan 1899; *d* Paris, 30 Jan 1963). French composer and pianist. During the first half of his career the simplicity and directness of his writing led many critics away from thinking of him as a serious composer. Gradually, since World War II, it has become clear that the absence from his music of linguistic complexity in no way argues a corresponding absence of feeling or technique; and that while, in the field of French religious music, he disputes supremacy with Messiaen, in that of the *mélodie* he is the most distinguished composer since the death of Fauré.

1. Life. 2. Piano music. 3. Chamber music. 4. Orchestral music. 5. Music for the stage. 6. Choral music. 7. Songs and other works for solo voice. 8. Summary.

1. Life. Born into a wealthy bourgeois family, Poulenc was Aveyronais by descent through his father, Emile Poulenc, director of a family pharmaceutical business which eventually became the giant Rhône-Poulenc, and of Parisian stock through his mother Jenny, née Royer, from a family of artist-craftsmen. Poulenc regarded this dual heredity as the key to his musical personality: he associated his deep Catholic faith with his Aveyronais roots and attributed his artistic heritage to his mother's family. It is certainly the case that two strands, profane and religious, co-exist in his work: he was the composer of the *Chansons gaillardes* as well as a Mass, of *Les mamelles de Tirésias* as well as a *Stabat mater*. The two sources of inspiration were summed up by Claude Rostand in the celebrated remark: 'In Poulenc there is something of the monk and something of the rascal'.

His mother introduced him to the piano at the age of five, and before long entrusted him to a teacher who was a coach for Cécile Boutet de Monvel, Franck's niece. In spite of his obvious talent and taste for music, Poulenc bowed to his father's wishes and completed a conventional classical education at the Lycée Condorcet, the condition on which he would then be allowed to enter the Conservatoire. But the war and his parents' early deaths (his mother died when he was 16, his father when he was 18) upset all his plans. From 1914 to 1917 Poulenc was the pupil of Ricardo Viñes, who, far more than a teacher, was a spiritual mentor and the dedicatee or first performer of his earliest works. He affirmed that the influence of Viñes had determined his career as pianist and composer, and thanks to him he made the acquaintance of other musicians, notably Auric, Satie and Falla. He also met poets and writers, and it was around this time that he was taken to Adrienne Monnier's bookshop in the rue de l'Odéon by his childhood friend Raymonde Linossier, the future lawyer and orientalist, where he had the privilege of meeting Apollinaire, Eluard, Breton, Aragon, Gide, Fargue, Valéry and Claudel, and to become familiar with their work.

Poulenc destroyed his first attempts at composition, dating from 1914. He made his public début in Paris in 1917 with his first work, *Rapsodie nègre*, dedicated to Satie and performed at the Théâtre du Vieux Colombier at one of the avant-garde concerts organized by Jane Bathori. Stravinsky, whose influence he had felt, took note of him and helped him to get his first works published by Chester in London. A conscript from January 1918 to January 1921, Poulenc did not let military service interfere with composition, and produced, notably, *Trois mouvements perpétuels* which enjoyed immediate success, and *Le bestiaire*, his first cycle of *mélodies* on poems by Apollinaire. His works were often performed in the concerts given at the studio of the painter Emile Lejeune, in the rue Huyghens in Montparnasse, where programmes also included the work of Milhaud, Auric, Honegger, Tailleferre and Durey. This led to the birth of the 'Groupe des Six' in 1920, baptized by Henri Collet in a review of a concert featuring all of them. Rather than a consciously shared aesthetic, these composers were united by strong friendship.

Instead of following a conventional course, Poulenc's years of study overlapped with the start of his career. He already had a certain reputation when he approached Charles Koechlin in 1921, asking him for lessons because until then he had 'obeyed the dictates of instinct rather than intelligence'. He was still Koechlin's pupil when he received a commission from Diaghilev for the Ballets russes: *Les biches*, first performed in Monte Carlo in 1924, was a great popular and critical success. As well as intellectual and artistic circles, Poulenc frequented Parisian society, in an age when private patronage still played an important role in musical life. Princesse Edmond de Polignac (at whose home he met Wanda Landowska, dedicatee and first performer of *Concert champêtre*) commissioned his Concerto for Two Pianos and his Organ Concerto, while *Aubade* and *Le bal masqué* were composed specially for events organized by Marie-Laure and Charles de Noailles. Poulenc was quick to see that the gramophone would play a major role in the diffusion of music, and the earliest recordings of his own work date from 1928. He suffered his first serious bout of depression in the late 1920s, at about the time he became fully aware of his homosexuality. He was permanently scarred by the death of Raymonde Linossier in 1930. His letters reveal that she was the only woman he ever wanted to marry. Throughout his life, his letters testify to the complexity of his emotional life, which was closely bound up with his creativity; they also reveal the existence of a daughter, born in 1946. Subject to a manic-depressive cycle, Poulenc always rebounded from depression into phases of enthusiasm, and was possessed successively by doubt and contentment.

The landmarks of Poulenc's life in the 1930s were the formation of a duo with the baritone Pierre Bernac and the composition of his first religious works. In 1934 he decided to start a career on the concert platform with Bernac, for whom he eventually composed some 90 mélodies, specifically for their recitals together. Their association lasted until 1959. The rhythm of Poulenc's life was determined henceforth by periods of concert-giving alternating with periods of composition. He divided his life between Paris, to which he retained a visceral attachment, and his house at Noizay in Touraine, where he retreated to work. He was deeply affected by the death of the composer Pierre-Octave Ferroud, but a pilgrimage to Notre Dame de Rocamadour in 1936 revived his Catholic faith, the immediate first fruits of which were *Litanies à la vierge noire*.

Poulenc passed the greater part of World War II at Noizay, which was in the German zone of occupation. There he composed, notably, *Les animaux modèles*, first performed at the Paris Opéra in 1942, and *Figure*

1. Francis Poulenc, 1957

humaine, settings of clandestinely published poems by Eluard. His first opera, *Les mamelles de Tirésias*, received its première at the Opéra-Comique in 1947 and inaugurated his collaboration with the soprano Denise Duval, who became his favourite female interpreter. 1948 saw the extension of Poulenc's international career, as he made his first concert tour in the United States. He returned there regularly until 1960, to give concerts with Bernac or Duval, or to attend first performances of some of his works, notably the Piano Concerto, commissioned by the Boston SO. Between 1947 and 1949, recognizing the important influence that radio had acquired, he devised and presented a series of broadcasts on French national radio.

During the 1950s he was a dedicated composer: fiercely independent, deliberately distancing himself from the musical mainstream of the time, while remaining attentive to what happened there. He had gone to Vienna to meet Schoenberg in 1922, and from their inception he subscribed to the concerts of Domaine musical. Of his compositions of this decade, *Dialogues des Carmélites*, commissioned by La Scala, Milan, rapidly gained international success, and *La voix humaine* sealed nearly 50 years of friendship with Jean Cocteau. In 1963 Poulenc died suddenly of a heart attack in his Paris apartment.

2. Piano music. From Viñes, Poulenc learnt a clear but colourful style of piano playing, based on a subtle use of the sustaining pedal, and in his own piano music he was insistent on there being 'beaucoup de pédale'. In his earlier pieces such a style gives body to the often arrogantly 'popular' tunes that abound, softening the ostinatos in the Sonata for piano duet (1918) and the quasi-Alberti bass in *Trois mouvements perpétuels* (1918). In *Promenades* (1921), written for Artur Rubinstein, a tougher harmonic language appears, based on 4ths and 7ths, and the texture is thicker than in any of his other works for the instrument.

The bulk of his piano music dates from the early 1930s, a time when he was reappraising the materials of his art. He later admitted that his reliance on past formulae (long pedal notes, arpeggios, repeated chords) was not always free of routine and that in this regard his familiarity with the piano could be a hindrance; his most inventive piano writing, he claimed, was to be found in his song accompaniments. Even so, a piece such as the Second Nocturne, *Bal de jeunes filles*, of 1933 is charming enough not to need supporting with claims of originality; it is in the manner of Chabrier but is still unmistakably Poulenc. His own favourite pieces were the 15 *Improvisations*, ranging in date from 1932 to 1959 and in dedicatee from Marguerite Long to Edith Piaf. This confirms that the piano was not always a vehicle for his deepest thoughts; he called the *Thème variée* (1951) an 'oeuvre sérieuse' and included a retrograde version of the theme in the coda to show that he was up with the latest serial ideas, but it is hardly the best of him. Inexplicably, he loathed what many would regard as his best piano work, *Les soirées des Nazelles* (1930–36), a suite of eight variations enclosed by a 'Préambule' and a 'Final' which might be described as the fusion of eclectic ideas in a glow of friendship and nostalgia. Ex.1 is typical of the suite and of Poulenc in the use of the dominant 13th, the pause after the end of the first phrase, the barely disguised sequence of 4ths in the bass and the circuitous route taken in bars 3–5 between the closely related keys of E minor and G major, a characteristically impertinent blend of the preceding and succeeding harmonic areas.

Ex.1 *Les soirées de Nazelles*, III

3. Chamber music. Poulenc's output in this genre falls conveniently into three chronological groups. The four works of the first period (1918–26), each under ten minutes in length, are acidly witty, garnishing plain triadic and scalic themes with spicy dissonances. No doubt they share something of the spirit of the 18th-century divertissement, but the properties of harmonic and syntactical behaviour are not unfailingly observed. In the Sonata for clarinet and bassoon (1922) there are passages of jazz and bitonality, often leading to a mischievous cadence; in the

Sonata for horn, trumpet and trombone (1922) the opening trumpet theme is one of Poulenc's 'folksongs', clearly a relation of many in *Les biches*, which needs the correction of only three 'wrong' notes in the first four bars for it to conform with 18th-century harmonic practice – as it were, Pergolesi with his wig awry. The central group comprises the Sextet for piano and wind (1932–9), one of his most popular works, and the sonatas for violin and piano (1942–3) and for cello and piano (1940–8). Poulenc admitted to being unhappy writing for solo strings and had written and destroyed two violin sonatas (1919 and 1924) before the surviving example, dedicated to the memory of Lorca and first performed by Ginette Neveu. Poulenc consigned a string quartet to the Paris sewers in 1947, rescuing three themes from it for his Sinfonietta. The final three sonatas for woodwind, like the last three chamber works of Debussy, form part of a set that Poulenc did not live to complete. They have already entered their appropriate repertories by virtue both of their technical expertise and of their profound beauty. In the Sonata for oboe and piano (1962), Poulenc's last work, dedicated to the memory of Prokofiev, his usual fast–slow–fast pattern of movements is altered to slow–fast–slow, in which the final 'déploration' fulfils both affective and instrumental requirements.

4. ORCHESTRAL MUSIC. The best of Poulenc's orchestral music dates from before World War II. The first of his major works was the *Concert champêtre* (1927–8), inspired by the playing and character of Wanda Landowska. The countryside evoked is nothing more savage than a Parisian suburb and the fanfares in the last movement emanate from nothing more exotic than the bugles in the barracks of Vincennes, but for all that it is an enchanting work. Finer still are the two concertos commissioned by the Princess Edmond de Polignac, for two pianos (1932) and for organ, strings and timpani (1938). The earlier of the two, first performed by the composer and his friend Jacques Février, has no aim beyond entertainment, in which it succeeds completely; its models range from Balinese gamelan at the end of the first movement to Mozart at the beginning of the second, but as in the case of the Sonata for horn, trumpet and trombone, Poulenc's 18th-century style affords a number of calculated inelegances before branching off in a quite different direction. The Organ Concerto is altogether deeper in emotional character while remaining stylistically ambivalent. Recognizably a product of 'Janus-Poulenc', it leads the solo instrument from Bach's G minor Fantasia to the fairground and back again. Poulenc placed it 'on the outskirts' of his religious music.

5. MUSIC FOR THE STAGE. A number of Poulenc's dramatic works deal with the inconsequential, if not the downright absurd. His first effort was incidental music to *Le gendarme incompris* (1920–1), a nonsense play by Cocteau and Raymond Radiguet in which the policeman delivers himself of lines by Mallarmé; despite Milhaud's enthusiasm, Poulenc withdrew the material soon afterwards. A month later, in June 1921, came the première of the ballet *Les mariés de la Tour Eiffel* incorporating two movements by Poulenc. This joint production by all the members of Les Six except Durey achieved no more than a brief *succès de scandale*. By contrast, *Les biches*, first performed in 1924, is still one of his best-known works. The absence of deep, or even shallow, symbolism was only accentuated by a tiny passage of mock-Wagnerian brass, complete with emotive minor 9ths, in a score which is above all clear and tuneful, matching the white and pale blue of Marie Laurencin's décor. Apart from the ballet *Les animaux modèles* (1940–42), based on eight fables from La Fontaine, Poulenc was occupied for the next 20 years by film music and incidental music to plays, until in 1939 he happened to reread Apollinaire's *Les mamelles de Tirésias* which he then set as his first opera. Described as an *opéra bouffe*, it includes a variety of scenes both inconsequential and absurd, but Apollinaire's underlying message, the need for more French babies and a corresponding distaste for the incipient women's liberation movement, had been a national preoccupation since Napoleon's time. The musical tone can therefore be either noble or popular, often both, as in ex.2. Poulenc himself pointed out that the vocal phrase (where Thérèse/Tirésias is reading in a newspaper of the death of two characters in a duel) would not disgrace a religious work; the three introductory bars confirm the continuity of Stravinsky's influence. *Les mamelles* is emphatically not an operetta – knowing winks, like smut, were anathema to Poulenc – but accommodates a host of musical techniques, lyrical solos, patter duets, chorales, falsetto lines for tenor and bass babies and, like Denise Duval whose Folies Bergères training was invaluable in the title role (fig.2), it succeeds in being both funny and beautiful.

Ex.2 *Les mamelles de Tirésias*, Act 1 scene v

2. *Francis Poulenc at a dress rehearsal for 'Les mamelles de Tirésias', Opéra-Comique, Paris, 1947, with Paul Payen (the husband) and Denise Duval (Thérèse)*

Poulenc's last two operas treat serious subjects seriously. In *Dialogues des Carmélites* (1953–6) he charted the delicate vagaries of character and emotion among a group of nuns condemned to death in the French Revolution. The text, which was originally a film scenario, is built up from a number of short scenes whose brevity forced the composer to discriminate painstakingly between types of vocal line, of rhythm, even of vowel sound; the immediate success of this two-and-a-half-hour opera with an almost entirely female cast reveals Poulenc as a technician of the first order. He confronted similar problems in *La voix humaine* (1958) and enriched this 40-minute solo scena, one side of the telephone conversation between a young woman and the lover who is abandoning her, with non-referential 'motifs conducteurs', with a wide range of musical language mirroring both her manic condition and the perpetual interruptions of French telephonic life, with terrifying silences (as her lover is saying what the audience never hears), and with a long-term aim for A minor as the tragic goal of the harmony. The result is a powerful study of human despair.

6. Choral music. Several minor secular works such as the *Chansons françaises* (1945–6) continue the French tradition of Janequin and Sermisy, but Poulenc's early study of Bach chorales also left its mark. His masterpiece in the genre, *Figure humaine* (1943), is a highly complex setting of words by Eluard; although instrumental support would have reduced the performers' troubles, the composer wanted a pure choral tone in order to capture the mood of supplication.

After his return to Roman Catholicism in 1936, Poulenc produced a steady flow of religious choral works. Stretching over a quarter of a century they display a remarkable unity of tone as well as an increasing complexity in language and resources. The *Litanies à la vierge noire* (1936), written in the week after his visit to Rocamadour, are for a three-part female chorus in a conventionally modal style that avoids conventional cadences, the organ punctuating the discourse with fervently chromatic chords. The Mass in G (1937) is 'more sober, more Romanesque' than his next major work in the genre, the *Stabat mater* (1950–51) for soprano, mixed chorus and orchestra, a powerful and profoundly moving work whose choral writing enlarges on the serious implications in that of *Les mamelles*. In the *Gloria* (1959–60) the choral writing is unsanctimonious to the point of wilfulness, as in the stressing of the phrase 'Gloria in *excelsis* Deo', while the ostinatos, the soaring soprano and the matchless tunes proclaim Poulenc a believer who had, in Tippett's phrase, 'contracted in to abundance'. Finally, the *Sept répons des ténèbres* (1961–2) pursue the same lush orchestral path but with a new concentration of thought, epitomized in the minute but spine-chilling codetta to 'Caligaverunt oculi mei' where Poulenc showed that his recognition of Webern was neither a matter of distant respect nor a piece of time-serving diplomacy.

7. Songs and other works for solo voice. In the *Rapsodie nègre* (1917) Poulenc showed a marked affinity with words which were less than explicit, but his setting of six poems from Apollinaire's *Le bestiaire* (1918–19) is an extraordinarily individual and competent piece of work for a young man of 20, in which he captured the mood of the tiny, elusive poems, often by simple yet surprising means such as abnormal word-setting (as with 'mélancolie', the last word of all). The scoring is at once economical and faintly 'impressionist', but in *Cocardes* (1919) he imitated the sound of a street band, and Stravinsky's *The Soldier's Tale* was also surely in his mind. There followed a period of 12 years before Poulenc again wrote songs by which he set any store, the *Trois poèmes de Louise Lalanne* (1931) – a fictitious poet born of Apollinaire's lively imagination; the second poem is by him, the others by his mistress Marie Laurencin. Apollinaire and Max Jacob provided the texts for the other vocal works of 1931–2. Poulenc's favourite was *Le bal masqué*, a nostalgic romp in which the 'côté paysan' of his nature is uncluttered by any kind of chic.

On 3 April 1935 Poulenc and Bernac gave their first public recital, including the first performance of the *Cinq poèmes de Paul Eluard*. Poulenc had been attracted by

Eluard's poetry since adolescence but there was 'a stillness about it which I did not understand'. In the *Cinq poèmes* 'for the first time, the key is grating in the lock', and the door opened wide the following year in the cycle of love-songs *Tel jour, telle nuit*, a masterpiece worthy to stand beside Fauré's *La bonne chanson*. It lacks the common touch of some other Poulenc songs, the sentimentality of *Hôtel* or the earthiness of the *Chansons villageoises*, but otherwise it is highly characteristic. Where a single song contains more than one tempo, Poulenc followed Satie's lead in making them 'successive' rather than 'progressive'; there is only one rallentando in the whole cycle; five of the nine songs move at a single, inexorable speed. However, Poulenc planned at least three of them (nos.3, 5 and 8) as transitions between their more important neighbours; in particular he intended the final climax of no.8, *Figure de force*, 'to make more keenly perceptible the kind of silence that marks the beginning of "Nous avons fait la nuit"'. Often piano and voice work on independent dynamic levels, a dimension of songwriting not widely explored before his time. The texture of the accompaniment is never complex but there must always be 'beaucoup de pédale'.

From this point there was little change in the technique of his songwriting, rather a continual refinement of means, an attempt to say more and more with less and less, a search for the pure line he admired so much in Matisse. This tendency reached its utmost point with *La fraîcheur et le feu* (1950), 'the most carefully wrought' of his songs, being a setting of a single Eluard poem in seven sections, in which two contrasted tempos (mostly crotchet = 120 and crotchet = 66–9) are treated as structural elements. Poulenc's last important setting of Eluard was of texts he commissioned from the poet to form *Le travail du peintre* (1956), a homage to seven contemporary painters. His last set of songs was *La courte paille* (1960), written for Denise Duval to sing to her young son and containing the hilarious patter song 'Ba, be, bi, bo, bu', but his last significant work for solo voice, *La dame de Monte Carlo* (1961), a monologue for soprano and orchestra to words by Cocteau, shows, like *La voix humaine*, that Poulenc understood all too well the terrors of depression.

In general, the sections that make up a Poulenc song are quite short and often built of two- or four-bar phrases. His technique has much in common with the surrealist poets whom he set, in the value he placed on the resonance of the individual elements. The opening of a song was rarely the first thing he composed. Usually a line or two would come at a time, and in the case of *Montparnasse* (a song of 20 lines) the process was spread over a period of four years. Furthermore, ideas always came to him in particular keys and he never transposed them; for example, D♭ major seems to have been a key of relaxation and in it the fourth degree tends to be sharpened. Towards the end of the compositional process, therefore, he might be confronted with a collection of quite disparate tonal areas which he then had to combine to reach the listener as a single experience. Much though it annoyed him, the legend of Poulenc the rich playboy of music, from whom *mélodies* flowed with every exhalation of breath, is the perfect compliment to this most scrupulous of craftsmen.

8. SUMMARY. Poulenc never questioned the supremacy of the tonal-modal system. Chromaticism in his music is never more than passing, even if he used the diminished 7th more than any leading composer since Verdi. Texturally, rhythmically, harmonically, he was not particularly inventive. For him the most important element of all was melody and he found his way to a vast treasury of undiscovered tunes within an area that had, according to the most up-to-date musical maps, been surveyed, worked and exhausted. His definitive statement came perhaps in a letter of 1942: 'I know perfectly well that I'm not one of those composers who have made harmonic innovations like Igor [Stravinsky], Ravel or Debussy, but I think there's room for *new* music which doesn't mind using other people's chords. Wasn't that the case with Mozart–Schubert?'. And if Poulenc was not quite a Schubert, he is among the 20th century's most eligible candidates for the succession.

WORKS

catalogue numbers from Schmidt (1995)

DRAMATIC

operas

35 Recits for Gounod: La colombe, 1923, unpubd

125 Les mamelles de Tirésias (opéra bouffe, prol, 2, G. Apollinaire), 1939–44, rev. 1962, Paris, OC, 3 June 1947

159 Dialogues des Carmélites (3, 12 tableaux, G. Bernanos), 1953–6, Milan, La Scala, 26 Jan 1957

171 La voix humaine (tragédie lyrique, 1, J. Cocteau), 1958, Paris, OC, 6 Feb 1959

ballets

23 'La baigneuse de Trouville' and 'Discours du général' for Les mariés de la Tour Eiffel (1, Cocteau), 1921, rev. 1957 [other nos. by Auric, Honegger, Milhaud, Tailleferre], Paris, Champs-Elysées, 18 June 1921

36 Les biches (ballet avec chant, 1, 17th-century text), chorus, orch, 1923, rev. 1939–40, 1947, Monte Carlo, 6 Jan 1924

45 'Pastourelle' for L'éventail de Jeanne (1, Y. Franck and A. Bourgat), 1927 [other nos. by Ravel, Roussel, Ferroud, Ibert, Roland-Manuel, Delannoy, Milhaud, Auric, Schmitt]; private perf., Paris, home of Jeanne Dubost, 16 June 1927; Paris, Opéra, 4 March 1929

51 Aubade (concerto chorégraphique), pf, 18 insts, 1929, Paris, 18 June 1929

111 Les animaux modèles (1, after J. de La Fontaine), 1940–42, Paris, Opéra, 8 Aug 1942

incidental music

20 Le gendarme incompris (Cocteau and R. Radiguet), 1920–21, Paris, Théâtre Michel, 24 May 1921

64 Intermezzo (J. Giraudoux), 1933, Paris, Comédie des Champs-Elysées, 1 March 1933, unpubd

MYRIAM CHIMÈNES (life, work-list), ROGER NICHOLS (works)

Poulet, Gaston (*b* Paris, 10 April 1892; *d* Paris, 14 April 1974). French violinist and conductor. After studying at the Paris Conservatoire, where he won a *premier prix* for violin playing in 1910, he made his début at Brussels in 1911 in Beethoven's Violin Concerto, with Ysaÿe conducting. In 1912 he founded the Gaston Poulet Quartet with Victor Ocutil, Amable Massis and Louis Ruyssen. In 1927 he initiated the Concerts Poulet, which took place in the Théâtre Sarah-Bernhardt in Paris until they were merged with the Concerts Siohan in 1935. From 1932 to 1944 he was director of the Bordeaux Conservatoire and conductor of the Bordeaux PO, and from 1940 to 1945 he also conducted the Concerts Colonne in Paris. He was appointed professor of chamber music at the Paris Conservatoire in 1944, and taught there until his retirement in 1962. He founded the Besançon Festival in 1948.

Poulet followed a dual career as violinist and conductor. He gave the first performance of Debussy's Violin Sonata with the composer (Paris, 1917). As a conductor, he had a very wide repertory, and received invitations to appear both in Europe and in South America – he gave the first performance in Buenos Aires of Debussy's *Le martyre de Saint Sébastien* in 1928. His style of conducting was greatly influenced by his teacher, Toscanini.

CHRISTIANE SPIETH-WEISSENBACHER

Poulton, (Edith Eleanor) Diana (Chloe) (*b* Storrington, Sussex, 18 April 1903; *d* Heyshott, Sussex, 15 Dec 1995). English lutenist. She studied at the Slade School of Fine Art (1919–23) and was taught the lute by Arnold Dolmetsch (1922–5). From 1927 she often performed at the Haslemere Festival as soloist and in lute ensembles. She was one of the first professional English lutenists in the 20th century, and on the formation of the Lute Society in 1956 was elected its chairman, and subsequently (1973) its president. In 1971 she was appointed the first professor of the lute at the RCM. Her writings were mainly on the history of lute technique and the music of Dowland. Her book on Dowland, and her edition (with Basil Lam) of his music, made Dowland's biography and music easily available for the first time.

DAVID SCOTT/R

Pound, Ezra (Loomis) (*b* Hailey, ID, 30 Oct 1885; *d* Venice, 1 Nov 1972). American poet and amateur composer. His musical achievements include an unorthodox *Treatise on Harmony*, a body of criticism, a role in the revival of older music and, most notably, music for two 'operas', *The Testament of François Villon* (1923) and *Cavalcanti* (1932). As a student Pound formed his taste on the Provençal troubadours, with their ideal union of composer and poet. Acquaintance with Arnold Dolmetsch deepened his love for early music, while other friendships broadened his experience. In 1913 the pianist Walter Morse Rummel and Pound published arrangements of nine troubadour songs. From this unorthodox base, Pound, as 'William Atheling', reviewed London concerts from 1917 to 1920 in the *New Age*, attacking current repertory and performance practice. In the 1930s local concerts sponsored by Pound in Rapallo formed a model for the 1939 Settimana Vivaldiana at Siena, which helped to establish Vivaldi's modern reputation.

Villon, composed with help from George Antheil, illustrates Pound's theories of song, combining troubadour monody with rhythmic notation intended to reproduce asymmetrical word rhythms with scientific precision. Such complex metres as 7/16 or 19/32 are frequent. Harmony is minimal, instrumentation pointillist, dialogue perfunctory, staging stylized and the performer's personality effaced; all operatic resources are subordinated to the rhythmic-melodic verse line. Pound's style is possibly the most original devised by an amateur. *Villon*, first performed in 1926, has been produced twice by the BBC, staged by Robert Hughes at the Western Opera Theatre (1971) and recorded in 1972. *Cavalcanti*, a similar work, was first performed by Hughes in 1983.

Pound's *Treatise on Harmony*, in his *Antheil and the Treatise on Harmony* (Paris, 1924, 2/1927/*R*1968), is a somewhat obscure attempt to substitute rhythmic organization for textbook harmony or the vertical sonorities of Impressionism. Best understood against the background of Antheil's *Ballet mécanique*, Stravinsky's music of the 1920s and the general revolt against tonality, it is one of the earliest attempts to theorize about music purely as an arrangement of *objets sonores*.

STEPHEN J. ADAMS

Pountney, David (Willoughby) (*b* Oxford, 10 Sept 1947). English director. After education at Radley College and Cambridge University, where he was director of productions of the Opera Society, he began his career with *Kát'a Kabanová* at Wexford (1972). With this and a subsequent series of productions for the WNO and Scottish Opera, where he was director of productions from 1975 to 1980, he did much to advance the cause of Janáček in Britain. He made his American début with *Macbeth* at Houston in 1973 and his Australian début in Sydney in 1978 with *Die Meistersinger*.

From 1982 to 1993 he was director of productions at the ENO, where, in close collaboration with the designer Stefanos Lazaridis and the music director, Mark Elder, he evolved a definable house style. Characteristic features were the arresting images of dislocated reality, an inexhaustible repertory of stage contrivances, a determination to explore the social and psychological issues latent in the works, and above all an abundant sense of theatricality. *Rusalka* (1983), with its Edwardian nursery setting and Freudian undertones, and *Hänsel und Gretel* (1987), its dream pantomime peopled by fantasy figures from the children's imagination, both enjoyed several revivals, while *Lady Macbeth of the Mtsensk District* (1987) and *Wozzeck* (1990) exemplified an approach to production in which grotesque caricature jostles with forceful emotional engagement.

Since leaving the ENO Pountney has undertaken a variety of engagements both at home and abroad, including a spectacular *Fidelio* at Bregenz (1995), a surreal production of Martinů's *Julietta* for Opera North (1997) and a libretto and staging for Maxwell Davies's *Doctor of Myddfai* (1997, WNO).

BARRY MILLINGTON

Poupard, Henri-Pierre. *See* SAUGUET, HENRI(-PIERRE).

Pousser (Fr.). In string playing, up-bow. *See* BOW, §II.

Pousseur, Henri (Léon Marie Thérèse) (*b* Malédy, 23 June 1929). Belgian composer and theorist. From the beginning of his period of study at the Liège Conservatory (1947–52) he was a member of the 'Variations' group of young composers centred around Froidebise. It was in that group that he was introduced to the music of Webern and other 20th-century composers. Apart from a period of military service (1952–3) at Malines, during which he maintained close contact with Souris, he worked from 1950 as a secondary school teacher. In 1951 at Royaumont he met Boulez, who gave him crucial insight into Webern's harmonic language, the techniques of which Pousseur explored in his *Trois chants sacrés* (1951). In 1953, he met Stockhausen, whose *Elektronische Studien I* (1953) seemed to him to mark the beginning of an new era. Over the next few years he encountered other members of the young European avant garde, including Maderna and Nono in 1954 (at the Darmstadt summer school), and Berio in 1956. In *Prospection* (1952–3), for three pianos tuned a sixth-tone apart, Pousseur attempted to develop further the serialization of multiple parameters embarked upon by Boulez in *Structure Ia* (1951), but encountered difficulties with the work's instrumental realization. In 1954 he made his first foray into electronic music at the Cologne studio: *Seismogrammes*. In his instrumental works *Symphonies à quinze solistes* (1954–5) and *Quintette à la mémoire d'Anton Webern* (1955), he achieved richer textures by means of a 'group' technique (not unrelated to that which Stockhausen was exploring at the time) and by integrating statistical considerations, both on the compositional and the interpretative level. These reflections led him towards open form in such works as *Scambi* (1957) and *Mobile* (1957–8). In the mid-1950s he published numerous theoretical writings, some analytical (dealing with Webern especially), and some reflecting on his own compositional procedures and aesthetic. He also taught in important new music centres, such as Darmstadt, Cologne and Basle. Very soon he was pondering the problem of how to write aleatory music for an ensemble of several players. *Répons* (1960) posed such drastic problems of co-ordination that it required a group able to devote some 100 rehearsals to it to make it feasible: the audience's difficulty in following the ensemble's interactions led Pousseur to add to the piece a strange parable by the French writer Michel Butor which makes explicit the musical choices and their consequences (1965). With *Rimes* (1958–9), he unveiled one of his first works for instruments and tape, and began to develop his concept of 'generalized periodicity', in which the different structural levels of a musical form are viewed in analogy to periodic (or aperiodic) wave-forms.

In *Electre* (1960) and *Trois visages de Liège* (1961), Pousseur sought to achieve greater immediacy of communication by experimenting with the transformation of an intelligible spoken text, and with the rich signifying potential of electronic sound (see illustration). In doing so he came very close to satisfying Butor's exhortation to composers (in his essay 'La musique, art réaliste' of 1960) to rediscover music's representational power. It was with Butor that Pousseur once more collaborated on his major theatrical project of the decade, *Votre Faust* (1960–68). This 'adaptable fantasy genre opera' feeds, on both musical and literary levels, on all previous versions of *Faust*, posing the problem of the stylistic integration of heterogeneous materials. Pousseur developed a system of

Page from Pousseur's 'Electre', electronic ballet for two-track tape, 1960 (London: Universal Edition, 1968): graphic realization by Sylvano Bussotti after Pousseur

harmonic transformations, outlined at length in the essay 'L'apothéose de Rameau' (1968), that allowed him to 'rhyme Monteverdi with Webern', to link by means of a 'universal matrix' (Sabbe) elements of musical language that might initially seem to be in opposition. At the dramatic level, the second part of the work appears as a vast mobile in which alternative scenes have multiplied, allowing the public the opportunity to intervene in the course of the work and to decide whether the story of the composer Henri shall end happily, or in disaster, or in one of the less extreme situations already presented. In *Couleurs croisées* (1967), a work commissioned by the Koussevitzky Foundation, the harmonic language is derived from the Black American song 'We shall overcome', and progresses from chromaticism to consonance by means of alternating transformations that link together monody, homophony, antiphony and polyphony. With *Mnémosyne I* (1968), Pousseur entered the realm of melody, thus completing his attempts at reappropriating musical tradition.

After three years spent teaching in Buffalo, New York (1966–8), Pousseur settled in Liège, where he assumed responsibility for a course in writings on music at the University and founded the Centre de Recherches et de Formation Musicales de Wallonie (CRFMW, 1970), bringing together an electronic music studio, the Ensemble Musique Nouvelle and activities in alternative music education. The most successful of his new pedagogical projects were gradually integrated within the regular curriculum of the conservatory, where he organized a seminar of experimental music before teaching composition (from 1971) and becoming director (1975). Between 1985 and 1987 he served as director of the Institut de Pédagogie Musicale (IPM) in Paris, and in 1990 he set up a study programme at the University of Liège which introduced a course in practical music within the university degree.

During the 1970s and 80s the nature of Pousseur's output was clearly influenced by his ambitious educational project. In this spirit he created indeterminate scores, such as *Ephémérides d'Icare II* (1970), in which collective improvisation is guided by multiparametric grids, the melodic formulae themselves being left undetermined. The Icarus theme finds its most wide-ranging expression in the 'programme for composition' *Icare obstiné* (1972). Social and political engagement is present in numerous compositions, sometimes in the content of the text being set, as in *Crosses of Crossed Colors* (1970) and *L'invitation à l'utopie* (1971), and at other times at a more abstract level, as in *Modèle réduit* (1975). With his second work of musical theatre, *Petrus Hebraicus* (1973–4), commissioned by the Berlin Festival to celebrate the Schoenberg centenary, Pousseur made a decisive step towards other musical worlds and practices. From then on he treated musical styles as points of formal articulation. Parallel to the libretto, in which several strands of time overlap (those of Schoenberg himself, his topicality in the postwar period, etc.), the work's stylistic allusions cover a wide range, from the Baroque cantata to Expressionist melodrama, and from the Viennese classics to Stravinsky and Weill. The practical experience of amateurs lies at the heart of projects such as *Chevelures du temps* (1979) and *La rose des voix* (1982), in which models from the popular or choral repertories intersect one with another and are augmented by everyday noise-effects produced by the singers themselves or by a group of sound technicians. In *Les îles déchaînées* (1980), composed in collaboration with his son Denis, three musical practices indulge in different 'duels': the symphony orchestra, an experimental electronic music group and a jazz group. At the height of his interest in the collation of pre-existing materials, Pousseur revisited such musical monuments as the Goldberg Variations in *Nuits des nuits* (1985) and *Dichterliebe* in *Dichterliebesreigentraum* (1992–3); the source materials are arranged in such

a way as to reveal motivic or structural links hidden or disregarded in the original work. The kaleidoscopic principle is present here in the same way as in such multi-faceted works as the *Seconde apothéose de Rameau* (1981), a comprehensive review of the harmonic experiments he had been conducting since 1960, which brings together a multitude of quotations, or *Déclarations d'orages* (1988–9), a vast fresco in which the contributions of different performing groups are woven together in a complex manner. Working in an educational environment stimulated Pousseur to compose numerous solo pieces and to begin compiling a work on instrumental teaching, including chamber music: *Méthodicare* (published since 1988). Clarity and simplicity of structure characterize many of his later compositions, such as *Leçons d'enfer* (1991) and *Don Juan à Gnide* (1996), in which the visual element contributes significantly to an appreciation of the form.

In the summer of 1994, Pousseur retired to Waterloo to devote himself to composition. Several new cycles of works subsequently emerged, including *Aquarius-Memorial* I (begun in 1994), an outcome of his period as composer-in-residence at the Catholic University of Leuven (1993–8). The foundations of Pousseur's work derive from the bringing together of his previous experiences, allowing him access, by way of his harmonic system, to the most varied musical landscapes, from consonance to chromaticism, and even micro-tonality.

WORKS

DRAMATIC

Electre (ballet, P. Rhallys, after Sophocles), 2-track tape [APELAC, Brussels], 1960, Brussels, Janine Charat Ballet, 1960

Votre Faust (fantaisie variable genre opéra, M. Butor), S, A, T, B, 5 actors, fl, cl, sax, bn, hn, tpt, perc, hp, pf, vn, vc, db, tape, 1960–68; Milan, Piccola Scala, 1969 [see also ORCHESTRAL: Parade de Votre Faust, 1974; OTHER INSTRUMENTAL: Miroir de Votre Faust, 1964–5; VOCAL: Echos de Votre Faust, 1967–9]

Die Erprobung des Petrus Hebraicus (Musikalisches Kammertheater, Pousseur and L. Wintgens), 2 spkr, S, T/Ct, B, cl, hn, hp, pf + org, vib, 2 perc, vn + va, tape, 1973–4; Berlin, 1974; Fr. version, Le procès du jeune chien (Pousseur and Butor), 1978, Strasbourg, 1978

Leçons d'enfer (music theatre, Pousseur after A. Rimbaud and Butor), 2 actors, S, A, B, child's v, cl, sax, tuba, hp, kbd, perc, live elecs, 1991, Metz, 1991

Don Juan à Gnide, ou les séductions de la chasteté (Répons III) (music theatre, Pousseur after Butor, C. Fourier and others), 1 actor, S, B, fl, vn, vc, hp, pf, 1996, Leuven, 1996

ORCHESTRAL

Rimes pour différentes sources sonores, 3 orch groups, 2-track tape [APELAC], 1958–9; Couleurs croisées, 1967; L'effacement de Prince Igor, 1971; Quatrième vue sur les jardins interdits, arr. chbr orch by J.-L. Robert, 1974; Parade de Votre Faust, 1974, collab. Robert; Chronique illustrée, 1976, movt 2 with B solo (Pousseur); Humeurs du futur quotidien (Pousseur and Butor), 2 spkr, orch, 1978; Les îles déchaînées, jazz ens, live elecs, orch, 1980; La seconde apothéose de Rameau, chbr orch, 1981; Trajets dans les arpents du ciel, solo inst, orch, 1983; Nuits des nuits (ou la voyante insomnie de Mr Goldberg), 1985; Les fouilles de jeruzona (Aquarius-Memorial II), 6 orch groups, 1995

OTHER INSTRUMENTAL

Large ens/band: Les ephémérides d'Icare II, pf, 19 insts, 1970, rev. 1971 as Invitation à l'utopie [see CHORAL]; Patchwork des tribus américaines, wind orch, 1984; Suite du massacre des innocents, wind orch, 1997

6–16 insts: Symphonies à 15 solistes, fl, ob, cl, bn, 2 hn, tpt, trbn, 2 hp, pf, 2 vn, va, vc, 1954–5; Répons, fl, hp, 2 pf, perc, vn, vc, 1960, rev. with spkr (Butor) as Répons avec son paysage, 1965; Trait, 5 vn I, 4 vn II, 3 va, 2 vc, db, 1962; Madrigal III, cl, 2 perc, pf, vn, vc, 1962; Cortège des belles ténébreuses au jardin boréal, eng hn, va, hn, tuba, 2 perc, 1984; Un jardin de passacailles (avec Lully, Bach, Beethoven, Brahms et Webern), chbr ens, 1987; Caprices de Saxicare, a sax, 5 vn I, 4 vn II, 3 va, 2 vc, db, 1993

2–5 insts: Prospection, 3 pfs (tuned 1/6-tone apart), 1952–3; Quintette à la mémoire d'Anton Webern, cl, b cl, vn, vc, pf, 1955; Mobile, 2 pf, 1957–8; Ode, str qt, 1960–61; Madrigal II, Baroque fl/vn, vn, va da gamba/vc, hpd, 1961; Vue sur les jardins interdits, 4 sax, 1973; Troisième vue sur les jardins interdits, arr. wind qnt by P.A. Monk, 1974; Chronique berlinoise, pf qnt, 1975, movt 2 with B solo (Pousseur); Modèle réduit, vc/b cl, pf, 1975; Fantaisie et fugue ('Dicté par . . . no.1': Arnold Schoenberg 1930), 1980: Ia, str qt; Ib, vc/bn, pf; Variations ('Dicté par . . . no.2': Anton Webern 1940), cl, pf, 1980; Variations-caprices, fl/high melody inst, hpd/org/pf, 1982; Sixième vue sur les jardins interdits, str trio, 1984; Chronique canine, 2 pf, 1984, movt 2 with female v (Pousseur); Mnémosyne obstinée (Ode no.2), str qt, 1988; At Moonlight, Dowland's Shadow Passes along Ginkaku-ju, koto, shamisen, shakuhachi, 1989; La lune et les flots (Passacaglia), str trio, 1989; Suite de coeur et de pique, cl/sax, vn, vc, pf, 1989–90; Motet, fl, ob, bn, 1995; Triptyque des septuajubilaires, str qt, 1995–6; Rasche Fuge zur Sache Bach, str qt, 1996; Septième vue sur les jardins interdits, arr. J.-P. Peuvion, 5 cl, 1996; Reflets d'arc-en-ciel ou variations canoniques sur le timbre traditionnel imaginaire 'Trop est acier Protest'Icare', vn, pf, 1997

Solo pf: Sonatine, 1949 (1988); Exercises: Variations I, Impromptu, Variations II, 1955–7; Caractères: Ia, Ib, 1961; Miroir de Votre Faust (Caractères II): Le tarot d'Henri, La chevauchée fantastique (with S ad lib), Souvenirs d'une marionette, 1964–5, rev. with 2-track tape [APELAC, U. of Ghent] as Jeu de miroirs de Votre Faust, 1966; Apostrophe et six réflexions, 1964–6; Icare obstiné: Vol. no.1, 1972; Ballade berlinoise, 1977; Le bal de Cendrillon ('Dicté par . . . no.0': P.I. Tchaikowski), 1980; Carré magique I, 1983; Yin-Yang (Carré magique II), 1983; Carré magique III, 1983; Litanie du cristal des fleurs, pf left hand, 1984; Sonate des maîtres viennois ('Dicté par . . . no.4'), 1984 [after Beethoven, Mozart, Schubert]; Tango de Jeanne-la-Sibylle, pf, left hand, 1984; Coup de dés en échos pours ponctuer – au piano – le silence de John Cage, 1992; Les litanies d'Icare (Aquarius-Memorial I), pf, 1994; 2 kleine Spinnereien über ein Thema von Clara Wieck, pf, 1996

Other solo inst: Madrigal I, cl, 1957–8; Caractères madrigalesques, ob, 1966; Deuxième vue sur les jardins interdits, org, 1974; L'ibéricare, gui, 1975; $^{19}\sqrt{8/4}$, vc, 1976; Flexions: I, fl, 1979; II, tpt, 1979; III, vn, 1979; IV, va, 1979; V, vc, 1980, arr. db by F. Grillo as Vbis, 1980; La patience d'Icarène, hp, 1980; Naturel, hn, 1981; La Paganiana, vn, 1982; La Paganiana seconda, vc, 1983; Hermès I ('Dicté par . . . no.3': Béla Bartók), cl, 1983, also in vn version as Hermès II; Litanie du miel matinal, high melody inst, 1984; Litanie du miel vésperal, high melody inst, 1984; Vers l'île du Mont Pourpre, fl, 1984; L'école d'Orphée, spkr, org, live elecs/tape ad lib, 1989; 3 petits caprices sur une mélodie populaire hongroise, vn, 1993; Chaconne, vn, 1996

VOCAL

Choral: 7 versets des psaumes de la Pénitence, 4vv, 1950; Missa brevis, 4vv, 1950; Invitation à l'utopie (Butor), spkr, S, Mez, chorus 4vv, pf, 19 insts, 1971: Les ruines de Jéruzona (Butor and Pousseur), 4vv, pf/org, db, perc, 1978; Vocalise, 1–6vv, pf, 1978; La passion selon Guignol (after J.W. von Goethe, T. Marlowe, G. de Nerval and others), 4vv, orch, 1981, collab. P. Chagas; La rose des voix (Pousseur and Butor), 4 spkr, 4 vocal qt, 4 choruses (4vv), 8 insts, 1982; L'étoile des langues (Butor), spkrs, 4vv, 1984; Arc-en-ciel de remparts (Butor and Pousseur), unison vv, student orch, 1986; Traverser le forêt (C. Baudelaire, Butor), spkr, S, B, chorus 4vv, 12 insts, 1987; Amen, unison vv, 1990; Puer natus, SAB, 1990; Devise (I. Pousseur), 4vv, 1993;

Vocal-orchestral: Déclarations d'orages (Butor, W. Blake, P. Neruda, F. von Schiller, V. Mayakovsky), spkr, S, B, 3 solo insts, orch, tape, 1988–9; Dichterliebesreigentraum (Pousseur, after H. Heine), S, B, 2 pf, chbr chorus, chbr orch, 1992–3

Vocal ens: Tales and Songs from the Bible of Hell (W. Blake, E.A. Poe), vocal qt, tape, live elecs, 1979; Cinquième vue sur les jardins interdits (Chorale text: 'Wenn ich einmal soll scheiden'), vocal quartet, 1982; Le sablier du phoenix (Butor), spkr, 5 solo vv, chbr orch, 1994

Solo vocal: 3 chants sacrés, S, vn, va, vc, 1951; Phonèmes pour Cathy (P. Claudel), 1v, 1966; Echos de Votre Faust (J.W. von Goethe, Butor), Mez, fl, pf, vc, 1967–9; Mnémosyne I (F. Hölderlin), 1v/unison vv/1 inst, 1968; Crosses of Crossed Colors (Black Amer. and Amerindian texts), amp. female v, 2–5 pf, 2 radios, 2 tape,

recs, 2 disc players, 1970; Pour Baudelaire (C. Baudelaire), 1v, 1978; Canines (Pousseur and Butor), female v, pf, 1980; Pedigrée, female v, vn/va, vc, cl/b cl, hn, hp, pf, perc, 1981; Sur le qui-vive (Butor), female v, cl, vc, tuba, hpd, pf, 1985; 5 soupirs pour une clairière (Butor and F. García Lorca), female v, pf, 1987–9; Mnémosyne doublement obstinée (F. Hölderlin), female v, str qt, 1988; Flexions hermétiques pour Baudelaire, female v, vn, 1989 [from Flexion III, vn, 1979 and Hermès II, vn, 1983]; Le tarot pérégrin, low v, fl, cl, b cl, vn, gui, pf, 1993; Jahresschlangenstaub, A, 1995; La guirlande de Pierre, S, B, pf, 1997

ELECTRONIC

Seismogrammes, 1-track tape [WDR, Cologne], 1954; Scambi, 2-track tape [RAI, Milan], 1957; Liège, cité ardente, 1-track tape [APELAC], 1957–8 [for film by E. Degelin]; Préhistoire du cinéma, 1-track tape [APELAC], 1959 [for film by E. Degelin]; 3 visages de Liège (J. Séaux), 2-track tape [APELAC], 1961; Psych'art, tape [U. of Ghent], 1971 [for film by M. Thonon]; Système des paraboles, 8 studies, tape [WDR], 1972; Paraboles-Mix I–III, tape [WDR], 1973 [from Système des paraboles]

Liège à Paris (A. Breton, Butor), elecs [CRFMW, Liège], 1977; see also DRAMATIC (Electre)

VARIABLE FORCES

Mnémosyne II, systems of improvisation, 1 or more pfmrs, 1969, version for pf by Bartholomée, 1973; Icare apprenti, any insts, 1970, combined with Mnémosyne as Les noces d'Icare et de Mnémosyne, 1984; Ex-dei in machinam memoria, melody inst, elecs, 1971; Icare obstiné, composition programme, 1972; Deuxième invitation à l'utopie, tape, improvising pfmrs, 1973; Chevelures du temps, amateur and professional pfmrs, 1979; Figure et ombre(s), any inst, 1988

PASCAL DECROUPET

Pouteau, Joseph (*b* Chaumes-en-Brie, 7 Feb 1739; *d* Paris, 3 Dec 1823). French organist and composer. He went to Paris about 1743–4 and studied the organ with his great-uncle Michel Forqueray, organist at St Martin-des-Champs, and composition with L.-C. Bordier, choirmaster at the church of the Cimetière des Innocents. In 1753 he won a competition for the reversion to the post of organist at St Martin-des-Champs and in 1756 he became organist at St Jacques-de-la-Boucherie. On Forqueray's death in 1757, Pouteau inherited his library and position as organist at the Filles-Dieu convent. He supported the Revolution and arranged *Le serment civique, ou Pot pouri national* for piano or harpsichord; later, however, the Revolutionary movement turned against the church and deprived him of his wealthy students. From about 1811 he taught the piano at the Ursuline Convent School and was organist at St Merry. His compositions include motets, *ariettes*, harpsichord sonatas and an *intermède, Alain et Rosette* (1777).

WORKS

Stage: Alain et Rosette (intermède, 1, M.J. Boutillier), Paris, Opéra, 10 Jan 1777

Vocal: Motets, chorus, insts; 2 cantatilles, 1v, insts (1764–5); Ariettes with insts; ariettes in contemporary anthologies

Kbd: Sonates en pièces de clavecin, vn ad lib (Paris and Lyons, n.d.); Recueil périodique d'ariettes d'opéra comique et autres, arr. pf/hpd, vn ad lib (Paris, 1772–6); Le serment civique, ou Pot pouri national, arr. pf/hpd (Paris, *c*1790)

FRÉDÉRIC ROBERT

Powell, Bud [Earl] (*b* New York, 27 Sept 1924; *d* New York, 1 Aug 1966). American jazz pianist. Following classical piano studies, from 1940 he took part in informal jam sessions at Minton's Playhouse, New York. There he came under the tutelage and protection of Thelonious Monk and contributed to the emerging black American bop style. By 1942–5, when he played in the band of his guardian Cootie Williams, he had already developed his individual style in most of its essentials. After sustaining a head injury during a racial incident in 1945, he suffered the first of many nervous collapses which were to confine him to sanatoriums for much of his adult life. Thereafter, in the late 1940s and early 1950s, he appeared intermittently in New York clubs with leading bop musicians or in his own trio. From the mid-1950s, as his mental health and musical powers deteriorated, he gradually restricted his public appearances. He moved in 1959 to Paris, where he led a trio (1959–62) with Kenny Clarke, the third member of which was usually bassist Pierre Michelot, and enjoyed a certain celebrity status. In August 1964 he returned to the USA and made a disastrous appearance at Carnegie Hall (1965); he was soon obliged to abandon music altogether.

Powell was the most important pianist in the early bop style, and his innovations transformed the jazz pianism of his time. A prodigious technician, he was able at will to reproduce the demanding styles of Art Tatum and Teddy Wilson, echoes of which can sometimes be heard in his ballad performances. At fast and medium tempos, however, he preferred the spare manner that he devised in the early 1940s: rapid melodic lines in the right hand punctuated by irregularly spaced, dissonant chords in the left. This almost anti-pianistic style (which was adopted by most bop pianists of the time) left him free to pursue linear melody in the manner of bop wind players, and it was as a melodist that Powell stood apart from his many imitators. At its best, Powell's playing was sustained by a free unfolding of rapid and unpredictable melodic invention, to which he brought a brittle, precise touch and great creative intensity. Except in his later years, when his virtuosity flagged and he self-consciously adopted a primitivism resembling Monk's, Powell never altered this basic approach, but worked ceaselessly within it to devise new melodic ideas, harmonies and ways of coupling the hands. He greatly extended the range of jazz harmony by reducing his chordal underpinning to compounds of 2nds and 7ths, and achieved an extraordinary variety in his phrase lengths, which range from brief flurries to seemingly inexhaustible lines that ignore the structure of the original.

Although most at ease in a trio setting, Powell was stimulated to his best work in competition with other leading bop soloists such as Charlie Parker, Dizzy Gillespie, J.J. Johnson, Sonny Stitt and especially Fats Navarro. He also composed a number of excellent jazz tunes, among them *Hallucinations* (recorded by Miles Davis as *Budo*), *Dance of the Infidels* (1949, BN), *Tempus Fugue-it* (1949, Clef), *Bouncing with Bud* (1949, BN) and *Un poco loco* (1951, BN), as well as the remarkable *The Glass Enclosure* (1953, BN), a musical impression of his experiences in mental asylums, which points to a talent for composition that was unfortunately left undeveloped.

J. BRADFORD ROBINSON

Powell, Dick [Powell, Richard Ewing] (*b* Mountain View, AR, 14 Nov 1904; *d* Los Angeles, 2 Jan 1963). American actor and singer. A popular singer and bandleader, he became known as the perennial boyish and energetic star of numerous backstage musical films for Warner Brothers during the 1930s. He made his film début playing a bandleading singer in *Blessed Event* (1932). He established himself playing the juvenile lead opposite dancer Ruby Keeler in a string of films which included *42nd Street*, *Footlight Parade* and *Gold Diggers of 1933* (all 1933). Other films included *Dames* (1934), *Gold Diggers of 1935* (1935), *Thanks a Million* (1935), *Gold Diggers of 1937* (1936), *On the Avenue* (1937), *Varsity Show* (1937), *Hollywood Hotel* (1938) and *Star Spangled Rhythm* (1942). He married fellow singing actor June Allyson in 1945. Powell later eschewed his clean-cut image and began to aspire to non-singing dramatic roles such as those he played in *Murder, My Sweet* (1944) and *The Bad and the Beautiful* (1952). He directed several films as well, but it is as the energetic wide-eyed dancer of the 1930s that Powell is best remembered. He had a fine clear tenor voice; with an instrument of moderate volume, Powell nonetheless possessed a technique which enabled him to be heard in a variety of musical venues with a solid sound and impeccable intonation.

WILLIAM A. EVERETT, LEE SNOOK

Powell, John (*b* Richmond, VA, 6 Sept 1882; *d* Richmond, VA, 15 Aug 1963). American pianist and composer. He attended the University of Virginia (BA 1901) and went on to study in Vienna, where his teachers included Theodor Leschetizky and Karel Navrátil. His early works, among them the *Sonata Virginianesque* (1906), *In the South* (1906) and *At the Fair* (1907), blend American folk material with traditional contrapuntal techniques, elements that remained important to his compositional style. He made his recital début in Berlin in 1907 and subsequently performed in Paris, London and Vienna.

After living in London for several years, Powell returned to Richmond, where he developed an interest in black American folksong. His reputation as an important American composer was established with the première of *Rhapsodie négre* for piano and orchestra (1918). Inspired by Joseph Conrad's *Heart of Darkness*, the work quotes black American melodies and uses syncopated ragtime rhythms. Powell, however, did not believe that black

melodies could serve as a basis for a national school of composition. In a lecture given in Houston on 6 April 1923 he expressed concern about the 'melting pot' conception of America and about the possibility that the country might be peopled by an octoroon race. The Sonata for Violin and Piano (1918) is among the last of his works to show traces of post-Romanticism. During the 1930s and 40s, Anglo-American folk influences took on increasingly important roles in his compositions. The Symphony in A (1945), for example, while cast in traditional symphonic form, is written in a modal style and quotes many folk melodies. Powell also completed numerous arrangements of traditional folksongs, dances and hymn tunes.

WORKS
(*selective list*)

Orch: Vn Conc., 1910 [2nd movt arr. as From a Love Past, vn, pf]; Rhapsodie négre, pf, orch, 1918 [arr. 2 pf, 1922]; In Old Virginia, 1921; 2 Interludes, 1921; Natchez-on-the-Hill (3 Virginian Country Dances), 1932 [arr. vn, pf; 2 pf]; A Set of Three, 1935; Sym. in A [modal], 1945

Vocal: 5 Choral Works, 1902–7: Phantoms (J.B. Tabb), To a Butterfly (Tabb), Enigma (N. Lenau), Moonbalm (H. Heine), Nein (K. Burger); Lenztraum (Burger), 1v, pf, 1902–7; The Babe of Bethlehem, SATB, 1934; The Deaf Woman's Courtship, Mez, T, SATB, 1934, arr. Mez, T, male vv (1950); Soldier, Soldier, S, Bar, SATB, 1934; 5 Virginian Folk Songs, Bar, pf, 1938; other songs, choral works, hymns

Chbr: Sonata Virginianesque, vn, pf, 1906; Str Qt no.1, E, 1907; Sonata, A♭, vn, pf, 1918; Str Qt no.2, e, 1922, unfinished

Kbd (pf, unless otherwise stated): Sonata psychologique, 1905; In the South, suite, 1906; Variations and Double Fugue on a Theme by F.C. Hahr, 1906; At the Fair, suite, 1907; Sonate noble, 1907; Sonata teutonica, 1913; In the Hammock, 2 pf, 8 hands, 1915; Dirge, 2 pf, 12 hands, 1928; Larry O'Garr, carillon, 1941; other unpublished works

DAVID Z. KUSHNER

Powell, Maud (*b* Peru, IL, 22 Aug 1867; *d* Uniontown, PA, 8 Jan 1920). American violinist. She began violin and piano lessons in Aurora, Illinois, then studied violin for four years with William Lewis in Chicago. She was a pupil at the Leipzig Conservatory under Henry Schradieck (1881–2) and at the Paris Conservatoire under Charles Dancla (1882–3), then in 1883 made a tour of England. The following year she studied with Joachim at the Berlin Hochschule für Musik. She made her European début with the Berlin PO under Joachim in 1885, and her American début with the New York PO under Theodore Thomas in the same year. She toured Europe with the New York Arion Society in 1892, and performed twice under Thomas at the World's Columbian Exposition, Chicago (1893), at which she delivered a paper 'Women and the Violin' to the Women's Musical Congress.

Powell's mission was to advance America's cultural growth by bringing the best in classical music to Americans in remote areas as well as the large cultural centres. She was one of the first to champion works by American composers and introduced to the American public concertos by Tchaikovsky, Dvořák, Saint-Saëns, Lalo, Sibelius, Coleridge-Taylor and Arensky. She also toured widely in Europe and was particularly popular with audiences in England. Powell became one of the first American women to form and lead a string quartet (1894). The Maud Powell Concert Company, a group of six musicians, visited South Africa in 1905; she also formed the Maud Powell Trio with the company's cellist May Mukle and pianist Anne Mukle Ford and toured the USA in 1908–9. In 1904 she became the first solo instrumentalist to record for the Victor Talking Machine Company's celebrity artist series (Red Seal label) and her recordings became worldwide bestsellers. Most were reissued on CD by the Maud Powell Foundation in 1989. She made transcriptions for violin and piano, and composed an original cadenza for Brahms's Violin Concerto; she also contributed articles to music journals and wrote her own programme notes. The brilliance, power and finish of her playing, combined with an unusual interpretative gift, led her to be recognized as one of America's greatest violinists; contemporary reviewers ranked her alongside Kreisler and Ysaÿe.

KAREN A. SHAFFER

Powell, Mel [Melvin Epstein] (*b* New York, 12 Feb 1923; *d* Van Nuys, CA, 24 April 1998). American composer. He studied the piano with Reisenberg and was for some years noted as a jazz pianist, composer and arranger (for Benny Goodman and Glenn Miller). After service in the US Army Air Force, he attended Yale University (BM 1952), where he studied composition with Hindemith. He taught at the Mannes College of Music and at Queens College, CUNY, before returning to Yale (1957-69), where he became chair of the composition faculty and director of the electronic music studio (1960–69), one of the first in the USA. In 1969 he went to the California Institute of the Arts as founding dean of the school of music; he was provost there from 1972 to 1976. Among his many awards and commissions are those from the Guggenheim Foundation (1960), the American Academy of Arts and Letters (1963), the NEA (1982) and Brandeis University (1989). In 1990 he was awarded the Pulitzer Prize for *Duplicates*, a commission from the Koussevitsky Foundation for the Library of Congress. He served as president of the AMC (1961–3) and on the editorial boards of *Perspectives of New Music* and *Journal of Music Theory*. He also served as a panelist for the NEA, as a consultant to other state and federal agenices and was a guest composer at many festivals and colleges (1972–94).

Powell's early works show the neo-classical influence of his teacher Hindemith. His gradual transition towards atonality is evidenced especially in *Miniatures* (1957), in which he mixes tonal and atonal languages. By 1958 he had abandonded tonality in favour of serialism. His use of 12-note techniques made possible the complexity of relationships between intervals, temporal structures, registers and phrases that is characteristic of his music. In some works, such as *Filigree Setting* (1959), he used

quasi-improvisational techniques to extend durations and to permit the performer some choice of pitch succession or contour within an otherwise rigourously controlled context. In other compositions such as *Haiku Setting* (1960), interval relations derived from pitch sets take precedence over ordered pitch succession to frame ordered elements. There is a similar use of pitch sets in his electronic music. In his later works, these 'pitch tableaux', in which aggregates are fixed in register, form background structures while freely ordered materials provide ornamentation, as in *Modules* (1985).

RICHARD SWIFT/SEAN GRIFFIN

Powell, Verne Q. (*b* Danville, IN, 7 April 1878; *d* Needham, MA, 3 Feb 1968). American maker of Boehm flutes and piccolos. As a boy he learnt to play the flute and the piccolo and at seven made a fife. He worked at first as a jeweller and engraver in Fort Scott, Kansas.

In 1910 Powell went to a concert in Chicago in which Georges Barrère played a Louis Lot silver flute; this inspired him to make a silver flute from melted-down teaspoons, watch cases and coins. In 1913 WILLIAM S. HAYNES, who had been making wooden flutes, invited Powell to join his firm in Boston as foreman. In 1926 he started his own business, Verne Q. Powell Flutes, Inc., at 295 Huntington Avenue. Powell's first catalogue (1927) advertised silver and gold flutes; among the first ten customers were John Wummer, Arthur Lora, and William Kincaid.

While working for Haynes, Powell was responsible for introducing French-model silver flute making to the USA. As an independent maker, he changed the design of his flutes, which were formerly on the Lot model, and made the first high C facilitator key. Besides silver flutes, Powell made wood and silver piccolos, silver alto flutes, and gold and platinum concert flutes. One platinum flute was made for the New York World's Fair in 1939 and was later purchased by Kincaid.

In 1961 Powell sold his business to four former employees, under whose management the firm expanded and moved to Arlington, Massachusetts. For most of the following 25 years it produced piccolos only sporadically; some of its employees made piccolos independently. In 1974 the firm introduced its Cooper scale for flutes, in collaboration with the English flute maker Albert Cooper. The firm holds a US patent (1990) for aurumite, a method of laminating 14-carat gold onto the outside and inside of the flute body. In 1997, working with the flautists András Adorján, Felix Skowronek and Fenwick Smith, it resumed the manufacture of wooden Boehm system flutes. The firm changed hands several times; it moved in 1989 to Waltham, Massachusetts, and in 1999 to nearby Maynard. Many former employees later founded their own firms, including Brannen Bros., Burkhart-Phelan, Edward Almeida, Dana Sheridan, Jack Goosman, Jonathon Landell and Ostroff Sagerman.

FRIEDRICH VON HUENE/NANCY TOFF

Power, James (*b* Galway, 1766; *d* London, 26 Aug 1836). Irish music publisher and instrument maker. After starting out as a pewterer he entered the military instrument trade, and set up with his brother William in Dublin in 1797 as James and William Power, music selling and publishing being eventually added to their activities. Towards the end of 1807 he moved to London, where he established himself as a military instrument maker and music publisher. William continued the Dublin business as William Power & Co. until 1831, but the partnership with his brother ceased about 1810, although many publications were issued jointly by them up to 1820.

The brothers' major publishing venture was Moore's *Irish Melodies*. For this project they commissioned the poet Thomas Moore (ii) to provide original verses to be set to traditional melodies arranged by John Stevenson (a plan similar to the *Scottish Melodies* then being issued by the Edinburgh publisher George Thomson). The first two parts were published in London and Dublin in 1808 (not 1807 as often stated), and were an immediate success. After the sixth number (1815) a quarrel arose between the brothers, and part vii (1818) was issued by each separately. From part viii (1821) James employed Henry Bishop as arranger, though William also issued part viii, with arrangements by Stevenson. James, however, brought a successful action for breach of copyright, and the remaining two parts (1824–34) and a supplement (1834) were published by James alone.

Power also issued several other volumes of settings of Moore's poetry, including *Sacred Songs* (1816–24), *National Airs* (1818–28) and *Evenings in Greece* (1826–32). He maintained a very close relationship with the poet and paid a substantial annuity for his verses. Power's other publications included *A Selection of Scottish Melodies* (Bishop and Twiss, 1812), *Indian Melodies* (1813), *A Selection of Welsh Melodies* (John Parry, 1822) and similar works, besides many single songs, duets and glees by Stevenson, Horn, Attwood, Matthew King and others. His widow carried on the business until about 1838. The plates of the *Irish Melodies* were bought by Addison & Hodson, who reissued them in 1844, and their popularity continued well into the second half of the century.

PETER WARD JONES

Power, Leonel [Lionel, Lyonel, Leonellus, Leonelle; Pôlbero] (*d* Canterbury, 5 June 1445). English composer and theorist. He shared with Dunstaple the leadership of English style in the influential decades between 1410 and 1440. Somewhat overshadowed in reputation by his probably younger contemporary, Leonel (as the sources usually name him) shows a similarly high level of musical craftsmanship and originality in an output only slightly smaller.

1. Life. 2. Works. 3. Style.

1. Life. The first dated reference to Power (see Bowers, 1975) records him as instructor of the choristers and second in the list of clerks of the household chapel of Thomas, Duke of Clarence (*d* 1421), brother of Henry V and heir apparent. The next records his admission to the fraternity of Christ Church, Canterbury, on 14 May 1423. This fraternity included distinguished lay friends of the priory as well as regulars and other ecclesiastics. The suggestion (in *MGG1*) that Power may have been master of the choir that was maintained to sing services outside the monastic liturgy in the nave or Lady Chapel has been confirmed by the discovery of his name in this context between 1439 (when the post may have been created for him) and his death. There is reference to 'Lionel Power of Canterbury esquire' on 20 September 1438 (a 'release of all personal actions' to one Thomas Ragoun), with a memorandum of acknowledgment dated 19 April 1444. Bowers now reports that Ragoun's uncle was Sir Richard Woodville, who had been in the service of the Duke of Clarence since 1411 and by 1423 was chamberlain to John, Duke of Bedford. Ragoun and Power may have become acquainted through a common employer; the possibility that Power might have served in Bedford's chapel after Clarence's death is thus slightly enhanced by this relationship (we have no documentation of Power's employment for most of the 1420s and 1430s). 'Lyonell Power' is listed as a recipient of livery from Christmas 1439 to Christmas 1444: whenever a distinction is made he is cited as a Kent man rather than a Londoner. He is listed among the esquires or gentlemen (*armigeri*, later *generosi*): that he was a layman therefore seems certain.

Three notices of his death survive. In a Canterbury calendar (*GB-Lbl* Cotton Tib.B.III, 4*v*) both date and year are given. The fraternity registers (*GB-Lbl* Arundel 68 and *Llp* 20) record his obit on 6 June, the date given for his burial by the chronicler monk John Stone, possibly himself a composer.

On stylistic grounds (discussed in §3 below), Power's birthdate must lie between about 1370 and 1385. The notoriously unreliable historian Grattan Flood, without knowledge of any of the above information, claimed that he came from County Waterford, Ireland, was related to Bishop Milo Power and Sir Maurice Power and that, as a younger son of a wealthy Anglo-Irish family, he probably studied at Oxford. Why Flood confidently dated Power's musical works between 1380 and 1395 is not vouchsafed, for in his day Power's deathdate was not known, and the possibility had not yet been raised that the Old Hall manuscript, in which he is well represented, might contain 14th-century music. Flood knew Power's treatise, which he dated about 1390, and referred tantalizingly to an Anglo-Irish contemporary who styled him 'noster Lionel'.

2. Works. The problems in determining the authentic works of Power are so great that a work-list cannot be left to stand without some discussion. For the nucleus we are dependent on the 40 works that bear undisputed ascriptions to him. Five more anonymous works, all mass movements, can be added by virtue of their musical relationship to movements ascribed to him. A further 12 items have conflicting ascriptions or belong to mass cycles with conflicting ascriptions. Altogether these comprise related and individual mass movements, and settings of Marian liturgical texts. No secular works or isorhythmic motets are anywhere ascribed to Power, nor any canonic compositions. There is no case for rejecting any of the unique or unanimous ascriptions, from which Power's personal style emerges as marginally more definable than Dunstaple's and more easily extricable from the characteristics of English music in general. It should prove possible to add further anonymous works to those tentatively assigned to him by Hamm and others. But there is a real danger of confusion with works by other composers showing Power's influence – of which the anonymous Credo Old Hall no.82 is probably an example. The survival of an elementary discant treatise in his name supports the idea that he may have been a teacher, as does his musical primacy in Old Hall. He and J(ohn) Cooke are the only two composers represented in both layers of the manuscript. Cooke's mass settings appear to be closely modelled on those of Power, perhaps indicating a tutorial relationship.

Together with Dunstaple, Power was a pioneer of the unified mass cycle, though the extent of their individual responsibilities cannot be fully established because of uncertain chronology and conflicting attributions in crucial works. Power appears to have taken the initiative in pairing movements of the Ordinary. His four pairs in the Old Hall Manuscript are unified respectively by closely parallel style, structure and motifs (including an anticipation of head-motif technique), by the use of related chants but separate isorhythmic construction, by parallel structure and the appropriate Ordinary chants in the top voice, and by use of appropriate Ordinary chants in the

Ex.1 Gloria (Old Hall no.22)

tenor. In all cases, ranges and signatures support the pairing, although the movements are physically separated according to the organization of the manuscript. The only Ordinary cycle ascribed to Power without contradiction is *Alma redemptoris mater*, in which the tenor (the first half of the plainchant antiphon) is presented in identical, unornamented form in each movement, although there is no internal isorhythm within each movement. The four surviving movements (the cycle probably once had a troped Kyrie) vary in length according to the length of the introductory and interpolated duet sections. Many technical and stylistic features support Power's authorship (use of pseudo-augmentation, proportional passages and conflicting time signatures; see §3 below).

Power's claim to the Mass *Rex seculorum* is shared with Dunstaple, and that to the *sine nomine* mass with Dunstaple and Benet. Both of these are free tenor masses, the latter so free as almost to impair its unity. Stylistic evidence as to authorship is still inconclusive, although certain rhythmic peculiarities, some wayward dissonances and the downward thrust of many melodic phrases may suggest Power rather than Dunstaple as the composer of *Rex seculorum* (Power used the rising triadic opening less than Dunstaple). The tenor is an antiphon for St Benedict; it would be Dunstaple's only use of a non-Sarum chant. The majority ascription to Power in the sources is not decisive but cannot be wholly overlooked. *Sine nomine* is altogether less characteristic of Dunstaple, and Bukofzer was inclined to favour Benet as the composer. The discovery in Milan of a source ascribing the mass to Power must revive Power's claim to the work: neither mass, however, shows sufficiently strong personal characteristics to permit any final decision.

3. Style. It is easier to attempt an approximate chronology for Power's more definitely authentic works than it is for Dunstaple's. His composing career was probably more extended, and the early part of it is well defined and characterized in his substantial contribution to the Old Hall Manuscript. His 23 compositions in the original layer (which contains nothing by Dunstaple) amount to more than three times the total for any other composer, perhaps indicating some degree of seniority, or a close connection with the compilation. By about 1415 he had mastered all the styles of the generation in which he presumably grew up, whereas Dunstaple left little evidence of activity earlier than this date. This could be a distortion occasioned by the accidents of survival, which may in turn have deprived us of any isorhythmic motets that Power may have written. Otherwise it would seem to indicate that he was older than Dunstaple, or earlier to mature as a composer. His later works are at present known chiefly from continental sources.

Power's Old Hall music includes the simplest of descant settings, with the chant in the middle voice (sometimes migrant, with very little elaboration), freely composed pieces of lush sonority for four and five voices (the Gloria-Credo pair Old Hall nos.21, 77), isorhythmic mass movements (the Gloria-Credo pair Old Hall nos.24, 84, and the Gloria no.23), four-part compositions with Ars Nova rhythms in C time (the Sanctus-Agnus pair Old Hall nos.118, 141) and settings of an elaborately figured and rhythmically complex upper part supported by slower-moving lower parts (Gloria Old Hall no.22, Credo settings nos.81, 83). His style at this period could be seen as a fusion of the English love of full sonorities, a sensuous Italianate melodic instinct, the syncopated rhythms of the French Ars Nova and the proportional ingenuity of the Ars Subtilior (ex.1). It would be invidious to place simplicity earlier than complexity within this range, although surviving English manuscripts of the late 14th century present no evidence of even mild proportional usage nor, before the Fountains fragment (*GB-Lbl* Add.40011*B*), of combinations of the four prolations of the French Ars Nova and use of syncopation, all of which are present in Power's Old Hall works.

The Old Hall styles, particularly in the case of Power's paired mass movements, overlap with the next stratum, comprising his one contribution to the second layer of that manuscript, the cyclic mass or masses, and most of the motets surviving in continental sources; these later pieces are usually in O time (with use of C) rather than C, and with the treble dominating in the manner of the French chanson. The final stage of this approximate chronology consists of the last four motets of Hamm's edition, which clearly anticipate the smooth discant writing of Frye's generation, with their well-integrated duets and increasing participation of the lower parts in the evolution of a more homogeneous texture.

Power's melodic style is not always distinct from

Ex.2 Gloria (*I-AO*)

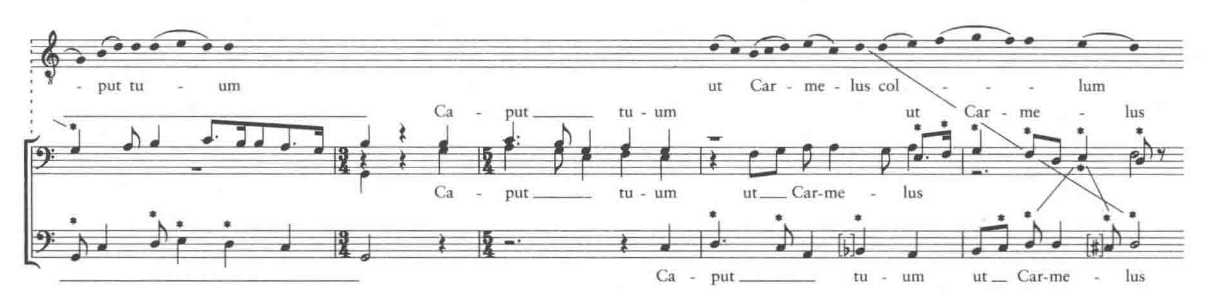
Ex.3 Gloria (Old Hall no.21)

Ex.4 *Anima mea liquefacta est* (*I-MOe* α.X.1.11)

Dunstaple's, though the rising triadic opening (*see* DUNSTAPLE, JOHN, ex.2*d*) is much less common, except where the opening is based on a chant with this feature, such as *Alma redemptoris mater*. Sequential passages, sometimes based on standard cadential figures, are increasingly common in the middle-to-late works (e.g. the Credo from the *Alma redemptoris* cycle and *Mater ora filium*). Power was often explicit in his *ficta* indications, writing bold but logical progressions such as inex.2. It has been suggested that he abandoned the use of plainchant in his later motets, but chant paraphrase is in many cases unmistakable and cannot be overlooked in assessing his melodic style. In some cases there are clear allusions to the relevant chant, especially in the top part and at beginnings of sections, but consistent use of the chant throughout the composition cannot be claimed. Examples of this include the duets in *Regina celi* (LP i, 19), and *Alma redemptoris mater*, where the chant appears after an eight-bar introduction in migrant form, and intermittently thereafter. In other cases the chant can indeed be traced throughout the composition though, admittedly, portions of the melody may be elided, overlapped or compressed; migration or transposition may obscure the outlines; and the melody may get out of step with the words; yet all these features are found in less extreme form in simple descant pieces where the presence of chant is not in doubt (e.g. Byttering's *Nesciens mater*).

With regard to cantus-firmus treatment in general, the Old Hall descant settings present the chant in the middle voice with occasional migration to the lowest. The underlay does not always correspond to that of the chant (e.g. *Ave regina* Old Hall no.43, and see above). Increased melodic freedom is found in *Beata viscera*, where it is still in the middle part; and most of the subsequent motets that use chant paraphrase it in the treble (*Salve regina*, LP i, 10, uses the *Alma redemptoris* plainchant in the treble, an unusual technique at this date). Of his earlier mass movements, most of those whose tenor cantus firmi can be traced use appropriate chants for the Ordinary (one Sanctus-Agnus pair unusually has them in the treble), the exceptions being the Gloria-Credo pair Old Hall nos.24, 84.

Isorhythm in Power's surviving works is confined to mass settings: the Gloria-Credo Old Hall nos.24, 84, the Glorias no.23 and LP ii, 17 (his strictest and most ambitious isorhythmic construction), and the doubtful Credo for three voices. All except the last are isorhythmic in all parts, and this technique seems to be confined to relatively early works. The Old Hall Gloria-Credo pair show some non-coincidence of colour and talea (*see* ISORHYTHM).



It is perhaps in features of rhythm that Power's personal style is most evident. The simultaneous use of conflicting mensural signatures for limited passages is common in early-to-middle works (e.g. the Agnus and Benedictus of the Mass *Alma redemptoris*; see also ex.2), and at the same period the notation of one or more parts requiring to be read in augmentation to correspond with the others is found in, for example, the Mass *Alma redemptoris*, the Glorias Old Hall no.22, LP ii, 17, the Credos Old Hall nos.81, 83 and the Sanctus Old Hall no.115. These features are not confined to Power, though both are more common in his works than in those of other composers. Nor was he the only composer to incorporate very elaborate syncopations and proportional passages, especially in upper parts of his early works, though the complexity of the Gloria Old Hall no.22 and the Credos nos.81 and 83, the last of which uses blue coloration in

Ex.5 Credo from Mass *Alma Redemptoris mater*

Ex.6 *Quam pulchra es*

addition to void and full red and black notes, as well as numerical and graphic signatures, is rarely surpassed (see ex.1). Short passages of this kind recur with diminishing frequency up to the midpoint of his output (as in ex.2). An individual feature of rhythm found throughout his career is a calculated disregard of regular mensuration. This is reflected by fluctuating bar lengths in modern transcription, as in exx.3 and 6 (early and late works respectively), and also ex.4, though shown here with regular barring. Together with this goes a predilection for asymmetry, especially in melodic and rhythmic sequences and imitation (see ex.4). His use of sequences is more extensive than Dunstaple's; they are often closely packed, sometimes occurring on different beats of the bar – a stretto effect which is sometimes achieved by rhythmic inexactitude in the limbs of the sequence. There is also a little more imitation (see especially ex.6, but also exx.4 and 5).

A constant refinement of harmony and texture can be traced in Power's development. His love of full sonorities is evident in his Old Hall compositions (no.15, exceptionally, has a 3rd in the final chord), and he often luxuriated freely over a single note or chord with free-wheeling imitations, as in ex.5 which also demonstrates the asymmetrical rhythms mentioned above. His music shows a preference for relatively low notated tessituras (ex.6). Dissonances are prepared with increasing care, and the final motets are completely pan-consonant. Leaps of 4ths and 5ths are common in the early duets (ex.3); simultaneously sounded dissonances are not avoided, though simultaneous leaps are quite rare. Power's late duet writing has greater poise and fluency and is largely conjunct, with a few leaps of 3rds as well as carefully placed larger intervals (see exx.4 and 6). Early works in three or four parts gradually give way to three-part compositions with extensive duets; in the very last works the duets are shorter again, but more integrated (as in ex.6).

Power's music shows little awareness of text declamation, except on the occasional isolated word. None of his compositions is as consistently declamatory as Dunstaple's *Quam pulchra es*, though Power's setting of this text contains more careful declamation than any of his other works (ex.6). A few distinct habits in early mass settings, though not confined to Power, include the telescoping of the Credo text (Old Hall nos.73, 77, 83, and the anonymous three-voice setting), and perhaps the commencement of polyphony not at 'Patrem' but at 'factorem' (no.73, also the anonymous three-voice setting; similarly the anonymous Gloria printed as no.10 in the complete works of Dunstaple).

The treatise (*GB-Lbl* Lansdowne 763) is headed 'This tretis is contrivid upon the Gamme for hem that wil be syngers or makers or techers' and concludes 'Quod Lyonel Power'. It precedes an anonymous treatise on faburden and one on proportions ascribed to Chilston. The volume was copied by JOHN WYLDE, who was a 15th-century preceptor of Waltham Abbey, and contains 20 musical treatises of which the three mentioned above are in English, the remainder in Latin. Power's treatise deals with the sights of DISCANT, naming them mean, treble and quatreble. 'To enforme a childe in his counterpoynt', Power gave exhaustive permutations for the two last-named (the highest; as master of the Lady Chapel at Canterbury, he would have been concerned primarily with training boys). In advocating contrary motion, he forbade parallel perfect intervals in descant, and permitted up to three consecutive imperfect intervals of the same kind, six of mixed kinds.

For a page of Power's treatise, *see* DISCANT.

MARGARET BENT

Power, Teobaldo (*b* Santa Cruz, Tenerife, 6 Jan 1848; *d* Madrid, 16 May 1884). Spanish pianist and composer of Irish descent. At the age of seven he began studying music with his father, and by the age of 11 he was already known as a pianist in Madrid and Barcelona. In 1862 he went to the Paris Conservatoire to study with Marmontel, and later returned to Spain to give concerts in Madrid and other provinces, and in Portugal. In 1882 Power became second organist of the Royal Chapel in Madrid and later professor of piano at the Madrid Conservatory.

Although Power composed for orchestra, notably *Polaca de concierto* (1878) and *Cantos canarios* (1883), he wrote mainly for the piano, and his principal works include *Gran Galop de concierto*, *Scherzo de concierto* and a four-movement sonata, a form which – the works of Ledesma, Olmeda and Albéniz notwithstanding – had all but disappeared in late 19th-century Spain. Power's sonata is a large-scale Romantic work, with a perpetual-motion theme in the first movement and relentless rataplan octave patterns in the finale.

LINTON POWELL

Power, William. Irish music publisher, brother and sometime partner of JAMES POWER.

Powers, Anthony (Jonathan William) (*b* London, 13 Mar 1953). English composer. He studied composition privately with Lutyens and Birtwistle (1969–71), then in Paris with Boulanger (1972–3). From 1973 to 1976 he studied with Blake David and Bernard Rands at York University, gaining a DPhil in composition. He began teaching at the University of Wales, Cardiff in 1987, becoming composer-in-residence in 1990.

The sensuous instrumental colours of early compositions, like the Monet-inspired *Nympheas* (1983), revealed his attraction to late-Romantic French music. Subsequently his music has evolved into a flexible and expressive synthesis embracing serial, atonal and tonal techniques. Extra-musical stimuli can be significant in the shaping of material and structure: in *Stone, Water, Stars* (1987), the architecture, history and labyrinthine form of Venice provided a potent source of ideas, while other fruitful stimuli have been landscapes (as in *Terrain* (1992) a rugged orchestral evocation of the Herefordshire marches) and music of the past (notably in *The Memory Room* (1990), which alludes to keyboard styles of four centuries). Other works, such as the Second String Quartet (1991) and the concertos for horn (1989) and cello (1990) are of a purely abstract character, exploring traditional forms. The Symphony (1994–6), performed at the 1996 Proms, convincingly demonstated his mastery of extended large-scale structures.

ANDREW BURN

Powers, Harold S(tone) (*b* New York, 5 Aug 1928). American musicologist. He attended Stanford University and received the BMus from Syracuse University (1950). He then studied at Princeton University under Milton Babbitt and Edward T. Cone (theory) and Oliver Strunk and Arthur Mendel (musicology); he took the MFA there in 1952, and the doctorate in 1959 with a dissertation on the rāga system. He taught at Princeton (1955–8) and Harvard (1958–60) and then moved to the University of Pennsylvania, where he was appointed professor of music and South Asian regional studies (1971). In 1973 he became professor of music at Princeton and in 1995 he was appointed Scheide Professor of Music History.

Powers's interests include theory, Italian opera and Indian music. His operatic studies began with late 17th-century Italian compositions and the ways in which these works show the development of formal organization for dramatic purposes; his comparative examinations of different settings of the same libretto reveal both progressive and conservative techniques employed by composers of the time. Later his interests turned to the musical and dramatic processes in the works of Verdi and Puccini. Powers's knowledge of Indian music was aided by study in India as a Fulbright fellow and a Rockefeller scholar (1952–4, 1960–61, 1967–8). His Indian teachers include Rangaramanuja Ayyangar, Balwant Ray Bhatt and Prem Lata Sharma. Aware of the problems of a Westerner approaching non-Western music, in his writings he cautions the reader about making unjustified comparisons between Western mode and Indian rāga, or attempting to

consider present-day Indian practice in the light of early Indian theory. His historical and analytical study of rāga classifications is a lucid exposition of one approach to this music, and the musical and historical methods employed should be equally applicable to any body of music, Eastern or Western.

PAULA MORGAN

Powwow. A pan-Indian festivity. *See* AMERINDIAN MUSIC and UNITED STATES OF AMERICA, §II, 4 (i).

Poynt [Point; Poyntz] (*fl* early to mid-16th century). English composer. His Christian name is unknown, but one source has an ascription to 'T.P.' (or possibly 'E.P.'). There is no convincing reason for identifying him with Robert Poyntz, fellow of New College, Oxford, from 1554 and a Catholic emigrant to Leuven in Elizabeth's reign. Poynt's four-part In Nomine (ed. in MB, xliv, 1979) is probably one of the earliest examples of the genre, with scoring, clefs and style similar to Taverner's prototype of *c*1525–30. There are also a fine five-part In Nomine (ed. in MB, xliv, 1979) and an English anthem *Blessed are all they that fear the Lord* (*GB-Lbl*, cantus only).

HUGH BENHAM

Pozadas Cordero, Florencio (*b* Potosí, 7 Nov 1939; *d* Buenos Aires, 8 Dec 1968). Bolivian composer and percussionist. He studied with Father José Díaz Gainza at the Fine Arts Academy of the Tomás Frías University in Potosí. He settled in Buenos Aires, studying the violin and percussion at the Falla Conservatory. Later he joined the 'Rytmus' percussion ensemble directed by Antonio Yepes and played regularly for the Argentine National SO, Buenos Aires PO and Avellaneda SO. He took part in the Argentine premières of Ginastera's *Cantata para América mágica* and Carlos Chavez's Toccata, also giving concerts in Chile and Uruguay. He won second prize in the Luz Mila Patiño contest (1965), and in 1967 he was awarded a grant from the Rockefeller Foundation to study at the Di Tella Institute in Buenos Aires with Ginastera, Nono, Gandini and Armando Krieger. He died in a traffic accident. Among his works are the *Tres coros bolivianos*, *Dos estudios para percusión*, *Dos canciones* for tenor and orchestra (based on poems by Giuseppe Ungaretti), *Wawaky (Cantos de rebelión)* for unaccompanied mixed chorus, and *C.M. Op. 1* (1968) for tape and percussion.

CARLOS SEOANE

Pozajić, Mladen (*b* Županja, 6 March 1905; *d* Sarajevo, 28 March 1979). Bosnian-Hercegovinan composer, conductor and writer. At the Zagreb Academy of Music he studied composition with Blagoje, conducting with Lhotka and the piano with Svetislav Stančić. He continued his studies in composition under d'Indy at the Schola Cantorum, Paris (1927–28), and in Vienna under Joseph Marx (1928–9). From 1930 he directed various choral groups in Zagreb, including the Oratorio Choir of St Mark and the Zagreb Madrigal Singers, with whom he achieved great success. From 1947 he conducted the Sarajevo Opera and the Sarajevo PO, and from 1955 gave classes in conducting at the Sarajevo Music Academy. He was also active as an accompanist. As a writer, he published the first studies of the history of Bosnian music, worked for television and radio and was a frequent contributor to journals and the daily press. His small output as a composer is characterized by his use of folk element, within a neo-classical style. He is known also for his harmonizations and re-orchestrations of works by other Bosnian composers, among them Franjo Maćojevksi and Bogomir Kačerovski.

IVAN ČAVLOVIĆ

Poznań (Ger. Posen). City in central Poland, the earliest capital of the Polish state (until *c*1038). The musical tradition of Poznań, into which there has been little research, dates from the foundation there of the oldest bishopric in Poland in 968. At that time it was the first centre in the region to cultivate Gregorian chant, which was of the Benedictine type until the 12th century. The bishops of Poznań included Jan Łodzia z Kępy (*d* 1346), creator of the Polish sequence. The first mention of an organ in Poznań dates from 1400, and from the 15th century there are records of the performance of mystery plays in the church of Boże Ciało (Corpus Christi). In the 16th century the cathedral and the collegiate church of St Maria Magdalena (burnt down in the 18th century) were the main musical centres; music was also cultivated at the court of the Górka family, who patronized Hermann Finck and to whom the latter dedicated his treatise *Musica practica* (1556). Music-making among the middle classes in Renaissance Poznań is indicated by the musical items mentioned in wills of the period. An outstanding 16th-century composer from Poznań was Jan Brant, known as Posnaniensis. A permanent cathedral chapel was founded before 1650, when it numbered five singers and eight instrumentalists. During the Baroque period chapels also existed at other Poznań churches; in 1774 the collegiate chapel numbered 12 members.

In 1793 Poznań was annexed to Prussia, and until Poland regained its independence in 1918 the cultural life of the city was dominated by Polish–German struggles, which were unfavourable to artistic development. Poznań's symphonic music was provincial in character, although the city's position on the route from Berlin to Warsaw and St Petersburg took many famous virtuosos there, including Paganini, Chopin and Liszt.

The first operas were given in 1783–4 in the former Jesuit school by W. Bogusławski's National Theatre company from Warsaw. Other Polish companies, mainly from Kraków, gave summer seasons intermittently from 1819 to 1869. In 1875 F. Ladegast built an organ of 43 stops in the collegiate church; it survives, and is one of the best Romantic instruments in Poland. At the beginning of the 19th century the music publishing house of A. Simon was based in Poznań; the publishing tradition was continued until the early 20th century by K.T. Barwicki (1871–1931), who was connected with the Polish nationalistic choral movement which developed at that time. Józef Surzyński, an editor of early Polish music, worked in Poznań (1881–94), as did the composer Feliks Nowowiejski between 1919 and his death in 1946.

Poznań is one of the main centres of 20th-century Polish musical culture. Among the active musical institutions are the Opera (1919), named after Stanisław Moniuszko and one of the most important opera houses in Poland; three male voice choirs; the Filharmonia (1947); the only museum of instruments in Poland (a department of the National Museum); and the State Academy of Music. From 1935 the Wieniawski International Violin Competition has taken place in Poznań. At Poznań University (1919, named after Adam Mickiewicz) the professors of musicology have included Lucjan Kamieński (1922–39) and Adolf Chybiński (1945–52); their colleagues have included Wacław Gieburowski, Marian Sobieski, Maria Szczepańska, Mirosław Perz and Jan Stęszewski.

Poznań libraries possess a number of music sources, notably the Chybiński collection (in *PL-Pu*), which includes parchment fragments with neumatic notation, 13th-century Notre Dame motets, polyphony of the late Ars Nova, choral parts (*c*1500) of works by Du Fay and Josquin and the most important source of Polish *kolędy* (carols). Other libraries contain a valuable fragment of choral parts (*c*1500, in *Pr*), medieval liturgical manuscripts and a fragment of an early 16th-century theoretical treatise (in *Pa*). The local Franciscan library possesses the manuscript of the musical treatise of Marek z Płocka (1518).

MIROSŁAW PERZ

Poźniak, Piotr Maria (*b* Kraków, 26 Oct 1939). Polish musicologist, son of Włodzimierz Poźniak. He studied musicology with Szweykowski at the Jagiellonian University (MA 1963), and obtained the doctorate there with a dissertation on Jakub Reys in 1981. From 1962 to 1973 he was employed as an editor of early music at Polskie Wydawnictwo Muzyczne and since 1973 he has worked at the department of musicology of the Jagiellonian University, becoming assistant professor in 1981. His main field of research is Renaissance music, with special emphasis on instrumental, and especially lute music. He is also editor of many critical editions of early Polish music, including Musica Antiqua Polonica: the Renaissance (Kraków, 1993–94), Śpiewnik Staropolski (Kraków, 1995–), and the complete works of Jakub Reys (Kraków, 1993).

ZYGMUNT M. SZWEYKOWSKI

Poźniak, Włodzimierz (*b* Kraków, 28 June 1904; *d* Kraków, 29 Jan 1967). Polish musicologist and composer. He studied musicology with Jachimecki at Kraków University until 1930 and composition in Kraków (1929–32) with M. Piotrowski, B. Wallek-Walewski and B. Rizzi. In 1932 he took the doctorate at Kraków with a dissertation on Eugeniusz Pankiewicz. He continued his musicological studies in Berlin (1934–5) with Schering, Schmitz, Schünemann and Ernst Pepping. He held posts as lecturer in the musicology department at Kraków University (1930–39), and lecturer in theoretical subjects at Kraków Conservatory (1930–37) and at the Moniuszko School of Music in Kraków (1937–9). He spent the war years as a POW in Germany, and then returned to his university post at Kraków, where he completed the *Habilitation* in 1947 with a work on the chorale Passion in Poland; he became reader in 1956 and head of the department in 1963. He also lectured at the State Music School in Katowice (1952–3), directed the collecting of folk music in southern Poland (1950–55) and from 1962 was the head of the folk music institute attached to the musicology department at Kraków University. His compositions include orchestral, chamber and vocal works, and he has edited folksong collections, and songs by Pankiewicz, Żeleński, Melcer and Kurpiński.

ZOFIA HELMAN

Pozsony (Hung.). *See* BRATISLAVA.

Pozzi, Luigi (*b* Venzone, nr Udine, *fl* 1638–56). Italian composer. He received a degree in theology from the University of Padua in 1638 and used the titles 'Don' and 'Dottore'. He evidently came from a noble Friulian family that had been subjugated by the Savorgnan family in the 16th century, hence the curious title of his 1652 print. As a member of the Accademia degli Sventati, Udine, he was associated with the poet Ciro di Pers; both were interested in incorporating Friulian folk music and dance into cultivated society. Pozzi's 1654 print, which includes a 'canzonetta furlana', continues the 'aria di passacagli' tradition initiated by Frescobaldi. Except for a single duet all his surviving compositions are sacred and secular songs for solo voice with continuo accompaniment. One song employs an extravagant and artificial chromatic notation.

WORKS

Arie, 1–2vv, mentioned in 1649 Vincenti catalogue
Zodiaco celeste in cui vegonsi dodici segni di spirituali concenti, 1v, bc (Venice, 1650)
La cerva savorgnana stridatrice de spirituali concenti, 1v, bc, op.3 (Venice, 1652)
L'innocenza dei Ciclopi, overo Concenti diatonici, cromatici ed henarmonici, 1–2vv, bc (Venice, 1654)
1 song in 1656[4]

THOMAS WALKER/JENNIFER WILLIAMS BROWN

Pozzoli, Ettore (*b* Seregno, nr Milan, 22 July 1873; *d* Seregno, 9 Sept 1957). Italian pianist, composer and teacher. A pupil of Ferroni, Appiani and Polibio Fumagalli at the Milan Conservatory, he became a concert pianist for a short time, then a highly esteemed teacher. In 1899 he returned to the Milan Conservatory, where he taught *solfeggio* and theory. He published useful methods for these subjects and for the piano, as well as piano studies, transcriptions and editions of piano works by Bach, Beethoven, Liszt, Weber and others. He also contributed articles to music magazines. His compositions include an oratorio, *La figlia di Jefte*, an organ mass, motets, a set of orchestral variations, a piano concerto, a concert allegro for piano and orchestra, a quartet, a trio, pieces for violin

and piano and some well-written piano pieces (for which he was best known).

SERGIO MARTINOTTI

Pozzoni(-Anastasi), Antonietta (*b* Venice, 1846; *d* Genoa, April 1914). Italian soprano, later mezzo-soprano. She studied in St Petersburg and Milan, making her début at La Scala in 1865 as Marguerite (*Faust*). After singing in Rome, Padua, Turin and Naples, in 1871 she sang *La traviata* in Florence, which led to her engagement to sing Aida at the première of Verdi's opera in Cairo. Her soprano repertory included Lady Macbeth, Hélène (*Les vêpres siciliennes*), Anna Bolena, Lucrezia Borgia, Emilia (Mercadante's *La vestale*) and Norma. In 1874 she took part in the first performance of Gomes's *Salvator Rosa* at Genoa and sang Amneris at Brescia, repeating the role in Rome, Madrid, Milan, Barcelona and Florence. Her mezzo parts included Fidès, Azucena, Ortrud, Léonor (*La favorite*) and Massenet's Herodias. She retired in 1887.

ELIZABETH FORBES

pp [pianissimo]. *See under* PIANO (i).

PPG Wave Computer. A digital SYNTHESIZER developed by Wolfgang Palm with Wolfgang Düren, and manufactured in several different models by PPG (Palm Production Germany) Synthesizer in Hamburg from 1978. Following the company's bankruptcy in 1986, a similar company involving Palm was founded in 1988 in Waldorf, near Cologne. *See* ELECTRONIC INSTRUMENTS, §IV, 5(iii).

PPL [Phonographic Performance Ltd]. *See* COPYRIGHT, §III, 16(iv).

Prabowo, Tony (*b* Malang, Java, 9 June 1956). Indonesian composer. After studying the viola at the Indonesian Music Academy in Yogyakarta, in 1977 he began composition studies at the Jakarta Arts Institute. In the late 1970s and 80s Prabowo wrote much music for the theatre and dance, including *Ten Minutes from Borobodur* for the choreographer S.W. Kusumo and *The Ritual of Solomon's Children* for the theatre director W.S. Rendra. In the 1990s he worked regularly with American choreographers and theatre directors. Many of his compositions are for voices accompanied by percussion or mixed ensemble, often using texts by the poet Gunawan Mohammad. *A Tale Before Sleeping* (1992) for soprano and ensemble, frequently performed in Indonesia and abroad, employs Webernian serial techniques. In 1996 Prabowo formed the New Jakarta Ensemble, a percussion group composed entirely of traditional Minangkabau musicians who perform his post-serial compositions by memorizing them as they would when playing traditional music. Through this ensemble Prabowo has introduced Indonesian contemporary music to a wider audience both at home and abroad. He is one of the most prominent Indonesian composers of his generation.

For musical example *see* INDONESIA, §VIII, 2, ex.4.

Práč, Jan Bohumír [Prach, Ivan]. *See* PRATSCH, JOHANN GOTTFRIED.

Practice. *See* PSYCHOLOGY OF MUSIC, §VI, 6.

Practice chanter. A double-reed wind-cap instrument, used by Scottish highland bagpipers, with tuning and fingering equivalent to that of an actual bagpipe chanter. Because of its narrow cylindrical bore and longer, less stiff reed, it sounds an octave lower than the bagpipe chanter and has a much softer tone.

See also WIND-CAP INSTRUMENTS.

□

Pradas Gallén, José (*b* Villahermosa del Río, 22 Aug 1689; *d* Villahermosa del Río, 11 Aug 1757). Spanish composer. He was a choirboy at Valencia Cathedral in 1700, when Antonio Teodoro Ortells was *maestro de capilla* and Cabanilles first organist. In 1712 he was made *maestro de capilla* at the parish church at Algemesi, and in June 1717 he secured a similar post at the parish church of S María in Castellón de la Plana. On 2 March 1728 he became *maestro de capilla* at Valencia Cathedral, a post he was granted without the usual competition. He retired on 22 February 1757 and he returned to his native village, where he died a few months later.

The long period of Pradas's service in Valencia coincided with major changes in the city's musical life: newly founded musical institutions, including one formed by cooperation between three parish *capillas*, were increasingly active; military bands introduced new instruments, such as hunting horns, together with their related repertories, and the first opera performances were given under the direction of the Neapolitan Francesco Corradini. Pradas's efficiency as a manager and his skill and prestige as a composer enabled the cathedral's *capilla* to face these changes sucessfully. It is significant that it was he who conducted an orchestra made up of professional musicians from the various city institutions during the grand celebration of the third centenary of St Vincent Ferrer's canonization in 1755. These changes, which were taking place also in the rest of Spain, are clearly reflected in Pradas's works. His villancicos regularly include a succession of recitative and aria (first introduced in Valencia by his predecessor Pedro Rabassa in 1714) as a standard section, normally at the end of the piece, after the traditional *introducción*, *estribillo* and *coplas* and before the final repetition of the *estribillo*. In both Latin and vernacular sacred music Pradas used concertato techniques, employing (besides string instruments) horns, oboes, trumpets, flutes and timpani. Most of his music is thus structured on the opposition of contrasting sections, alternating polychoral (two to three choirs, six to twelve voices) and solo singing and/or different instrumental accompaniment. This is a conception that is deeply rooted in Spanish tradition, but the superimposition of operatic vocal virtuosity and the independent treatment of instruments bring it nearer to contemporary European styles.

Most of Pradas's works are extant, including seven masses, 34 *Miserere* settings and over 300 villancicos and other vernacular compositions (principal sources: *E-E*, *Mn*, *SEG*, *VAc*, *VAcp*); modern transcriptions by Joaquín Piedra of 86 Latin works (including all the masses) and 266 vernacular works are in the Biblioteca Municipal, Valencia.

ANDREA BOMBI

Prades Festival. Annual festival held in Prades, a small mountain village in France, 40 km from Perpignan. In 1939 Pablo Casals exiled himself there as a protest against General Franco's regime in Spain. Ten years later Casals was visited by the violinist Alexander Schneider, who offered him substantial contracts for an American tour; Casals refused, but agreed to the idea of inviting musicians to Prades to perform with him in commemoration of the bicentenary of Bach's death. The event's success led to its being repeated annually during July and August. The Prades Festival is run by an association whose president is also the town's mayor, and is funded by municipal, regional and national grants. In 1980 clarinettist Michel Lethiec was appointed director. Artists invited have included Rudolf Serkin, Isaac Stern, Clara Haskil, Alexander Schneider, William Primrose, Marcel Dupré, Pierre Fournier and Henryk Szeryng. The programmes, given in the small church of the Romanesque abbey of Saint-Michel-de-Cuxa, have revolved around works by Bach, Beethoven, Mozart, Schubert, Brahms and earlier composers. Contemporary music has, however, begun to appear: in 1994 an evening was devoted to Penderecki. The concerts are supplemented by an academy for instrumental technique, a choral session and a short series of concerts held in Paris at the Théâtre des Champs-Elysées every January.

CLAUDE SAMUEL

Pradher [Pradère], **Louis-Barthélémy** (*b* Paris, 16 Dec 1782; *d* Gray, 19 Oct 1843). French pianist, composer and teacher. He was the son of Anne Pradher, musician to the Prince of Condé, and was educated by his father and his uncle François Lefèvre; he then attended the Ecole Royale de Musique, where he studied the keyboard with Louis Gobert. When the school was shut down at the time of the Revolution, he studied with Hélène de Montgeroult before entering the Conservatoire and attending Gobert's piano class (*premier prix* in 1798) and Berton's harmony class. He interrupted his studies to marry Elise, daughter of François-André Philidor, and then worked with Méhul, composing music for the theatre. In 1800 he succeeded Hyacinthe Jadin as piano teacher at the Conservatoire after a competition in which, according to Fétis, he played a concerto by Dussek and 'very difficult' fugues by Cherubini. He lost his job in 1802, but was recalled the following year to replace Boieldieu who had gone to Russia. He was made professor in 1808, and retired in 1828. According to Marmontel, Pradher 'believed especially in technical studies which aim to produce the complete independence of the fingers'. Among his many pupils were the brothers Henri and Jacques Herz, Le Couppey, Rosellen and Fétis.

Having entered the Chapel Royal and become part of the musical entourage of Louis XVIII and Charles X, he became piano teacher to the princesses, Louis-Philippe's daughters. Widowed in 1819, he remarried, his second wife being Mlle More, an actress at the Opéra-Comique, with whom he travelled. In 1826 he was admitted to the Légion d'honneur. He was director of the Toulouse Conservatoire from October 1840 to May 1841.

Pradher's operas, whose music had some success, soon fell out of favour because of their weak librettos. He was known above all for his *romances* (he was Garat's accompanist), and for his piano music, which reveals his virtuoso qualities. According to Choron and Fayolle, he united 'warmth, elegance and vivacity with grace and expression'.

WORKS

(*printed works published in Paris*)

STAGE

(*all opéras-comiques, and performed at the Opéra-Comique in Paris*)

Le chevalier d'industrie (1, J.M.B. Saint-Victor), 16 Nov 1804, collab. G. Dugazon

La folie musicale, ou Le chanteur prisonnier (1, F. d'Allarde), 24 Sept 1807

Jeune et vieille (1, C.-A. Chazet and [?J.-B.] Dubois), 12 Jan 1811, collab. H.F. Berton, *F-Pc*

L'emprunt secret, ou Le prêteur sans le vouloir (1, F.A.E. de Planard), 25 July 1812

Le philosophe en voyage (3, C.-P. de Kock), 16 Aug 1821, collab. F. Kreubé

Jenny la bouquetière (2, J.N. Bouilly and M.J. Pain), 10 March 1823, collab. Kreubé

VOCAL

23 vols. of romances pubd up to 1819; Bouton de rose (1799), Romance d'Eliza (1804), Les pensers d'amour (1815), Le rocher des deux amants (*c*1818); many other romances pubd in the *Journal des dames*, 1802–3, *Journal hebdomadaire de Leduc*, 1807–13, *Journal des troubadours*, 1808, *Souvenir des ménestrels*, 1814–17

INSTRUMENTAL

Pf conc., perf. 1808 (1809); Rondo, 2 pf, Variations, 2 pf, opp.11, 14, 18, mentioned by Fétis; Sonata, vn, pf, op.3 (1807); Grande Sonate, pf, vn, vc, op.17, Adagio and Rondo, pf, vn, vc, mentioned by Fétis

sonatas, pf, op.2 (1802), op.3 (1806), op.16 (1819); sonatas opp.1 and 13 mentioned by Fétis; other pf pieces, incl. 2 potpourris; rondos, fantasies and variations op.8 (*c*1805), op.10 (1810), op.12 (1813), op.13 (*c*1813), op.15 (*c*1816); other romances and fantasies

HERVÉ AUDÉON

Prado (Quesada), Alcides (*b* Alajuela, 5 Nov 1900; *d* San José, 9 Oct 1984). Costa Rican composer, conductor, organist and violinist. He received his first musical tuition

from his father, Pedro J. Prado Gómez. Later he was awarded a scholarship to study at the Escuela de Música S Cecilia, San José, where he studied the violin with Alfredo Morales and composition with Fonseca. At the age of 19 he started playing violin with the Braccale Italian Opera Company, with whom he toured South and Central America and the Caribbean for several years and worked as choral director, deputy director and rehearsal pianist. After 1924 he worked as a violinist and pianist in Panama, where he founded and directed his own jazz orchestra, thus becoming the first Costa Rican to perform this genre. During this period in Panama he began to employ popular genres in his compositions, as in his famous and widely disseminated *pasillo No digas que no*, the dance *Costa Rica* and the marches *América libre* and *Franklin Roosevelt*, all dating from 1945. Other popular pieces of this period are the tangos *Déjame morir a solas* and *Tristeza*, and the foxtrots *Gran pilón*, *Carmen* and *Triunfador*.

Returning to Costa Rica he taught in schools and colleges, founded his own popular orchestra and (1940–48) worked as technical director of music, campaigning to improve musical education by publishing teaching materials. At the same time he was active as a performer and composer. In the 1930s he was a member of the Serrano String Quartet and later joined the Raúl Cabezas Quartet. He also conducted the Costa Rican SO, with whom he performed his first serious works, including *Vida azoroza* and *En el Palenque*.

In the 1940s Prado Quesada played first violin in and guest-conducted the National SO (with whose permanent conductor, Hugo Mariani, he formed a piano-and-violin duo) and taught at the National Music Conservatory. From 1952 he was organist at the Metropolitan Cathedral, a post he held for over 20 years. He composed sacred works such as his Requiem, the Mass no.1 'de Gloria' and the *Plegaria a la Virgen de la Soledad*. He also wrote a number of stage works for the Teatro Nacional, notably the zarzuela *Milagro de amor* (1955) and the opera *María* (1976), both emphasizing local manners and customs. In 1971 his *Cantata de la Independencia* earned him second prize at the celebrations of the 150th anniversary of Central American independence, and in 1979 he won the competition for the Latin American Parliamentary Hymn with lyrics by another Costa Rican, Efraín Nuñez Madriz. In 1982 he won the Aquileo J. Echevarría prize for his *Marcha de Pontifical Monseñor Antonio Troyo*.

WORKS
(selective list)

Stage (all perf. at San José, Nacional, unless otherwise stated): La casa del diablo (operetta), 1937; Aladino (operetta, C. Carvajal de Prado), 1953; Así es mi tierra (zar, L.F. Alomar), 1955; Milagro de amor (zar, Carjaval da Prado), July 1955; María (op, Carvajal de Prado), 1976; Tamira (ballet), perf. late 1970s; La mil y una noche (ballet, choreog. O. Franco)

Choral: Cantemos (1965) [teaching album]; Acuarela guanacasteca, 1967; Cant. de la Independencia, solo vv, chorus, orch, 1971; Mass no.1 'de Gloria'; Plegaria a la Virgen de la Soledad; Requiem; hymns, incl. Himno al Parlamento Latinoamericano (E. Nuñez Madriz)

Orch: En el Palenque, int, 1953; Dulce hogar, str, 1963; Huellas del sendero, sym. poem; Siguiendo la estrella, sym. poem [choral finale added later]; Vida azoroza, sym. poem

Other inst: América libre (1945); Costa Rica, dance, 1945; Franklin Roosevelt, march (1945); No digas que no, pasillo (1945); Marcha de Pontificial Monseñor Troyo, march, 1982; 8 de Mayo de 1958, march; Carmen, foxtrot; Déjame morir, tango; Gran pelón, foxtrot; Tristeza, tango; Triunfador, foxtrot

JORGE LUIS ACEVEDO VARGAS

Prado, José (Antonio Resende) de Almeida (*b* Santos, 8 Feb 1943). Brazilian composer. He studied the piano with Dinorah de Carvalho and composition with Lacerda and Guarnieri in Santos. In 1963 he graduated from the Santos Conservatory, where he taught the piano from 1965 to 1969. He then studied in Santiago de Compostela with Clemente Terni (1967) and in Paris with Boulanger and Messiaen (1969–73), both of whom exerted a profound influence on him, Boulanger in harmony, counterpoint and form and Messiaen in rhythm. In 1969 he also enrolled in a composition course in Darmstadt, studying with Ligeti and Foss. He won the Lili Boulanger Prize in Paris for his First Symphony (1970) then through the Boston Foundation (1972, 1973). In 1972 the state of São Paulo awarded him the Brazil Independence Prize for *Trajetória da independência*. Back in Brazil he directed the Municipal Conservatory at Cubatão, near Santos (1973–4), took part in the Seventh Paraná Music Festival (1974) and was appointed professor of composition at the State University of Campinas (1974) from where he earned the doctorate in composition in 1986. In the early 1990s he retired from the university to dedicate himself solely to composition and performance.

Almeida Prado's output, numbering over 250 works, reveals a development from the early nationalist influence of Guarnieri (e.g. *Variações sobre um tema do Rio Grande do Norte*, 1963), through atonality and post-serialism to an extended tonalism (e.g. *Cartas celestas*, 1974, 1981–2), from a deep mysticism (in the masses, cantatas and oratorios) and an evocation of Afro-Brazilian spiritualism (e.g. *Sinfonia dos orixás*, 1985) to postmodernism (in the piano preludes) and free tonalism (in the works of the 1990s). His music in general exhibits rigorous structural integrity, highly individual harmonic and timbral effects and an overt poetic and spiritual content. The resounding international success of many of his works from the 1970s to the 90s has ensured that he is recognized as one of the most creative figures in Brazilian contemporary music.

Praeger, Ferdinand (Christian Wilhelm) (*b* Leipzig, 22 Jan 1815; *d* London, 2 Sept 1891). German composer, pianist and writer. He was the son of Heinrich Aloys Praeger (*b* Amsterdam, 23 Dec 1783; *d* Magdeburg, 7 Aug 1854), a violinist, guitarist and composer (especially of chamber music), and opera director in Leipzig (1818–28), Magdeburg and Hanover. Ferdinand developed his gifts early, playing the cello well at the age of nine but transferring to the piano on Hummel's advice. In 1831 he taught at The Hague, also continuing his piano, violin and composition studies. In 1834 he settled in London, where he was much in demand as a teacher, and from 1842 he acted as London correspondent of the *Neue Zeitschrift für Musik*. He later translated Emil Naumann's history of music. He gave a successful concert of his compositions at Paris in January 1851, and in 1852 he played at Leipzig, Berlin and Hamburg. His overture *Abellino* was conducted by Berlioz in July 1855, and in 1867 his Piano Trio was chosen for performance at Meiningen. He also composed a symphonic prelude to Byron's *Manfred* (1880), four string quartets, piano pieces and songs. A concert of his works was organized by his pupils on 10 July 1879 in London.

An early enthusiast for Wagner, Praeger was partly (not, as he claimed, primarily) responsible for the invitation to Wagner to conduct eight of the Philharmonic Society's concerts in London in 1855. Wagner stayed with him; and they had further contacts in 1877, and at other times and places. Nevertheless, he greatly exaggerated his closeness to Wagner, and with his *Wagner as I Knew him* (London, 1885; Ger. trans., Leipzig, 1892 as *Wagner, wie ich ihn kannte*), published without the authorization of the Wagner family, he was accused of falsifying evidence, inventing stories and altering letters (differently in the English and German editions) so as to exalt his role in Wagner's career. This distortion was exposed by various biographers, chiefly Ashton Ellis, and in 1893 Houston Stewart Chamberlain obtained the original letters from the Earl of Dysart as evidence for his exposure, which proved so devastating that the German publishers withdrew Praeger's book. Though totally discredited, the book retained a certain interest for some personal impressions of Wagner, and later research has shown it to be less mendacious than was once thought. Praeger was in turn described by Wagner as 'an unusually good-natured man, though one too excitable for his standard of culture' (*Mein Leben*).

Praelisauer [Prelisauer]. German family of monastic composers and organists.

(1) **Anton Simon Ignaz Praelisauer** (bap. Kötzting, Bavaria, 13 Aug 1692; *d* Augsburg, 5 Jan 1746). His father, Josef Praelisauer, was Swiss (from canton Appenzell) and spent 20 years as sacristan in Kötzting. From 1718 Anton Praelisauer was organist at the Michaelskirche and vice-prefect of St Gregory's seminary in Munich. In 1725 he became organist and in 1736 Kapellmeister of Augsburg Cathedral, succeeding J. Weiss. Although he was a prolific composer, he published nothing, and none of his works is known. In 1743 the Augsburg Cathedral chapter commissioned him to compose choral antiphons,

hymns and responsories for the feasts of St John Nepomuk and St Elizabeth of Portugal. He wrote, for the Jesuit theatre, music to 13 Latin school plays, of which only textual material is extant (*D-As, DI, Mbs, MT, Rs*; they include *Philalelia seu Mutus amicitia*, *Ruina imperii Macedonici* and *Triumphus Marianae charitatis*, given at Munich in 1718, 1719 and 1728 respectively, in addition to those listed in *MGG1*).

(2) **Coelestin** [Franz Idelfons] **Praelisauer** (bap. Kötzting, 7 April 1694; *d* Tegernsee, 5 Feb 1745). Brother of (1) Anton Simon Ignaz Praelisauer. He was educated in the seminary at Tegernsee, where he eventually entered the Benedictine order (being ordained priest in 1723) and became director of music. According to his contemporaries, he was an outstanding organist, teacher and composer. He made a detailed study of the works of Lassus and used them as models for his own compositions, most of which were written for the church and the school theatre. His responsories for the Vigil for the Dead were famous for their gravity and sensitivity, and his sacred folk play *Ecce Agnus Dei* (1728) was much admired.

(3) **Andreas Benedikt Praelisauer** (bap. Kötzting, 7 April 1696; *d* Polling, 5 Nov 1743). Brother of (1) Anton Simon Ignaz Praelisauer. After training in Munich, he entered the Augustinian prebendary college at Polling, near Weilheim in Upper Bavaria, in 1720; he was a canon, and held office as choirmaster for many years. He bequeathed musical material, partly his own work and partly that of his family, to the foundation. He wrote incidental music for two plays, *Jakob jubiläus sacerdos* (1738) and *Sacrae scripturae studium, angeli custodis gaudium* (1739), whose texts were published at Tegernsee.

(4) **Columban** [Josef Bernhard] **Praelisauer** (bap. Kötzting, 11 Jan 1703; *d* Rott am Inn, 23 Oct 1752). Brother of (1) Anton Simon Ignaz Praelisauer. He went to the Jesuit school in Munich and in 1720 entered the Benedictine monastery at Rott am Inn. After studying philosophy in Ensdorf, he returned to Rott where he became *rector chori* and librarian. He is notable not only as a composer but also as a music palaeographer and for his research into choral singing; his *Principia cantus choralis* and *Specimen signorum musicae veteris*, however, have not survived. His compositions were distributed beyond the monastery at Rott, but none survives. The text remains of his *Actio scenica in annum millesimum* (1746), which he wrote in place of his late brother (2) Coelestin Praelisauer, to mark the 1000th anniversary of the Tegernsee foundation.

(5) **Robert** [Martin Aemilianus] **Praelisauer** (bap. Kötzting, 4 Nov 1708; *d* Reinstetten, Württemberg, 18 Oct 1771). Brother of (1) Anton Simon Ignaz Praelisauer. He went to the Jesuit school in Munich, where in 1725 he appeared as a singer in religious dramatic performances. In 1729 he took his vows at the Benedictine abbey of Ochsenhausen, Württemberg, and became a priest in 1734; thereafter he served his monastery as *rector chori* and as priest of various parishes, the last being Reinstetten. The music of the Ochsenhausen Organbook, a collection which emphasizes the significant capabilities of the abbey's Gabler organ, most likely comes from Praelisauer. A set of *Compositiones piarum cantionum* and three arias for soprano with instrumental accompaniment survive (*Amor patientiae*, 1731, and two *Pro adventu*, both 1762; all in *D-Bsb*). Praelisauer also wrote music for the monastery theatre in Ochsenhausen, including *De Sancto Malcho* (1741) and *Die Unschuld wird gedrückt* (1762).

Praepunctus. In Western chant notations an adjective used in medieval neume tables to describe a neume preceded by a PUNCTUM (single note) lower than the first note of the neume. The resulting group is usually known as a compound neume. (For illustration *see* NOTATION, Table 1; see also M. Huglo: 'Les noms des neumes et leur origine', *EG*, i, 1954, pp.53–67).

Praestant (Lat.). *See under* ORGAN STOP.

Praetorius [Schulz, Schulze, Schultz, Schultze]. German family of musicians. They were unrelated to Michael Praetorius.

(1) **Jacob Praetorius (i)** (*b* Magdeburg, *c*1530; *d* Hamburg, 1586). Organist, copyist and composer, father of (2) Hieronymus Praetorius. He possibly studied with Martin Agricola at Magdeburg. After converting to the Protestant faith he moved to Hamburg, where in 1550 he is recorded as clerk at the Jacobikirche and the chapel of St Gertrud. In 1554 he became assistant organist, and from 1558 until his death he served as first organist at both institutions. In 1554 he compiled a set of liturgical chants and German chorale melodies, *Cantilenae sacrae* (*DK-Kk* Thott 151), probably intended for organists to improvise upon. In 1566 he copied a collection of 204 sacred works for four, five, six and eight voices by German and Dutch composers, *Opus musicum excellens et novum* (*D-ROu* Mus.Saec.XVI-49); the seventh and eighth partbooks, as well as the second volume of the collection, are lost. Most of the works for four to six voices were copied from publications by Georg Rhau, but 15 exist in no other source. The collection contains Praetorius's only known composition, a *Te Deum* for four voices.

(2) **Hieronymus Praetorius** (*b* Hamburg, 10 Aug 1560; *d* Hamburg, 27 Jan 1629). Composer, organist, copyist and music editor, son of (1) Jacob Praetorius (i).

After receiving his first organ instruction from his father, he studied at Hamburg with Hinrich thor Molen during 1573 and at Cologne with Albinus Walran from 1574 to 1576. His first position was as organist at Erfurt from 1580 to 1582, when he returned to Hamburg as assistant organist to his father at the Jacobikirche (with the chapel of St Gertrud); on his father's death in 1586 he became first organist, and he held this post until his death. He took part in the Gröningen organ examination of 1596, which Hans Leo Hassler and Michael Praetorius also attended; this was probably his only personal contact with other composers of polychoral works. Three of his four sons were musicians too: for the two most important ones see (3) and (4) below; the third son, Michael, published a five-part wedding motet at Hamburg in 1619 and died at Antwerp possibly in 1624.

All but five of Praetorius's masses, motets and vocal *Magnificat* settings were published between 1616 and 1625 in Hamburg as a five-volume collected edition. Some of the volumes had been published in earlier editions and a number of motets from the first two volumes appeared in the printed collections of Bodenschatz, Phalèse and Schadaeus. All of Praetorius's masses are parody masses, four based on his own motets and the other two on motets by Jacob Meiland and Stefano Felis. His 102 motets set mostly psalm and antiphon texts, but he also composed several wedding motets to non-liturgical Latin texts which were both published separately and in the collected edition. Of the six motets with German texts two incorporate traditional melodies, *Ein Kindelein so löbelich* and *Herr Gott dich loben wir* (the German *Te Deum*). 50 of the motets are polychoral compositions for eight to 20 voices divided into two, three or four choirs. They were among the earliest Venetian-inspired music to be published in north Germany and are Praetorius's most progressive and important works. These are similar in style to the polychoral motets of Hassler, but the expression of the text is more vivid because Praetorius introduces greater contrasts of texture, harmony and rhythm. They are less homophonic than such works by many other composers because of the extensive use of imitation and the breaking up of basically chordal structures by rhythmically and motivically active inner parts. The total vocal range frequently spans more than three octaves, and there are frequent contrasts of high and low vocal groupings. Apart from an optional *basso seguente*, no parts are prescribed for instruments, but contemporary documents from Hamburg describe performances of Praetorius's motets with instruments supporting or replacing voices. His finest polychoral motets are *Cantate Domino*, *Decantabat populus Israel*, *Ein Kindelein so löbelich* and *Herr Gott dich loben wir* (first performed in 1607). Embellished versions of his motets by Heinrich Scheidemann and other organists are in organ tablatures at Lüneburg, Munich, Pelplin, Regensburg and elsewhere. The nine eight-voice *Magnificat* settings, one in each tone and an additional one in the fifth tone, provide music for the even-numbered verses; the imitative textures are derived from the tone formulae. The second *Magnificat* in the fifth tone concludes with settings of the Christmas carols *Joseph, lieber Joseph mein* and *In dulci jubilo*.

In 1587 Praetorius compiled and copied a collection of monophonic German and Latin service music for the Hamburg churches, containing the chants for Matins, Mass and Vespers for the Sundays and feast days of the church year. It may have served as the model for Franz Eler's *Cantica sacra* (Hamburg, 1588), the contents of which are similar but not identical. Praetorius was also the chief compiler of the *Melodeyen Gesangbuch* (Hamburg, 1604), a collection of 88 four-part German chorale settings by the organists of the four largest Hamburg churches. It is the first German collection to specify organ accompaniment to congregational singing of chorales and includes 21 of his own harmonizations. The other three composers represented are Joachim Decker, Jacob Praetorius (ii) and David Scheidemann, father of Heinrich Scheidemann.

The only organ works definitely by Praetorius are a complete set of eight *Magnificat* settings in the Visby (Petri) Tablature, which were composed by 1611, an additional *Magnificat* in the first tone in the Clausthal-Zellerfeld Tablature, and two chorale settings. The modified cantus firmus technique employed in the *Magnificat* settings presents the notes of the tone in the tenor, cantus and bass parts, separated by freely contrapuntal and figurative interludes and imitative fugatos on motifs from the tones. Some are closely related to his vocal *Magnificat* settings of 1602. They are full-textured works, often in five real parts, and were certainly designed for a large organ, including pedal (the organ that Praetorius played at the Jacobikirche, Hamburg, is described by Michael Praetorius in *Syntagma musicum*, ii, Wolfenbüttel, 1618, 2/1619/*R*). The eight *Magnificat* settings in the Visby Tablature are the earliest unified set of organ works by a north German composer. On stylistic grounds it is highly probable that Praetorius also composed almost all of the anonymous organ pieces – settings of hymns, sequences and Mass items – in the Visby Tablature. The case for his authorship is convincingly argued by Kite-Powell. If these works are indeed by him he must be considered the founder of 17th-century German organ music and, next to Michael Praetorius, the leading north German composer of the early 17th century.

EDITIONS

Cantiones sacrae chorales, collection of Lat. and Ger. service music, 1587, *D-Ha*
Melodeyen Gesangbuch, 4vv (1606) [incl. 21 settings by H. Praetorius]; ed. K. Ladda and K. Beckmann (Singen, 1995)

(3) **Jacob Praetorius (ii)** (*b* Hamburg, 8 Feb 1586; *d* Hamburg, 21 or 22 Oct 1651). Composer, organist and organ teacher, second son of (2) Hieronymus Praetorius. He studied the organ in Amsterdam with Sweelinck, who in 1608 wrote a motet for his wedding. From 1603 until his death he was organist of the Petrikirche, Hamburg, and was specially known as an excellent organ teacher. Berendt Petri, who was his pupil from 1609 to 1611, compiled about that time a notable manuscript of organ music, the Visby (Petri) Tablature, containing works by Praetorius and his father, among others. His most famous student, Matthias Weckmann, studied with him in Hamburg between 1633 and 1636. Praetorius contributed 19 four-part chorale settings to the *Melodeyen Gesangbuch* (1604) – see §2 above – and ten continuo songs to one of Johann Rist's collections of sacred verses (1651). His three sacred motets were published in the second edition of his father's *Opus musicum i*, but the original

prints of all but one of Praetorius's other wedding motets were probably destroyed in World War II. However, the music for six of them survives in transcriptions by Robert Eitner and Gustav Fock. Praetorius's motets show close acquaintance with his father's music, often exploit double-choir effects, reflect some influence of the Italian madrigal in harmonic expressiveness and exhibit a high degree of contrapuntal writing. His surviving organ works require a large instrument and frequently specify two or three keyboards, including pedal. The three preludes are embryonic preludes and fugues: a full-organ introduction (prelude) is followed by a strict four-part imitative section (fugue or ricercare) with occasional motivic imitation and cadential flourishes. Three of the Clausholm organ *Magnificat* settings borrow from his father's organ *Magnificat* settings in the Visby (Petri) Tablature. They and the remaining organ works employ a varied cantus firmus technique in their treatment of the melodic material. The most impressive work is the setting of *Durch Adams Fall* (unfortunately incomplete), which, because of its length, motivic interplay, virtuoso passages and contrasts of texture and rhythm, approaches the style of the chorale fantasia.

(4) **Johannes Praetorius** (*b* Hamburg, *c*1595; *d* Hamburg, 25 July 1660). Organist and composer, fourth and youngest son of (2) Hieronymus Praetorius. He studied the organ with Sweelinck in Amsterdam between 1608 and 1611 and was organist of the Nikolaikirche, Hamburg, from 1612 until his death. He published six wedding motets for five, six and eight voices at Hamburg between 1615 and 1635. The original Hamburg prints are lost but transcriptions exist in *D-Bsb* for the two six-voice motets *O pulcherrima inter mulieres* (1635) and *Dulcis amica veni* as well as for the eight-voice motet *Felix cui divum contingit* (1619, inc.).

FREDERICK K. GABLE

Praetorius, Abraham (*b* Mecklenburg; *fl* 1587–92). German composer. From 1587 (or 1588) to 1592 he was a singer at the Danish royal chapel. He is known for two publications only: *Harmonia gratulatoria* for six voices in honour of the wedding of King James VI of Scotland

and Anne of Denmark (Copenhagen, 1590), and *Newe geistliche teutsche des königlichen Propheten Davidis Psalmen ganz lieblich zu singen und auff allerley Instrumenten zu gebrauchen* for five voices (Greifswald, 1592). The latter is a collection of motets in song style of considerable artistic merit. The individual compositions show the influence of Lassus's style in their frequent use of expressive musical symbolism. Apart from Psalm x the texts are based on psalm paraphrases by Kaspar Ulenberg (Cologne, 1582), which evidently had a wide circulation beyond denominational frontiers; Ulenberg's melodic material was also drawn upon. The motets are settings of only the first strophe of each psalm.

WALTER BLANKENBURG

Praetorius, Bartholomaeus [Bartholomäus] [Schultz, Bartold, Bertil] (*b* Marienburg [now Malbork, Poland], *c*1590; *d* Stockholm, bur. 3 Aug 1623). German composer and cornettist partly resident in Sweden. He matriculated at Königsberg University in June 1608. He was a cornettist at the court of the Elector Johann Sigismund of Brandenburg from 1613 to 1620, when he moved to Stockholm to lead the new royal chapel that Gustavus II Adolphus engaged from Germany at the time of his marriage. His only known collection of music is the five-part *Newe liebliche Paduanen und Galliarden* (Berlin, 1616; one partbook now lost but two dances printed complete in Sachs, 260ff); the title and preface are modelled on those of William Brade's *Newe ausserlesene Paduanen und Galliarden* (1614). The 26 dances, each of which is in three sections, are all paired; the dances in each pair are in the same key and form a suite. There are six more such dances by Praetorius in David Oberndörffer's *Allegrezza musicale* (1620), and there are also extant a four-part 'fugue' (actually a canon, in Thomas Rosa's *Hymnus sacra*, 1617) and a polychoral motet from his Swedish period (in *S-V*, inc.). A four-part wedding song (Königsberg, 1617) is lost.

BENGT KYHLBERG

Praetorius, Christian Andreas. *See* SCHULZE, CHRISTIAN ANDREAS.

Praetorius, Christoph (*b* Bunzlau [now Bolesławiec], Silesia; *d* Lüneburg, 1609). German composer. He was the uncle of Michael Praetorius. He matriculated at Wittenberg University in 1551. In 1560 he printed a funeral motet on the death of Melanchthon. In 1563 he became Kantor at the Johannisschule at Lüneburg, where he taught music to the senior classes, while the third class was taught music by Lossius, the deputy headmaster. Praetorius was obliged to retire in 1581 because of deafness, and in the same year he composed a wedding motet for his successor Euricius Dedekind.

As a composer Praetorius produced no outstanding works, but he was one of the first well-known musical personalities active in north Germany. Both parts of his German *Ehrnlieder* begin with chorale motets (on the melodies *Vater unser im Himmelreich* and *Erhalt uns Herr bei deinem Wort*, but with different texts), and end with two settings of biblical texts. The 11 other pieces in each part are occasional works mostly intended for weddings. One of the texts was reprinted in 1582 in Lechner's *Neue teutsche Lieder* (see U. Martin, *AMw*, xi, 1954, 315). In the foreword to the *Ehrnlieder* Praetorius explained that he had already composed many German and Latin hymns. He also edited a textbook in which he rejected antiquated mensural theory and dealt with the 12 modes of Glarean instead of the eight ecclesiastical modes. He thus reduced the amount of teaching material, but added noteworthy comments on the training of coloraturas, the ornamentation of cadences, text underlay and the use of 'voces fictae' in expressing the text and its emotions. Henning Dedekind and Joachim Burmeister, both of whom attended the Lüneburg school, quoted from his textbook and Dedekind reprinted several exercises from it.

WORKS

SACRED VOCAL

De obitu ... Domini Philippi Melanchthonis, 4vv (Wittenberg, 1560)
Melodia epithalamii composita in nuptiis ... D. Christopheri Schramm, 4vv (Wittenberg, 1561)

MARTIN RUHNKE/CLYTUS GOTTWALD

Praetorius [Pretorius, Ammon], **Conrad** [Konrad] (*b* Windsheim, Bavaria, *c*1515; *d* Alerheim, nr Nördlingen, 30 Dec 1555). German poet and composer. He probably studied at Ansbach, at an advanced Lateinschule founded in 1529. After some years as Kantor at Windsheim, he was from 1549 to 1555 Rektor of the Lateinschule at Ansbach, where he became a member of the circle round Caspar Othmayr. His only known piece of music is a motet published in a commemorative volume that these friends produced after Othmayr's death in 1553, *In epitaphiis Gaspari Othmari* (only the bass partbook survives: n.p., n.d., probably Nuremberg, 1554[30]). Praetorius's motet is a setting of two distichs, the first of which runs: 'Harmonicae decus et columen lumenque camoenae/ Othmar et ingenio clarus et arte potens'. He also became well known as a poet and established close contacts with the University of Wittenberg. His particular contribution to Ansbach was to build up an educational system

consistent with the ideals of the Reformation, with particular emphasis on music. He was also tutor to Margrave Georg Friedrich the Elder of Brandenburg-Ansbach. In 1555 he became preacher at Alerheim but died at the end of that year.

WALTER BLANKENBURG

Praetorius [Schultheiss, Schultze], **Michael** (*b* Creuzburg an der Werra, nr Eisenach, ? 15 Feb 1571; *d* Wolfenbüttel, 15 Feb 1621). German composer, theorist and organist. He was the most versatile and wide-ranging German composer of his generation and one of the most prolific, especially of works based on Protestant hymns. He is also important as a theorist, notably through his *Syntagma musicum*.

1. Life. 2. Music. 3. Writings. 4. Conclusion.

1. LIFE. Wetzel and Walther both stated that Praetorius was born on 15 February 1571 and died on his 50th birthday, but this could be a mistake, since according to a poem appended to his funeral sermon he was only in his 49th year when he died. Yet another date is suggested by the statement 'Aō. aetat. XXXV' in the legend round the woodcut portrait of 1604 (fig.1) in the first part of *Musae Sioniae* (1605), in conjunction with the fact that his family moved to Creuzburg an der Werra in 1569. But 1571 is the most commonly accepted year of his birth. His father,

1. *Michael Praetorius: woodcut, 1604, from his 'Musae Sioniae' (Regensburg, 1605)*

who was also called Michael and came from Bunzlau, Silesia, was from 1534 at the latest a colleague of Johann Walter (i) at the Lateinschule at Torgau. In the Protestant infighting that broke out after the Augsburg Interim (1549) he was among the strict Lutherans, which led to his losing office more than once and having to move. His son Michael was born during a second period of service at Creuzburg that began in 1569, but in 1573 the family moved to Torgau, the mother's home, because of renewed banishment. At the Lateinschule there Praetorius was taught music by Michael Voigt, Walter's successor as Kantor. In 1582 he matriculated at the University of Frankfurt an der Oder, where his brother Andreas was professor of theology. In 1584 he attended the Lateinschule at Zerbst, Anhalt, the home of two of his sisters, and from there he returned to Frankfurt an der Oder, probably in the spring of 1585. Although he probably had no musical education after leaving school, it is certain that he became acquainted with Bartholomäus Gesius at Frankfurt, with whom he shared a strong interest in Protestant hymns and their melodies as well as in *alternatim* practice. After the early death of his brother, who had been keeping him, he was appointed organist of St Marien, Frankfurt, probably at the beginning of 1587. By his own account he held this post for three years, but it is not known why he gave it up or where he went in 1590.

According to a later report Praetorius settled at Wolfenbüttel in about 1592–3, but to judge from his own testimony in his *Motectae et psalmi* (1607) and *Polyhymnia caduceatrix* (1619) it was not until 1595 that he entered the service, as an organist, of Duke Heinrich Julius of Brunswick-Wolfenbüttel, who had his residence there. In 1596 he took part with the most famous German organists of the day in the consecration of the organ in the castle chapel at Gröningen, near Halberstadt, a castle that Heinrich Julius had had built in his capacity as postulated Bishop of Halberstadt after introducing the Reformation there in 1591. In 1602 he stayed at Regensburg 'on his own business' and as a member of the Wolfenbüttel delegation to the Reichstag. In February 1603 he was again in Regensburg on ducal business and is recorded as an organist. He made close personal friends there – dedicatory poems by the Regensburg pastor Christoph Donaverus appear in ten of his printed works; moreover, the first part of *Musae Sioniae* was published there in 1605. Towards the end of 1602 he was given a new appointment with a considerable increase in salary, so that he could now afford to set up his own household. In September 1603 he married Anna Lakemacher, who bore him two sons.

Praetorius had won such esteem by 1604 that, while retaining the post of organist, he was appointed court Kapellmeister on the retirement of Thomas Mancinus. The Kapelle, which at the time he took over consisted of six to eight singers and about the same number of instrumentalists, was modest, but evidently sufficient for his wishes, which he expressed in the dedication to the *Motectae et psalmi*. It was well supported by the duke, who must have taken it with him on at least some of his journeys; one city he went to was Prague, which Praetorius certainly seems to have visited. There is evidence that in 1605 and 1609 he stayed at the court of the music-loving Landgrave Moritz of Hesse at Kassel. This was an extremely busy period for him: most of his collections of music appeared between 1605 and 1613. On 4 April

1605, in company with the duke, he was caught in an ambush in Brunswick, in which he displayed conspicuous bravery. The duke promised him a gift of land and in 1612 made him a present of 2000 thaler from Prague. Between 1606 and 1612 he collaborated with the most famous organ builder of his day, Esaias Compenius, who was engaged by the Wolfenbüttel court at Praetorius's instigation and with whom he wrote the *Orgeln Verdingnis* mentioned in the second and third volumes of *Syntagma musicum*.

The sudden death of Duke Heinrich Julius in Prague in 1613 was a turning-point in Praetorius's life. The Elector Johann Georg of Saxony immediately asked the duke's successor, Friedrich Ulrich, to let Praetorius spend his year of mourning as deputy for the aging Rogier Michael, Kapellmeister of the electoral court. The year eventually became two and a half years, which Praetorius spent mostly at Dresden. He not only had responsibility for the music at the Assembly of Electors at Naumburg in 1614 and met Schütz in Dresden but also, more importantly, got to know the latest Italian music, which influenced his later work in significant ways; he must also have devoted more and more time to his theoretical work. The fact that he did not return to Wolfenbüttel after one year may have been due not least to the scant attention that the young Duke Friedrich Ulrich paid to a memorandum he had submitted to him about the reorganization of the Hofkapelle. His period in Dresden officially ended in 1616, but he was there again in 1617 to organize the ceremonial music for the emperor's visit and for the centenary celebration of the Reformation. From 1614 he was also Kapellmeister to the administrator of the bishopric of Magdeburg. At Easter 1616 he was working at Halle, and in 1617 he built up the Hofkapelle of the counts of Schwarzburg at Sondershausen and also stayed once more with Landgrave Moritz of Hesse at Kassel, this time for a baptismal celebration, for which he wrote a *Concertgesang*. In 1618 he was summoned, along with Schütz and Scheidt, to Magdeburg Cathedral to mark the reorganization of the music there, and he is known to have visited Leipzig, Nuremberg and Bayreuth (again with Schütz and Scheidt) in 1619. No wonder the efficiency of the Wolfenbüttel Hofkapelle declined when its Kapellmeister was away so much. Moreover, on his eventual return it continued to suffer because of his ill-health – probably brought on by overwork – and at Trinity 1620 he was not reappointed. He had been appointed prior of the monastery at Ringelheim, near Goslar, in 1614, and no doubt he continued to draw an income from this position. He left an impressive fortune, most of which was to be used to set up a foundation for the poor. As the son and grandson of theologians he was a firm Christian all his life (in the words of his funeral sermon he 'often regretted that he never took holy orders'). This is borne out by the titles (listed in *Syntagma musicum*, iii, 225ff) of a number of theological tracts that he wrote, all of which are lost. His initials, M.P.C. (= Michael Praetorius Creuzburgensis), also meant for him 'Mihi Patria Coelum'.

2. Music. The most immediately impressive facts about Praetorius are his enormous creative power and, considering his relatively short life, his astonishing output of works. He took 28 pages of *Syntagma musicum* (iii, 199–26) to give a complete list of works he had already written as well as those he had still only planned; he later had more ambitious plans, which, however, were largely unrealized. Some of his works are lost. The fourth part of *Polyhymnia*, marking the centenary of the Reformation in 1617, must have existed in manuscript. Of his secular works only the single collection of instrumental French dances, *Terpsichore* (1612), is extant, yet according to *Syntagma musicum* (iii, 220–21) he planned this in eight parts, some vocal, some instrumental, and he remarked that these were 'almost ready but not yet in print'. A conspicuous feature of his output is his extraordinarily systematic approach to his works, including a thorough grasp of their texts as well as an exhaustive consideration of their practical application. All this went hand in hand with an urge to collect and with a sense of pedagogical responsibility. The method in Praetorius's approach to his work explains why his music appeared almost without exception in personal prints, several of which he published himself (sometimes he managed to prepare them only by keeping a special office to work in).

Despite this urge towards universality, Praetorius nevertheless confined himself in his sacred music to works – over 1000 of them – based on Protestant hymns and, to a lesser extent, to the Latin liturgy of the Lutheran service of his time. The only exceptions among his published works are *Motectae et psalmi* and *Polyhymnia exercitatrix* (1619–20), based mainly on psalm texts, and a few other pieces. Within the limited sphere of hymn-based works, however, he continued to work on a comprehensive scale in that he assembled a great many hymn texts as well as melodies (the latter often in versions varying from province to province). Thus parts iv–viii of *Musae Sioniae* are specially rich sources for hymnology that have not yet been fully studied. Praetorius's works are also important for knowledge of liturgical practice at the time, for instance concerning the interpolation into the Latin *Magnificat* at Christmas and Easter of German songs called *Laudes* (see *Megalynodia Sionia*, 1611). Moreover, his work clearly forms the climax in the history of Protestant church music of *alternatim* practice, for which he gave new instructions from work to work, most completely in the 'Introductio pro cantore' in *Urania* (†1613). A peculiarity here is the inclusion of a congregational hymn or chorale in a polychoral work, an idea he derived from his visits to Kassel in 1605 and 1609.

According to Blume, Praetorius's church music, as well as his theoretical works, can be assigned to five periods, which partly overlap. The first embraces *Motectae et psalmi* and *Megalynodia Sionia*, which, according to Praetorius's preface, originated at Regensburg in 1602. In the second period come the nine parts of *Musae Sioniae*, in the third period the Latin liturgical works of *Missodia Sionia*, *Hymnodia Sionia* and *Eulogodia Sionia* (all 1611), as well as *Urania* and *Kleine und Grosse Litaney* (1613), which are linked in content to *Musae Sioniae*. To the fourth period belongs principally his work on *Syntagma musicum*, and in the last period there are the *Puericinium*, two parts of *Polyhymnia* and Psalm cxvi (RISM 1623[14]).

Megalynodia Sionia contains parodies, based mainly on madrigals by Lassus and Marenzio, and can probably be regarded as a prentice work, while in *Motectae et psalmi* Praetorius contributed to the repertory of the Latin motet, obviously without intending to offer anything particularly individual; a much more characteristic feature here is his appropriation of works by other composers, among them Aichinger, Hassler and Palestrina, a practice

that recurs occasionally in his later works. In the second period, at least two stages in his development can be seen in the nine parts of *Musae Sioniae*. Parts i–iv consist mainly of eight-part works for two choirs (part ii also contains, with somewhat greater relevance to the ecclesiastical year, five 12-part pieces, and part iii two nine- and three 12-part pieces), with a somewhat random choice of hymns. In part v, however, Praetorius began to arrange systematically the complete repertory of German hymns, in this case those of the Ordinary for Matins, Mass and Vespers, as well as those of the ecclesiastical year, in arrangements for two to seven voices, some of them in motet style. Parts vi–viii consist almost entirely of simple, homophonic settings: in part vi the hymns of the ecclesiastical year are once more to be found; in part vii, among other pieces, catechistic, penitential and communion hymns as well as those 'of the Christian life'; and in part viii, hymns of the cross, solace and death, and Tischlieder. Part ix again presents the core of the Lutheran repertory, but here arranged predominantly for two and three voices. Compared with the imitative four-part works of Melchior Franck (1602) and Hassler (1607), the eight-part motets of parts i–iv are less linear and with their frequent dialogues between short homophonic phrases – an essential feature of polychoral music – far more expressive of their texts and thus more indicative of future developments. There is no continuous cantus firmus: in the Protestant motet of about 1600 hymn melodies appear in all parts. In his pieces for two to four voices too, Praetorius stands out from his contemporaries by virtue of the attractive qualities of his music, to which his well-known four-part arrangement of the carol *Es ist ein Ros entsprungen* bears witness.

The three collections from Praetorius's third period, comprising arrangements from the Latin liturgy, are on the whole similar to *Musae Sioniae*, above all part ix; but the musical character of the borrowed material obviously induced in him a stronger feeling for older stylistic elements arising from 16th-century Dutch polyphony. For example, in no other volume does canonic technique play as prominent a role as in *Hymnodia Sionia*. Yet the works in the collections of this period are also very harmonically orientated and are thus not at all archaic. *Hymnodia Sionia* also includes four organ arrangements, in which the cantus firmus appears in long note values in the bass. Although Praetorius was active throughout his life as an organist, these pieces, together with four other organ chorales at the end of part vii of *Musae Sioniae*, which are more strongly influenced by the motet, were his only contribution, though an important one, to the early history of the German organ chorale. *Urania*, which also belongs to the third period, consists of hymns for two to four choirs with the cantus firmus always in the highest part so that the congregation could join in at any time. The same treatment is to be found in most of the pieces in the litany volume and in the *Epithalamium* for Duke Friedrich Ulrich (1614).

The last two periods of Praetorius's work show further new developments. After the death of Duke Heinrich Julius he carried out a conscious reorientation: he introduced the continuo more systematically (he had already added an optional continuo part to some of his bicinia) and also, more significantly, assimilated elements from the most recent Italian vocal music, frequently notating a vocal line not only in its simple, basic form but also in an embellished version. There are other new elements too: the massive sound of 16 and more parts, the fruitful contrast of tutti and concertato sections, the liberal use of echo effects, and not least the skilful introduction of connecting instrumental ritornellos. The resulting richness and variety give an added dimension to Praetorius's later works. His *Polyhymnia caduceatrix*, in which he indulged in all the possibilities open to an early Baroque composer of choral music, seems far more daring than Schütz's *Psalmen Davids* (also 1619); it is the most valid counterpart to Monteverdi's Vespers (1610) in Protestant Germany. Nevertheless, there was no fundamental break in Praetorius's development, for characteristically he still concentrated, though not exclusively, on the hymn. His last work, the fine five-part setting of Psalm cxvi (published in 1623[14]), which he wrote in anticipation of his approaching death 'as a farewell to myself', shows almost all his new advances – only a continuo part is lacking, because of a request from the editor who commissioned it.

3. WRITINGS. *Syntagma musicum* also belongs to Praetorius's last years. The three parts that appeared (the fourth was to have contained instruction in composition) display a tendency typical of him, towards an encyclopedic, systematic approach to the theory and practice of music. The first volume deals with religious music, its principles and its liturgical constituents. It is of real value only in its wealth of quotations from every period. Of particular importance among these is the unique, full account from Johann Walter of his collaboration with Luther and of the musical reforms that Luther sought. In the second volume, 'De organographia', Praetorius gave, in combination with the instructive illustrated section 'Theatrum instrumentorum' (issued separately; fig.2), detailed information about the instruments of his day, with a particularly thorough treatment of the organ. The third volume is a dictionary dealing with contemporary musical forms, with a detailed consideration of technical manners such as notation, proportions, solmization, transposition and polychoral writing. The importance of *Syntagma musicum* lies less in its influence on the succeeding generation of composers (because of new developments at the beginning of the 17th century, in particular the rise of continuo) than in its high documentary value. It reflects the extraordinary diffuseness of instrumentation in the early Baroque period, the numerous families of instruments and the prominent position of the organ, and consequently the enormous variety of tone colour available in the performance of polyphonic and *alternatim* music which reached a highpoint in Germany in Praetorius's lifetime.

4. CONCLUSION. When making a general evaluation of Praetorius's life and work one must bear in mind that he was largely self-taught, though he made up through his immense efficiency and self-discipline for everything that had been denied him in his education. The much-debated thesis that his work was more retrospective than forward-looking is disproved by a close study of the works from the last years of his life, when he combined with his manifest commitment to the heritage of the Reformation a great receptiveness to recent changes in musical style. His character cannot be understood unless one first sees in it the academically cultivated Lutheran Kantor with pronounced theological leanings. The central connection

2. *Title-page of Praetorius's 'Theatrum instrumentorum' (Wolfenbüttel, 1620)*

of his life's work with divine service, especially with the hymn, is fundamental, as also is his aspiration to a universality incorporating all aspects of music into his ideas and practice. His play on words in the preface to *Polyhymnia caduceatrix*, that the 'Concio' (a 'good sermon') should also include the 'Cantio' ('good music and singing', with abundant use of instruments), is virtually his manifesto. He obviously saw himself as a mediator for the tradition of Lutheran church music, not least because of his upbringing at Torgau: his inclusion at the beginning of *Musae Sioniae* of Walter's translation of Luther's 'Encomion musices' in a form that he himself had probably corrected: the inclusion of a number of pieces by Walter in parts v and vii of *Musae Sioniae* and the publication of Walter's own words in *Leiturgodia Sionia latina* (1612) and in *Syntagma musicum*, i, are clear signs of this. But he further developed the theological understanding of music, which culminated in the eschatological concept of the heavenly choir (cf Walter's *Lob und Preis der löblichen Kunst Musica*, 1538), saying (in the 'Commefactio' of *Urania*), with reference to Isaiah: 'Musica per Choros Caelestia canens ... because the art of choral singing is truly the correct, heavenly way of making music'. In its theoretical foundations and practical aims and in its realization through composition, Praetorius's work thus displays an unusual degree of uniformity at a time of great change in musical history.

WALTER BLANKENBURG/CLYTUS GOTTWALD

Prague (Cz. Praha). City on the River Vltava (Moldau), capital of Czechoslovakia from 1918 and from 1992 the Czech Republic, and formerly capital of Bohemia. Because of its strategic position it has fallen repeatedly under foreign domination and its musical life has been extensively influenced by ideas from other countries. A long history of musical education has also led to Prague composers and, particularly latterly, performers achieving international fame. The reputation of the citizens as music lovers is firmly established, and for its size the city has a greater degree of musical activity than almost any other European city.

1. To 1620. 2. 1620–1830. 3. 1830–1918. 4. From 1918.

1. To 1620. Prague did not attain importance until it became the political headquarters of the Přemyslid dynasty (probably in the 9th century). In time the Přemyslid princes asserted their independence and built up an economically and politically important kingdom which, although bounded by German tribes of the Holy Roman Empire, managed to remain autonomous. The Přemyslids appear to have owed allegiance to the Holy Roman Emperor; this was formally recognized in the Golden Sicilian Bull of 1212 in which Frederick II granted the rights of the Kingdom of Bohemia in perpetuity and guaranteed its borders. The Bohemians were empowered to take part in the election of the emperor but their obligations to him were minimal, which gave them a unique position.

The earliest cultural developments were associated with the introduction of Christianity. Most surviving medieval sources relate to the Church, the earliest containing neumes (of the St Gallen type) dating from the 11th century (see Plocek). The earliest records of vernacular (Czech) religious songs date from the same period. A troper of 1235 casts lights on the practice of plainchant at the cathedral. At the church of St Jiří liturgical dramas for Holy Week and Easter are known to have been performed from the 13th century; this practice developed in the 14th century and was adopted in other Prague churches. Monodic *planctus* (laments, for example of the Virgin and Mary Magdalen beneath the cross) are attested from the 14th century.

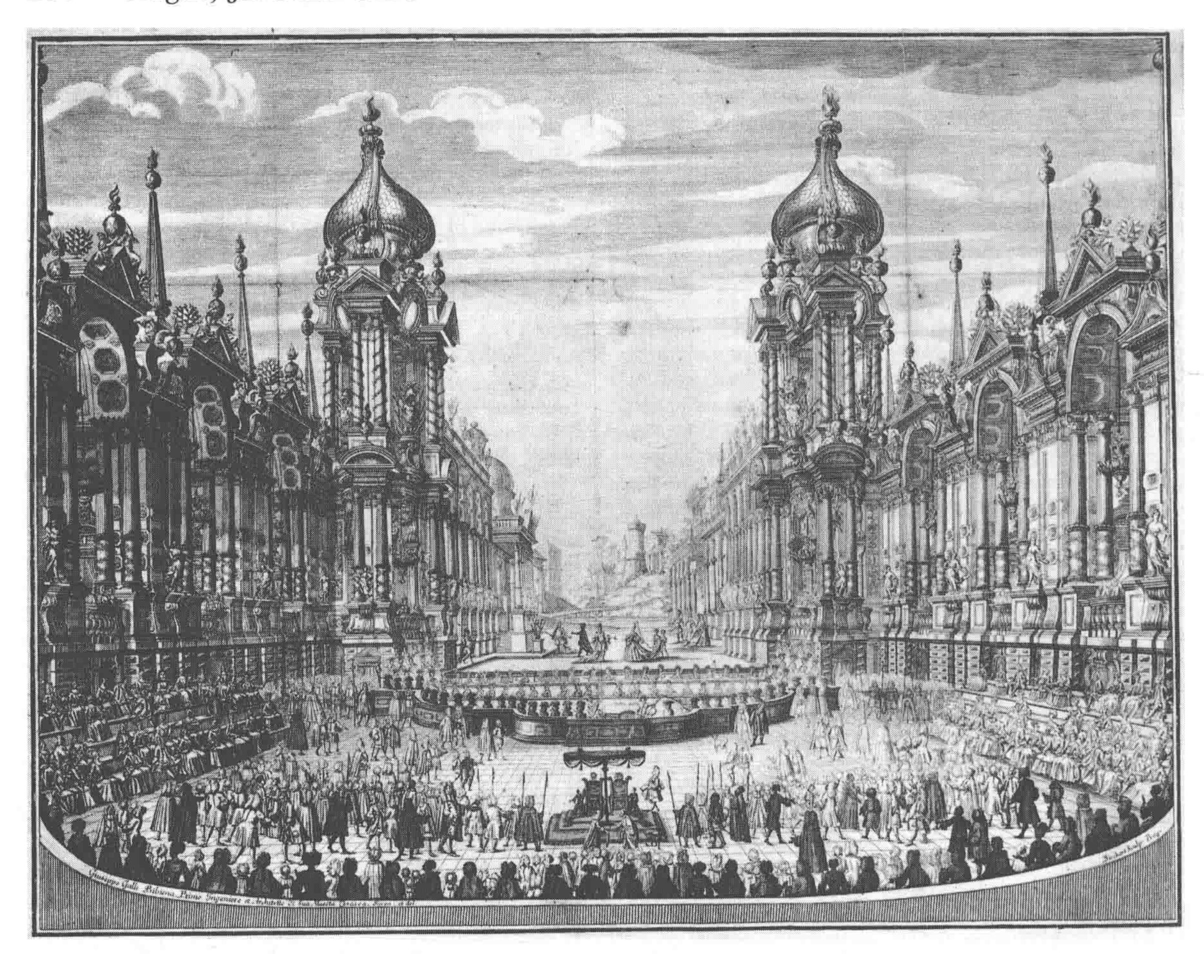
Secular music is less well documented. The court was a leading patron, and epics, sung by *jongleurs* and wandering minstrels, were popular there until the end of the 12th century. Subsequently Minnelied appears to have been encouraged at court. A number of important Minnesinger spent time in Prague, including Reinmar von Zweter, Frauenlob and Heinrich von Mügeln. King Václav II, whose coronation in 1297 occasioned great musical festivities, composed Minnelieder; the texts of three of his songs survive in the Manesse manuscript. Mülich von Prag belongs to the transition period from Minnelied to Meisterlied at the beginning of the 14th century; some of his work is in the 15th-century Colmar manuscript.

The last Přemyslid died in 1306, and by 1310 John of Luxembourg was king. The Luxembourgs were orientated towards France both politically and culturally; Machaut was in John of Luxembourg's service from about 1323 and possibly spent some time in Prague. Nevertheless, the importance of the alliance with the Holy Roman Empire was realized and this culminated in the election of Charles of Bohemia as Emperor Charles IV in 1356. In 1346 the bishopric of Prague was elevated to an archbishopric, thereby achieving increased independence; from this period the Ambrosian and Old Slavonic rites were cultivated alongside the ubiquitous Roman rite. In the vernacular sacred songs of this period a folksong element is sometimes detectable, for instance in the *koleda* (Christmas song). There is early evidence of the importance of instrumental music; drums, trumpets and strings were played at the coronation of John of Luxembourg in 1311 and there was a court band. Town trumpeters are mentioned as early as 1409 and were obviously men of some stature since one, Aleš, became a councillor in 1414–15. Two secular instrumental melodies survive from the end of the 14th century, but most instrumental music was improvised. The organ was probably in use quite early but the first clear reference is to its use at the 1311 coronation. A new organ was built at the cathedral in 1369.

Prague's elevation to imperial capital brought great wealth to the city. In 1348 Charles IV founded Prague University, later named the Charles-Ferdinand University after him. The first university in central Europe, it was modelled on that of Paris. The *Musica* of Johannes de Muris was evidently used there as commentaries on it, together with treatises by those connected with the university, survive; the earliest treatise preserved in Prague that deals with polyphony is *Tractatus de cantu perfecto et imperfecto* by Henricus de Zeelandia (late 14th century). At that time Prague was essentially a centre of serious learning and conflicts arose between the intellectual leaders of the city and those who came seeking favours from the court; among the latter churchmen were prominent. There was much antagonism to the moral laxity of the Church, and demands were made for services in the vernacular. In 1391 the Bethlehem Chapel was founded expressly for vernacular preaching to the common people; Jan Hus became a preacher there in 1403, aiming to abolish church abuses and return to the simplicity of early Christianity; he was initially supported by the Archbishop of Prague. The Hussite movement had far-reaching effects on music and led in particular to an increased cultivation of vernacular religious songs. The use of instruments was forbidden, and polyphony, secular music and dancing were discouraged. The continuing

development of vernacular hymnody during the 16th and early 17th centuries stimulated the publication of many hymnbooks, some including music (*see* CANTIONAL, §1). The best-known printing house in Prague was that of Georg Nigrin, active around 1600.

Under the Jagellon dynasty (1471–1526) a considerable flowering of music took place. The Jagellons re-established religious tolerance and under their patronage a school of composition grew up influenced by Netherlandish polyphony. Much church music was written, especially for the Utraquists who had their own form of Mass which used Latin and Czech, omitted the Agnus Dei and had other variants. Polyphonic music and Czech vernacular songs were cultivated in literary brotherhoods, guilds of leading citizens who met in many of the Prague churches to perform music; these groups flourished all over Bohemia and each had its own songbook. The Prague collegium musicum (founded 1616) was the most famous. In the schools and university polyphonic odes with humanistic texts were cultivated.



A Habsburg, Ferdinand, younger brother of Emperor Charles V, was elected king in 1526 and became emperor on his brother's abdication in 1556. He made Prague an important musical centre, albeit at the expense of native composers and performers; he founded a Hofkapelle in 1564 and engaged foreign musicians, and many noble families followed his example. His successor Rudolf II (1576–1612) was served by such outstanding musicians as Monte, Regnart, Kerle and Luython. Handl worked as an organist in Prague at this period. The concern of the Habsburgs was to secure the imperial succession; they ceased to respect Bohemian rights and liberties and as Catholics they felt antagonism towards the Protestants. The struggle for political and religious liberty became outright war in 1618 when an attempt was launched to make the Protestant Frederick V, Elector Palatine, King of Bohemia. The Czechs were finally defeated by imperial troops at White Mountain near Prague in 1620.

2. 1620–1830. The events of 1620 wrought a considerable change in Prague's cultural life. With the firm establishment of Habsburg domination, it was no longer capital of an independent state but merely a provincial capital. The nobility of Bohemia were dispossessed to make way for foreign appointees, many of whom were responsible for the city's beautiful Baroque palaces, but few of whom spent much time there, preferring to stay close to Vienna, the centre of political power. For musicians an absentee nobility meant a lack of patrons. Another factor was the persecution of the population, and this allied to lack of patronage caused an unprecedented emigration of musicians in the 17th and 18th centuries to obtain better positions and greater artistic opportunities in other parts of Europe. The leading composers resident in Prague during these two centuries were worthy and talented but tended to be inferior to their compatriots who sought fame abroad. Apart from the lack of employment for the many musicians that Prague produced, the Habsburg domination had other effects, including the almost complete obliteration of the Czech language as a vehicle for culture. As late as the 1820s opera was given in German and even the art songs produced by nationalistically inclined composers such as V.J. Tomášek were settings of German poetry. But although the Habsburg influence in Prague was not generally favourable to native composers and musicians, it fostered a varied musical life: oratorio in particular flourished, and works by Hasse, Caldara, Fux, Lotti, Leo and other widely known composers were often heard.

The most notable resident composer in the Baroque era (though he also spent much time in Italy) was B.M. Černohorský, choirmaster of St Jakub and a composer of organ music, who attracted many pupils from outside Prague and in effect founded the city's strong tradition of organ playing. F.I.A. Tůma and Josef Seger continued his work: Seger was renowned for his church and organ music and Tůma wrote orchestral partitas and chamber music. F.X. Brixi and J.A. Kozeluch (Koželuh) were other noteworthy composers of church music in the mid- and late 18th century; the former also wrote delightful organ concertos. The 18th century also saw the publication, by T.B. Janovka, of the first music dictionary in the Czech lands, *Clavis ad thesaurum magnae artis musicae* (Prague, 1701).

The growth of opera in the 17th and 18th centuries was one of the most important musical developments in Prague. The taste of the new aristocracy was for Italian opera but, with little native tradition to build on, the early exponents were mainly musicians from abroad. Initially performances were irregular, given during the visits of the Viennese court by touring Italian companies. These occasionally introduced works on Czech subjects, such as Bartolomeo Bernardi's *La Libussa*, performed in Prague in about 1703–5. The coronation of Emperor Charles VI as King of Bohemia (1723) stimulated operatic enterprise; the première of Fux's *Costanza e Fortezza*, conducted by Caldara, was given as part of the festivities and among those taking part were C.H. Graun, J.J. Quantz, S.L. Weiss, Tartini and J.D. Zelenka (fig.1). An Italian company, directed by Antonio Denzio, was engaged, giving its first performance on 24 October 1724 (Bioni's *Orlando furioso*). It continued on a regular basis at Count Sporck's Prague residence and his summer palace, Kuks, until Sporck's death; the repertory of this company included works by Vivaldi, among them several that received their premières in Prague. After 1738 operas were given in various Prague theatres and visiting companies, run by skilful Italian managers such as Angelo and Pietro Mingotti and Pasquale Bondini, continued to be popular. Important premières were those of Gluck's *Ezio* (1750) and *Issipile* (1752).

One pressing need was that for a real opera house. This was fulfilled by Count Nostitz (1725–94), who founded the Nostitzsches Nationaltheater with a company directed by Bondini in 1783, which became known as the Stavovské Divadlo (Estates Theatre, financed by the Bohemian Estates, 1798) and subsequently as the Tylovo Divadlo (Tyl Theatre, 1945) and, again, the Estates Theatre (1991). At first Sunday afternoon performances were given in Czech and after 1861 two more weekly Czech performances were added. Following the success of *Die Entführung aus dem Serail* (1782) and *Le nozze di Figaro* (1786) Mozart was invited to Prague at the beginning of 1787, when he conducted the new Prague Symphony and a performance of *Figaro*; his success there led to Bondini's commissioning a new opera, to be given the following autumn at royal wedding celebrations. This was *Don Giovanni*, which Mozart conducted on 29 October. He visited Prague twice more, briefly in 1789 when travelling between Dresden and Berlin, and in the last weeks of his life, when he conducted the première of *La clemenza di*

1. Arena of Prague Castle during the première of Fux's opera 'Costanza e Fortezza', given as part of the festivities in celebration of the coronation of Emperor Charles VI as King of Bohemia, August 1723: engraving by Anton Birkhart after designs by Giuseppe Galli-Bibiena

Tito, commissioned by the impresario Domenico Guardasoni on behalf of the Bohemian Estates for the festivities surrounding the coronation of Leopold II as King of Bohemia, and given on 6 September 1791 (at first with only limited success). Although Italian opera continued to predominate, the repertory of the Estates Theatre after 1790 reveals an increasing number of German works and even one or two French operas. The ousting of Italian opera was completed under Karl Liebich's direction (1807–16); he engaged as conductor first Wenzel Müller (1807–13) and then C.M. von Weber (1813–16), together with whom he broadened the repertory to include operas by several French composers, Beethoven and Spohr, raised performance standards and worked to dispel some of the apathy engendered in the city's musicians by the popularity of Mozart resulting from the success of *Figaro* and *Don Giovanni*. Nevertheless the main establishment figures at the beginning of the 19th century, B.D. Weber, first director of the Prague Conservatory (founded 1811), and J.A. Vitásek, first director of the Varhanická Škola v Praze (Prague Organ School, 1830), were firm Mozartians and strongly resisted the introduction of a more modern idiom.

The development of instrumental concerts in Prague was a disorganized process. Although the nobility (e.g. the Kinsky, Lobkowitz, Hartig, Pachta and Černin families) had their own bands, these were seldom resident in Prague, and the only orchestral tradition was that of the opera orchestras. A wealthy merchant, Jan Ratzenbeck, offered refreshments and instrumental music at a house in the New Town district from 1754, but the first regular series of concerts were those of the musical academy organized by Antonio Duni in 1767 and given once or twice weekly; how long these continued is not recorded. The numerous synagogues, some equipped with organs, were important centres of orchestral music throughout the 18th century. Many travelling virtuosos visited Prague in the second half of the 18th century; the first licence for a public performance of this kind was granted to two Italian lutenists on 7 November 1764. Touring instrumentalists apparently found Prague audiences eager and undiscriminating and few of these visitors were artists of the first rank, though there were exceptions, such as the clarinettist Stadler in 1791 and Beethoven, who visited the city six times between 1796 and 1812. The most prominent Czech composers working in Prague in the later 18th century were F.X. Dušek, a fine pianist and composer who was host to Mozart on his visits to the city, and Tomášek, a pioneer of the Romantic piano piece and famous as a piano teacher. During the 17th, 18th and 19th centuries instrument making flourished in Prague; organ builders and violin makers were particularly active.

The Church, and particularly the Jesuits, played a leading role in Prague's musical life in the 17th and 18th

2. Stavovské Divadlo (Estates Theatre), Prague: wash drawing by Vincenc Morstadt, c1835

centuries. Catholicism was reintroduced; the monasteries, mostly in ruins since the Hussite wars, were rebuilt, and churches were refurbished and new ones built in Baroque style. These became important musical centres until most of the monasteries were secularized under Joseph II. The Jesuit colleges emphasized music and trained boys as church musicians as well as providing opportunities for composers of choral and organ music. Prague's Jesuit College was founded in 1556. The Clementinum, later the home of the State and University Library, was originally a Jesuit monastery; among its pupils in the 18th century were Johann Stamitz, J.D. Zelenka, Franz Benda and Josef Mysliveček. The Clementinum had its own music printing press (the only other notable music publisher in 18th-century Prague was Georg Labaun, who published the works of Černohorský). The great Baroque church of St Mikuláš in the Little Quarter, which was rebuilt from 1703, was the venue for lavish performances of oratorios and other ecclesiastical choral music. Another important church was that of St František built in 1688 and run by the Knights of the Cross; the post of organist and choirmaster there was one of the most coveted in Prague and the choirboys were renowned for their performances of school and sepulchre dramas with music. The church of Nativity in the Loreto (1694), the Minorite church of St Jakub (rebuilt in 1702) and the Premonstratensian monastery of Strahov (founded 1148 but much altered during the Baroque period) were also important.

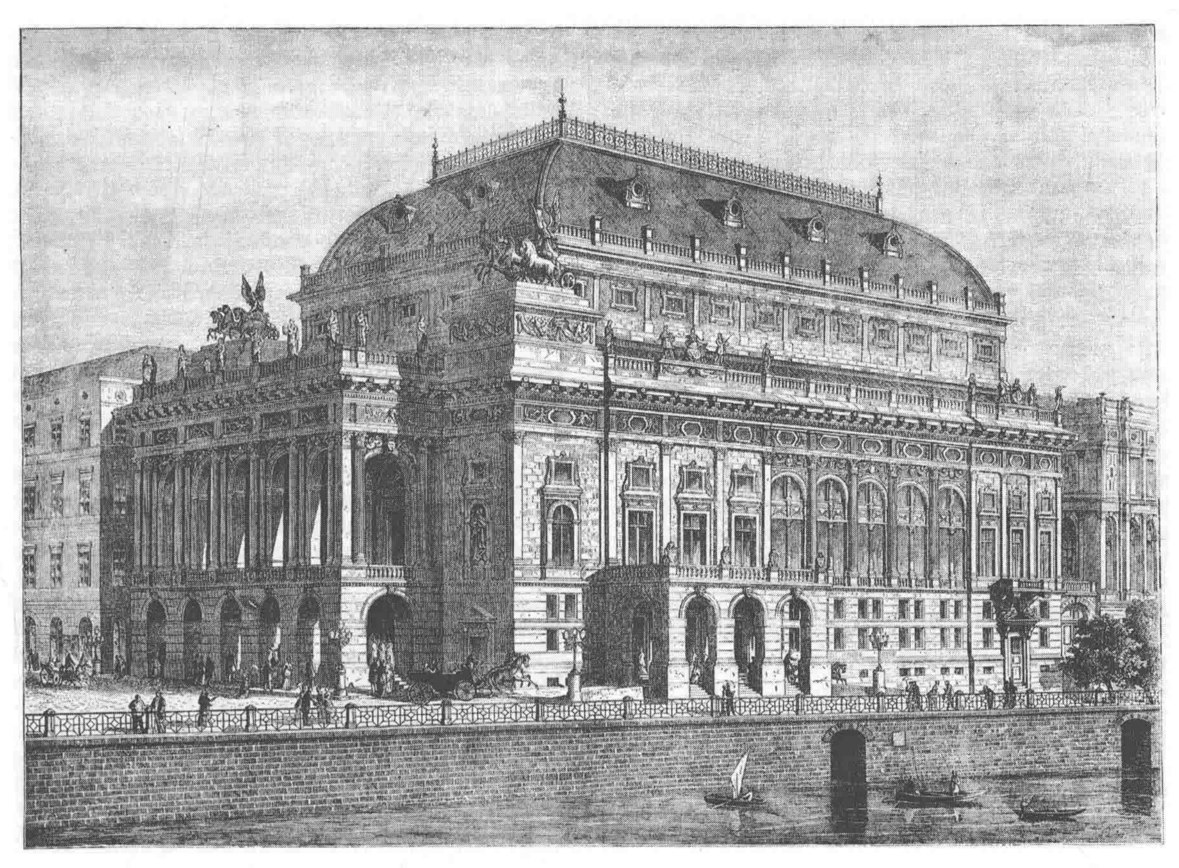
During the period of the Mozart cult there were a number of political changes that were to create the opportunity and impetus for the growth of Czech nationalism. The reign of Joseph II (1780–90) – the so-called 'period of enlightenment' – saw a number of important reforms in the Czech lands, including the abolition of serfdom and the reintroduction of religious freedom, as well as the abolition of the fraternities of *literati* (though their musical importance was no longer great).

Administratively, however, Habsburg control was not weakened and this was to prove a spur to nationalist ambitions. Even before the reforms there had been agitation for the use of Czech in schools, and scholars had begun to rediscover the country's independent past. A Piarist priest, M.A. Voight (1733–87), wrote *Von dem Alterthume und Gebrauche des Kirchengesanges in Böhmen* (1775), which heralded a number of antiquarian publications on music culminating in the three-volume *Allgemeines historisches Künstler-Lexikon für Böhmen und zum Theil auch für Mähren und Schlesien* (1815) by the choirmaster of Strahov, B.J. Dlabač. The Royal Bohemian Academy of Sciences was founded in 1784 and in 1791 a chair of Czech language and literature was created at Prague University.

Just as opera had reflected the demand for things foreign after 1620, so it quickly came to reflect the growing tide of national feeling. An enterprising Italian company performed *Die Zauberflöte* in a Czech translation in the 1794–5 season, and subsequently many more works were given in Czech. A society for the promotion of music in Bohemia was set up in 1808 and was instrumental in establishing the Prague Conservatory in 1811. However, the conservatory's function was to train performers (composition did not become part of the curriculum until the late 19th century) and as much for this reason as for the conservatism of B.D. Weber, its director, it played no role in the creation of a national musical idiom. Similarly Societa, established as a musicians' benevolent society in 1803, sponsored regular concerts but concentrated on the works of foreign composers. There were no composers of sufficient calibre in Prague at the beginning of the 19th century to fulfil the dearest wish of the nationalists, the creation of an authentic Czech opera. F.J. Škroup's *Dráteník* ('The Tinker'), first performed on 2 February 1826, was a Czech opera of the Singspiel type and a great success, but his subsequent works failed; the Singspiel was too slight a medium to satisfy a public familiar with C.M. von Weber and his contemporaries. Škroup's failure caused a temporary reversion to a repertory dominated by foreign works.

3. 1830–1918. The Varhanická Škola v Praze (Prague Organ School) was founded by the Spolek pro Pěstování Církevní Hudby v Čechách (Society for the Promotion of Church Music in Bohemia) in 1830, and the most important directors before its amalgamation with the

Prague Conservatory in 1890 were Vitásek (1830–39) and F.Z. Skuherský (1866–90). In the mid-1830s the spark of musical nationalism was rekindled, initially in response to the publication of a number of folksong collections. Composers attempted to incorporate folk material into modest choral compositions, while traditional dances and the polka, a new dance based on traditional models, became popular in the salons. Polka composers such as Joseph Labitzky and František Hilmar were regarded as nationalist pioneers. In the years 1835–9 and 1844 the six volumes of *Věnec* ('Garland of Patriotic Songs') were published in a largely successful attempt to create Czech art song. Political encouragement was given by the ideas and aftermath of 1848, the 'year of revolutions', and by the Habsburg defeats in Lombardy in 1859. In the 1860s two important institutions were founded: the Prague Hlahol (male-voice choir, 1861) and the Umělecká Beseda (Artistic Society, 1863), an association of leading figures in all the arts which remained in existence until 1973 and was then re-established in 1990; it founded the Hudební Matice publishing company (1871) and the influential journal *Hudební revue* (1908–20).



Standards of performance continued to rise. In 1840 two concert-giving societies were inaugurated, the Cecilská Jednota or Cecilienverein (to about 1864) and the Žofínská Akademie (Sophien Akademie, to 1899); orchestral music was thus put on a more professional basis. The expensive but excellently prepared concerts of the Žofín PO were particularly notable. The German-dominated opera at the Estates Theatre continued to command respect; under Škroup a series of Wagner productions showed the level of improvement achieved: *Tannhäuser* (1854), *Lohengrin* (1856) and *Der fliegende Holländer* (1856) were resounding successes. However, it was important to Czech citizens that they should have their own opera house. Plans were made for a theatre for Czech opera and drama; when it opened in 1862 as the Prozatímní Divadlo (Provisional Theatre) there was still no suitable Czech opera to perform, and its first opera production under J.N. Maýr (1862–6 and 1874–81) was of Cherubini's *Les deux journées*.

In 1861 Count Jan Harrach (1828–99) offered prizes for the best opera and libretto on a Czech theme. In response to this competition Smetana, already established as a conductor of the Hlahol and with the Žofínská Akademie, wrote his first opera *Braniboři v Čechách* ('The Brandenburgers in Bohemia'). After some disagreement (Smetana had made enemies in the Prague establishment by his criticism of their standards), his opera was declared the winner and he conducted the first performance at the Provisional Theatre on 5 January 1866 with tremendous success, and that year he became the theatre's principal conductor until Maýr resumed the post in 1874. Some additional buildings were occupied by the opera during this period, notably the Nové České Divadlo (New Czech Theatre, 1869–75) and the Novoměstské Divadlo (New Town Theatre, 1857–85, cap. *c*3000), both wooden structures suitable only for summer performances. Smetana composed a series of operas on nationalistic subjects which were received with varying degrees of critical acclaim (*The Bartered Bride* failed at its first performance on 30 May 1866). He demonstrated the possibility of genuine Czech opera and so encouraged other composers. During his period at the Provisional Theatre he introduced operas by Karel Bendl, Vilém Blodek, Leopold Měchura, Karel Šebor and J.R. Rozkošný. From the 1870s to the 90s opera was also performed on other Prague stages: in the New Town Theatre, the New Czech Theatre and the Aréna Na Hradbách (Arena on the Ramparts, 1869–75, on the site of the present National Museum), which was replaced by the Národní Arena Na Hradbách (National Arena on the Ramparts, 1876–80).

Smetana's most politically effective opera was *Libuše*, a festival opera that deals with the legendary founder of Prague and emphasizes the historic achievements of the Czech nation. It was written for the opening on 11 June 1881 of the new Národní Divadlo (National Theatre), which absorbed the Provisional Theatre. It burnt down on 12 August the same year and Czech Prague music lovers united in the effort to rebuild it; it was reopened on 18 November 1883, again with *Libuše*. During the 19th century the premières of a number of important Czech works were given there, including Dvořák's *Čert a Káča* ('The Devil and Kate', 1899) and *Rusalka* (1901), Fibich's *Nevěsta messinská* ('The Bride of Messina', 1884) and his trilogy of stage melodramas, *Hippodamia* (1890). Works from abroad were not neglected; a balance was struck between Italian, French and German operas and a number of Polish and Russian works were also performed. A highlight was Tchaikovsky's visit in February 1888 to conduct *Yevgeny Onegin*.

After the opening of the Provisional Theatre, the Estates Theatre, with Škroup as conductor (1827–57), had been slightly eclipsed and became exclusively a German theatre. It was no match, however, for the National Theatre despite extensive renovation, and the Neues Deutsches Theater was subsequently opened in 1888 (it was renamed the Smetana Theatre in 1949 and the Prague State Opera in 1992) on the site of the former New Town Theatre. The German company had an outstanding director in Angelo Neumann (1885–1910), while important figures at the National Theatre were František Adolf Šubert (1883–1900) and Karel Kovařovic (1900–20), who was one of the great figures in Czech music culture and was responsible for firmly establishing the company. Kovařovic gave the Prague première of Janáček's *Jenůfa* (but with his own alterations to the orchestration), which established the composer's reputation. There was a pact whereby the National Theatre generally gave the Prague premières of new French works and the Neues Deutsches Theater those of German operas (e.g. *Salome* in 1906); however, the Neues Deutsches Theater mounted the Prague première of *Pelléas et Mélisande* (1908), the National Theatre that of *Elektra* (1910), and *Parsifal* received its first two performances in the city (in Czech and German) at the rival theatres on the same night, 1 January 1914. The Czech-German rivalry that permeated Prague musical life at the end of the century was reflected at first in these two theatres, though some degree of cooperation was necessary over performing rights and the exchange of orchestra players and singers. Less important was the Městské Divadlo na Královských Vinohradech (Town Theatre in the Royal Vineyards), which was built outside Prague in 1907 mainly as a dramatic theatre, but it also mounted operas until 1919 and was especially outstanding during the period 1914–18 when it was under the direction of Ostrčil.

The foundation of the Kammermusikverein in 1876 marked the beginning of what has become Prague's main

3. Národní Divadlo (National Theatre), Prague: steel engraving, late 19th century

musical achievement. Chamber groups soon began to be established, most notably the Czech Quartet (1891). The Český Spolek pro Komorní Hudbu (Czech Society for Chamber Music) was formed in 1894 as a Czech rival to the Kammermusikverein; between 1894 and 1918 it gave 208 concerts and has continued to be active. While the Czech society boasted the best performers, the Germans caused the greatest furore when Schoenberg conducted his *Pierrot lunaire* in 1913. The same division by nationality was evident in the sphere of musicology which was first taught at the bilingual Prague University in 1869 when Ambros was appointed extraordinarius in music history. The university was divided nationally in 1883: the aesthetician Otakar Hostinský lectured on musical subjects in the Czech section from 1883, and Zdeněk Nejedlý lectured in music history from 1905 until World War II. From 1885 to 1896 Adler was extraordinarius in musicology at the German section and was followed by Heinrich Rietsch (1900–27). The Prague Conservatory grew in importance through the century, especially after the Prague Organ School was amalgamated with it in 1890. It produced many virtuosos, including the internationally known violinists Josef Slavík, František Ondříček, Otakar Ševčík and Jan Kubelík. Three composers closely connected with it were Bendl, Karel Knittl and Dvořák; the last was appointed professor of composition, harmony and form in 1890. His masterclass produced the leading Prague composers of the post-World War I period, including Josef Suk (i), and Dvořák's international stature as a composer was also a factor in maintaining the morale of Czech musicians in the city during the difficult period at the turn of the century, when pressure for freedom from Habsburg domination reached its zenith.

In the course of the 19th century Prague became a first-rate musical centre. Throughout the century it was popular with touring virtuosos, and the rise in performance standards and the discrimination of its musicians were reflected in its attracting the best performers and many distinguished composers. Paganini visited the city in 1828 and 1829, Chopin in 1829 and 1830, and Wagner as early as 1832; when Berlioz went in 1846 he conducted three concerts and was impressed by the capabilities of the Žofín PO in excerpts from his *Roméo et Juliette*. Liszt visited several times in the 1840s and conducted his *Hungarian Coronation Mass* in the Cathedral of St Vít in 1856. Mahler conducted at the Neues Deutsches Theater during the 1885–6 season and gave the first performance of his Seventh Symphony on 9 September 1908 with the Czech PO. In 1894 the orchestra of the National Theatre had organized four concerts as the Česká Filharmonie (Czech Philharmonic), the first of which was given in 1896 under the direction of Dvořák, to raise money for their pension fund. The Czech PO became an independent orchestra in February 1901, after a strike by the members of the National Theatre orchestra, and gave its first concert under Čelanský. Other conductors before 1918 were Oskar Nedbal (1896–1906) and Vilém Zemánek (1902–6).

A number of music publishers flourished: Marco Berra, an Italian immigrant, started his publishing house in 1811

and was particularly associated with the early nationalist composers. Other publishers included Christoph & Kuhé, Jan Hoffman (1814–49), who collaborated with Berra in the publication of *Věnec*, the Umělecká Beseda and the Hudební Matice. The firm of Urbánek, founded by F.A. Urbánek, dominated the later 19th century and was active until the nationalization of the publishing industry after 1948. A number of periodicals devoted to music also appeared: *Dalibor*, which began in 1858 and was twice revived, finally ceasing in 1927; *Hudební listy*, which published also with interruptions, over the period 1873–90; *Hudební revue* (1908–20); *Cyrill* (1874–1948); and *Listy Hudební matice* (1921–48).

4. From 1918. On 28 October 1918, with the end of World War I and the Habsburg Empire disintegrating, Prague became capital of the new Republic of Czechoslovakia. The city's return to political importance coincided with a slight decline in musical status. The great composers and conductors who had shaped Prague's musical life at the end of the 19th century were either dead or died within a few years of the Republic's foundation. The second generation of post-Smetana Romantic nationalists, mostly products of the Dvořák masterclass at Prague Conservatory, became dominant. Particularly notable were J.B. Foerster, Novák, Suk and Otakar Ostrčil; however, none of these gained the international repute that was accorded Leoš Janáček, whose success drew postwar attention away from Prague to the Moravian capital of Brno. Moreover, although Foerster, Novák and Suk all taught at the conservatory masterclass, they had surprisingly little influence on the course of Prague's musical life. Foerster was a recluse, Suk more interested in his performing career and Novák, although a passionate innovator and a very important teacher, was too stormy and undiplomatic a figure to be an effective leader of a more progressive style of musical life. Only Ostrčil can be said to have played an important role, as chief conductor of the National Theatre from 1920 to 1935; although not an innovatory composer himself, he made considerable efforts to include modern works in the operatic repertory and caused a riot with his production of Berg's *Wozzeck* (11 November 1926).

In 1920 the small Royal Provincial Theatre (formerly the Estates Theatre) became part of the National Theatre complex and only reverted to a German theatre during the Nazi occupation (1939–45); it was renamed the Tyl Theatre in 1948 and resumed the name of Estates Theatre in 1991, and is most suitable for Mozart and other small-scale works. The Neues Deutsches Theater continued to compete with the National Theatre: Zemlinsky was director from 1911 to 1927, and was succeeded by Szell, under whom the theatre's repertory included works by Schoenberg, Shostakovich, Krenek, Milhaud, Hindemith, Weill and Ravel. At the National Theatre Talich succeeded Ostrčil in 1935 and was chief conductor there until 1944 and for the 1947–8 season. After the liberation in 1945 a new experimental Czech theatre, called the Grand Opera of Fifth of May, was established in the former Neues Deutsches Theater under the direction of Alois Hába. In 1948 it was also incorporated into the National Theatre complex and in 1949 renamed the Smetana Theatre; it was renovated in the 1970s as were many important historic buildings in Prague. Musicians of German origin were still numerous in Prague between the wars, and the Verein für Musikalischen Privataufführungen, a group of German composers who followed the Second Viennese School, were active from about 1922 and had considerable influence through their journal, *Der Auftakt*.

The inter-war period was notable for the founding and development of a number of musical institutions. After 1918 the Czech PO became an important ensemble under Talich (1919–41), Kubelík (1936–48), Ančerl (1950–68), Neumann (1968–90), Jiří Bělohlávek (1990–92), Gerd Albrecht (1994–6) and Vladimir Ashkenazy (1998–). Czechoslovak Radio began in Prague in 1923 and a radio orchestra, Symfonický Orchestr Československého Rozhlasu, conducted by K.B. Jirák and Otakar Jeremiáš, was formed the following year; subsequent conductors have been Karel Ančerl, Alois Klíma, Jaroslav Krombholc, František Vajnar and, since 1985, Vladimír Válek. Pride in the achievements of the two pioneering nationalist composers was marked by the establishment of the Smetana Museum (1928) and the Dvořák Museum (1932). The Spolek pro Moderní Hudbu (Society for Modern Music) flourished between 1920 and 1939, while many 19th-century musical institutions, such as the amateur choral societies and the Umělecká Beseda, remained active. Avant-garde composition was centred on Alois Hába, who pioneered a microtonal system of composition that was influential for many years and attracted composers from abroad to his composition class at the conservatory, which began in 1924. Other prominent composers resident in Prague in the 1920s were Bohuslav Martinů and Ladislav Vycpálek. Gustav Becking (1930–45) and Paul Nettl were notable musicologists at the German section of the university.

The Symfonický Orchestr Hlavního Města Prahy FOK (FOK SO) was founded in 1934 under Rudolf Pekárek: other conductors have included Smetáček (1942–72), Ladislav Slovák (1972–6), Jiří Bělohlávek (1978–89), Petr Altrichter (1990–92), Martin Turnovský (1992–5) and Gaetano Delogu (1995–8). In 1935 a contemporary music society known as Přítomnost (The Present) was founded under Hába's aegis and attracted not only his disciples but composers of other orientations, including those associated with the Soviet-aligned Union of Workers (Svaz DDOČ), led by Ervín Schulhoff and Vít Nejedlý, and the neo-classical group allied to the Society of Graphic Artists (Mánes), who included Pavel Bořkovec and Iša Krejčí; independent composers such as the jazz-inspired Jaroslav Ježek and E.F. Burian were also associated with Přítomnost, which had its own journal, *Rytmus*. Ježek and Burian collaborated with the poets and actors Voskovec and Werich in the popular satirical revue theatre Osvobozené Divadlo (Liberation Theatre), which ran from 1925 to 1938. In the 1920s and 30s Prague re-established its position as the musical capital of the country: the second, third and 13th festivals of the ISCM were staged there, and at the second in 1924 Schoenberg's *Erwartung* had its world première and Bartók's Dance Suite its Prague première.

The independent Czechoslovak Republic was short-lived; by 1939 it had been incorporated into Hitler's Grossdeutsches Reich, and until 1945 the city was isolated from musical trends elsewhere. The German occupation broke up musical institutions: Prague University was closed, as was the National Theatre (in 1944), and even the Neues Deutsches Theater ceased to function. Many musicians fled in time and several died in the allied forces; a significant number of those remaining were imprisoned

or sent to concentration camps. The Jewish community in Prague, one of the largest and best established in central Europe, and its important musical tradition were almost entirely obliterated. In May 1945 the Soviet Army entered Prague. Cultural life was quickly re-established and musicians lost little time in reopening international contacts and reorganizing themselves. Among the first events were the creation of the Syndikát Československých Skladatelů (Syndicate of Czechoslovak Composers, 1946–9) and the inception of the Pražské Jaro (Prague Spring) festival in 1946. The festival was intended as a means of attracting visiting artists to the city for the first time since 1939; from 1946 the Prague Spring became a three-week annual festival of considerable repute. After the war the German language ceased to be used in public; since then German-speaking musicians and German musical culture have played no more important a part in Prague's cultural life than any other foreign import.

After 1945 Czechoslovakia became a socialist state and gradually all musical institutions were nationalized; for example, responsibility for music education was transferred to the state. New specialist primary schools for the musically gifted were set up, and a new Academy of Musical Arts was founded in 1946. Many organizations were established to cover various aspects of musical activity. These were mostly based in Prague and included organizations replacing a number of previously independent firms. The state record company Supraphon (founded in 1961 as the Státní Hudební Vydavatelství – State Music Publishers – and renamed in 1967), the state film industry with its own symphony orchestra based at Prague-Barrandov (1945), the Státní Nakladatelství Krásné Literatury Hudby a Umění (State Publishers of Literature, Music and Art, 1953) and the state concert agency Pragokoncert (1962) are typical examples. The Český Hudební Fond (Czech Music Fund, 1953) played a large role in propagating new Czech music and also provided musicians' pensions, grants and health camps. The music fund encouraged performances of new Czech music abroad and published a bulletin, *Music News from Prague*, in several languages. It also promoted concerts in Prague including the important Týden Nové Tvorby (Week of New Works), an annual festival of new Czech compositions in all media which began in 1956. The publishing company Panton produces scores, books and recordings of contemporary music.

Musicological study also received state encouragement; an important factor was the systematic removal of musical archives and other items from private hands to central locations. Much of the wealth of castle and monastic libraries, including some medieval and many 18th- and 19th-century music manuscripts, was placed in the music division of the National Museum in Prague. A fine collection of historic instruments was also created there. Another important manuscript collection is in the library of Prague University. Apart from the musicological items contained in *Hudební rozhledy*, two important musicological journals were established in Prague: *Miscellanea musicologica* (1956–), edited at the music department of Prague University, and *Hudební věda* (1964–), which stemmed from the music section of the Czech Academy of Sciences. Prominent musicologists working at the Czech Academy of Sciences have included Josef Bek, Miroslav K. Černý, Jarmila Doubravová, Jaroslav Jiránek, Josef Kotek, Jan Kouba, Milan Kuna, Vladimír Lébl, Jitka Ludvová, Zdeňka Pilková, Václav Plocek, Ivan Poledňák, Karel Risinger, Petr Vít and Tomislav Volek. Musicologists at Prague University included Josef Hutter, Antonín Sychra, František Mužik, Milan Poštolka, Ivan Vojtěch and Jaromír Černý.

The logical conclusion of this state control of musical activities was the centralization of all musicians – performers, composers, historians and critics – under one organization, the Svaz Českých Skladatelů a Koncertních Umělců (Union of Czech Composers and Concert Artists), with its headquarters in Prague, in 1972. The basing of so many of the national organizations in Prague has naturally made it dominant in musical politics, but it has to some extent lost its leadership in performance with the creation of symphony orchestras, opera companies and other ensembles in provincial cities. Perhaps because it has been so closely associated with the musical establishment Prague has tended to lag behind in the exploration of contemporary trends of composition. However, in the 1960s new groups began to form. The Pražská Skupina Nové Hudby (Prague New Music Group, 1965) included the composers Zbyněk Vostřák and Marek Kopelent. A number of performing ensembles for new music were formed – Komorní Harmonie (Chamber Harmony, 1960), Musica Viva Pragensis (1961), Sonatori di Praga (1964), Due Boemi di Praga (1964) and others. A number of composers, such as Miloslav Kabeláč, began to cultivate electronic and aleatory techniques. In addition to the composers already mentioned other progressive composers working in the city include Petr Eben, Jan Fischer, Luboš Fišer, Jan Hanuš, Svatopluk Havelka, Viktor Kalabis, Jan Klusák, O.F. Korte, Zdeněk Lukáš, Otmar Mácha, Klement Slavický, Milan Slavický, Vladimír Sommer and others. An annual jazz festival began in 1964, while the jazz-pop world of the satirical revue started at the Semafor Theatre in 1959 with the poet Jiří Suchý and the composer Jiří Šlitr.

The musical life of Prague in the 1970s and 80s was rich and varied. A great deal of contemporary Czech music was heard, although until the 1980s there was a degree of isolation from trends abroad. Leading ensembles and performers were regularly invited to the Prague Spring, a highlight of the musical year. Opera and ballet were performed by the National Theatre Company at the Smetana Theatre, Tyl Theatre and National Theatre. Czechoslovak Radio played a leading role through the concert performances of the Radio SO, and the annual Concertino Praga started in 1955 as an international competition for young musicians featuring a different instrument each year. The many internationally known ensembles originating in Prague have included the Czech Quartet (founded 1891), Prague Quartet (1919), Czech Nonet (1924), Prague Wind Quintet (1928), Czech Piano Quartet (1941), Czech Philharmonic Wind Quintet (1944), Smetana Quartet (1945), Vlach Quartet (1950), Ars Rediviva (1951), Dvořák Quartet (1951), Prague Chamber Orchestra (1951), Suk Trio (1951), Foerster Trio (1955), Novák Quartet (1955), Prague String Quartet (1955), Prague Madrigalists (1956), Czech Chamber Orchestra (1957), Prague Chamber Soloists (1961), Talich Quartet (1962), Musici Pragenses (1962), Panocha Quartet (1968), Pražák Quartett (1972), Martinů Quartet (1976), Stamic Quartet and Wihan Quartet (both 1985) and Škampa Quartet (1989). Many of these

groups have had a continuous history of distinction through many changes of personnel.

Since the revolution in 1989 and the creation of the Czech Republic in 1992, many changes have taken place in the cultural life of Prague. The National Theatre and the Estates Theatre separated from the State Opera Prague (formerly the Smetana Theatre) in 1992 and now function as two independent theatres. New chamber and orchestral ensembles were established, the most important among them the Pražská Komorní Filharmonie (Prague Philharmonia) (1994, music director Jiří Bělohlávek) and the Czech National SO (1993, directed by Zdeněk Košler from 1993 to 1995 and Paul Freeman from 1996), and several string quartets (including the Apollon Quartet, 1993 and the M. Nostitz Quartet, 1994). The city remains one of Europe's leading centres of chamber music. The Prague Spring is still the most significant festival, but important festivals established since 1989 include the Pražský Podzim (Prague Autumn, 1997) and the St Václav Festival (1992), both held in September, and Musica Iudaica (1992), held in October. The concert agency Pragokoncert lost its monopoly in concert life, after 1989, and many new agencies have been created. The two most important recording and publishing organizations, Supraphon and Panton, also underwent fundamental changes. In 1991 Supraphon was divided into the publishing house Editio Supraphon (renamed Edito Praga in 1998) and the record company Supraphon. The publishing house Panton was amalgamated with the German publishing house Schott and now operates as Panton International. Many new recording companies have emerged (Clarton, Gramofonové Závody Loděnice, Lotos, Multisonic, Music Vars, Rosa, Ultraphon). The former unions of Czech and Czechoslovak composers were disbanded, and in 1990 the new Asociace Hudebních Umělců a Vědců (Association of Musicians and Musicologists) was created. It embraces some 14 smaller societies, among them Společnost Českých Skladatelů (Society of Czech Composers), which organizes the annual festival Dny Soudobé Hudby (Contemporary Music Days), now held in November, and Společnost Hudební Rozhledy (Musical Survey Society), which publishes the monthly journal *Hudební rozhledy*.

Prague Quartet. Czech string quartet. It was founded in Ljubljana in 1920 by expatriate Czechs and later based in Prague. Its guiding spirit was the viola virtuoso Ladislav Černý (1891–1975), who remained until the quartet disbanded in 1955. The second violinist from 1923 to 1954 was Herbert Berger. Its leaders were Richard Zika (1920–33), Willibald Schweyda (1933–41), Alexandr Plocek (1941–51) and the younger Josef Suk (1951–5); and its cellists included Ladislav Zika, Miloš Sádlo, Ivan Večtomov and Josef Šimandl. The quartet toured widely and helped to propagate the music of Hindemith, with whom Černý was closely connected. Playing with exceptional rhythmic vitality, tonal quality and technical address, the group influenced generations of Czech musicians. It recorded remarkable interpretations of works by Schumann, Smetana, Dvořák and Janáček, some of which have been reissued on compact discs. With Černý's encouragement, in 1956 its final second violinist, Břetislav Novotný, founded the City of Prague Quartet, which lacked the brilliance of the earlier ensemble but for more than three decades maintained a high standard of musicianship.

Prahács, Margit (*b* Budapest, 12 April 1893; *d* Budapest, 1 July 1974). Hungarian musicologist. After studying the piano with Emánuel Hegyi at the Budapest Academy (diploma 1917), she enrolled in the faculty of philosophy and aesthetics at Budapest University, where she took the doctorate in 1924 with a dissertation on the psychology of music. She also taught at the Ernő Fodor School of Music (1917–27). A scholarship enabled her to continue her studies in Berlin from 1926 to 1927 with Abert, Sachs and Schünemann. In 1928 she was appointed librarian at the Budapest Academy, a position she retained until her retirement in 1961. She became lecturer in musical aesthetics at Budapest University in 1937; in 1936 she received the Baumgarten Prize for her work in aesthetics. She remained at the university until 1947, during which time she founded a collegium musicum for the performance of early music. She also took part in organizing the Liszt Museum at the Academy. She was a corresponding member for Hungary at the European Liszt Centre from 1970, and in 1971 she was elected an honorary member of the American Liszt Society. As a critic Prahács contributed to numerous Hungarian periodicals. Most of her writings are devoted to Hungarian music, particularly

that of Liszt, but she contributed several valuable studies in her special field of musical aesthetics.

Pratella, Francesco Balilla (*b* Lugo di Romagna, 1 Feb 1880; *d* Ravenna, 17 May 1955). Italian composer, critic and musicologist. He studied composition at the Pesaro Liceo Musicale, where he received some lessons from Mascagni. His early works often incorporated Romagnese folk melodies, their influence being most apparent in the symphonic cycle *Romagna* and his second opera *La sina d'Vergöun*. His involvement with the futurist movement began in 1910 when he wrote the first of three manifestos: the *Manifesto dei musicisti futuristi*. This criticizes the current state of Italian music and includes polemical passages inserted by Marinetti; the *Manifesto tecnico della musica futurista* (1911) and *La distruzione della quadratura* (1912) advocate atonality, microtones and rhythmic irregularity. The manifestos are mainly of theoretical interest since no futurist musician realized their implications to any great degree; Pratella's *Musica futurista*, violently received in Rome, is an amorphous, simplistic piece relying on the whole-tone scale and the repetition of short phrases. His futurist opera *L'aviatore Dro* incorporates Russolo's 'intonarumori' and involves structured improvisation in the choral writing, but is otherwise futurist in topic alone. Although he continued to contribute music for the Futurist Synthetic Theatre and the Futurist Pantomime Theatre until the mid-1920s, after World War I he generally withdrew from the movement to which his most valuable musical contribution was clearly the inspiration he provided for Russolo.

Pratella's involvement with the futurist movement was, however, only one aspect of his multi-faceted career. In addition to teaching and writing for a number of Italian and foreign journals, his active interest in Italian, and particularly Romagnese, folk music continued to influence his compositional style. Early music was another enthusiasm: as part of a national project instigated by Malipiero and Pizzetti, he transcribed and edited oratorios by Carissimi and harpsichord sonatas by Rutini, Sandoni and Serini. As the editor of the licei musicali of Lugo di Romagna (1910–29) and Ravenna (1927–45) he wrote a number of idiosyncratic didactic books on music theory, many of which remain in print. His reputation as a futurist has regrettably tarnished his standing as a musician. While his futurist music is of theoretical interest, in compositional terms it is comparatively insignificant when considered alongside his operas, songs and instrumental works; likewise, his involvement with the movement has overshadowed his significant ethnographic work.

WORKS
(*selective list*)

DRAMATIC

Lilia (op, 2, Pratella), op.15, 1903; Lugo, 1905; expanded as Il regno lontano (3, Pratella), *c*1905
La sina d'Vergöun (scene della Romagna bassa, 3, Pratella), op.22, 1906–8; Bologna, 1909
L'aviatore Dro (op, 3, Pratella), op.33, 1911–14; Lugo, 1920
Dono primaverile (incid music, Pratella), op.48, 1916–21; Bologna, 1923; rev. as Il principe malinconico
La ninna nanna della bambola (children's op, 2, Pratella, after L. de Nardis), op.44, 1920–22, some music from 1901–2; Milan, 1923
La leggenda di San Fabiano (sacra rappresentazione, prol., 2, epilogue, A. Beltramelli and Pratella), op.54, 1928–32; Bologna, 1939
L'uomo (op, 3, Pratella), op.59, 1934–9, unperf.
Nòstra médar Rumagna (incid music, Pratella), op.61, 1952–4
Operettas, other incid music, film scores

OTHER WORKS

Orch: Romagna, opp.17–21, 5 sym. poems, 1903–4; Musica futurista, op.30, 1912, soon renamed Inno alla vita, rev. 1933; La guerra, op.32, 3 dances, 1913, rev. as Il rondò della vittoria, 1932
Choral: La chiesa di Polenta, op.10 (G. Carducci), 1v, chorus, orch, 1903; Laudes creaturarum (Il cantico di frate sole di Sancto Francesco), op.50, chorus, org, str, 1927; other pieces
Chbr and solo inst: Pf Trio, op.28, 1911; Sonata seconda, op.37, vn, pf, *c*1920; Giallo pallido, op.39, str qt, 1923; Per un dramma orientale, op.40 [adapted, probably *c*1934, from unpubd intermezzos of 1922 for Marinetti: Il tamburo di fuoco], wind qnt, pf, str qt (1938); Sonata terza, op.55, pf qnt, 1937; Sonata quarta da conc., op.58, vc, pf, 1940s; several early pieces, vn, pf; kbd music
Songs: Le canzoni del niente, op.36, 1v, pf, 1917–18; I canti del cammino, op.52, 1v, pf trio, 1928: many others, folksong arrs., edns. and arrs. of works by Carissimi, Rutini, Sandoni, Serini, etc.

Principal publishers: Bongiovanni (Bologna), Carisch, Fantuzzi (Milan), Ricordi, Sonzogno (Milan)

FLORA DENNIS

Prati, Alessio (*b* Ferrara, 19 July 1750; *d* Ferrara, 17 Jan 1788). Italian composer. He studied with Pietro Marzola, *maestro di cappella* of Ferrara Cathedral. At Piccinni's suggestion, he commenced studies in Naples in 1768. In 1774–5 he spent ten months in Rome studying counterpoint with Abate Speranza. He then moved to France where he apparently taught singing and the harpsichord in Marseilles for two years; he may also have lived in Lyons where his first set of sonatas was published. Later he entered the service of the Duke of Penthièvre in Paris. His music was heard at the Concert Spirituel in 1776 and his first opera, *L'école de la jeunesse*, met with success at the Théâtre Italien in 1779. The published score is dedicated to the writer Mme de Genlis, governess of the children of the Duke of Chartres, Penthièvre's son-in-law. These are probably the 'princes' that Prati is said to have taught, among them the future king, Louis-Philippe.

Grand Duke Pavel Petrovich, in Paris in 1782, encouraged Prati to come to St Petersburg later that year. Prati gave three concerts there in March 1783, including his oratorio *Giuseppe riconosciuto*, returning to Italy by way of Vienna (a mass MS in Ferrara is dated 'Vienna 1783'). Back in Ferrara in 1784 he failed to succeed Marzola, although about 1786 he became coadjutor to the new *maestro* Petrucci. His successful *opera seria Ifigenia in Aulide* (1784, Florence) propelled him into a remarkable career as a composer of *opera seria*. During the next two years he composed four more operas for Florence, Munich, Naples and Venice, two of them with the prima donna Cecilia Giuliani, with whom he was romantically involved. His untimely death brought to an end an extraordinarily promising career.

His operas, although few, hold an important place in the history of opera. His time in France worked to his advantage in the 1780s when French-inspired spectacle operas were being given in the major centres. His *Armida abbandonata* (1785, Munich) was a collaboration with Sertor, the eldest of the innovative Venetian librettists who would transform *opera seria* in the late 1780s and 90s. The first French-inspired opera produced in Munich since Mozart's *Idomeneo* of 1781, *Armida* has the typical characteristics: a plot based on fable, choruses and ballets, supernatural aspects and occasionally the suspension of the 'exit aria' convention. His *Olimpia* has mythological subject matter, a ballet, a battle with a monster and the scaling of a city wall, as well as an unusually large number of ensembles (five). *La vendetta di Nino* (1786, Florence) had far-reaching implications: the staged matricide marked the abrogation of conventions more than a century old that proscribed staged deaths, and led to a series of 'La morte' operas; in 1791, in Vienna, Emperor Leopold II, Archduke of Tuscany at the time of the Florence première, chose Prati's opera to initiate his efforts to reinstate *opera seria*. Even his more traditional librettos have fashionable aspects: *Demofoonte* has a quintet ending Act 1 and an unusual number of natural tenors (Adrastus, Mathusius and Demophoön); in the surprise ending of his *Ifigenia in Aulide*, the usual sacrifice of 'the other Iphigenia' does not take place because the oracle declares that everyone has suffered enough.

Prati was a skilled musical dramatist capable of passages filled with raging fury as well as moments of ravishing beauty. Solo wind figure prominently in arias and ensembles as well as in obbligato recitative. Prati's operas have an unusual amount of obbligato recitative in a broad spectrum of styles, which he used to build powerful scenes, some with important choral elements. He produced an unusual number of sonatas for an opera composer, of which the first set makes excessive use of Alberti basses, while the later ones aim at brilliance, with more varied textures and expansive (though not difficult) passage-work.

WORKS

OPERAS

L'école de la jeunesse, ou Le Barnevelt français (oc, 3, L. Anseaume), Paris, Italien, 11 Oct 1779 (Paris, 1779)
L'Ifigenia in Aulide (os, 3, L. Serio), Florence, Pergola, aut. 1784, *US-Wc*
Armida abbandonata (os, 2, G. Sertor, after T. Tasso: *Gerusalemme liberata*), Munich, Hof, 1785, *D-Mbs**
La vendetta di Nino [La morte di Semiramide] (melodramma tragico, 2, P. Giovannini after Voltaire: *Sémiramis*), Florence, Pergola, carn. 1786; *A-Wn*, *GB-Ob*, *I-Bc*, *Fc*, *Nc*, *Rsc*, *US-Wc*
Olimpia (os, 2, after Voltaire), Naples, S Carlo, 6 June 1786; *I-Nc*, *P-La*, *US-Wc*
Demofoonte (os, 3, P. Metastasio), Venice, S Benedetto, 26 Dec 1786, ?*D-Bsb*, *P-La*
L'Aminta (azione pastorale, G. Muzzarelli Brusantini), Ferrara, ?1787

Doubtful: Semiramide (Metastasio), Paris, 1780; Didone abbandonata (Metastasio), Munich, 1783

OTHER VOCAL

Giuseppe riconosciuto (orat, Metastasio), St Petersburg, March 1783

La passione di Gesù Cristo signor nostro (orat, Metastasio), Florence 1786
3 rondeaux italiens traduits en français (Paris, *c*1781); Recueil de romances italiennes et françaises (Berlin, 1782); 6 romanzi in lingua italiana e francese (Metastasio) (Venice, *c*1782); Sarete alfin contenti (Metastasio: *Demetrio*), recit, Agitata in tanti affanni (not by Metastasio), aria, *Journal des ariettes italiennes* (1782), Oct, no.91; Scène italienne d'Armide (Son pur giunta, recit, Infelice in tanto orrore, rondò) (Paris, 1784)

INSTRUMENTAL

Concs.: ob, perf. Paris, 1777, ed. (Zürich, *c*1950); fl (Paris, ?1786); 2 for hpd, *I-Nc*; 2 for hpd, vn, *Nc*
Sonatas: 6 for hpd/pf, vn, op.1 (Lyons, n.d.; London, n.d.), 3 rev. for hp/pf, vn, op.6 (Paris, ?1781); 3 for hp/hpd, vn, op.2 (Berlin and Amsterdam, 1782) [described as trios in score]; 3 for hp/hpd, vn, op.3 (Berlin and Amsterdam, 1782) [described as trios in score]; 6 for hpd/pf, vn (Paris, 1782 or later)
Other works: Duo, 2 hp (Paris, ?1786); Duo, 2 vc, ?*D-Bsb*; Sinfonia, D, org, *I-Bsf*

MARITA P. McCLYMONDS (work-list with JOHN RICE)

Pratinas of Phlius (*fl* Athens, *c*500 BCE). Greek tragic and (probably) dithyrambic poet. He wrote 50 plays, 32 being satyr-plays, a form of which he was one of the first exponents. Four fragments of his lyric writing have survived. One of these (Campbell, frag.712=Edmonds, frag.5) is an exhortation to pursue 'neither the intense [*syntonon*] nor the relaxed [*aneimenan*] Iastian' but instead to 'plough the middle [*mesan*: 'mean'] furrow and Aeolize [i.e. 'compose in the Aeolian *harmonia*'] in your melos', since the Aeolian *harmonia* 'is certainly suited to all song-braggarts'. Pratinas's reference was probably to the central concept of Hellenic ethos theory – the MIMESIS of character traits. The Aeolian *harmonia* was thought to express the blithe, free-spoken nature of the Aeolian peoples; it was a mean between such intense modes as the Mixolydian and the serenity of the 'relaxed' Iastian (renamed Hypophrygian).

In a long fragment (Campbell, frag.708=Edmonds, frag.1) preserved in Athenaeus's *The Sophists at Dinner* (xiv, 617b–f), Pratinas complains of the abuses to which the DITHYRAMB has been subjected and especially the rising prominence of the aulos, which is criticized for its sound and, of course, for the typical unattractive smell, dampness and imprecision of all wind instruments. He writes:

> The Muse established the song as queen; let the aulos dance behind, for it is the servant. It is accustomed to be the leader only for door-to-door carousels and the brawling of drunken young men. Drive away the one that has the breath of the spotted toad, burn the spit-soaked reed, the low-babbling-unmelodious-arythmic-stepping flatterer, its body formed by a reamer.

Athenaeus identifies this as an excerpt from a hyporcheme (*huporchēma*), but it seems clear that the same composition might fall into a number of different classifications. In any event, the abuses he condemned eventually had their most obvious effects on the dithyramb (*see* TIMOTHEUS), but tragic dramas of the late 5th century BCE also show clear traces of such libretto writing. Line 12 of this fragment is thought to contain a punning reference (*phruneou*: 'toad') to the early tragic poet Phrynichus ('little toad'). Pratinas, who seems to have been strongly didactic and prone to theorize in his poetry, was a reactionary many decades before Aristophanes attacked the 'new music' associated with Euripides and the dithyrambists.

Prato [Pratis], **Johannes de.** *See* STOKEM, JOHANNES DE.

Prato, Lorenzo (di Jacopo) da (*b* Prato, 1417; *d* Napoli, 1492). Italian organ builder. He was the foremost member of the important 15th-century Tuscan school of organ building centred in Prato (another notable member was Matteo da Prato). His organs include those built for S Agostino and S Maria della Scala, both in Siena (before 1459 and 1460), S Francesco, Cortona (1467), and Pistoia

Cathedral (commissioned in 1473), but he is known principally as the builder of the organ in *cornu Epistolae* of the basilica of S Petronio in Bologna, commissioned on 2 June 1470 and completed in 1475. The original gilded case survives, enclosed in a carved stone Baroque outer case of 1674–5. The original instrument had the following specification: Principale 24′ (probably doubled from *c*), Ottava 12′ (doubled from *c*, tripled from *c*′), Quintadecima 6′ (doubled from *c*′), Decimanona, Vigesimaseconda, Vigesimasesta, Vigesimanona, Trigesimaterza, Trigesimasesta, Flauto in XV (6′). It had a manual of 51 keys (*F*′*G*′*A*′–*a*″), a pull-down pedal-board (probably of 17 keys) and a spring-chest with copper sliders. The pitch was a′ = 521 (i.e. one and a half tones higher than a′ = 440). In 1528–31 G.B. Fachetti lowered the pitch by one tone and built a new wind-chest to add extra enharmonic or 'quarter' notes for the three A♭s. In 1563 Giovanni Cipri added a Flauto in XII (i.e. sounding 12 notes above the Ottava 12′). The organ has been restored (1974–82).

UMBERTO PINESCHI

Prato, Vincenzo del. *See* DAL PRATO, VINCENZO.

Pratoneri, Gaspero [Spirito da Reggio] (*fl* Reggio nell'Emilia, 1566–*c*1595). Italian composer. He has been confused in many sources with the earlier Hoste da Reggio. In the dedication of Vincenzo Spada's *Primo libro delle canzoni a sei voci* (Venice, 1592), addressed to the 'virtuosissimi signori del ridutto del Sgr. Spirito Pratoneri', he is referred to as 'canonico di Reggio'; in about 1569 he was *maestro di cappella* at S Prospero, Reggio nell'Emilia. The title-pages of three of his publications show that he was called 'Spirito' or 'Spirito da Reggio'; he appears as the latter in madrigal anthologies and in his own first volume of madrigals. He was never called 'Spirito l'Hoste', however; this seems to be an invention of Fétis. His two volumes of madrigals are full of occasional pieces celebrating the weddings and the comings and goings of the gentry of Reggio. The music is undistinguished, perhaps reflecting amateur or provincial taste. (*FetisB*; *GaspariC*)

JAMES HAAR

Pratsch, Johann Gottfried [Prach, Ivan; Práč, Jan Bohumír] (*b* Silesia, *c*1750; *d* ?St Petersburg, *c*1818). Czech composer, teacher and folksong collector. Much of his life was spent in Russia. From 1780 until 1795 he taught music at the Smolnïy Institute, and in 1784 he was appointed harpsichord teacher at the St Petersburg Theatre School. His keyboard compositions include a sonata in C (1787), six variations on an allemande by Martín y Soler (1794), Fandango (1795), 12 variations (1802), a sonata based on Russian themes (1806), eight variations on the folktune *Tï podi, moya korovushka, domoy* ('Be off home with you, my little cow!', 1815) and an unpublished rondo. He also made a keyboard arrangement of the music from Martín y Soler's opera *Gorebogatïr Kosometovich* ('The Sorrowful Hero Kosometovich') and Pashkevich's *Fevey* (both 1789). His most important work, however, was the *Sobraniye narodnïkh russkikh pesen s ikh golosami* ('Collection of Russian folksongs with vocal parts'), one of the earliest collections of Russian folktunes, which he made in collaboration with N.A. L'vov. In its first edition (St Petersburg, 1790) this comprised 100 songs; larger revised editions were published in 1806 (repr. as *A Collection of Russian Folk Songs by Nikolai Lvov and Ivan Prach*, 1987) and 1815.

GEOFFREY NORRIS

Pratt, Henry (*b* Wrentham, MA, 14 May 1771; *d* Winchester, NH, Aug 1841). American organ builder. A self-taught mechanic who also worked on clocks, guns, fifes and violins, he built his first small chamber organ in 1789 after having studied a similar organ in Boston. In 1799 he built his first church organ for the Congregational Church in Pittsfield, Massachusetts, and at the time of his death he was credited with having built 23 church organs and 19 chamber organs. His organs were all of small size, having mostly wooden pipes. Although he lived and worked in a small south-western New Hampshire town, he knew and exchanged information with Josiah Leavitt and William Goodrich in Boston, serving somewhat as a link between the 18th-century New England builders and those of the early 19th century.

BARBARA OWEN

Pratt, Silas G(amaliel) (*b* Addison, VT, 4 Aug 1846; *d* Pittsburgh, 30 Oct 1916). American composer and writer. He left school at the age of 12, and while working in three Chicago music stores he saved enough money to spend the years 1868–71 in Germany studying with Franz Bendel, Theodor Kullak and others. A wrist injury caused by over-strenuous practice during his lessons with Kullak prevented his career as a concert pianist. Upon returning to Chicago he became organist of the Church of the Messiah, and with George P. Upton organized the Apollo Club. During his next trip to Germany (1875) Liszt listened intently during a two-hour matinée of Pratt's compositions, giving him encouragement and advice (see Fay), and Pratt conducted his own *Centennial Overture*

at Berlin (4 July 1876). From 1877 to 1888 he again lived in Chicago, where in June 1882 his second opera, *Zenobia, Queen of Palmyra*, was produced in concert form at Central Music Hall and staged the following March at McVicker's Theatre. His first opera, titled *Antonio* when begun in 1870 but retitled *Lucille*, had a three-week run at the Columbia Theater in Chicago during March 1887. In 1888 Pratt moved to New York, where in 1895 he became principal of the West End School of Music. In 1906 he founded the Pratt Institute of Music and Art in Pittsburgh, and was its president until his death. He wrote *Lincoln in Story* (New York, 1901) and *The Pianist's Mental Velocity* (New York, 1905).

ROBERT STEVENSON

Pratt, Waldo Selden (*b* Philadelphia, 10 Nov 1857; *d* Hartford, CT, 29 July 1939). American musical scholar. He was educated at Williams College (BA 1878, MA 1881), and at Johns Hopkins University, where he studied Greek, archaeology and aesthetics. He was largely self-taught in music. After two years with the Metropolitan Museum of Art in New York, he went to the Hartford Theological Seminary in 1882 as professor of ecclesiastical music and hymnology, a position he retained until his retirement in 1925. He taught concurrently at several other colleges, including the Institute of Musical Art in New York, and served as a church organist and a choral conductor. He was president of the Music Teachers National Association (1906–8), an editor of its *Proceedings*, and president of the American section of the International Musical Association (1911–16). He wrote a standard history of music and several books on the use of music in the church, and edited the American supplement to the second edition of *Grove's Dictionary*, a book of children's songs and a Sunday school hymnbook. He was awarded honorary degrees by Syracuse University (MusD 1898) and Williams College (LHD 1929).

RAMONA H. MATTHEWS

Praupner [Braupner, Brautmer, Brautner, Prautner], **Jan (Josef)** (*b* Litoměřice, 9 Jan 1751; *d* Prague, after 1824). Bohemian violinist, choirmaster and composer, brother of VÁCLAV PRAUPNER. He studied music at Litoměřice, where he attended the grammar school, and in about 1770 he studied philosophy at Prague. As a violinist he was active in the Prague Theatre orchestra (as early as 1778), at the Týn and Crusaders' churches and at the metropolitan cathedral (from about 1790; he was still listed there in 1824). In 1807 he succeeded his brother as the choirmaster of the Crusaders' church. He was renowned as a violinist and music teacher. His extant compositions, all sacred works in a high Classical style similar to that of Michael Haydn, comprise two masses, a Requiem, a *Te Deum* and eight lesser works (all in *CZ-Pnm*).

MILAN POŠTOLKA

Praupner [Braupner, Brautmer, Brautner, Prautner], **Václav** [Venceslaus] **(Josef Bartoloměj)** (*b* Litoměřice, 18 Aug 1745; *d* Prague, 1 April 1807). Bohemian composer, violinist and organist, brother of JAN PRAUPNER. He studied music at the Jesuit Gymnasium in Litoměřice, and before 1770 went to Prague, where he studied philosophy and theology. He became a church musician and also taught music to the nobility. From 1783 he directed the orchestra at several Prague theatres, and was choirmaster at various churches including, from 1794 until his death, the Týn Church and St František. He was an admirer of Mozart, whom he met in 1787. Esteemed as a player, violin and singing teacher and orchestra director, he was elected the first director of the Prague Tonkünstler-Sozietät in 1803, a position that enabled him to help introduce important oratorios, such as *The Creation* and *Messiah*, to the Prague public.

Praupner's most notable composition is the scenic melodrama *Circe* (1789). Developing J.A. Benda's model, he wrote music full of abrupt modulations and chromaticism, with the orchestration reflecting the dramatic situations of the text. His sacred compositions contain

conservative traits such as *a cappella* writing and the use of a double chorus.

WORKS

MSS, some autograph, in CZ-Pnm, unless otherwise indicated

Pražák Quartet. Czech string quartet. It was founded at the Prague Conservatory in 1974 by Václav Remeš, Vlastomil Holek, Josef Klusoň and Josef Pražák. After graduation in 1978 its members undertook further study with Antonín Kohout of the Smetana Quartet, at the Prague Academy of Musical Arts, and with the members of the LaSalle Quartet at the University of Cincinnati. In 1978 it won the *grand prix* at the Evian International Competition and the following year it took first prize at the Prague Spring Competition. In 1989 Michal Kaňka replaced Pražák as cellist. The ensemble has won acclaim for its performances of music of the Czech and Second Viennese schools. In particular, its interpretations of Janáček's quartets are regarded as authentic. Václav Remeš has also been praised for his performances of Janáček's Violin Sonata.

TULLY POTTER

Precentor. In a general sense, one who leads the singing in church (the cantor in a synagogue). More specifically, in the English dissenting churches and in Scottish Presbyterianism, the minister or layman who strikes up the tune for the congregation in the absence of an instrument; in cathedrals, an important musical officer among the clergy: *see* ANGLICAN AND EPISCOPAL CHURCH MUSIC.

WATKINS SHAW

Preces (Lat.: 'prayers'). In the Western rites, the name for a series of short petitions in the form of versicles and responses. They form a specific category of chant in the Gallican and Mozarabic liturgies (*see* GALLICAN CHANT, §13; MOZARABIC CHANT, §3, x), but in the Roman rite they are confined to the Office of Prime for ferial Sundays (but *see also* LITANY, for the same type of chant). For the use of the term in the Anglican services of Matins and Evensong *see* VERSICLE.

□

Prechtel, Franz Joachim. *See* BRECHTEL, FRANZ JOACHIM.

Preciado (Ruiz de Alegría), Dionisio (*b* Salvatierra, Alava province, 19 Jan 1919). Spanish musicologist, organist and composer. While a boy soprano in local parishes, he received his early musical training from Ramón Segosti, the organist in his home-town. Beginning at Alsasua, aged eleven, he enrolled at various Capuchin institutions in Navarra and after army service (1938–9) he returned to ecclesiastical studies at Estella and was ordained a priest in 1943. He was organist and choir director for the S Antonio seminary at Pamplona (1944–9) and at various churches in Santiago, Chile (1949–59), always known by the name Fray Pío de Salvatierra (under which he published an extensive list of compositions beginning in 1960). During his decade in Chile he studied theory and composition at Santiago Conservatory, gaining the licentiate in music (1959). He later won both first and second prizes for villancicos he submitted in a contest at Pamplona in 1962.

He resided in Oxford (1964–5) and while there published 14 articles in *Ritmo* on electronic music. In 1966 he enrolled at the Pontificio Instituto di Musica Sacra in Rome, obtaining the licentiate in plainchant (1968) and the doctorate (1975). He taught musicology at the Valencia Conservatory (1976–8), and musical palaeography and folklore at the Madrid Conservatory from 1978 until his retirement in 1987. The Spanish Musicological Society elected him director of its journal, *Revista de musicología*, from 1978 to 1982. He was elected president of the society in 1994.

Preciso, Don. *See* IZA ZAMÁCOLA, JUAN ANTONIO.

Pre-Classical. A term applied to what came before and led up to the 'classical' synthesis achieved by Mozart and Haydn; more loosely it has been used to signify any music before the late 18th century. It is applied most aptly to the Arcadian classicism represented by Vinci, Pergolesi and Hasse (*see* CLASSICAL) and thus to a musical style more appropriately called GALANT. From the critical standpoint of the later 18th century, the virtues of the earlier Italian operatic style were simplicity, directness and boldness. The question was often raised whether the subsequent evolution of the Italian style represented an improvement or a dilution. With respect to Pergolesi in particular, G.J. Vogler (1778) posed the question 'whether through later additions dryness was avoided or instead simplicity was spoilt'. In a lengthy analysis and recomposition of Pergolesi's *Stabat mater*, he pointed out the essential differences between his generation and that of the 1730s. He regularized all the musical periods, balanced the weight of tonic and dominant, filled out the harmony to four parts, thickened the orchestration and corrected what appeared to him as cavalier part-writing. He did all this while maintaining that the origins of 'modern' musical style were to be sought nowhere else but in the breakthrough to true melody achieved by Pergolesi and his generation. 'Facile inventis addere.'

In historiographical writings the term 'pre-classical' has often been used in an implicitly or explicitly teleological sense, often pejoratively, with regard to music of widely differing styles and origins. Perversely, some musical editions have employed the term even for works of the later 18th century, as a synonym for 'Kleinmeister'. The idea of a 'pre-classical' period (like that of a '[Viennese] classical style') has come under attack in recent Anglo-American, and even some German, discussions; James Webster, for instance, has objected to the banishment of 'Haydn's early and middle music, indeed all pre-1780 music, to a pre-Classical ghetto'. There is probably no single, satisfactory designation – apart from a simple chronological one – that can encompass all of mid-18th-century European art music, given the multiplicity of its idioms.

DANIEL HEARTZ/BRUCE ALAN BROWN

Preconium paschale. *See* EXULTET.

Predieri. Italian family of musicians. Active mainly in Bologna, it included the singer Giuseppe Predieri (*b* Bologna, *c*1650; *d* Bologna, 1722) and the six members of the family discussed below; some of the family relationships are unclear.

(1) **Giacomo (Maria) Predieri** (*b* Bologna, 9 April 1611; *d* Bologna, 1695). Organist, cornettist and composer. He was a cornettist in Bologna's civic instrumental group and a singer at S Petronio there from October 1636 to December 1657, serving as *vicemaestro di cappella* from 1650 to 1657. He was organist at the cathedral of S Pietro from 1679 to 1693; simultaneously he served as *maestro di cappella* to the Confraternita de' Poveri di S Maria Regina Coeli around 1681. He was among the founder-members of the Accademia Filarmonica in 1666 and in 1693 was chosen *principe*, a position he could not fill because of an apoplectic stroke. His oratorio *Il valore della povertà*, the music of which is lost, was given at Bologna in 1681.

(2) **Antonio Predieri** (*b* Bologna, *c*1650; *d* Bologna, 1710). Singer, nephew and pupil of (1) Giacomo Predieri. He first appeared as a tenor in *L'inganno trionfato* by F.M. Bassani (1673). From 1684 to 1687 he was in the service of the Duke of Mantua and from 1687 until at least 1699 he served the Duke of Parma, performing in operas at Milan, Modena, Naples and Rome, as well as at Parma and Piacenza. He specialized in comic roles and many *vecchia* parts were created for him. From 1689 to 1696 he sang at the church of the Madonna della Steccata in Parma and on festive occasions at the cathedral. In 1685 he was admitted to the Accademia Filarmonica of Bologna; he later appeared as a singer at Genoa (1699), Milan (1704), Florence (1707) and Forlì (1710).

(3) **Angelo** [Tommaso] **Predieri** (*b* Bologna, 14 Jan 1655; *d* Bologna, 27 Feb 1731). Teacher, singer and composer, son of Marco Filippo and Virginia Vignoli. He studied music with Camillo Cevenini and Agostino Filipucci. In 1671 he was admitted to the Accademia Filarmonica as a tenor singer. He entered the Third Order of Franciscans on 3 January 1672, taking the religious name Angelo. In 1673 he was elected *maestro di cappella* of S Maria della Carità. Among his pupils was G.B. Martini, who praised him as having a rare talent for teaching and held him in great esteem as his first mentor. He is known to have written a Kyrie, for five voices and instruments, and a 'Christe eleison', for soprano, alto and instruments; 'Et in saecula saeculorum' from an otherwise lost psalm *Dixit Dominus* was published in Martini's *Esemplare, o sia Saggio fondamentale pratico di contrappunto fugato*, ii (Bologna, 1775), 135.

(4) **Giacomo Cesare Predieri** (*b* Bologna, 26 March 1671; *d* Bologna, 1753). Composer and singer, nephew of (1) Giacomo Predieri. He was the son of Carlo and Vittoria Torri and a pupil of his uncle Giacomo and of G.P. Colonna. Admitted to the Accademia Filarmonica as a singer on 13 May 1688, he advanced to the rank of composer on 29 November 1690, and was named *principe* in 1698, 1707 and 1711. He was *maestro di cappella* at six institutions in Bologna: the cathedral of S Pietro (1696–1742), the Congregazione di S Gabriele (*c*1681), the churches of S Salvatore (*c*1700), S Paolo and S Bartolomeo, and the Arciconfraternita della Vita (*c*1705–21). He wrote a good deal of sacred music, including 11 oratorios, of which only one survives.

WORKS

ORATORIOS

all lost unless otherwise stated

Mosè bambino esposto al Nilo, Bologna, Palm Sunday, 1698
Davide perseguitato, Bologna, 1702
Il trionfo della croce (G.B. Taroni), Cento, 14 Sept 1702, *D-Bsb*
La sepoltura di Cristo, Bologna, 1704
La fiamma della carità, Bologna, 1705
Il Gefte, Bologna, 11 March 1706
La martire d'Alessandria S Catterina (Taroni), Bologna, Lent 1709
Maria e Giuseppe in traccia di Gesù (L.A. Mescoli), Bologna, 30 March 1713
La purificazione di Maria Vergine, Bologna, 28 March 1715
Jezabelle, Bologna, 25 March 1719 [collab. F. Arresti]
La decollazione di S Giovanni Battista, Bologna, 3 April 1721

OTHER WORKS

Cantate morali e spirituali, 2–3vv, some with vns, op.1 (Bologna, 1696)
1 canzone sacra in La ricreazione spirituale nella musica delle sagre canzoni (Bologna, 1730)
1 sonata, g, vn, vc, in Sonate a violino e violoncello di vari autori (Bologna, *c*1700)
Credo, 4–5vv, insts, *I-Bc*
Salmi, 8vv, 1690, *Bam*, *Bc*
Fuga, 8vv, 1690, *Baf*
Laudate Dominum, 8vv, *Fc*
Astra coeli cari ardores, A, org, 1745, *Bc*

(5) **Luca Antonio Predieri** (*b* Bologna, 13 Sept 1688; *d* Bologna, 1767). Composer and violinist, nephew of (4) Giacomo Cesare Predieri. He was the son of Vitale and Maria Menzani. He studied the violin with Abondio Bini and Tommaso Vitali, and counterpoint with his uncle Giacomo Cesare, with (3) Angelo Predieri and with G.A. Perti. He was among the instrumentalists at the church of S Petronio for the patronal feast in 1704, 1705 as a viola player and 1706–11 as a violinist. On 25 June 1716 he was admitted to the Accademia Filarmonica as a composer and in 1723 served as *principe*. He was *maestro di cappella* in several Bolognese churches: S Paolo (1725–9), Madonna della Galliera (1726), for the Arciconfraternita della Vita (1727) and the cathedral of S Pietro (1728–31). In addition to sacred music, he wrote numerous operas, among which his *Partenope* inaugurated the Teatro Marsigli-Rossi in 1710.

At the end of 1737 he went to Vienna, and after two years was made *vicemaestro* of the court chapel. A series of letters written to Padre Martini reveals his cordial relationship with Fux, his successes at court and his favour with the emperor, who found in him a worthy successor to Caldara. In 1741, at the death of Fux, he assumed the direction of the court chapel, although he used the title of first *maestro* only in 1746. He retired in 1751, keeping his title and stipend until 1765 when he returned to Bologna.

His sacred works exhibit a mastery of vocal polyphony and polychoral writing. His operas and oratorios are characterized by careful word setting in the recitatives and effective use of dynamic colours in the arias. He was one of the most famous opera composers of his generation, working in the same years as Vinci, Pergolesi and Porpora. The librettos he set reflect the taste of the first Arcadian reform of opera, but he also wrote *Il duello d'amore e di vendetta*, described as a Spanish opera. His collaboration with Metastasio and Pasquini on *drammi per musica* and *azioni teatrali* marked the peak of his career. In Vienna his music changed from the prevailing *style galant* of *Amor prigioniero* to a more dramatic expression of the text, a greater use of polyphonic forms and orchestral independence. His operatic works were written at the close of the era of Emperor Charles VI in Vienna and they were soon replaced by the new dramatic style of Jommelli and Gluck. By the time he retired his operas were almost completely neglected in Vienna.

WORKS

OPERAS

lost unless otherwise stated

La Partenope (S. Stampiglia), Bologna, Marsigli-Rossi, 28 Oct 1710
La virtù in trionfo o sia La Griselda (T. Stanzani, after A. Zeno), Bologna, Marsigli-Rossi, 18 Oct 1711; 1 aria, *I-Bc*
La Giuditta (F. Silvani), Ancona, La Fenice, 1713
Lucio Papirio (A. Salvi), Florence, Pratolino, Villa Medici, 1714; 4 arias, *GB-Lbl*
Astarte (Zeno, P. Pariati), Rome, Capranica, 1715
Il pazzo per politica (G.B. Gianoli), Livorno, S Sebastiano, 1717
Il duello d'amore e di vendetta, Livorno, S Sebastiano, 1718
La fede ne' tradimenti (G. Gigli), Florence, Pergola, 1718
Merope (Zeno, Pariati), Livorno, S Sebastiano, 1718
Anagilda (Gigli), Turin, Carignano, 1719
Il trionfo della virtù (F. Pecori), Florence, Pergola, 1719
Il trionfo di Solimano, ovvero Il trionfo maggiore è vincere se stesso (Pecori), Florence, Pergola, 1719
La finta pazzia di Diana, Florence, Pergola, 1719
Astarto, Florence, Pergola, carn, 1720
Tito Manlio (M. Noris), Florence, Pergola, 1721
Sofonisba (Silvani), Rome, Alibert, 1722
Scipione, Rome, Alibert, 1724
Cesare in Egitto (G.F. Bussani), Rome, Capranica, carn. 1728
Astianatte (Salvi), Alessandria, Soleri, aut. 1729
Eurene (C. Stampa), Milan, Regio Ducal, 1729, rev. as Sirbace, Pistoia, Accademici dei Risvegliati, 2 July 1730
Ezio (P. Metastasio), ? Milan Regio Ducal, carn. 1730
Alessandro nell'Indie (Metastasio), Milan, Regio Ducal, 1731
Scipione il giovane (G.F. Bortolotti), Venice, S Giovanni Grisostomo, aut. 1731, *F-Pc*
Amor prigionero, Vienna, 1732, *A-Wn*
La serva padrona (F. Vanneschi), Florence, Cocomero, 1732
Il sogno di Scipione (Metastasio), Vienna, 1 Oct 1735
Zoe (Silvani), Venice, S Cassiano, aut. 1736
Gli auguri spiegati (G.C. Pasquini), Laxenburg, 3 May 1738, *Wgm*
La pace tra la virtù e la bellezza (Metastasio), Vienna, 15 Oct 1738, *Wgm*
Perseo, Vienna, 4 Nov 1738, *Wgm*
Astrea placata, ossia La felicità della terra (Metastasio), Vienna, 28 Aug 1739, *Wgm*
Zenobia (Metastasio), Vienna, Favorita, 28 Aug 1740, *Wgm*
Armida placata (Pasquini), 1750; collab. E.C. Wagenseil, J. Hasse, G. Bonno, G. Abos

ORATORIOS

lost unless otherwise stated

S Cipriano e Giustina martiri, Bologna, Oratorio di S Maria della Vita, 17 March 1712
L'Adamo (G. Melani), Bologna, Madonna di Galliera, 1723
La caduta di Gerusalemme, Bologna, Oratorio di S Maria della Vita, 1st Thursday of Lent, 1727
S Pellegrino Laziosi, Bologna, Madonna di Galliera, 1729 [as I prodigi del crocifisso nella conversione di S Pellegrino Laziosi, Cento, 1734]
Gesù nel tempio, Bologna, Oratorio di S Maria della Vita, 31 March 1735
Il sacrificio d'Abramo (F. Menzoni-Giusti), Vienna, 1738, *A-Wgm*, *Wn*
Isacco figura del Redentore, Vienna, 12 Feb 1740, *Wgm*, *D-MEIl*

SACRED VOCAL

Masses, mass movements, 4-5vv, insts, *A-Wn*, *D-Dl*, *MÜs*
Antiphons, litanies, psalms, *KR*, *I-Baf*, *Fc*
Stabat Mater, 4vv, *Fc*

Several other motets, *Baf*, *Bc*, *Fc*
1 canzona in La ricreazione spirituale nella musica delle sagre canzoni (Bologna, 1730)

OTHER WORKS

1 cant, in Recueil d'airs sérieux et à boire de différents autheurs (Amsterdam, 1711)
Quel ruscel che tra sassi si frange, cant, *Bc*
Individual arias, *B-Bc*, *GB-Lbl*, *F-Pn*
1 conc, in 6 concerti a 5 (Amsterdam, *c*1717)
1 sinfonia, B♭, *I-Bsp*

(6) **Giovanni Battista Predieri** (*fl* 1730–55). Composer. He studied law and was a canon at S Maria Maggiore, Bologna. On 1 July 1749 he was admitted to the Accademia Filarmonica. From about 1748 to 1753 he was *maestro di cappella* of S Paolo, Bologna. Some of his instrumental works are set in Baroque forms such as the concerto grosso but they reveal transitional characteristics in their *galant* style, especially in the harpsichord parts. Others are sonatas in binary, three-movement form with Rococo elegance in the keyboard figurations. His organ

sonatas for the offertory consist of toccata-like passages over pedal points and contrasting sections in *galant* style.

WORKS

ORATORIOS

La fuga di Lotte, Bologna, Madonna di Galliera, 1746; listed in catalogue *I-Bc*

Giuseppe riconosciuto, Fermo, 1755, lost

Danielle liberato dal lago de' lioni, Bologna, Madonna di Galliera, 1764; listed in catalogue *Bc*

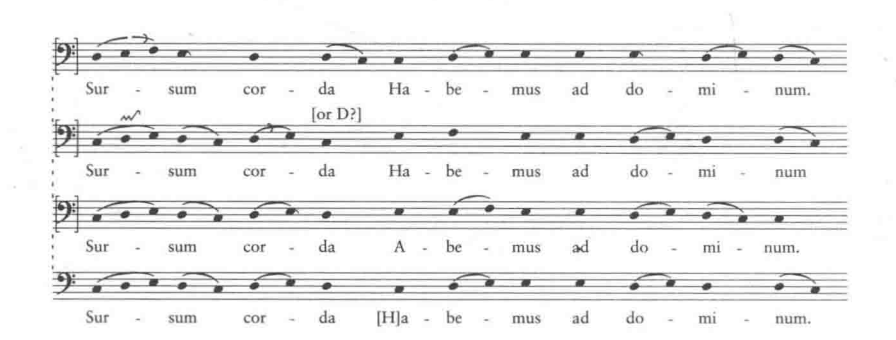
ANNE SCHNOEBELEN

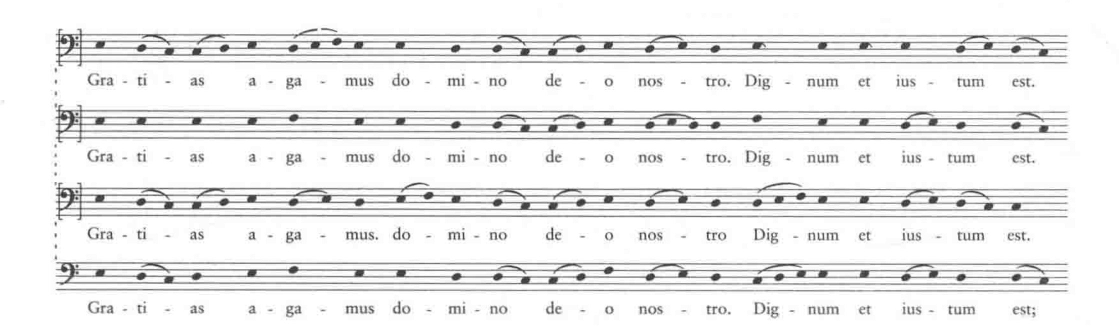
Preetorius, Emil (*b* Mainz, 21 June 1883; *d* Munich, 27 Jan 1973). German stage designer. He studied law, and later worked as an illustrator. In 1921 the writer Thomas Mann recommended him to Bruno Walter as designer for a new production of Gluck's *Iphigénie en Aulide* at Munich. During the 1920s he designed opera productions for Berlin, Dresden and Munich. His association with Bayreuth began in 1933, when he designed the *Ring* for Heinz Tietjen, with whom he worked both there and in Berlin during the 1930s and 40s. Other important work included *Ring* cycles at La Scala (1938), Rome (1953–4) and Vienna (1958–60), and the 'official' première of Richard Strauss's *Die Liebe der Danae* at Salzburg in 1952.

Preetorius's style dominated mainstream European Wagner design in the two decades preceding Wieland Wagner's revolutionary productions at Bayreuth (his influence on Wieland's early work was great but unacknowledged), forging a link between the weighty, pictorial Wagner settings of the late 19th century and the sparser experimental work of the mid-20th century. His *Ring* included geometrical rock formations that owed much to the sketches of Adolphe Appia, while his imposing Valhalla seemed to come from Fritz Lang's expressionist film *Metropolis*. Letters from Bayreuth suggest that Preetorius sometimes found the Festspielhaus traditions restricting; his later work (e.g. at La Scala in the early 1950s) showed greater abstraction in both sets and costumes. He lectured (mostly in Munich) until 1952, and was elected president of the Bayerische Akademie der Schönen Künste the following year. His published writings include *Richard Wagner: Bild und Vision* (Berlin, 1942) and a collection of essays, *Reden und Aufsätze* (1953).

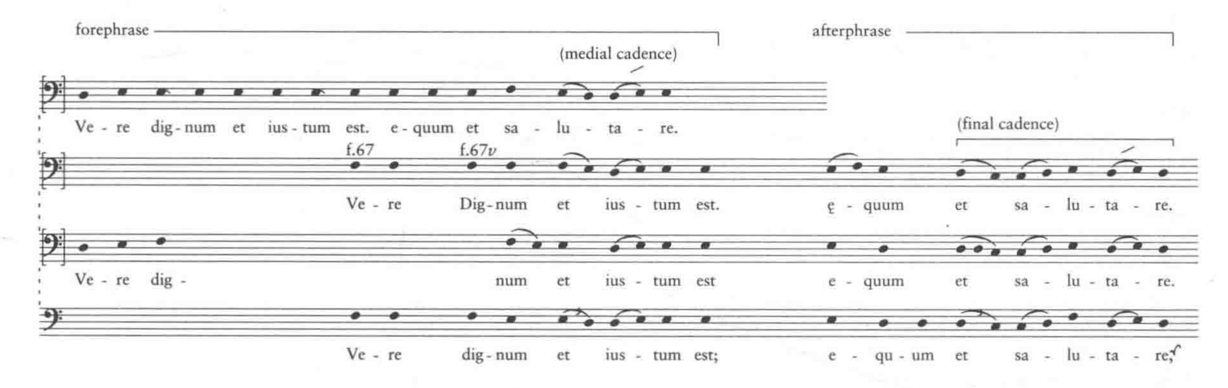
MIKE ASHMAN



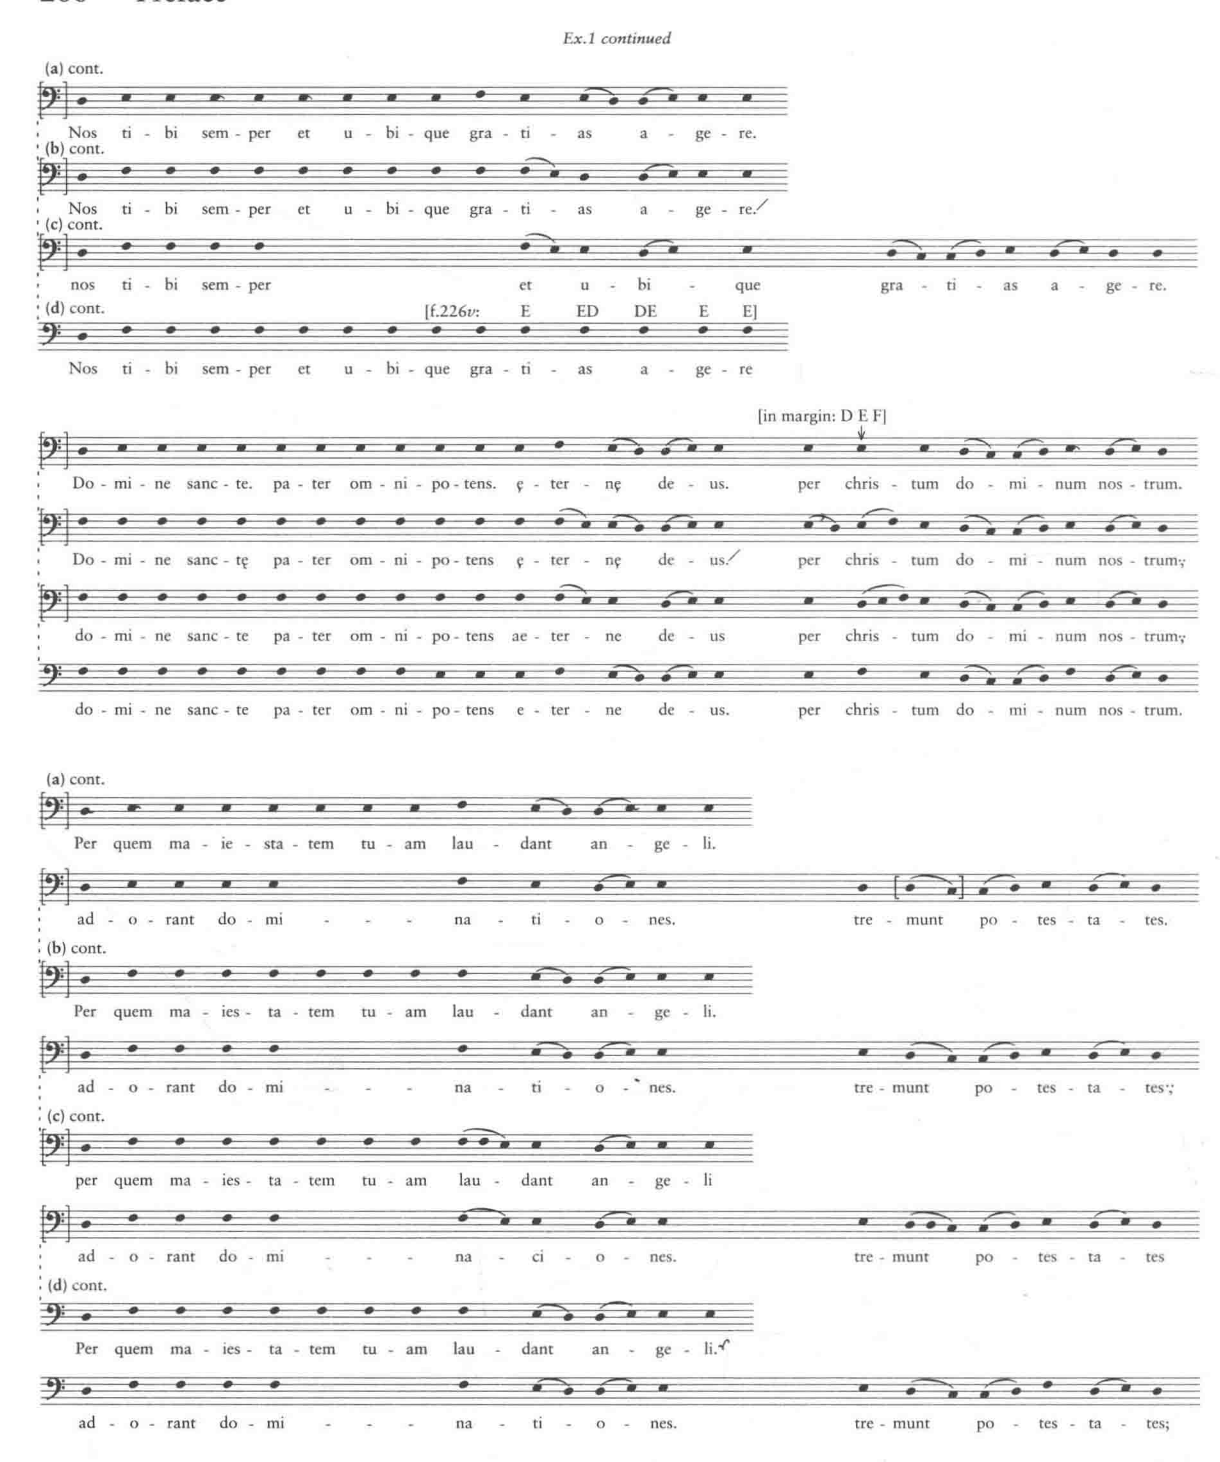
Preface. The introductory part of the Eucharistic Prayer in the Mass. The imprecise early Roman designation *preces* and the later *praefatio* (6th century; in normal use in rubrics from the 8th century) are replaced elsewhere by *illatio*, *immolatio* or *contestatio* – the first in Spain, the others in Gaul, and the last also at Milan. The Preface, opening with the ancient dialogue between celebrant and worshippers, is followed by the Sanctus, after which the Eucharistic Prayer is resumed. Most prefaces dating from the 5th century to the 8th contain variable elements; otherwise a single Common preface served. The oldest Roman collections of Mass prayers, the Leonine and Old Gelasian sacramentaries, contain approximately 267 and 54 prefaces respectively. The number of Proper prefaces increased up to about the year 1000, but a tendency to limit their number is evident as early as the 8th century in the papal sacramentary sent to Charlemagne, the Hadrianum, which has only 14 different preface texts. Urban II prescribed ten Proper prefaces in his decree of 1095; only these ten (plus perhaps those for Lent, the Dead and the Dedication feast) are usually found in sources from that date until the 20th century. The 1970 Roman Missal, however, contains 81 Prefaces. The 1674 numbered entries in *Corpus praefationum* (ed. E. Moeller, Tournai, 1980–81) are drawn exclusively from printed editions but include various solemn blessings, which from the 10th century onwards were adapted to be sung as prefaces. The entire repertory of preface texts is larger still.



The earliest completely notated and transcribable preface chants appear in south-Italian missals from about 1000. At Montecassino and its dependencies, a unique double preface-chant tradition persists from about 1070 to 1300, consisting of an everyday–votive mass chant (see below) and an independent Sunday–festive chant (the first of three in *I-MC* 339) derived from Lombard use. A less stable, ornamented version of the everyday chant, with the rubric 'In sollemnitatibus', is also found in some later Cassinese manuscripts. (See Boe, 'Präfation' §V and exx.4 and 9, *MGG2*; Boe, 1996, pp.xxi, xxxviii–li and 1–6, 11–37.) Fully legible chants for the Preface appear slightly later in Aquitanian altarbooks. With the help of legible versions, passages notated in adiastematic neumes can be transcribed. Such local redactions document the oral transmission throughout western Europe of a standard chant formula for preface texts belonging to and supplementing the Roman rite.



The four redactions in ex.1 reflect 10th-century usage. The first (*a*) – labelled 'Francisca' ('Frankish'), in a late 11th-century missal, *I-MC* 127 – is a copy of the erased 3rd preface chant in Desiderius's sacramentary, *MC* 339 (*c*1070; see Boe, 1996, pp.xlvi–li and 38–43). It may be a version of a chant introduced much earlier to southern Italy by the Franks. The second redaction (*b*), the only preface chant in an 11th-century votive missal from Canosa in Apulia (*US-BAw* W.6), is based on an archaic model that can be understood as a mid-stage between the rigid simplicity of 'Francisca' and the developed figures of



the Cassinese everyday–votive version (the now partly erased second chant in *I-MC* 339) whose earliest source dates from about 1000 (see Boe, 'Präfation', ex.7). The third redaction (*c*) was added in *in campo aperto* to an 11th-century Aquitanian sacramentary, *F-Pn* lat.2293, from Figeac. The fourth (*d*), from the missal *F-CHRm* 520 (dated 1225–50 by D. Hiley, MMMA iv, 1992), incorporates a new feature: *mi*, preceding the pes *re–mi* for the last accent in the final cadence, is raised to *fa*.

The four redactions deploy the pitches *ut*, *re*, *mi* and *fa* according to the same underlying formula, consisting of a forephrase, sometimes repeated, with medial cadence and

Ex.1 continued

an afterphrase having a different, more final cadence that begins on the 3rd syllable before the last accent. An initial figure, here the single note *re* but elsewhere expanded, begins the forephrase or its repetitions.

The formula is already implied by a scrap of notation entered over the beginning of the second section of the *Exultet* in the mid-9th century manuscript *CH-SGs* 397, a personal miscellany belonging to Grimald, archchaplain to Louis the German and later abbot of St Gallen. This copy (dated 858–67 by B. Bischoff, *Mittelalterliche Studien*, iii, Stuttgart, 1981, pp.187–212) would hardly have been used by anyone except Grimald's deacon (or Grimald himself); thus the added notation is probably contemporary. This melody is transcribed in ex.2 according to the standard formula. Three times in succession, the third syllable before the last accent at the end of a verbal phrase is marked by a *clivis* (for the notes *re–ut*) showing where to begin the final cadence (this is marked with brackets above the staff in ex.2) At the fourth cadence, the more strongly accented syllable in this

position has *virga*-plus-*clivis*: *rere-ut* for 'transire'. (Regarding the relation of the final cadence to the accentual cursus, see Boe, 'Präfation', §IV, exx.1, 2 and 3 and Boe, 1996, pp.xxxiv–xxxvii.)

Alternative chants (before *c*1150) include archaic survivals and perhaps newly composed melodies. In the 10th-century sacramentaries *F-Pn* lat.12051 and *Pn* lat.12052 from Corbie (the latter compiled for St Vaast, Arras) and in the 11th-century sacramentary *Pn* lat.9436 from St Denis, adiastematic neumes preserve a distinct preface formula, at present indecipherable, which may derive from Luxeuil or from Gallican chant. (See Boe, 'Präfation', §VII, 1; the standard formula was introduced into *F-Pn* lat.12052 shortly after the MS was completed.) The heighted neumes of an apparently unique melody for the common preface in *F-Pn* lat.2293 (the Figeac sacramentary; ex.3) show remarkable similarities to the unheightened neumes of the northern manuscript *F-Pn* 12051; the melody may indeed be Gallican.

Between 1150 and 1300 the way prefaces were sung and copied changed greatly. The oral transmission of formulae learned by ear, retained in memory and ever reapplied by the individual celebrant to the changing texts of unnotated proper prefaces – the formula being recorded only in the chant for the Common preface – gave way to the written transmission of regularized formulae. These were precisely notated for all the texts a celebrant might have to sing, and a sharply reduced number of proper prefaces were now notated one after another on cleffed staves.

The changes in chant formulae can be summarized as follows: in the name of primitive simplicity, the Cistercians stripped the preface chant down to an all but syllabic skeleton. (See H. Hüschen, 'Zisterzienser', *MGG1*, for a facsimile of the Cistercian *Liber usuum*, copied 1175–91, *F-Dm* 114, f.134.) The Franciscans borrowed the idea of paired ferial and festal chants from Montecassino; but for ferial use they took over not the Cassinese everyday–votive chant but a slightly altered version of the single Cistercian Preface, perhaps by way of the Dominicans. The Franciscan festal version, however, merely regularized the

Ex.2 Second part of *Exultet, CH-SGs* 397, p.30

standard Western formula. The Franciscan paired prefaces quickly passed into the use of the Roman curia. From the time of Innocent IV (1243–54), 'papal and Franciscan use were to all intents and purposes the same' (Hiley, 1993).

Curial use was imitated but not by all. The Carthusians, like the Cistercians, used one chant; certain French cathedrals (e.g. Paris, Senlis and Chartres) continued singing their single preface formula on all occasions; and the Sarum rite also used only one preface chant (in which the tenors and the note preceding the last accent of the final cadence are raised from *mi* to *fa*; ex.4). In German-speaking countries and in eastern Europe, highly ornamented forms of the standard chant either replaced the normal festal version (as in a 15th-century missal from Neuss, *F-Pn* lat.12063, ff.147–151; see Boe, 'Präfation', §VII, 2 and ex.12) or provide a third chant for the highest feasts. These versions also raise the tenor (and other notes) to *fa*. Such a *tonus sollemnior* was included in the Vatican edition along with the *Tonus solemnis* and the *Tonus ferialis* based on Franciscan–curial usage (see Stäblein, 'Präfation', *MGG1*).

The Latin texts for the new common prefaces and for the restored, edited and composed Proper prefaces of the 1970 Roman Missal were set to the melodic formulae of the Vatican edition, in *Praefationes in cantu* (Solesmes, 1972).

JOHN BOE

Prefatory staff. In Western notation a device used in many scholarly editions to show the original pitch and note values of the piece edited, together with certain other information. It ideally consists of a portion of staff (with the original number of lines) preceding the opening of each part, with the original clef, key signature, time signature and initial note(s) and rest(s); or, in music for such instruments as the lute, the beginning of the tablature.

RICHARD RASTALL

Prégardien, Christoph (*b* Limburg 18 Jan 1956). German tenor. He studied at the Frankfurt Hochschule für Musik

Ex.3 Common Preface melody, *F-Pn* lat.2293, f.18

∾ = Aquitanian quilisma, spanning a minor 3rd
× = 'semicircular virga', the upper note of a special pes, in this MS the *lower* note at the semitone interval in the scale

Ex.4 Proper Preface chart, Sarum Missal (*F-Pa* 135; 13th century): chant '*In nativitate Domini*' (f.147) with Sursum corda from *Exultet* (f.90) and conclusion from the Preface 'In festo apostolorum' (f.149*v*)

and later in Milan, Frankfurt and Stuttgart. From 1983 to 1987 he sang with the Frankfurt Opera, making his début there in 1984 as Vašek (*The Bartered Bride*) and later appearing as Hylas (*Les Troyens*), Fenton and the Steersman. His wide repertory ranges from the Baroque to the 19th century and includes the roles of Don Ottavio, Tamino and Almaviva. His operatic commitments have taken him to many German opera houses, and in 1989–90 he sang in Haydn operas at Cairo and Antwerp. He has acquired an outstanding reputation in cantata and oratorio; his dramatic sense, articulate delivery and lyrical, light-textured voice are well suited to Bach's Evangelist and to the interpretation of lieder. In this repertory his fresh and penetrating performances of Schubert have been especially acclaimed. Prégardien's recordings include Monteverdi's *Il ritorno d'Ulisse in patria*, Handel's *Rodelinda*, Mozart's *Don Giovanni*, Bach's *St John Passion* and *St Matthew Passion*, *Christmas Oratorio* and a number of cantatas, and lieder by Schubert, Schumann and Mendelssohn.

NICHOLAS ANDERSON

Preghiera (It.: 'prayer'; Fr. *prière*; Ger. *Gebet*). An aria in one movement consisting of a prayer, usually offered up by the hero or heroine in his or her hour of danger; examples are 'Deh, calma, o ciel, nel sonno' (*Otello*, Rossini, 1816), 'Deh! tu di un'umile preghiera' (*Maria Stuarda*, Donizetti, 1835) and 'Salvami tu, gran Dio' (*Aroldo*, Verdi, 1857). That Verdi in his own *Otello* (1887) should have followed Rossini's example bears witness to the strength of the tradition. Rare instances of ensemble *preghiere* are the 'Angelus' settings in *Aroldo* and *Le villi* (Puccini, 1884) and 'O sacre polve', which concludes Act 2 of Donizetti's *L'assedio di Calais* (1836). 'Del tuo stellato soglio' (*Mosè in Egitto*, Rossini, 1818) constitutes a special case, being built in the manner of a vaudeville-finale.

In French opera the *prière* is rarely confined to a single voice. 'Toi qui du faible es l'espérance' (*Guillaume Tell*, Rossini, 1829) is a terzetto for female voices. 'O Dieu de nos pères' (*La Juive*, Halévy, 1835) and 'Blanche Dourga' (*Lakmé*, Delibes, 1883) both involve choral response. A notable exception is 'O vierge Marie' (*Mignon*, Thomas, 1866).

Prominent examples of the German *Gebet* include 'Allmächt'ger Vater, blick herab' (*Rienzi*, Wagner, 1842) and 'Allmächt'ge Jungfrau, hör mein Flehen' (*Tannhäuser*, 1845). The choral prayer 'Herr und Gott nun ruf ich Dich' (*Lohengrin*, 1850), stands out as the one moment of triple time in the entire score. Particular importance attaches to 'Abends, will ich schlafen gehn' (*Hänsel und Gretel*, Humperdinck, 1893), whose material is developed during the opera into a pantomime of angels.

JULIAN BUDDEN

Preindl, Josef (*b* Marbach, Lower Austria, 30 Jan 1756; *d* Vienna, 26 Oct 1823). Austrian composer, organist and theorist. After early music instruction from his father, who was organist at Marbach, he was, from 1763, a choirboy at Mariazell, Styria, where he was taught organ and composition by F.X. Widerhofer. In 1772 he was appointed organist at the orphanage in Vienna by Propst Ignaz Parhamer. He completed his training in Vienna under Albrechtsberger, the influence of whose teaching method is apparent in Preindl's important theoretical work, the posthumously published *Wiener Tonschule* (1827). In 1775 he became organist at the church of Maria am Gestade; in 1783 he was organist of the Carmelite church in Vienna-Leopoldstadt where Albrechtsberger was *regens chori*. In 1787 he moved to the Michaelerkirche where he remained until 1793 when he became Kapellmeister at the Peterskirche. From 1795 he was also vice-Kapellmeister at the Stephansdom and from 1809 (after the death of Albrechtsberger) Kapellmeister.

Preindl was a popular piano teacher and probably gave lessons to members of the noble family of Fürstenberg-Weitra. His music, often modelled on that of Caldara and Albrechtsberger, has only been little studied, though in his lifetime it was widely circulated and continued to be known for some time after his death. He was among the favourite composers of Prince Nikolaus Esterházy (the younger). When Bruckner sat for the *Oberlehrer* examination in Linz in 1845 he was given a theme by Preindl on which to write a strict fugue.

WORKS

all printed works published in Vienna

Liturgical: *c*14 masses, 4vv, orch, incl. opp.7–8, 10–12 (n.d.), *A-KN, KR, Wgm, D-Dl*; 2 Requiem with orch, E♭, *A-KR*, op.50 (n.d.); TeD, 4vv, orch, op.51 (n.d.); several grads and offs, incl. opp.13–18 (n.d.), *KN, Wgm, D-Mbs*; Lamentationes Jeremiae prophetae, vv, org (n.d.); other works, incl. vespers, lits, pss, motets, *A-GÖ, Wgm, Wn, Wsp*

Songs: Melodien von allen deutschen Kirchen-Liedern samt dazu verfassten neuen Kadenzen und Präambuln, acc. org/pf (n.d.) ['Preindl-Gesangbuch']; other sacred songs, 4vv, and occasional works, pubd separately (n.d.)

Pf: 2 concs., op.1 (1797), op.2 (n.d.); Sonatas (n.d.); variations, op.3 (n.d.), op.4 (1798), op.6 (n.d.); 3 fantasias, op.5 (1800), op.7 (1803), op.25 (n.d.); Et incarnatus est, org, *Wn**

THEORETICAL WORKS

Gesang-Lehre, op.33 (Vienna, 2/1833)

Wiener Tonschule, oder Elementarbuch zum Studium des Generalbasses, des Contrapunktes, der Harmonie- und Fugen-Lehre, ed. I. von Seyfried (Vienna, 1827, 2/1832 as *Anweisung zum Generalbasse*)
